On the Advantage and Disadvantage of History for Life 1216
On the Genealogy of Morality 1253

Weber 1321
Politics as a Vocation 1324

INTRODUCTION

We have called this anthology *Classics of Moral and Political Theory* in order to suggest by its title some of the volume's important features. First, it contains writings with a certain content. Some of the texts are about moral or ethical theory in the broad sense that includes reflection on the nature of morality and discussion of the content of the moral life, its principles and ideals, its characteristic virtues and vices. Other works deal with political matters, also in a broad way, often treating the relationships among political, legal, religious, philosophical, moral, and psychological issues, discussing the nature of political institutions, political practice, and much else. Some of these works, then, are classic moral texts; some are classic political texts; some are both. All, however, and this is my second point, are classics.

What is a classic? Surely there is no short and simple answer to this question. But perhaps this much will do: A classic text is one that reverberates within one or more traditions. It is a text that articulates powerfully influential views, positions, or conceptions; that exhibits in a paradigmatic way models, motifs, or arguments; and that is recalled, cited, and exhibited in subsequent discussion, inquiry, and debate. A classic, in short, is a work that makes an important difference or at least, from a particular vantage point, is thought to have made and to continue to make such a difference.

Not all texts of course are classics. But while others may be interesting or valuable or helpful, only classic texts are somehow necessary, both for understanding a tradition and for participating in one as well as for calling a tradition into question and seeking to deconstruct or subvert it. To say something significant and important within or against a tradition of discourse, one must, to some degree or other, call upon the resources that constitute that tradition, and classic texts are the chief written repositories of these resources—of the tradition's terms, its alternative views, its examples, formulations, arguments, and indeed all that make up its tools for discussion and debate. In this sense, the writings collected in this anthology are classics, not *the* classics, to be sure—for there are many others, and the very status of being a classic changes in the course of history—but *some of the classics* of the several traditions of reflection about moral and political matters in the West, from Greek antiquity to the late nineteenth century.

These classics, moreover, are of a limited kind. They are all works written by men, largely for men; their conceptions of human nature, the good life, political virtues, and so on exhibit a gender bias. Furthermore, they are Western, European classics that are featured in certain traditions of discussion and debate but should be compared and contrasted with other types—non-Western classics, classics by nonwhites, by women, by Native Americans, by non-Christian authors, and more. For many reasons, excluding such alternative classics is unfortunate, but it has been unavoidable and purposeful. What this volume contains is not a sample of everything; it is, rather, a selection that can serve as a common resource both for those who seek to understand and continue the Western traditions of debate and for those who seek to examine these traditions critically and, in the end, to oppose them.

Each one of these classic texts, moreover, means and has meant many things. Each work meant something, surely many things, when it was written and published and initially read. Each came to mean much else as it was reread, cited, recalled, and reinterpreted in the years and decades thereafter. And each text now means many things to its many current readers, us among them, as it is read again and interpreted in the context of today's debates, issues, and events. Different readers will approach these works for different reasons and with different interests and presuppositions. In a way, then, each of these texts is not one text but many, a vast plurality.

These issues have guided the construction of this anthology. From a much larger list of classic texts of moral and political thought we carved the current table of contents, trying insofar as it was possible to include many of the most influential and significant classics that are currently taught and studied. Moreover, where we could, we chose to include entire works or at least very sizeable chunks. The more we excerpt, the more we limit the reader's perspective and options and hence the more we coopt the reader's role as interpreter and critic. We did not want to do that either to you, the teacher, or to you, the student. Finally, the introductions to each author are not intended as full-scale interpretations of the works; rather they aim to help the student by situating the author and the work historically and by saying some general things about the author's work and thought. In the end, these strategies all serve a single goal: to provide a useful and convenient resource for the critical study of moral and political thinking in the Western historical traditions.

In many ways this work is an empirical enterprise. It does not hope to shape a tradition so much as to respond to and express features of several. For this reason, as years go by and as interests change, it may be advisable, if not necessary, to alter its contents—to add, delete, and replace these classics with others. Your guidance in this process will be invaluable, and we invite it. In such a way, this anthology, which has thus far been a cooperative enterprise, will continue to be one, in a continually useful and significant way.

PREFACE TO THE FIFTH EDITION

The Fifth Edition of *Classics of Moral and Political Theory* offers four major new features. First, an augmentation of the unit on Aquinas—most significantly, by the inclusion of a selection from Aquinas' *Disputed Questions on Virtue* from the splendid new translation by Jeffrey Hause and Claudia Eisen Murphy (Hackett, 2010). In addition, selections on law from the *Summa Theologica*, in Richard Regan's translation, have been expanded. Together the selections from these two works offer a far better picture than have previous editions of Aquinas' ethical and political theory, a body of work that has sparked renewed interest in recent years.

Second and third are the additions of two milestones of Western political theory: Locke's *Letter Concerning Toleration* and, from Ted Humphrey's 2003 edition, Kant's *To Perpetual Peace*.

Fourth is the addition of Peter Preuss' translation of Nietzsche's *On the Advantage and Disadvantage of History for Life*, an early work that touches on many themes of Nietzsche's work as a whole.

In addition, selections from Aristotle's *Politics* have been expanded.

As in previous editions, unbracketed footnotes are an author's own. Bracketed footnotes have been contributed by an editor or translator. Initialed bracketed footnotes signify the first in a series of notes by a given editor or translator.

PREFACE TO THE FIRST EDITION

In the fall of 1990 Jay Hullett approached me with a proposal for a major anthology of classic texts in the Western traditions of moral and political theory. At every stage, this has been a collegial and cooperative effort. Jay has supervised our work with sensitivity and wisdom; Brian Rak has been a thoughtful and meticulous editor. Dan Kirklin has guided the production process with tremendous attention to detail, constant encouragement, and a great understanding of our goals.

In making my editorial selections I was aided by a number of friends and colleagues—Jeff Isaac, Paul Eisenberg, Milton Fisk—but especially by Brian Rak, with his keen sense for what is used and what is useful in the teaching of ethics and political theory. In preparing the introductions I benefited from a vast amount of biographical, historical, and philosophical work. Jim Tully read all the introductions and made copious recommendations, virtually all of which I accepted and which directed me to avoid infelicities and inaccuracies. Gillian Parker read text and proofs as we tried to make the result as accurate as possible, and Mark Rooks of InteLex provided many texts on disk and scanned others, in order to facilitate the publication process. Audrey, Debbie, Sara, and our two cats, Blaze and Amanda, endured a good deal less attention than they deserved, sympathizing as I worried about deadlines and providing encouragement and distraction as needed.

SOPHOCLES

Poetry, drama, and fiction express the moral and political dimensions of our lives that philosophy attempts to examine and analyze. Indeed, given the character and complexity of moral and political life, literature often is the best avenue we have to its disclosure. Greek tragedy is a classic case of such disclosure. There are features of Greek ethics and Greek thinking in the fifth century B.C.E. that are known to us best from the writings of Aeschylus, Sophocles, and Euripides.

The fifth century was a towering period. The Greek world experienced the Persian Wars, the rise of the Athenian Empire, the war between Sparta and Athens, the flourishing of Periclean Athens as the apex of democracy and its cultural center, and the fall of Athens and the emergence of Sparta as the preeminent Greek *polis*. It experienced too the development of historical writing in the work of Herodotus and Thucydides, the rise of the itinerant teachers called sophists, the epitome of pre-Socratic natural philosophy, and the birth of old comedy. And the fifth century was the century of Socrates and of the tragedians, among them the author of the *Antigone*, Sophocles.

Born in 496 B.C.E., Sophocles died in 406, just prior to the fall of Athens. He composed over 120 plays; it has been calculated that about 96 of them won the first prize at the festival of Dionysus where tragedies and satyr plays were performed. His first victory was in 468; the *Antigone* was first performed in 441. Of this corpus, just seven plays survive.

Sophocles's tragedies are marked by larger-than-life figures who, when confronted with momentous decisions and faced with the forces of fate and *dike* (justice), become victims of the complexity of such forces. In the *Antigone* both Creon and Antigone face such a situation. From antiquity to our own day, readers have puzzled over who the central player is and what Sophocles seeks to show us about how human beings respond to the forces of fate and justice that govern the universe and the affairs of humankind. Readers find within the *Antigone* multiple tensions—between the individual and the state, between familial obligations and duty to the *polis*, between divine command and positive law, between youthful self-sacrifice and adult domination, and more. Whether the drama does in fact display precisely these conflicts or ones like them the reader must make out for herself. What is clear is that Antigone's choice, when faced with her brothers' deaths and the edict of Creon, her uncle, sets in motion a chain of actions that ultimately leave Creon damaged and in despair. From one perspective, while it is Antigone who first confronts the pull of familial devotion and respect under the abiding laws of the gods, on the one hand, and the prohibition uttered by Creon as king, on the other, ultimately it is Creon whose convictions are shown to parent conflict and disaster. There is no easy way to subordinate family loyalty to the allegiance and commitment to the state. There is no escaping fate, no way of cultivating without fault the many modes of *philia* (friendship, mutuality, loyalty).

Modern discussion of the drama falls under the heavy burden of Hegel's famous reading, in which such dichotomies, oppositions, and dialectical reversals take pride of place. But some interpreters suggest that the play is more subtle than that. Every opposition, like those between the family and the state, youth and age, the individual and society, is qualified in the careful speeches that Sophocles creates. It is not as easy as one might initially think to eulogize Antigone for her strength of character and conviction or to denigrate Ismene for her weakness, to demonize Creon or to heroize Haemon. Sophocles' portrayal of the individual is more complex; what we call moral obligations and political responsibilities are less easy to separate than we tend to think. The lives that Socrates, Plato, and Aristotle subject to examination and analysis realize in Sophocles a complexity that we should keep in mind.

Antigone

Cast of Characters

Antigone	daughter and half-sister of Oedipus
Ismene	Antigone's sister
Chorus	the council of elders in Thebes
Chorus Leader	has lines in conversations
Creon	Antigone's uncle on her mother's side
Watchman	one of those set to guard the corpse
Tiresias	prophet of Apollo
Haemon	Creon's son, Antigone's fiancé
Messenger	a servant of Creon's
Eurydice	Creon's wife, Haemon's mother

Nonspeaking Roles

Attendants	of Creon
Attendants	of Antigone (when under arrest)
Servants	of Eurydice
Boy	who guides Tiresias

Scene

The royal house at Thebes, fronting onto a raised platform stage. Wing entrances right and left allow for characters to be seen by the audience and the chorus long before they are seen by the main characters. The great doors of the house stand upstage center.

[Enter Antigone leading Ismene through the great doors that lead from the palace.]

From Sophocles, *Antigone*, translated by Paul Woodruff (Indianapolis: Hackett Publishing Company, 2001). Copyright © 2001. Reprinted by permission of the publisher.

Antigone:
Ismene, dear heart, my true sister:
You and I are left alive to pay
The final penalty to Zeus for Oedipus.
I've never seen such misery and madness—
It's monstrous! Such deep shame and dishonor—
As this, which falls upon the pair of us.
And now, a public announcement!
They say the general has plastered it around the city.
Have you heard this terrible news or not?
Our enemies are on the march to hurt our friends.

Ismene:
No, Antigone, I have had no news of friends,
Nothing sweet or painful, since the day
We lost our brothers, both of us, on one day,
Both brothers dead by their two hands.
Last night the army that came from Argos
Disappeared, and after that I don't know
Anything that could bring me happiness—or despair.

Antigone:
I knew it! That's the whole reason
I brought you outside—to hear the news alone.

Ismene:
Tell me. You're as clear as a fog at sea.

Antigone:
It's the burial of our two brothers. Creon
Promotes one of them and shames the other.

[5: Line numbers refer to the Greek text.]
[*14–15:* The two brothers, Eteoclês and Polyneices, had planned to take turns ruling Thebes; but Eteoclês refused to give Polyneices his time on the throne. An army came from Argos in support of Polyneices' claim and was defeated at the seven gates of the city. The two brothers killed each other. Argos, in the northeast corner of Peloponnesus, was seen as an enemy of Thebes.—P.W.]

Eteoclês—I heard Creon covered him beneath
The earth with proper rites, as law ordains,
So he has honor down among the dead.
But Polyneices' miserable corpse—
They say Creon has proclaimed to everyone:
"No Burial of any kind. No wailing, no public tears.
Give him to the vultures, unwept, unburied,
To be a sweet treasure for their sharp eyes and beaks."
That's what they say the good Creon has proclaimed
To you. And me. He forbids me, too.
And now he's strutting here to make it plain
To those who haven't heard—he takes
This seriously—that if anyone does what he forbids
He'll have him publicly stoned to death.
There's your news. Now, show your colors:
Are you true to your birth? Or a coward?

ISMENE:
You take things hard. If we are in this noose,
What could I do to loosen or pull tight the knot?

ANTIGONE:
If you share the work and trouble . . .

ISMENE:
In what dangerous adventure?

ANTIGONE:
If you help this hand raise the corpse . . .
[Indicating her own hand.]

ISMENE:
Do you mean to bury him? Against the city's ordinance?

ANTIGONE:
But he is mine. And yours. Like it or not, he's our brother.
They'll never catch me betraying him.

ISMENE:
How horrible! When Creon forbids it?

ANTIGONE:
He has no right to keep me from my own.

ISMENE:
Oh no! Think carefully, my sister.
Our father died in hatred and disgrace
After gouging out his own two eyes
For sins he'd seen in his own self.
Next, his mother and wife—she was both—
Destroyed herself in a knotted rope.
And, third, our two brothers on one day
Killed each other in a terrible calamity,
Which they had created for each other.
Now think about the two of us. We are alone.
How horrible it will be to die outside the law,
If we violate a dictator's decree!
No. We have to keep this fact in mind:
We are women and we do not fight with men.
We're subject to them because they're stronger,
And we must obey this order, even if it hurts us more.
As for me, I will say to those beneath the earth
This prayer: "Forgive me, I am held back by force."
And I'll obey the men in charge. My mind
Will never aim too high, too far.

ANTIGONE:
I won't press you any further. I wouldn't even let
You help me if you had a change of heart.
Go on and *be* the way you choose to be. I
Will bury him. I will have a noble death
And lie with him, a dear sister with a dear brother.
Call it a crime of reverence, but I must be good to those
Who are below. I will be there longer than with you.
That's where I will lie. You, keep to your choice:
Go on insulting what the gods hold dear.

ISMENE:
I am not insulting anyone. By my very nature
I cannot possibly take arms against the city.

ANTIGONE:
Go on, make excuses. I am on my way.
I'll heap the earth upon my dearest brother's grave.

ISMENE:
Oh no! This is horrible for you. I am so worried!

ANTIGONE:
Don't worry about me. Put your own life straight.

ISMENE:
Please don't tell a soul what you are doing.
Keep it hidden. I'll do the same.

ANTIGONE:
For god's sake, speak out. You'll be more enemy to me
If you are silent. Proclaim it to the world!

ISMENE:
Your heart's so hot to do this chilling thing!

ANTIGONE:
But it pleases those who matter most.

ISMENE:
Yes, if you had the power. But you love the impossible.

ANTIGONE:
So? When my strength is gone, I'll stop.

ISMENE:
But it's the highest wrong to chase after what's impossible.

ANTIGONE:
When you say this, you set yourself against me.
Your brother will take you to him—as his enemy.
So you just let me and my 'bad judgment'
Go to hell. Nothing could happen to me
So bad that it would cloud my noble death.

[Exit Antigone toward the plain, through the stage left wing.]

ISMENE:
Then follow your judgment, go. You've lost your mind,
But you are holding to the love of your loved ones.

[Exit Ismene through the great doors into the palace, as the chorus enter from the city, stage right wing.]

CHORUS:

Parodos (Entry-song)

[Strophe *a*]

Let us praise the Sun:
These brilliant beams
Shine glory never seen before in Thebes,
Our City of Seven Gates.
O bright eye of golden day!
You came striding over River Dirkê,
And the White Shield of Argos ran away.
He has fled,
Man and weapon racing from your light,
On sharpened spur.

He was roused against our land
For a fight that Polyneices, haggling, picked.
And, like a screaming eagle,
He dropped on our land:
The shadow of his white-snow wing—
A multitude of armored men,
Helmets crested with horsehair.

[Antistrophe *a*]

He stooped over our homes,
Mouth gaping wide for the kill,
He engulfed our Seven Gates with spears of death;
But he has gone,
Gone before plunging his beak in our blood,
Gone before torching our crown of towers
With the flames of Hephaestus.
For behind his back there arose too loud
The clamor of war;
His dragon-foe was too strong for him.

Zeus hates an arrogant boast,
With towering hatred.
He saw the river of men attack,
Their golden armor clashing in contempt,
And so he struck the man down with a missile of fire
As he swooped toward his highest goal,
Eager to shout "Victory!"

[*105:* Dirkê is one of the rivers of Thebes.]

[*126:* "Dragon-foe"—The people of Thebes believed that they were descended from men who grew from the teeth of a dragon slain by Cadmus.]

[*131–40:* These lines refer to the attacker who boasts too much; according to the legend, this was an Argive named Kapaneus.]

[**Strophe** *b*]

He crashed to the ground
Like a weight slung down in an arc of fire,
This man who had swooped like a dancer in ecstasy,
Breathing hurricanes of hatred.
But his threats came to nothing:
The mighty war god, fighting beside us,
Swept them aside.

Seven captains at seven gates,
Matched with seven defenders,
All left trophies for Zeus the protector
(They took off their armor and ran).
Except for a savage pair, full brothers:
Their two spears stand upright, conquering,
Each in the other's dead breast.

[**Antistrophe** *b*]

Now Victory is ours,
Great be her name! Now Thebes rejoices.
Therefore let us forget our pain.
The war is over: let us dance all night,
Fill all the sacred precincts with joy:
We must now be ruled by Bacchus,
Dance-master of Thebes.

[Enter Creon through the great doors.]

CHORUS:
Here is the king of our land
Creon, the son of Menoeceus,
Our new ruler given us by chance and the gods.
What plan has he been churning over on his way?
Why has he summoned us—
The council of elders—
By public announcement?

CREON:
Gentlemen, the city is safe again, we may thank the gods:
After a great upheaval, they have rescued Thebes.
You are here because I chose you from the whole crowd
And summoned you by escort. You always showed respect
For Laius' power when he held the throne,
And the same again for Oedipus, when he rescued Thebes.
After he died I know you stood by their sons;
You were always there with good advice.
Now they are dead, both on one day;
Each stabbed the other and was stabbed.
Brother struck brother, and the blows were cursed.

So now the throne and all the power in Thebes are mine,
Because I am closest kin to those who died.

No man has a mind that can be fully known,
In character or judgment, till he rules and makes law;
Only then can he be tested in the public eye.
I believe that if anyone tries to run a city
On the basis of bad policies and holds his tongue
Because he's afraid to say what is right,
That man is terrible. So I have always thought.
But it's even worse when he plays favorites,
Puts family or friends ahead of fatherland.
As for me—I call to witness all-seeing Zeus—
I will never hold my tongue about what I see
When ruin is afoot or the city is not safe.
I will never call a man my friend
If he is hostile to this land. I know this well:
The city is our lifeboat: we have no friends at all
Unless we keep her sailing right side up.
Such are my laws. By them I'll raise this city high.

And I have just announced a twin sister of those laws,
To all the citizens, concerning Oedipus' sons:
Eteoclês fought for the city, and for it he died,
After every feat of heroism with his spear.
He shall be sanctified by every burial rite
That is given to the most heroic dead below.

As for his blood brother, Polyneices by name,
He broke his exile, he came back hungry for our blood,
He wanted to burn his fatherland and family gods

Down from the top. He wanted to lead his people—
Into slavery. This man will have no grave:
It is forbidden to offer any funeral rites;
No one in Thebes may bury him or mourn for him.
He must be left unburied. May birds and dogs
Feed on his limbs, a spectacle of utter shame.

Such is the character of my mind: Never, while I rule,
Will a criminal be honored higher than a man of justice.
But give me a true friend of this city
And I will pay him full honor, in death or life.

CHORUS:
That is your decision, son of Menoeceus,
As to the one who meant our city well
And the one who meant it ill. It's up to you:
Make any law you want—for the dead, or for us who live.

CREON:
Now, look after my commands. I insist.

CHORUS:
Ask someone younger to take up the task.

CREON:
No, no. I have men already watching the corpse.

CHORUS:
Then what's left for us to do? What are your orders?

CREON:
That you do not side with anyone who disobeys.

CHORUS:
No one is foolish enough to ask for death.

CREON:
Right. That would be their reward. But hope—
And bribery—often have led men to destruction.

[Enter Watchman from the stage left wing.]

WATCHMAN:
Sir, I am here. I can't say I am out of breath.
I have not exactly been "running on light feet."
I halted many times along the road so I could think,
And I almost turned around and marched right back.
My mind kept talking to me. It said, "You poor guy,
Why are you going there? You'll just get your ass kicked."
Then it said, "Are you stopping again, you damn fool?
If Creon hears this from another man, he'll give you hell."
Well, I turned this idea up and down like that,
And I hurried along, real slow. Made a short trip long.
What got me here in the end was this: My report.
It doesn't amount to much, but I might as well give it,
Because I won't let go this handful of hope
That things won't be any worse than they have to be.

CREON:
What is it, man—where's your courage?

WATCHMAN:
First, I want to tell you where I stand:
I didn't do this thing, and I don't know who did,
And it wouldn't be fair if I got hurt.

CREON:
All right, your defense perimeter is up.
Now, let's have your report.

WATCHMAN:
It's terrible news. I can't come right out with that.

CREON:
Speak up! And then get lost.

WATCHMAN:
OK, here it is. The body out there—someone buried it
Just now and went away. They spread thirsty dust
All over the skin and did the ceremony in full.

CREON:
What? No man would dare! Who did it?

WATCHMAN:
I don't know. The ground was so hard and dry.
It showed no marks. No spade scratches,

No pickaxe holes, not even chariot ruts.
The perpetrator had not left a single clue.
When the first day-watchman showed it to us,
We were all amazed. It was incredible:
The guy had vanished. There was no tomb,
Only fine dust lying over the body, enough to take
The curse away. No sign of wild animals,
No dogs sniffing or tugging at the corpse.

We burst out shouting at each other;
Everyone was hurling accusations.
We kept coming to blows, no one to stop us.
Any one of us could have done the thing.
No one caught red-handed, everyone pled ignorance.
We were about to test each other with red-hot iron
Or run our hands through fire and swear by all the gods:
"I didn't do it, and I had no part in any plot
To do it, not with anyone else, not by hand or word."
Well, we weren't getting anywhere, and in the end
Someone told us to do a thing we couldn't see how
To refuse *or* accept. So we dropped heads, stared at the ground
In fear. There was no way it would turn out good for us.
We simply had to bring word to you,
Because we could not hide a thing like this.
We voted to do it, and I am so damned unlucky
I won the lottery to have this lovely job.
I didn't want to come. And you sure didn't want to see me:
No one loves the man who brings bad news.

CHORUS: *[To Creon.]*
You know, sir, as soon as I heard, it came to me:
Somehow the gods are behind this piece of work.

CREON: *[To the chorus leader.]*
Stop right there, before I'm gorged with rage!
You want to prove that you're as stupid as you are old?
It's totally unacceptable, what you said about the gods—
That they could have a caring thought for this man's corpse.
You think they buried him for his good deeds?
To give him highest honor? They know he came with fire
To burn down their fine-columned shrines, their land,
Their store of treasure—and to blow their laws away.
Have you ever seen a criminal honored by the *gods*?
Not possible.
But some *men* here have always champed,
Like surf, against my orders, and obeyed me, if at all,
Without cheer. They shake their heads when I'm not looking,
Pull out of the yoke of justice, and are not content with me.
They are the ones, I'm absolutely sure, who used bribes
To lead our watchmen astray, into this crime.

Money is the nastiest weed ever to sprout
In human soil. Money will ravage a city,
Tear men from their homes and send them into exile.
Money teaches good minds to go bad;
It is the source of every shameful human deed.
Money points the way to wickedness,
Lets people know the full range of irreverence.
But those who committed this crime for hire
Have set themselves a penalty, which, in time, they'll pay.

[To the Watchman.]

Now listen here. So long as I am reverent to Zeus
I am under oath, and you can be absolutely sure
That if you don't find the hand behind this burial
And bring him so I can see him with my own eyes,
Death alone will not be good enough for you—

Not till I've stretched you with ropes and you confess
To this outrageous crime. That will teach you
Where to look to make a profit. And you will learn:
Never accept money from just anyone who comes along.
Those who take from a source that is wicked, you'll see,
Are ruined far more often than saved.

WATCHMAN:
Permission to speak, sir? Or about face and go?

CREON:
Don't you see how badly your report annoyed me?

WATCHMAN:
So where's it biting you? On your ears or in your mind?

CREON:
What's it to you? Why should you analyze my pain?

WATCHMAN:
If it hurts your mind, blame the perpetrator.
If it's only your ears, blame me.

CREON:
Damn it, man, will you never stop babbling?

WATCHMAN:
Well, at least I never did the thing.

CREON:
Yes, you did. And for money! You gave up your life!

WATCHMAN:
Oh no, no, no.
It's terrible when false judgment guides the judge.

CREON:
All right, play with the word 'judgment.' But you'd better catch
The man who did this thing or I'll have proof:
You men ruined your miserable lives to make a profit!

[Creon turns and exits through the great doors to the palace.]

WATCHMAN:
We'll find him. You'd better believe it.
But if we don't—you know, if he gets lucky—
No way you'll ever see me coming back to you.
As it is, this has gone better than I expected—
I'm still alive, thanks be to the gods.

[Exit Watchman toward the plain, through the stage left wing.]

First Stasimon

CHORUS:

[Strophe *a*]

Many wonders, many terrors,
But none more wonderful than the human race
Or more dangerous.
This creature travels on a winter gale
Across the silver sea,
Shadowed by high-surging waves,
While on Earth, grandest of the gods,
He grinds the deathless, tireless land away,
Turning and turning the plow
From year to year, behind driven horses.

[Antistrophe *a*]

Light-headed birds he catches
And takes them away in legions. Wild beasts
Also fall prey to him.
And all that is born to live beneath the sea
Is thrashing in his woven nets.
For he is Man, and he is cunning.
He has invented ways to take control
Of beasts that range mountain meadows:
Taken down the shaggy-necked horses,
The tireless mountain bulls,
And put them under the yoke.

[Strophe *b*]

Language and a mind swift as the wind
For making plans—
These he has taught himself—

And the character to live in cities under law.
He's learned to take cover from a frost
And escape sharp arrows of sleet.
He has the means to handle every need,
Never steps toward the future without the means.
Except for Death: He's got himself no relief from that,
Though he puts every mind to seeking cures
For plagues that are hopeless.

[**Antistrophe** *b*]

He has cunning contrivance,
Skill surpassing hope,
And so he slithers into wickedness sometimes,
Other times into doing good.
If he honors the law of the land
And the oath-bound justice of the gods,
Then his city shall stand high.
But no city for him if he turns shameless out of daring.
He will be no guest of mine,
He will never share my thoughts,
If he goes wrong.

[Enter Watchman leading Antigone through the stage left wing.]

CHORUS:
Monstrous! What does this mean?
Are gods behind it? I don't know what to think:
Isn't this Antigone? I can't deny it.
You miserable child of misery,
Daughter of Oedipus,
What have you done?
Is it you they arrested?
Are you so foolish?
So disloyal to the laws of kings?

WATCHMAN:
Yes, she's the one that did the burial.
We caught her in the act. Hey, where's Creon?

[Enter Creon through the great doors.]

CHORUS:
Here he is. Coming back from the palace.

CREON:
What's all this? Lucky I turned up now.

WATCHMAN:
Sir, there's no point swearing oaths if you're a mortal.
Second thoughts make any plan look bad.
I swore I'd never come to you again
Because those threats of yours gave me the shakes.
But you know: "Joy beyond hope
Surpasses every other pleasure."
I've come, though I swore on oath I wouldn't.
And I've brought this girl, arrested her at the grave
When she was tidying it up. No lottery this time.
The windfall's mine and no one else's.
Now it's up to you. Take her, question her,
Make your judgment. As for me,
The right thing is to let me off scot-free.

CREON:
Circumstances under which you arrested her? Location?

WATCHMAN:
She was burying that man. Now you know it all.

CREON:
Do you honestly know what you are saying?

WATCHMAN:
Well, I saw this girl burying the dead body.
The one you put off-limits. Clear enough for you?

CREON:
How did you see this? Caught her in the act?

WATCHMAN:
It was like this. We went back to the body
After all your terrible threats,
And we brushed off the dust that covered it,
So as to make the rotting corpse properly naked.
Then we settled down on the hill,
Upwind, so the stink wouldn't hit us.
We kept awake by yelling insults
At each other when a slacker nodded off.
That went on for a long time, till the sun
Stood bright in the center of the sky.
And we were really getting cooked. Then,

Suddenly, a tornado struck. It raised dust
All over the plain, grief to high heaven.
It thrashed the low-lying woods with terror
And filled the whole wide sky. We shut our eyes
And held out against this plague from the gods.

After a long while it lifted, and then we saw the girl.
She gave a shrill cry like a bird when she sees her nest
Empty, and the bed deserted where her nestlings had lain.
That was how she was when she saw the corpse uncovered.
She cried out in mourning, and she called down
Curses on whoever had done this thing.
Right away she spread thirsty dust with her hands,
Then poured the three libations from a vessel of fine bronze.
And so she crowned the corpse with honor.

As soon as we spotted her, we started to run.
She showed no fear; it was easy to catch her.
Then we questioned her about her past and present actions.
She did not deny a single thing.
For me, that was sweet, and agonizing, too.
It's a great joy to be out of trouble,
But bringing trouble on your friends is agony.
Still I don't mind that so much. It's nature's way
For me to put my own survival first.

CREON:
You there! With your head bowed to the ground—
Are you guilty? Or do you deny that you did this thing?

ANTIGONE:
Of course not. I did it. I won't deny anything.

CREON: *[To the Watchman.]*
You're dismissed. Take yourself where you please;
You're a free man, no serious charge against you.

[To Antigone.]

As for you, tell me—in brief, not at length—
Did you know that this had been forbidden?

ANTIGONE:
I knew. I couldn't help knowing. It was everywhere.

CREON:
And yet you dared to violate these laws?

ANTIGONE:
What laws? I never heard it was Zeus
Who made that announcement.
And it wasn't justice, either. The gods below
Didn't lay down this law for human use.
And I never thought your announcements
Could give you—a mere human being—
Power to trample the gods' unfailing,
Unwritten laws. These laws weren't made now
Or yesterday. They live for all time,
And no one knows when they came into the light.
No man could frighten me into taking on
The gods' penalty for breaking such a law.
I'll die in any case, of course I will,
Whether you announce my execution or not.
But if I die young, all the better:
People who live in misery like mine
Are better dead. So if that's the way
My life will end, the pain is nothing.
But if I let the corpse—my mother's son—
Lie dead, unburied, that would be agony.
This way, no agony for me. But you! You think
I've been a fool? It takes a fool to think that.

CHORUS:
Now we see the girl's as wild by birth as her father.
She has no idea how to bow her head to trouble.

CREON: *[To the chorus.]*
Don't forget: The mind that is most rigid
Stumbles soonest; the hardest iron—
Tempered in fire till it is super-strong—
Shatters easily and clatters into shards.
And you can surely break the wildest horse
With a tiny bridle. When the master's watching,
Pride has no place in the life of a slave.
This girl was a complete expert in arrogance
Already, when she broke established law.
And now, arrogantly, she adds insult to injury:

She's boasting and sneering about what she's done!
Listen, if she's not punished for taking the upper hand,
Then I am not a man. *She* would be a man!
I don't care if she is my sister's child—
Or closer yet at my household shrine for Zeus—
She and her sister must pay the full price
And die for their crime.

[The chorus indicate their surprise that both must die.]

Yes, I say they have equal guilt,
Conniving, one with the other, for this burial.

Bring her out. I saw her in there a minute ago;
She was raving mad, totally out of her mind.
Often it's the feelings of a thief that give him away
Before the crimes he did in darkness come to light.

[Turning to Antigone.]

But how I hate it when she's caught in the act,
And the criminal still glories in her crime.

ANTIGONE:
You've caught me, you can kill me. What more do you want?

CREON:
For me, that's everything. I want no more than that.

ANTIGONE:
Then what are you waiting for? More talk?
Your words disgust me, I hope they always will.
And I'm sure you are disgusted by what I say.
But yet, speaking of glory, what could be more
Glorious than giving my true brother his burial?
All these men would tell you they're rejoicing
Over that, if you hadn't locked their tongues
With fear. But a tyrant says and does
What he pleases. That's his great joy.

CREON:
You are the only one, in all Thebes, who thinks that way.

ANTIGONE:
No. They all see it the same. You've silenced them.

CREON:
Aren't you ashamed to have a mind apart from theirs?

ANTIGONE:
There's no shame in having respect for a brother.

CREON:
Wasn't he your brother, too, the one who died on the other side?

ANTIGONE:
Yes, my blood brother—same mother, same father.

CREON:
When you honor the one, you disgrace the other. Why do it?

ANTIGONE:
The dead will never testify against a burial.

CREON:
Yes, if they were equal. But one of them deserves disgrace.

ANTIGONE:
He wasn't any kind of slave. He was his brother, who died.

CREON:
He was killing and plundering. The other one defended our land.

ANTIGONE:
Even so, Hades longs to have these laws obeyed.

CREON:
But surely not equal treatment for good and bad?

ANTIGONE:
Who knows? Down below that might be blesséd.

CREON:
An enemy is always an enemy, even in death.

[519: Hades is the god of death; his name is also used for the underworld, to which the dead belong.]

ANTIGONE:
I cannot side with hatred. My nature sides with love.

CREON:
Go to Hades, then, and if you have to love, love someone dead.
As long as I live, I will not be ruled by a woman.

[Enter Ismene under guard, through the great doors.)

CHORUS:
Now Ismene stands before the doors
And sheds tears of sister-love.
From her brows, a blood-dark cloud
Casts a foul shadow
And stains her lovely face.

CREON:
Now you. Hiding in my house like a snake,
A coiled bloodsucker in the dark! And I never realized
I was raising a pair of deadly, crazed revolutionaries!
Come, tell me: How do you plead? Guilty of this burial
As an accomplice? Or do you swear you knew nothing?

ISMENE:
I did it, I confess. That is, if we are partners, anyway.
I am an accomplice, and I bear responsibility with her.

ANTIGONE:
I will not permit this penalty to fall on you.
No. I never wanted to give you a share.

ISMENE:
But these are your troubles! I'm not ashamed;
I'll be your shipmate in suffering.

ANTIGONE:
I have witnesses: the gods below saw who did the work.
I won't accept a friend who's only friends in words.

ISMENE:
No, please! You're my sister: Don't despise me!
Let me die with you and sanctify our dead.

ANTIGONE:
No, you may not die along with me. Don't say you did it!
You wouldn't even touch it. Now leave my death alone!

ISMENE:
Why would I care to live when you are gone?

ANTIGONE:
Creon's the one to ask. He's the one you care for.

ISMENE:
Why are you scolding me? It won't help you.

ANTIGONE:
Of course not. It hurts me when my mockery strikes you.

ISMENE:
But I still want to help you. What can I do?

ANTIGONE:
Escape! Save yourself! I don't begrudge you that.

ISMENE:
O misery! Why am I cut off from your fate?

ANTIGONE:
Because you chose life, and I chose death.

ISMENE:
But I gave you reasons not to make that choice.

ANTIGONE: *[Pointing to Creon and the chorus.]*
Oh yes, you are sensible; these men agree.

[Pointing to the ground, speaking of the dead or the gods below.]

But *they* agree with me.

ISMENE:
Yes, I know. And now the sin is mine as much as yours.

ANTIGONE:
Be brave. You are alive. Already my soul is dead.
It has gone to help those who died before me.

CREON:
What a pair of children! One of you lost her mind
Moments ago; the other was born without hers.

ISMENE:
That is right, sir. Whenever we commit a crime,
Our minds, which grew by nature, leave us.

CREON:
Yours did, when you deliberately joined a criminal in crime.

ISMENE:
Without her, why should I live? I'd be alone.

CREON:
Her? Don't speak of her. She is no more.

ISMENE:
But will you really kill the bride of your son?

CREON:
There's other ground for him to plow, you know.

ISMENE:
But no one is suited to him as well as she is.

CREON:
I loathe bad women. She's not for my son.

ANTIGONE (or possibly ISMENE, or possibly CHORUS):
O Haemon, dearest, what a disgrace your father does to you!

CREON:
Shut up! What a pain you are, you and your marriage!

CHORUS (or ISMENE, or ANTIGONE):
Will you really take away your son's bride?

CREON:
Not me. Death will put a stop to this marriage.

CHORUS (or ISMENE):
So she will die. Has it really been decided?

CREON:
Yes. By you and me. Now, no more delays.
Servants! Take them inside. They are women,
And they must not be free to roam about.
Even a brave man flees from Death
When he sees his life in immediate danger.

[Servants take Ismene and Antigone through the great doors.]

Second Stasimon

CHORUS:

[Strophe *a*]

Happy are they that never taste of crime,
But once a house is shaken by the gods,
Then madness stalks the family without fail,
Disaster for many generations.
It is like a great salt wave
Kicked up by foul winds from Thrace,
It surges over the hellish depths of the sea,
Roils the bottom,
Churns up black sand,
And makes the screaming headlands howl
Against the gale.

[Antistrophe *a*]

I see grief falling from old days on Labdacus' family:
New grief heaped on the grief of those who died.
And nothing redeems the generation that is to come:
Some god is battering them without relief.
Now I see a saving light
Rising from the sole remaining roots
Of the house of Oedipus. But this, too, falls
In a bloody harvest,
Claimed by the dust
Of the Underworld gods, doomed by foolish words
And frenzied wits.

[Strophe *b*]

O Zeus! Who could ever curtail thy power?
Not a man, never—
No matter how far he oversteps his bounds—
Not sleep, that weakens everyone,
Not the untiring months of gods.
No, Zeus, you do not grow weak with time,
You who hold power in the luminous glow of Olympus.

And this will be the law,
Now and for time to come, as it was before:
Madness stalks mortals who are great,
Leaves no escape from disaster.

[**Antistrophe *b***]

Beware of hope! Far-reaching, beguiling, a pleasure—
For a lot of men.
But a lot are fooled by a light-headed love,
And deception stalks those who know nothing
Until they set their feet in fire and burn.
Wisdom lies in the famous proverb:
"Those who judge that crime is good,
Are in the hands of a driving god
Who is leading them to madness."
Time is very short for them,
Leaves no escape from disaster.

[Enter Haemon through the stage right wing.]

CHORUS:
Now, here is Haemon, the last of your children.
Is he goaded here by anguish for Antigone,
Who should have been his bride?
Does he feel injured beyond measure?
Cheated out of marriage?

CREON:
We'll know the answer right away, better than prophets:
Tell me, son, did you hear the final verdict?
Against your fiancée? Did you come in anger at your father?
Or are we still friends, no matter what I do?

HAEMON:
I am yours, Father. You set me straight,
Give me good advice, and I will follow it.
No marriage will weigh more with me,
Than your good opinion.

CREON:
Splendid, my boy! Keep that always in your heart,
And stand behind fatherly advice on all counts.
Why does a man pray that he'll conceive a child,
Keep him at home, and have him listen to what he's told?
It's so the boy will punish his father's enemies
And reward his friends—as his father would.
But some men beget utterly useless offspring:
They have planted nothing but trouble for themselves,
And they're nothing but a joke to their enemies.

Now then, my boy, don't let pleasure cloud your mind,
Not because of a woman. You know very well:
You'll have a frigid squeeze between the sheets
If you shack up with a hostile woman. I'd rather have
A bleeding wound than a criminal in the family.
So spit her out. And because the girl's against us,
Send her down to marry somebody in Hades.
You know I caught her in the sight of all,
Alone of all our people, in open revolt.
And I will make my word good in Thebes—
By killing her. Who cares if she sings "Zeus!"
And calls him her protector? I must keep my kin in line.
Otherwise, folks outside the family will run wild.
The public knows that a man is just
Only if he is straight with his relatives.

So, if someone goes too far and breaks the law,
Or tries to tell his masters what to do,
He will have nothing but contempt from me.
But when the city takes a leader, you must obey,
Whether his commands are trivial, or right, or wrong.
And I have no doubt that such a man will rule well,
And, later, he will cheerfully be ruled by someone else.
In hard times he will stand firm with his spear
Waiting for orders, a good, law-abiding soldier.

But reject one man ruling another, and that's the worst.
Anarchy tears up a city, divides a home,
Defeats an alliance of spears.
But when people stay in line and obey,
Their lives and everything else are safe.
For this reason, order must be maintained,
And there must be no surrender to a woman.

No! If we fall, better a man should take us down.
Never say that a woman bested us!

CHORUS:
Unless old age has stolen my wits away,
Your speech was very wise. That's my belief.

HAEMON:
Father, the gods give good sense to every human being,
And that is absolutely the best thing we have.
But if what you said is not correct,
I have no idea how I could make the point.
Still, maybe someone else could work it out.

My natural duty's to look out for you, spot any risk
That someone might find fault with what you say or do.
The common man, you see, lives in terror of your frown;
He'll never dare to speak up in broad daylight
And say anything you would hate to learn.
But I'm the one who hears what's said at night—
How the entire city is grieving over this girl.
No woman has ever had a fate that's so unfair
(They say), when what she did deserves honor and fame.
She saved her very own brother after he died,
Murderously, from being devoured by flesh-eating dogs
And pecked apart by vultures as he lay unburied.
For this, hasn't she earned glory bright as gold?
This sort of talk moves against you, quietly, at night.

And for me, Father, your continued good fortune
Is the best reward that I could ever have.
No child could win a greater prize than his father's fame,
No father could want more than abundant success—
From his son.

And now, don't always cling to the same anger,
Don't keep saying that this, and nothing else, is right.
If a man believes that he alone has a sound mind,
And no one else can speak or think as well as he does,
Then, when people study him, they'll find an empty book.
But a wise man can learn a lot and never be ashamed;
He knows he does not have to be rigid and close-hauled.
You've seen trees tossed by a torrent in a flash flood:
If they bend, they're saved, and every twig survives,
But if they stiffen up, they're washed out from the roots.
It's the same in a boat: if a sailor keeps the footline taut,
If he doesn't give an inch, he'll capsize, and then—
He'll be sailing home with his benches down and his hull to the sky.
So ease off, relax, stop being angry, make a change.
I know I'm younger, but I may still have good ideas;
And *I* say that the oldest idea, and the best,
Is for one man to be born complete, knowing everything.
Otherwise—and it usually does turn out otherwise—
It's good to learn from anyone who speaks well.

CHORUS:
Sir, you should learn from him, if he is on the mark. And you,
Haemon, learn from your father. Both sides spoke well.

CREON: *[To the chorus.]*
Do you really think, at our age,
We should be taught by a boy like him?

[*715:* A footline is the rope that runs from the foot of the sail, equivalent to what today's sailors call a sheet. Easing the sheet can save a boat from capsizing in a sudden gust of wind.]

HAEMON:
No. Not if I am in the wrong. I admit I'm young;
That's why you should look at what I do, not my age.

CREON:
So "what you do" is show respect for breaking ranks?

HAEMON:
I'd never urge you to show respect for a criminal.

CREON:
So you don't think this girl has been infected with crime?

HAEMON:
No. The people of Thebes deny it, all of them.

CREON:
So you think the people should tell me what orders to give?

HAEMON:
Now who's talking like he's wet behind the ears?

CREON:
So I should rule this country for someone other than myself?

HAEMON:
A place for one man alone is not a city.

CREON:
A city belongs to its master. Isn't that the rule?

HAEMON:
Then go be ruler of a desert, all alone. You'd do it well.

CREON: *[To the chorus.]*
It turns out this boy is fighting for the woman's cause.

HAEMON:
Only if *you* are a woman. All I care about is you!

CREON:
This is intolerable! You are accusing your own father.

HAEMON:
Because I see you going wrong. Because justice matters!

CREON:
Is that wrong, showing respect for my job as leader?

HAEMON:
You have no respect at all if you trample on the rights of gods!

CREON:
What a sick mind you have: You submit to a woman!

HAEMON:
No. You'll never catch me giving in to what's shameful.

CREON:
But everything you say, at least, is on her side.

HAEMON:
And on your side! And mine! And the gods' below!

CREON:
There is no way you'll marry her, not while she's still alive.

HAEMON:
Then she'll die, and her death will destroy Someone Else.

CREON:
Is that a threat? Are you brash enough to attack me?

HAEMON:
What threat? All I'm saying is, you haven't thought this through.

CREON:
I'll make you wish you'd never had a thought in your empty head!

HAEMON:
If you weren't my father I'd say you were out of your mind.

CREON:
Don't beat around the bush. You're a woman's toy, a slave.

HAEMON:
Talk, talk, talk! Why don't you ever want to listen?

CREON:
Really? Listen, you are not going on like this. By all the gods,
One more insult from you, and the fun is over.

[To attendants.]

Bring out that hated thing. I want her to die right here,
Right now, so her bridegroom can watch the whole thing.

HAEMON:
Not me. Never. No matter what you think.
She is not going to die while I am near her.
And you will never, ever see my face again. Go on,
Be crazy! Perhaps some of your friends will stay by you.

[Exit Haemon through the stage left wing.]

CHORUS:
Sir, the man has gone. He is swift to anger;
Pain lies heavily on a youthful mind.

CREON:
Let him go, him and his lofty ambitions! Good riddance!
But those two girls shall not escape their fate.

CHORUS:
Are you really planning to kill *both* of them?

CREON:
Not the one who never touched the crime. You're right.

CHORUS:
By what means will you have the other one killed?

CREON:
I'll take her off the beaten track, where no one's around,
And I'll bury her alive underground, in a grave of stone.
I'll leave her only as much food as religious law prescribes,
So that the city will not be cursed for homicide.

Let her pray to Hades down there; he's the only god
That she respects. Maybe she'll arrange for him to save her life;
Maybe she'll learn, at last, that she's wasting her time
Showing respect for whatever's in Hades.

[Exit Creon through the great doors.]

Third Stasimon

CHORUS:

[Strophe]

In battle the victory goes to Love;
Prizes and properties fall to Love.
Love dallies the night
On a girl's soft cheeks,
Ranges across the sea,
Lodges in wild meadows.
O Love, no one can hide from you:
You take gods who live forever,
You take humans who die in a day,
And they take you and go mad.

[Antistrophe]

Destroyer Love, you seize a good mind,
And pervert it to wickedness:
This fight is your doing,
This uproar in the family.
And the winner will be desire,
Shining in the eyes of a bride,
An invitation to bed,
A power to sweep across the bounds of what is Right.
For we are only toys in your hands,
Divine, unbeatable Aphrodite!

Kommos

[Enter Antigone under guard through the great doors.]

CHORUS:
Now I, too, am swept away,
Out of bounds, when I see this.
I cannot contain the surge of tears:
For now I see Antigone, soon to gain
The marriage bed where everyone must sleep.

ANTIGONE:
See how I walk the last road,
You who belong to my city,
How I fill my eyes with the last
Shining of the sun.
There's no return: I follow death, alive,
To the brink of Acheron,
Where He gives rest to all.
No marriage hymns for me.
No one sounds
A wedding march:
I will be the bride of Acheron.

CHORUS:
But won't you have hymns of praise?
So much glory attends you
As you pass into the deep place of the dead.
For you are not wasted by disease, not maimed by a sword.
But true to your own laws, you are the only one,
Of mortals, who'll go down to Hades while still alive.

ANTIGONE:
No. I hear Niobe was lost in utmost misery—
Daughter of Tantalus, visitor in Thebes,
Wasted on a Phrygian mountain.
Rock sprouted up around her, firm,
Erect as shoots of ivy,
And it subdued her. So men say.
Rain and snow pelted her
Without a break, and she melted away,
Dripping from her mournful brows,
Tears streaming down her flanks.
It's the same for me, exactly:
Something divine lays me to sleep.

[*816:* Acheron—a river in the underworld.]

[*821:* "But true to your own laws"—The Greek is *autonomos,* rendered by some scholars as "of your own will"; but the word means more than that in ancient Greek, and the root word "law" (*nomos*) is clearly heard.]

CHORUS:
Really! Niobe was a god; she had a god for a father.
We are mortal, and our fathers pass away.
But you—when you die, you will be great,
You will be equal in memory to the gods,
By the glory of your life and death.

ANTIGONE:
You're laughing at me.
For the gods' sake, why now?
You could have waited till I'm gone.
But now you make insults to my face,
You grasping, rich old men! What a city you have!
I call on the rising of rivers in Thebes
And on the great chariot-reaches of the plain.
The rivers and the plain are on my side, at least.
They'll testify that no friends wept for me,
That the laws of Thebes sent me to prison
In a rock-hollowed tomb.
They see how unusual and cruel this is.
But I have no place with human beings,
Living or dead. No city is home to me.

CHORUS:
You've gone too far! You are extreme, impetuous.
My child, you caught your foot and fell
When you tried to climb against high justice.
This is your father's legacy—pain and punishment.

ANTIGONE:
Now you raise the agony that hurts my mind the most:
Grief for my father,
Like raw earth plowed three times,
Grief for the whole huge disaster of *us,*
Our brilliant family,
Labdacus' descendants.
I weep for the ruin in my mother's bed,
The sexual intercourse and the incest
My father had with our mother.
Ill-fated parents make a miserable child.
I am going to them now,
Unholy and unmarried, to lodge with them.
Oh, my brother, you were married once,

[*869:* "You were married once"—Polyneices married the daughter of the king of Argos, and Argos provided the army that attacked Thebes.]

But what a disaster it was:
Your death snuffed out my life.

CHORUS:
You have one kind of reverence.
But a man whose job it is to rule
Will never let you trample on his power.
You chose anger, and anger destroyed you.

ANTIGONE:
No tears for me, no friends, no wedding hymns.
They are taking me away
In misery, by the road before me,
Now and forever forbidden to see
This blessed eye of light.
No friends cry for me,
No one is mourning.

[Enter Creon with his attendants through the great doors.]

CREON:
Singing and wailing? They would never end
Before death, if they made any difference.
Take her away immediately. And when she's locked up,
In the embrace of her covered tomb—exactly as I said—
Leave her alone, deserted. Let her die if she wants,
Or else live there in her grave, if she feels at home there.
We wash our hands of this girl. But either way,
Her permit to reside above the earth is canceled.

ANTIGONE:
My tomb, my marriage, my hollow, scraped in dirt,
I'm coming home forever, to be held in
With my own people, most of them dead now,
And gone where Persephone welcomes them.
I am the last of them that will go under, and my death—
It is the worst by far—so much before my time.
As I leave, even so, I feed this one strong hope:
That I will have a loving welcome from my father,
More love from you, my mother, and then, love
From you, dear heart, my brother. When you died,
I took you up, all three, and laid you out,
And poured libations at your graves.
And, Polyneices, look: This is my reward
For taking care of you. I was right, but wisdom knows
I would not do it for a child, were I a mother,
Not for a husband either. Let them lie, putrefied, dead;
I would not defy the city at such cost for their sake.

What law can I claim on my side for this choice?
I may have another husband if the first should die
And get another child from a new man if I'm a widow.
But my mother and my father lie in the land of death,
And there is no ground to grow a brother for me now.
That is the law I followed when I made you first in honor,
Even though Creon thought I did a terrible thing,
A rash and sinful crime, dear heart, my brother.
Now he has taken me by force, he is driving me down
Unmarried. I've had no man, no wedding celebration,
Shared nothing with a husband, never raised a child.
My friends and family have abandoned me in misery,
And I am going—alive—to the scraped hollow of the dead.
What have I ever done against divine justice?
How can I expect a god to help me in my misery?
To whom should I pray now? Do you see?
They are counting all my reverence to be
Irreverence. If the gods really agree with this,
Then suffering should teach me to repent my sin.
But if the sin belongs to those who condemned me,
I hope they suffer every bit as I do now.

CHORUS:
Still she is tossed by gusts of wind;
They tear through her soul as strongly as before.

CREON:
Listen, it's the guards who will weep
If they don't get a move on now.

ANTIGONE (or CHORUS): *[With a cry of pain.]*
That word—
It's almost death itself!

CREON:
I have no hope to give.
The death sentence stands.

ANTIGONE:
City of my fathers, Thebes!
Gods of my people!
They are taking me against my will.
Look at me, O you lords of Thebes:
I am the last remnant of kings.
Look what these wretched men are doing to me,
For my pure reverence!

Fourth Stasimon

CHORUS: *[To Antigone.]*

[Strophe *a*]

Courage! Danaë, too, endured
The exchange of heavenly light
For a bronze-bolted prison.
And there she was kept down
Secretly in a bedroom tomb.
She was of noble birth, too, my daughter, O my daughter,
And Zeus trusted her to mind his golden-rainfall child.
Fate has a terrible power
That nothing escapes, not wealth,
Not warfare, not a fortress tower,
Not even black ships beating against the sea.

[*944–50:* Danaë's father locked her away from men because of an oracle warning him against any son she might bear. But Zeus visited her in a shower of gold, and they conceived a child, Perseus.]

[Antistrophe *a*]

Another case: Lycurgus was kept down,
And he was a king in Thrace.
But because of his angry jeering,
Dionysus had him jailed in a cell of rock,
And there the terrible flood-force
Of his madness trickled away, drop by drop, until he learned,
At last, that it was a god he had stung in his madness
With those jeering insults.
For he tried to quench the holy fire,
Reined in the god-filled women,
And drove flute-loving Muses into a rage.

[Strophe *b*]

At the Black Waters,
Where a thrust of land divides the Bosporus from the Sea,
Lies a city of Thrace known as Salmydéssus.

[*955–65:* Lycurgus had tried to suppress the worship of Dionysus, which involved ecstatic rituals. In some versions of the story, he went mad and killed his son before being imprisoned.]

[*958:* Dionysus was believed by the ancient Greeks to have brought his worship to Greece from Asia, along with the practice of making wine.]

[*964:* "God-filled women"—These women, variously called Maenads, Bacchae, and bacchants, are women who worship Dionysus through ecstatic dance and song in the mountains, away from their homes. "God-filled" means "inspired."]

[*965:* "Flute-loving Muses"—The *aulos*, usually translated "flute," was a reed instrument; its music was considered to be the most exciting in ancient Greece.]

[*966–87:* Phineus, a king in Thrace (northern Greece), had two sons by his first wife, Cleopatra (no relation to the famous queen of Egypt). This Cleopatra was the daughter of an Athenian princess who had been stolen by Boreas, the North Wind, to be his bride. Cleopatra's sons were blinded by their stepmother after Phineus had imprisoned their mother and taken a new wife.]

[*966:* "Black Waters"—The manuscripts are unclear. The phrase may refer to the Black Sea or the two Dark Islands at the mouth of the Bosporus.]

[[link this to the note "[966-87: Phineus" previous page]]

War god Ares was hard by and saw the curséd blows
When Phineus' two sons were blinded by the beast
He called a wife. Darkness came
Over the disks that had been eyes,
That would have looked for vengeance
To gashing hands, stained in blood,
Shuttles torn from the loom
And used as knives.

[**Antistrophe *b***]

The boys melted away
In misery, mourning their own sad fate
And their mother's, for her marriage was hateful
Although she was born to be a queen of the ancient line,
Royal in Athens, and she was raised in distant caves
Where her father's tempests blew.
For he was North Wind, Boreas,
And she was a child of gods,
Swift as horses on a rocky slope.
But the eternal Fates kept after her,
Her too, O my daughter.

[As the chorus bring their ode to an end, the attendants lead Antigone out through the stage left wing. Enter Tiresias, led by a boy, through the stage right wing.]

TIRESIAS: *[To the chorus, indicating the boy who guides him.]*
Gentlemen of Thebes, we two have come by the same path;
He alone has eyesight, and we both see by this:
A blind man takes the way his guide directs.

CREON:
Why, old Tiresias! What brings you here?

TIRESIAS:
I will speak: I am the soothsayer, and you will learn.

CREON:
Well, I never have rejected your advice.

TIRESIAS:
That is how you've been steering the city straight.

CREON:
Yes, I know firsthand how helpful you are, and I can testify.

TIRESIAS:
Then know this: Once again, your fate stands on a knife-edge.

CREON:
What is it? Your voice puts my hair on end!

TIRESIAS:
You'll see.
Listen to what I have read from the signs of my art.
I took my seat, the ancient seat for seeing omens—
Where all the birds that tell the future come to rest—
And I heard a voice I've never known from a bird:
Wild screeching, enraged, utterly meaningless.
But the thrashing of their wings told me the truth:
They were clawing each other to death with their talons.
I was frightened. Immediately, I tried burnt sacrifice.
The altar had been blazing high, but not one spark
Caught fire in my offerings. The embers went out.
Juice was oozing and dripping from thighbones,
Spitting and sputtering in clouds of smoke.
Bladders were bursting open, spraying bile into the sky;
Wrappings of fat fell away from soggy bones.

And so the ritual failed; I had no omens to read.
I learned this from the boy who is my guide,

[*1005:* "Burnt sacrifice"—Ancient Greeks offered thighbones wrapped in fat to the gods, along with other inedible parts of a cow or sheep, by burning these parts on an altar.]

As I am the guide for others. Now, it was *your* idea
That brought this plague down on our city.
Every single altar, every hearth we have,
Is glutted with dead meat from Oedipus' child,
Who died so badly. Birds and dogs gnawed him to bits
That is why the gods no longer hear our prayers,
Reject our sacrifice of flaming thighbones. And that is why
The birds keep back their shrill message-bearing cries:
Because they have fed on a dead man's glistening blood.

Take thought, my son, on all these things:
It's common knowledge, any human being can go wrong.
But even when he does, a man may still succeed:
He may have his share of luck and good advice
But only if he's willing to bend and find a cure
For the trouble he's caused. It's only being stubborn
Proves you're a fool.

So, now, surrender to the dead man.
Stop stabbing away at his corpse. Will it prove your strength
If you kill him again? Listen, my advice is for your benefit.
Learning from good words is sweet when they bring you gain.

CREON:
I hear you, old man: You people keep shooting arrows at me
Like marksmen at a target. Do you think I don't know?
I have a lot of experience with soothsayers. Your whole tribe
Has made market of me from the start. "Benefit"? "Gain"?
If you want to turn a profit, speculate in gold from India
Or go trade with Sardis for electrum and traffic in that.
You'll never put that man down in a grave,
Not even if eagles snatched morsels of his dead flesh
And carried them up to the very throne of Zeus.
I won't shrink from that. And don't you call it "pollution"
Or tell me I have to bury him to fend off miasma—
Surely no human power could pollute a god.

You're terribly clever, old man, but listen to me:
Clever people tend to stumble into shameful traps
When they make a wicked speech sound good
For their personal gain.

TIRESIAS:
This is very sad:
Does any human being know, or even question . . .

CREON: *[Interrupting.]*
What's this? More of your great "common knowledge"?

TIRESIAS:
How powerful good judgment is, compared to wealth.

CREON:
Exactly. And no harm compares with heedlessness.

TIRESIAS:
Which runs through you like the plague.

CREON:
I have no desire to trade insults with a soothsayer.

TIRESIAS:
But you're doing it. You implied that I make false prophecies.

CREON:
Prophecies? All your tribe wants to make is money.

[*1038:* Electrum is an alloy of gold and silver made in Sardis, the city where Croesus, famous for his wealth, had ruled in the sixth century.]

[*1042–4:* Pollution, miasma—Either an unburied corpse or an unavenged murder was thought to infect the land with miasma, pollution.]

TIRESIAS:
And what about tyrants? Filthy lucre is all you want!

CREON:
Remember, you are speaking about your commander-in-chief.

TIRESIAS:
I haven't forgotten. It was by my powers that you saved the city.

CREON:
Cunning soothsayer! Yes, but you'd rather do what's wrong.

TIRESIAS:
You are provoking me. I have a secret we have not touched.

CREON:
Well, touch it then. But do not speak as you've been paid to do.

TIRESIAS:
Do you really think that's why I've spoken out?

CREON:
You'll never collect your fee; I'm not changing *my* mind.

TIRESIAS:
So be it. But you must know this and know it well:
You'll hardly see the sun race around its course
Before you'll make a trade with your own boy's corpse—
Your only child, born from your guts, traded for corpses.

You took one who dwells above and tossed her below,
You rejected a living soul and peopled a tomb with her.
And you took one who belongs down there and kept him here,
Untouched by gods, unburied, unholy, a corpse exposed.

[*1067*: Haemon is Creon's last surviving child.]

The dead are no business of yours; not even the gods above
Own any part of them. You've committed violence against them.
For this, an ambush awaits you—slow, crippling avengers,
Furies sent by Hades and the gods above.
You will be tangled in the net of your own crimes.

Now look carefully: Have I been paid to speak out?
No. The passage of a little time will prove the point;
Men and women will be wailing over death in your family.
And all the cities of our enemies are in a rage
For their dead, whose funeral rites were held by dogs
Or wild beasts or vultures, and for the stench of bodies
Carried by birds to defile their hearths at home.

These are my arrows. You stung me, and I let fly,
In my anger, like a marksman aiming for your heart.
And I never miss. You can't outrun the pain.

[To his guide.]

Take us home, boy.
Let him vent his anger on younger men;
May he learn to cultivate a gentler tongue
And a mind more cogent than he has shown today.

[Exit Tiresias led by the boy through the stage right wing.]

CHORUS:
The man is gone, sir. His prophecies were amazing,

[*1075*: Furies—avenging spirits.]

[*1080–3*: These lines refer to the tradition, not otherwise mentioned in this play, that Creon left not just Polyneices but all the enemy troops unburied.]

Terrible. Ever since my hair turned white
I'm quite certain he has never sung a prophecy,
Not once, that turned out to be false for the city.

CREON:
I know that, too. My mind is shaken.
Giving in would be terrible.
But standing firm invites disaster!

CHORUS:
Good judgment is essential, Creon. Take advice.

CREON:
What should I do? Show me. I'll do what you say.

CHORUS:
Let the girl go. Free her from underground.
And build a tomb for the boy who lies exposed.

CREON:
Really? You think I should give in?

CHORUS:
As quickly as you can, sir, before you're cut off.
The gods send Harm racing after wicked fools.

CREON:
It's so painful to pull back; it goes against my heart.
But I cannot fight against necessity.

CHORUS:
Go and do this *now*. Don't send others in your place.

CREON:
I'll go immediately. Come on, come on, everyone,
Wherever you are, grab a pick and shovel,
Hurry up! Get over to the place you see.
It's up to me, now my mind has changed.
I put her away, I must be there to release her.
I'm afraid it is best to obey the laws,
Just as tradition has them, all one's life.

[Exit Creon, with his attendants, through the stage left wing.]

CHORUS:

Fifth Stasimon

[Strophe *a*]

God of many names,
Glorious child of Thebes,
Whose mother was bride
To Zeus' deep thunder!
It is you who guard the fame of Italy,
You who look after the embrace, at Eleusis,
Of Demeter, all-welcoming goddess.
O Bacchus, your home is Thebes,
Thebes, the mother of Maenads,
Where River Ismenus gently flows,
And the fierce dragon-teeth were planted.

[Antistrophe *a*]

Torches flash through smoke,
Catch sight of you at Delphi
High above the twin-peaked crag.
The Castalian Stream has seen you
By nymphs of the cave who dance for Bacchus.
The Nysaean Mountains know you, too,

[*1115*: "God of many names"—Dionysus is known by a number of names, including the ones the chorus use here, "Bacchus" and "Iacchus."]

[*1117*: The line refers to the mother of Bacchus. Semélê was a princess of Thebes who became pregnant with Dionysus, after being visited by Zeus, and gave birth to the infant god when Zeus struck her with thunder.]

[*1119*: Italy—Dionysus was evidently honored in the Greek cities of southern Italy.]

[*1124–5*: The Ismenus flows through Thebes. According to legend, Cadmus founded Thebes by killing a dragon and planting its teeth as seeds; where he planted them, the warriors of Thebes sprouted from the earth.]

[*1127*: Delphi—Though sacred mainly to Apollo, Delphi was also a principal site for the worship of Dionysus.]

[*1129*: The Castalian Stream flows from a sacred spring at Delphi.]

[*1130*: Nymphs were minor divinities believed to inhabit caves and other special places.]

[*1131*: Nysaean Mountains—probably refers to mountains on the long island of Euboea, separated from Attica by a narrow strait.]

The ivy-covered shores, the coasts,
The green tangles of grapevines.
They are sending you to Thebes: Watch over us,
Hear our sacred hymns that sound for you.

[Strophe *b*]

You hold Thebes in honor
Above all cities;
Your mother, too,
Thunderstruck woman.
And now we pray: Watch over us:
The violence of plague
Strikes all our people.
Come, your presence is healing.
Soar above Parnassus
Or cross the howling straits of the sea.

[Antistrophe *b*]

O Leader in the dance of stars,
That circle across the night,
Breathing fire,
O shepherd of dark voices,
Child of Zeus, let us see you now.
Come, O Lord, with your throng of Maenads
Iacchus, steward of joy,
Grant them ecstasy
To dance all night for you.

[Enter Messenger through the stage left wing.]

MESSENGER:
Listen, all you neighbors of Cadmus' family:
The course of our lives never stops; it runs past good
Or ill. I'll never declare success or failure for anyone.
It's only chance that keeps your boat upright,
And chance that sinks you—good luck or bad is all you have.
Soothsayers give no guarantees for human lives.
This Creon—you know, I used to envy him.
He saved the land of Cadmus from its enemies

[*1144:* Parnassus is the high mountain dividing Thebes from Delphi.]

And took command as the only ruler of this ground.
He set us straight, and he set his house abloom
With well-born sons. Now all of that is gone.
When every source of joy deserts a man,
I don't call him alive: he's an animated corpse.
For my money, you can get as rich as you want,
You can wear the face of a tyrant,
But if you have no joy in this,
Your life's not worth the shadow of a puff of smoke.

CHORUS:
What's this new grief that weighs on the king's family?

MESSENGER:
Death. And the living are to blame for it.

CHORUS:
Who's the killer? Who's the victim? Speak up!

MESSENGER:
Haemon is dead, killed by his own flesh and blood.

CHORUS:
What! His father? Some other relative?

MESSENGER:
He killed himself, in a rage with his father, for her death.

CHORUS:
That soothsayer! He had it right.

MESSENGER:
Those are the facts; the judgment is up to you.

[Enter Eurydice through the great doors.]

CHORUS:
Wait, I see her coming, Creon's wife.
Poor Eurydice, has she heard about her son?
Or did she leave her home by chance?

EURYDICE:
Tell me, men of the city—I caught what you said
As I was about to leave the house
To pray for help to the goddess Athena.
I was just sliding the bolt to unlock the door

When word of disaster in the family struck my ears.
I fell back into my servants' arms,
Terrified out of my mind.
Please tell me again. What happened?
Speak freely. I am quite used to hearing bad news.

MESSENGER:
I will, beloved queen. I was *there*,
And I'll tell you everything, the whole truth.
No point taking off the rough edges;
You'd soon find out I was lying. Truth's right,
Always.
Well, I went with your husband as his guide
To the upper field where the body was lying,
What was left of Polyneices—Cruel!—torn by dogs.
First we prayed to the goddess of passageways,
Pluto also, and we begged that their good will attend us.
Then we performed the sacred cleansing of the corpse,
Gathered up the pieces we could find,
Burned them over fresh-cut boughs,
And heaped up the earth into a tomb,
A high-crested home for him.
Then we went for the girl,
Toward her deadly marriage bed, blanketed with rocks.
There was a voice—you could hear it from far off—
It sliced through you, wailing around that unsanctified tomb.
One of us got Creon to listen. He crept forward; cries of misery
Welled up around him, wordless, without meaning.
Suddenly he let out a groan of utter despair—
"Oh no! Now *I* am reading signs: Could this be the path?
The one that that leads me to the worst disaster of my life?
My son! My son's voice! Neighbors, be quick, please help.
On the tomb, look, that gap in the mound—
Stones ripped out—can you slip in through those jaws?
Tell me if I am right, that it *is* Haemon,
Unless the gods have robbed me of my mind."

That was the order our master gave, his courage gone.
We looked. In the last depth of the tomb,
She was there, we saw her hanging by the neck
On a noose she'd twisted from her own fine clothes.
He was there, too, tumbled around her, hugging her waist,
Grieving for his marriage lost, gone under—
His father's doing—as he, in misery, kissed his bride.
When Creon saw them, he gave a horrible cry
And came up to them. He was in tears, sobbing:
"Poor soul," he said, "how could you do this?
What were you thinking? Had you lost your mind?
O my child, come out, please, I beg you on my knees."
The boy did not answer. His eyes were fierce.
He fixed them on his father, then spat in his face
And drew his two-edged sword. The father darted back,
Dodged the blow. Thwarted, the angry boy
Turned against himself. He took his blade
And leaned on it, drove it half through his lungs.
Then, still conscious, he pulled the girl into the curve
Of his sagging embrace. He gasped and panted,
Spattered blood on her white cheek, a spurt of scarlet.
Then he was dead. His body lay with hers;
They'd brought their marriage off at last in the house of Death—
Which proves the point: In a human life,
It's deadly for bad judgment to embrace a man.

[Exit Eurydice through the great doors.]

[*1199–1200:* Hecate, goddess of passageways (including the one to the underworld), was honored along roads, especially at intersections. Pluto, also called Hades, is god of the underworld.]

CHORUS:
What could it mean? The woman's gone inside.
She did not stay for a word, good or bad.

MESSENGER:
I'm astonished, like you. But I feed on hope.
Probably,
When she heard her son was dead, she chose to mourn indoors,
Rather than make a public display of grief.
She'll have her servants join in the lament.
She's always planned ahead, to avoid mistakes.

CHORUS:
I don't know. If you ask me, a silence so extreme
Is as dangerous as a flood of silly tears.

MESSENGER:
We'll know soon enough if she's holding something in,
And hiding it secretly in a seething heart.
I'm going into the house. You may be right:
Silence, when extreme, is dangerous.

[Exit Messenger through the great doors. Creon enters through the stage left wing; assisted by his attendants, he is carrying the body of Haemon.]

CHORUS:
Now here is the king himself. He carries in his arms
A Reminder (I hope I'm right to be blunt)
Pointing clearly to the madness that destroys,
And it's no one else's but his own. The sin was his.

[Strophe *a*]

CREON:
Oh, howl for the sins of a stubborn mind,
Evil-minded, death-dealing! O you who are witnesses,
You saw those who killed and those who died,
All in one family,
Cry out against the sacrilege that I called strategy!
Oh, howl, my son, my young son, for your young death.
Ah! Ah!
You were expelled from life
By my bad judgment, never yours.

CHORUS:
Yes, it is late, but you have seen where justice lies.

[Strophe *b*]

CREON:
Oh yes:
I have learned, and it is misery.
Some god leapt full force onto my head
And steered me onto a wild path, shaking my reins,
And I have trampled joy with sharp hooves.
Oh weep, weep for the pain of human pain!

[Enter Messenger through the great doors.]

MESSENGER:
You have so many troubles, master, troubles in hand—
You carry them yourself. And troubles at home—
You'll see them for yourself, soon enough, when you arrive.

CREON:
What, after this, could be worse?

MESSENGER:
Your wife is dead, poor woman.
Fresh-killed, a mother to match this dead boy.

[Antistrophe *a*]

CREON:
Howl, howl! O Death, refuge that cannot be appeased,
Why me? Why me, Destroyer?

[To the Messenger.]

And you,
What is this noise you're making? Your horrible message?
It is only grief.
I was a man in ruins, and you crushed me again.
Speak to me, my son, tell me, is there more killing?

Ah! Ah!
Is it a woman's sacrifice,
Her death piled on yours?

[The great doors open, and Eurydice's body is brought out or revealed.]

CHORUS (or MESSENGER):
Look, she is here, brought out from the inner rooms.

[Antistrophe *b*]

CREON:
Oh yes:
Here's the second disaster for my misery to see.
What could be worse? Does fate have more for me?
A moment ago, I took my dead son in my arms.
Now I see her face to face—my wife. And she is dead.
Oh weep, weep for the mother in torment, weep for the child.

MESSENGER:
She died at the altar.
A sharp sword-thrust brought darkness to her eyes,
But first she grieved over Megareus, dead before his wedding,
And then over Haemon.
Last of all she called out to you,
"These are your crimes, Childkiller!"

[Strophe *c*]

CREON:
Ah! Ah!
I am on wings of fear.
Take a sharp sword, someone.
Why don't you kill me now?
My misery is so huge,
I am dissolved in misery.

[*1302:* Megareus—Haemon's only brother, son of Creon and Eurydice. The audience probably knew that Megareus had been sacrificed earlier to ensure victory over Argos.]

MESSENGER:
Yes, she brought this charge against you as she died:
"You're to blame for his death, and the other boy's, too."

CREON:
Tell me, how was she killed?

MESSENGER:
Stabbed in the guts by her own hand,
As soon as she heard what horrors came over her boy.

[Strophe *d*]

CREON:
The grief is mine, all mine.
I'll never pin the blame on anyone else that's human.
I was the one, I killed you, poor child.
I did it. It is all true.
Now, my neighbors,
Please take me away,
Take me quickly.
I must not be underfoot;
I am worth less than a nobody.

CHORUS:
A worthy request—if there's any value in suffering.
Shortest way is strongest way when trouble's afoot.

[Antistrophe *c*]

CREON:
Let it come! Let it come!
I look for the light
Of my last day.
My ultimate fate
Oh, let it come
I never want to face another day!

CHORUS:
That lies in the future. Our duty is for the present.
Leave your death to the Ones whose concern it is.

CREON:
But that's what I long for. I prayed for that.

CHORUS:
Then don't pray at all.
A mortal has no escape from fate.

[**Antistrophe *d***]

CREON: *[Praying.]*
Please take this useless man,
Put him out of your way. He killed you, my child,
Though that is not what he wished.
And you, too, my wife.

What a miserable wretch I am!
Never to see them again!
On whom can I lean?
Everything I touch turns against me,
My head bows to the fate that has leapt on it.

CHORUS:
Wisdom is supreme for a blesséd life,
And reverence for the gods
Must never cease.
Great words, sprung from arrogance,
Are punished by great blows.
So it is one learns, in old age, to be wise.

–END–

[*1348:* "Wisdom is supreme for a blesséd life"—*Phronein* (wisdom, good sense) is essential for *eudaimonia* (flourishing, happiness in a broad sense).]

PLATO

In 399 B.C.E., five years after the conclusion of the Peloponnesian War (431–404 B.C.E.), Socrates (469–399) was charged with impiety, tried by the Athenian court, and executed. To this day scholars debate the character and significance of this event. What were the real issues that led to Socrates' trial and execution? What was Athens like in 399, and why were the majority of dicasts (jurors) convinced of Socrates' guilt? Indeed, of what was Socrates really guilty? What kind of life did he live? How did he defend himself? Does the event teach us anything in general about the role of philosophy in society and the relation between philosophy and morality or philosophy and politics?

By the time this trial took place, Socrates was an old man of seventy. He had been born in Athens and left it only two, perhaps three times, for military service. We know very little of his life. He was a citizen of modest means, who had a deep commitment to Athens, who was married with young children at the time of the trial, and who had been associated, in the popular mind, with the Sophists, those itinerant educators of fifth-century Greece, teachers of language, rhetoric, oratory, argument, and political skills. There is reason to think that early in his life, when Athens flourished under Pericles and was the hub of Greek intellectual activity, Socrates had been interested in the investigations of nature of people like Democritus and Anaxagoras. At some point, however, probably prior to the outbreak of the Peloponnesian War in 431, he turned to other matters, to the examination of beliefs about ethical notions. He came to hold the primacy of the soul and its well-being and became committed to seeking knowledge of the good and the truth about the best human life. His fellow Athenians found him difficult, annoying, an enigma, and perhaps even a threat. Many of his associates and students, e.g., Alcibiades and Critias, were pro-Spartan, aristocratic, and antidemocratic, and it is possible that his characteristic conduct, the *elenchos* or critical interrogation, led many to think that he too opposed the democracy. At the very least, some took him to be a threat to Athenian values or disdainful of them. If Plato's *Apology* is an accurate portrayal of his defense, he was not able—or perhaps did not even try—to persuade them otherwise.

Modern students of Greek philosophy and culture have found Socrates to be a richly rewarding subject. He wrote nothing, but many of Plato's dialogues are taken to reflect with some fidelity his method of philosophical interrogation, his moral and religious views, and his political thought. But the picture we get from Plato, especially when it is supplemented from other ancient sources, e.g., Xenophon, Aristophanes, and Aristotle, is unclear and hard to fill in consistently. Socrates was committed to the primacy of soul or character in living the best human life. Knowledge was central to that commitment, and hence philosophy, as the quest for moral knowledge, was also fundamental. Moreover, Socrates was convinced that the best character and knowledge were closely tied to right conduct, and that harmful or unjust action was self-destructive. But the intricacies of these and other of his views are complex and have led to much debate, as has the nature of Socrates' political thought and his primary political allegiance. One wonders how perspicuous was the average Athenian's understanding of this man.

While many Athenians may have been satisfied, if not pleased, with the verdict against Socrates and his execution, some clearly were not. Among this group of Socrates' friends, associates, and disciples was a young Athenian aristocrat who labored for a lifetime under the shadow of these events. Later in life he reports the disturbing effects that these events had on him and his thinking:

> When I was a young man I had the same ambitions as many others: I thought of entering public life as soon as I came of age. And certain happenings in public affairs favored me. . . . a new government was set up [the Thirty Tyrants]. Some of these men happened to be relatives and acquaintances of mine, and they invited me to join them. . . . I thought that they were going to lead the city out of the unjust life she had been living and establish her in the path of justice.

But this young aristocrat realized he was wrong when this government acted corruptly, on one occasion commanding "Socrates, an older friend of mine whom I should not hesitate to call the wisest and justest man of that time," to participate in the assassination of Leon of Salamis, "planning thereby to make Socrates willy-nilly a party to their actions." He refused, to his credit, but later, after the democracy had been reinstated in 403,

> certain powerful persons brought into court this same friend Socrates, . . . charged him with impiety, and the jury condemned and put to death the very man who, at the time when his accusers were themselves in misfortune and exile, had refused to have a part in the unjust arrest of one of their friends.

Here Plato (427–347), in his famous Seventh Letter, reflects on the pivotal role that Socrates' trial had had on his life and on his thinking about justice, human nature, and the state.

Plato was born in 427, probably in Athens. Both his father Ariston and his mother Perictione were of distinguished lineage; indeed, Perictione traced her descent from the great lawgiver Solon. Critias, Perictione's cousin, was one of the most violent and most hated of the Thirty Tyrants of 404, the oligarchic government which Sparta enforced at the conclusion of the war, while Charmides, her brother, was also a member of the Thirty and one of the overseers of the Piraeus, the Athenian port. Plato had two brothers, Glaucon and Adiemantus, who appear as major players in the *Republic*, and one sister, Potone, whose son Speusippus was appointed head of the Academy (see below) upon Plato's death.

We know nothing in detail of Plato's youth. Doubtless he would have had the normal Athenian education in culture and gymnastics that he describes in the *Republic*. Clearly he developed a high degree of literary skill and studied the various subjects taught by the Sophists and natural investigators. He became acquainted with Socrates no later than when he was twenty and, given his status, certainly had military service, probably in the cavalry.

After Socrates' death, Plato and some other disciples left Athens to join Euclides, a close associate of Socrates, in Megara, where he remained until 395 or so, when he would have been called to serve in the Corinthian War. During the next several years, we may surmise, Plato wrote many of the early, short dialogues in which Socrates is the chief character and which aim to clarify and portray the Socratic life. These dialogues include the *Apology*, *Crito*, *Laches*, *Lysis*, *Charmides*, *Euthyphro*, *Ion*, *Hippias Major*, and *Hippias Minor*.

When he was forty, in 387, Plato made the first of three visits to Italy and Sicily. Later sources claim that his trip was motivated by his desire to meet the Pythagorean philosophers and religious thinkers there, especially the important mathematician, Archytas of Tarentum, who became a lifelong friend and may have influenced Plato's belief in the immortality of the soul and the importance of mathematics to philosophy. While in Sicily, moreover, Plato met Dion, then twenty, the brother-in-law of the powerful tyrant of Syracuse, Dionysus I. With Dion Plato developed a close, indeed intimate relationship. Dion was a brilliant and receptive student who quickly became Plato's disciple and a convinced Socratic, committed to the life of virtue and goodness and opposed to the hedonistic, luxurious style of Italian and Sicilian life.

Once back in Athens, in 387, Plato purchased some buildings and a grove of trees nearly a mile outside the walls of Athens. There he founded a society or religious fellowship (*thiasos*), on the model of an Orphic-Pythagorean religious association, which he called the Academy, after the hero Hecademus, to whom the spot was sacred. Until his death he was its director, organizing and coordinating its activities, from meals held according to fairly strict rules, to lectures, discussions, guided research, and visits by foreign scholars. Among

the many subjects studied and examined in the Academy, philosophical inquiry, mathematics, and moral-political thought were probably preeminent. During the 380s, moreover, Plato wrote further dialogues, but these dialogues develop his own thinking, on Socratic foundations, on matters such as moral character, virtue (*arete*), inquiry, knowledge, metaphysics, and more. These writings include the *Protagoras*, *Gorgias*, and *Meno*, followed by the middle dialogues, in which his own thinking emerges in full form, the *Phaedo*, *Symposium*, *Republic*, *Phaedrus*, and *Cratylus*. In these dialogues, he first displays his famous theory of Forms or Ideas, develops his understanding of philosophical inquiry, its stages and ultimate goal, sketches an account of philosophical education and moral development, identifies various capacities and states of the soul in an increasingly subtle psychology, and works out the features of his moral view and its political implications.

In 368 Dionysus I of Syracuse died and was replaced immediately by his inexperienced and insecure son Dionysus II. To Dion, who was dazzled by the possibilities of Plato's moral and political thinking and all too unrealistic in his expectations, the situation seemed propitious. He persuaded the young ruler to invite Plato to Syracuse, and he himself wrote to Plato suggesting that the young Dionysus might be an ideal subject for Plato's proposals about philosophy and political rule as expressed in the *Republic*. Whatever Plato's hopes or misgivings, he accepted the invitation but, upon arriving in Syracuse, found a situation of jealousy, conflict, and intrigue. Eventually, Dion was expelled from Sicily, and, when war broke out with Carthage, Plato was sent home. By 365 Dion had joined Plato in Athens, where for four years Plato directed research, taught, and wrote, all the while keeping abreast of affairs in Sicily. By this time too Plato's disenchantment with politics had grown deeper; it was directed not only at Dionysus and Sicily but also at Athens and the city's misguided efforts to regain her power, her empire, and her prestige.

By 362 a new invitation had arrived from Dionysus II, who showed signs of the commitment to philosophy that Plato had long sought. Full of doubts, Plato once again sailed to Sicily, and once again his plans came to naught. The young Dionysus refused Plato's directions for philosophical education, began to sell off Dion's property while he was still a virtual exile, and in the end held Plato under house arrest. Only the intervention of Plato's old friend Archytas enabled him to escape and return to Athens.

Amid all this turmoil, Plato had begun a serious deepening of his own thinking about knowledge, inquiry, reality, politics, morality, and law. He wrote or at least began an extraordinarily rich set of dialogues, the *Parmenides*, *Theaetetus*, *Politicus*, and *Sophist*. In the remaining thirteen years of his life, he completed these works, began several new ones, and continued to direct the affairs of the Academy. He died in 347, leaving unfinished his last great work, the *Laws*. In it Plato's sense of political realism emerges in full force. He attempts to set out in detail the structure, goals, and character of a *polis* that is both ideal and realistic, a *polis* in which expert rulers play their roles alongside an elaborate legal order that coordinates philosophy, political life, religion, and ethics.

Since the 360s Plato had appreciated the demands on the worldly career of philosophy; already in the *Republic* he had tried to reconcile the philosopher's religious goals, his aspiration to transcendence, with his political responsibilities and the complex psychology of the embodied soul. By the time he begins the *Laws*, Plato is fully aware of the limitations on human hopes and possibilities. The prominence of law and all its accoutrements in his last work expresses that awareness and all that comes with it, the sober recognition that human life is a fragile but difficult blending of this world and beyond and that any genuine understanding of philosophy and the moral-political life must appreciate that blending to the fullest.

EUTHYPHRO

2a EUTHYPHRO:[1] What's new, Socrates, to make you leave the Lyceum,[2] where you usually spend your time, to spend it here today at the court of the King Archon?[3] Surely, *you* don't have some sort of lawsuit before the King, as I do.

SOCRATES: *Athenians* don't call it a lawsuit, Euthyphro, but an indictment.[4]

EUTHYPHRO: What? Someone has indicted you,
b apparently, for I'm not going to accuse *you* of indicting someone else!

SOCRATES: No, I certainly haven't.

EUTHYPHRO: But someone else has indicted you?

SOCRATES: Exactly.

EUTHYPHRO: Who is he?

SOCRATES: I hardly know the man myself, Euthyphro. He's young and unknown, it seems. But I believe his name's Meletus. He belongs to the Pitthean deme—if you recall a Meletus from that deme, with straight hair, not much of a beard, and a slightly hooked nose?

EUTHYPHRO: No, I don't recall him, Socrates. But tell me, what indictment has he brought against you? c

SOCRATES: What indictment? Not a trivial one, it seems to me. I mean, it's no small thing for a young man to have come to know such an important matter. You see, according to him, he knows how the young men are being corrupted, and who's corrupting them. He's probably a wise man, who's seen that my own ignorance is corrupting his contemporaries, and is coming to accuse me to their mother the city, so to speak. In fact, he seems to me to be the only one who's starting up in politics correctly. For it is correct to take care of the young first, to make them the best d possible, just as it's reasonable for a good farmer to take care of the young plants first, and all the others afterward. And so Meletus, too, is presumably first weeding out those of us who corrupt the young shoots, 3a as he claims. Then, after that, he'll clearly take care of the older people and bring about the greatest goods, both in number and in quality, for the city. That, at any rate, is the likely outcome of such a start.

EUTHYPHRO: I hope it happens, Socrates, but I'm terribly afraid the opposite may result. You see, by attempting to do an injustice to you, it seems to me he's simply starting out by wronging the city at its very hearth.[5] Tell me, what on earth does he say you're doing that corrupts the young?

SOCRATES: Strange things, my excellent friend, at any rate on first hearing: he says I'm an inventor b of gods. And because I invent new gods, and don't acknowledge the old ones, he's indicted me for the latter's sake, so he says.

1. [Euthyphro was a *mantis*, or prophet (3b9–c5, 3e3), a self-proclaimed authority on Greek religion (4e4–5a2), who takes very literally the stories embodied in its myths (5e3–6b6).—C.D.C.R.]

2. [The Lyceum was one of three great gymnasia outside the city walls of Athens (the others were the Cynosarges and the Academy).]

3. [The nine archons, chosen annually, were the chief public officials in Athens: one was civilian head of state, one was head of the army (*polemarchos*), and six had judicial roles (*thesmothetai*). The King Archon dealt with important religious matters (such as the indictment against Socrates for impiety) and also with homicide (the subject of Euthyphro's indictment). His court or porch (*stoa*) was in the marketplace (*agora*).]

4. [A lawsuit (*dikē*) was either private (*dikē idia*) or public (*dikē dēmosia*). A public suit was one thought to affect the community as a whole, and so any free adult male citizen could prosecute it. An indictment (*graphē*) was a specific sort of public suit.]

5. [The reference is to the communal hearth in the Prytaneum (*Apology* 36d7 note), which was the symbolic center of Athens.]

EUTHYPHRO: I understand, Socrates. That's no doubt because you say your daimonic sign comes to you on each occasion. So he has written this indictment against you for making innovations in religious matters and comes before the court to slander you, knowing that such things are easy to misrepresent to the majority of people. Why, they even mock *me* as if I were crazy, when I speak in the Assembly on religious
c matters and predict the future for them! And yet not one of my predictions has failed to come true. But all the same, they envy anyone like ourselves. We mustn't give them a thought, though. Just meet them head on.

SOCRATES: Yes, my dear Euthyphro, but being mocked is presumably nothing to worry about. Athenians, it seems to me, aren't much concerned if they think someone's clever, so long as he doesn't teach his own wisdom. But if they think he's making other people wise like himself, they get angry, whether out
d of envy, as you say, or for some other reason.

EUTHYPHRO: As to that, I certainly have no desire to test their attitude toward *me*.

SOCRATES: Don't worry. They probably think you rarely put yourself at other people's disposal, and aren't willing to teach your own wisdom. But I'm afraid they think my love of people makes me tell whatever little I know unreservedly to any man, not only without charging a fee, but even glad to lose money, so long as someone cares to listen to me. So, as I was just saying, if they were going to mock me,
e as you say they do you, there'd be nothing unpleasant about their spending time in the law court playing around and laughing. But if they're going to be serious, the outcome's unclear, except to you prophets.

EUTHYPHRO: Well, it will probably come to nothing, Socrates, and you'll fight your case satisfactorily, as I think I'll fight mine.

SOCRATES: But now, Euthyphro, what *is* this case of yours? Are you defending or prosecuting?

EUTHYPHRO: Prosecuting.

SOCRATES: Whom?

EUTHYPHRO: Someone I'm again thought to be
4a crazy for prosecuting.

SOCRATES: What's that? Is your prosecution a wild goose chase?

EUTHYPHRO: The goose is long past chasing: he's quite old.

SOCRATES: Who is he?

EUTHYPHRO: My father.

SOCRATES: My good man! Your own *father*?

EUTHYPHRO: Yes, indeed.

SOCRATES: But what's the charge? What's the lawsuit about?

EUTHYPHRO: Murder, Socrates.

SOCRATES: In the name of Heracles![6] Well, Euthyphro, I suppose most people don't know how it can be correct to do this. I mean, I can't imagine any ordinary person taking that action correctly, but only someone who's already far advanced in wisdom. b

EUTHYPHRO: Yes, by Zeus,[7] Socrates, far advanced indeed.

SOCRATES: Is the man your father killed one of your relatives then? Of course he must be, mustn't he? You'd hardly be prosecuting him for murder on behalf of a stranger.

EUTHYPHRO: It's ridiculous, Socrates, for you to think it makes any difference whether the dead man's a stranger or a relative. It's ridiculous not to see that the sole consideration should be whether the killer killed justly or not. If he did, let him go, if he didn't, prosecute—if, that is to say, the killer shares your own hearth and table. For the pollution's the same if you c knowingly associate with such a person and don't cleanse yourself and him by bringing him to justice.

In point of fact, though, the victim was a day laborer of mine, and when we were farming on Naxos,[8] he worked the land there for us. Well, he got drunk, became enraged with one of our household slaves, and cut his throat. So my father tied him hand and foot, threw him in a ditch, and sent a man here to find out from the official interpreter[9] what should be done. In the meantime, he ignored and neglected his captive as a murderer, thinking it mattered nothing d

6. [Heracles (Hercules) was a hero of legendary strength. His famous labors—twelve extraordinarily difficult tasks—are alluded to at *Apology* 22a6–8.]

7. [The greatest of the Greek gods (5d6–6a1) and king of the Greek pantheon. It was common, and not blasphemous, to swear by him, and by the other gods.]

8. [A large island southeast of Athens.]

9. [The *exēgētai* ("interpreters") were three men chosen—perhaps by the Delphic Oracle (*Apology* 21a4 note)—with advising people on difficult legal cases involving bloodshed and other such religious matters.]

if he did die. And that's just what happened: hunger, cold, and being tied up caused his death before the messenger got back from the interpreter.

That's precisely why my father and my other relatives are angry with me: because I'm prosecuting my father for murder on the murderer's behalf, when my father didn't even kill him, so they claim, and when, even if he definitely did kill him, it's wrong—since the dead man was a murderer—to concern yourself with the victim in that case. You see, it's impious, they say, for a son to prosecute his father for murder.
e Little do they know, Socrates, about the gods' position on the pious and the impious!

SOCRATES: But, in the name of Zeus, Euthyphro, do you think *you* have such exact knowledge about the positions the gods take, and about the pious and the impious, that in the face of these events, you've no fear of acting impiously yourself in bringing your father to trial?

EUTHYPHRO: I'd be no use at all, Socrates, and Euthyphro would be no different from the majority
5a of people, if I didn't have exact knowledge of all such things.

SOCRATES: So, my excellent Euthyphro, the best thing, it seems, is for me to become your student, and to challenge Meletus on this very point before his case comes to trial, telling him that even in the past I always considered it of great importance to know about religious matters, and that now, when he says I've done wrong through improvising and innovating concerning the gods, I've become your student. Shouldn't I say to him, "Meletus, if you agree that Euthyphro is wise
b about the gods, you should also regard me as correctly acknowledging them and drop the charge. But if you don't agree, prosecute this teacher of mine rather than me, for corrupting the old men—myself and his own father, me by his teaching, and his father by admonishment and punishment." If he isn't convinced by me, and doesn't drop the charge or prosecute you instead of me, shouldn't I say the same things in court as in my challenge to him?

EUTHYPHRO: Yes, by Zeus, Socrates, and if he tried bringing an indictment against *me*, I think I'd soon find
c his weak spots, and the question in court would very quickly be about him rather than about me.

SOCRATES: I realize that as well as you do, my dear friend, and that's why I'm eager to become your student. I know that this Meletus, as well as others no doubt, pretends not to notice *you* at all, whereas he has seen *me* so sharply and so easily that he has indicted me for impiety.

Now then, in the name of Zeus, tell me what you were just claiming to know so clearly. What sort of thing would you say the holy and the unholy are, whether in cases of murder or of anything else? Or isn't the pious itself the same as itself in every action? *d* And conversely, isn't the impious entirely the opposite of the pious? And whatever's going to count as impious, isn't it itself similar to itself—doesn't it, as regards impiety, possess one single characteristic?

EUTHYPHRO: Absolutely, Socrates.

SOCRATES: Tell me, then, what do you say the pious and the impious are?

EUTHYPHRO: Very well, I say that what's pious is precisely what I'm doing now: prosecuting those who commit an injustice, such as murder or temple robbery, or those who've done some other such wrong, regardless of whether they're one's father or one's mother or anyone else whatever. Not prosecuting *e* them, on the other hand, is what's impious.

Why, Socrates, look at the powerful evidence I have that the law requires this—evidence I've already offered to show other people that such actions are right, that one must not let an impious person go, no matter who he may happen to be. You see, those very people acknowledge Zeus as the best and most just of the gods, and yet they agree that he put his own father in fetters *6a* because he unjustly swallowed down his children, and that *he*, in his turn, castrated *his* father because of other similar injustices.[10] Yet they're extremely angry with *me*, because I'm prosecuting *my* father for his injustice. And so they contradict themselves in what they say about the gods and about me.

SOCRATES: Could this be the reason, Euthyphro, I face indictment, that when people say such things about the gods, I find them somehow hard to accept? That, it seems, is why some people will say I'm a

10. [Cronus mutilated his father, Uranus (Sky), by cutting off his genitals when he was copulating with Gaea (Earth). He ate the children he had with his sister Rhea. Aided by her, however, their son Zeus escaped, overthrew Cronus, and fettered him. See Hesiod, *Theogony* 137–210, 456–508.]

wrongdoer. But now if you, who know so much about such matters, share these views, it seems that the rest
b of us must assent to them too. I mean, what can we possibly say in reply, when we admit ourselves that we know nothing about them? But tell me, by the god of friendship,[11] do you really believe those stories are true?

EUTHYPHRO: Yes, and still more amazing things, Socrates, that the majority of people don't know.

SOCRATES: And do you believe that there really is war among the gods? And terrible hostilities and battles, and other such things of the sort the poets relate, and that the good painters embroider on our
c sacred objects—I'm thinking particularly of the robe covered with embroideries of such scenes that's carried up to the Acropolis at the Great Panathenaean festival?[12] Are we to say that these are true, Euthyphro?

EUTHYPHRO: Not only those, Socrates, but as I mentioned just now, I will, if you like, tell you lots of other things about religious matters that I'm sure you'll be amazed to hear.

SOCRATES: I wouldn't be surprised. But tell me about them some other time, when we've the leisure. Now, however, try to answer more clearly the very
d question I asked before. You see, my friend, you didn't teach me adequately earlier when I asked what the pious was, but you told me that what you're now doing is pious, prosecuting your father for murder.

EUTHYPHRO: Yes, and what I said was true, Socrates.

SOCRATES: Perhaps. But surely, Euthyphro, there are also many other things you call pious.

EUTHYPHRO: Yes, indeed.

SOCRATES: Do you remember, then, that what I urged you to do wasn't to teach me about one or two of the many pieties, but rather about the form itself, by virtue of which all the pieties are pious? You see, you said, I believe, that it was by virtue of one characteristic that the impieties are impious, and the pieties pious. Or don't you remember? *e*

EUTHYPHRO: I do indeed.

SOCRATES: Then teach me what that characteristic itself is, in order that by concentrating on it and using it as a model, I may call pious any action of yours or anyone else's that is such as it, and may deny to be pious whatever isn't such as it.

EUTHYPHRO: If that's what you want, Socrates, that's what I'll tell you.

SOCRATES: That *is* what I want.

EUTHYPHRO: In that case: what's loved by the gods is pious, and what's not loved by the gods is impious. *7a*

SOCRATES: Excellent, Euthyphro! You've now given the sort of answer I was looking for. Whether it's true, however, that I don't know. But clearly you'll go on to demonstrate fully that what you say *is* true.

EUTHYPHRO: Yes, indeed.

SOCRATES: Come on, then, let's examine what it is we're saying. A god-loved thing or a god-loved person is pious, whereas a god-hated thing or a god-hated person is impious. And the pious isn't the same as the impious, but its exact opposite. Isn't that what we're saying?

EUTHYPHRO: It is indeed.

SOCRATES: And does it seem to be true?

EUTHYPHRO: It does seem so, Socrates. *b*

SOCRATES: And haven't we also said that the gods quarrel and differ with one another, and that there's mutual hostility among them?

EUTHYPHRO: Indeed, we did say that.

SOCRATES: But what are the issues, my good friend, on which differences produce hostility and anger? Let's examine it this way. If you and I differed about which of two groups was more numerous, would our differences on this issue make us hostile and angry toward one another? Or would we turn to calculation and quickly resolve our differences? *c*

EUTHYPHRO: Of course.

SOCRATES: Again, if we differed about which was larger or smaller, we'd turn to measurement and quickly put a stop to our difference.

EUTHYPHRO: That's right.

SOCRATES: And we'd turn to weighing, I imagine, to settle a dispute about which was heavier or lighter?

11. [Namely, Zeus.]

12. [The Acropolis, set on the steep rocky hill that dominates Athens, was the central fortress and principal sanctuary of the goddess Athena. It was the site of the Parthenon, as well as of other temples. The Great Panathenaean festival took place every four years and was a more elaborate version of the yearly festival that marked Athena's birthday. At it, her statue in the Parthenon received a new robe embroidered with scenes from the mythical battle of the gods and the giants.]

EUTHYPHRO: Certainly.

SOCRATES: Then what sorts of issues *would* make us angry and hostile toward one another if we disagreed about them and were unable to reach a settlement? Perhaps you can't say just offhand. But examine, while I'm speaking, whether they're issues
d about the just and unjust, fine and shameful, good and bad. Whenever we become enemies, aren't these the issues on which disagreement and an inability to reach a settlement make enemies of us—both you and I and all other human beings?

EUTHYPHRO: That is the difference, Socrates, and those are the things it has to do with.

SOCRATES: And what about the *gods*, Euthyphro? If indeed they differ, mustn't it be about those same things?

EUTHYPHRO: Absolutely.

SOCRATES: Then, according to your account, my
e noble Euthyphro, different sets of gods, too, consider different things to be just, or fine or shameful, or good or bad. For if they didn't differ about these, they wouldn't quarrel, would they?

EUTHYPHRO: That's right.

SOCRATES: Then are the very things that each group of them regards as fine, good, and just also the ones they love, and are the opposites of these the ones they hate?

EUTHYPHRO: Of course.

SOCRATES: But the very same things, so you say, that some gods consider to be just and others unjust
8a are also the ones that lead them to quarrel and war with one another when they have disputes about them. Isn't that right?

EUTHYPHRO: It is.

SOCRATES: Then the same things, it seems, are both hated and loved by the gods, and so the same things would be both god-hated and god-loved.

EUTHYPHRO: It seems that way.

SOCRATES: So, on your account, Euthyphro, the same things would be both pious and impious.

EUTHYPHRO: Apparently.

SOCRATES: So, you haven't answered my question, my excellent friend. You see, I wasn't asking you what the self-same thing is that's both pious and impious. But a thing that's god-loved is, it seems, also god-hated. It follows, Euthyphro, that it wouldn't be at all surpris-
b ing if what you're now doing in prosecuting your father was something pleasing to Zeus but displeasing to Cronus and Uranus, or lovable to Hephaestus and displeasing to Hera,[13] and similarly for any other gods who may differ from one another on the matter.

EUTHYPHRO: But, Socrates, I think that on this point, at least, none of the gods do differ—that anyone who has unjustly killed another should be punished.

SOCRATES: Is that so? Well, what about men, Euthyphro? Have you never heard them arguing that someone who has killed unjustly or done anything *c*
else unjustly should *not* be punished?

EUTHYPHRO: Why yes, they never stop arguing like that, whether in the law courts or in other places. For people who've committed all sorts of injustices will do or say anything to escape punishment.

SOCRATES: But do they agree, Euthyphro, that they've committed injustice, and, in spite of agreeing, do they still say that they shouldn't be punished?

EUTHYPHRO: No, they certainly don't say that.

SOCRATES: So it isn't just anything that they'll do or say. You see, I don't think they'd dare to say or argue that if they act *unjustly*, they should not be punished. Instead, I think they deny acting unjustly, *d*
don't they?

EUTHYPHRO: That's true, they do.

SOCRATES: So they don't argue that someone who acts unjustly should not be punished, though they do, perhaps, argue about *who* acted unjustly, *what* his unjust action consisted of, and *when* he did it.

EUTHYPHRO: That's true.

SOCRATES: Then doesn't the very same thing happen to the gods as well—if indeed they do quarrel about just and unjust actions, as on your account they do, and if one lot says that others have done wrong, and another lot denies it? For surely no one, my excellent friend, whether god or human being, dares to say that one who acts unjustly should not be punished. *e*

13. [Hephaestus, the god of fire and of blacksmithing, was armor maker to the gods. His mother, Hera, the wife and sister of Zeus (4b3 note), threw him off Olympus because he was lame and deformed. This pleased her, not him. In revenge, he made her a throne that held her captive when she sat on it. This pleased him, not her. Similarly, Cronus cannot have been pleased at being fettered by Zeus (see 6a3 note).]

EUTHYPHRO: Yes, what you say is true, Socrates, at least the main point.

SOCRATES: I think that men and gods who argue, Euthyphro, if indeed gods really do argue, argue instead about *actions*. It's about some action that they differ, some of them saying that it was done justly, others unjustly. Isn't that so?

EUTHYPHRO: Of course.

SOCRATES: Come then, my dear Euthyphro, and
9a teach me, too, that I may become wiser. A man committed murder while employed as a day laborer and died as a result of being tied up before the master who tied him up found out from the proper authorities what to do about him. What evidence do you have that all the gods consider this man to have been killed unjustly, and that it's right for a *son* to prosecute and denounce his *father* for murder on behalf of such a
b man? Come, try to give me a clear proof that all gods undoubtedly consider this action to be right. If you can give me adequate proof of that, I'll never stop praising your wisdom.

EUTHYPHRO: But presumably that's no small task, Socrates, though I could of course prove it to you very clearly.

SOCRATES: I understand. You think I'm a slower learner than the jury, since it's clear that you'll prove to *them* that those actions of your father's were unjust and that the gods all hate them.

EUTHYPHRO: I'll prove it to them very clearly, Socrates, provided they'll listen to what I say.

SOCRATES: They'll listen all right, provided you
c seem to speak well. But a thought occurred to me while you were speaking, and I'm still examining it in my own mind: "Suppose Euthyphro so taught me that I became thoroughly convinced that all the gods do consider a death like that to be unjust. What more would I have learned from Euthyphro about what the pious and the impious are? *That action* would indeed be god-hated, so it seems. Yet it became evident just now that the pious and the impious aren't defined by that fact, since it became evident that what's god-hated is also god-loved. So I'll let you off on that point, Euthyphro. If you like, let's suppose that all the gods consider the action unjust, and that
d they all hate it. Is that, then, the correction we're now making in the account, that what *all* the gods hate is impious while what they *all* love is pious, and that whatever some love and others hate is neither or both? Is that how you'd now like us to define the pious and the impious?

EUTHYPHRO: What's to prevent it, Socrates?

SOCRATES: Nothing on my part, Euthyphro. But you examine your own view, and whether by assuming it you'll most easily teach me what you promised.

EUTHYPHRO: All right, I'd say that the pious is what all the gods love, and its opposite, what all the e
gods hate, is the impious.

SOCRATES: Then aren't we going to examine that in turn, Euthyphro, to see whether what we said is true? Or are we going to let it alone and accept it from ourselves and from others just as it stands? And if someone merely asserts that something is so, are we going to concede that it's so? Or are we going to examine what the speaker says?

EUTHYPHRO: We're going to examine it. However, I for my part think that this time what we said *is* true.

SOCRATES: Soon, my good friend, we'll be better able to tell. Consider the following: is the pious loved 10a
by the gods because it's pious? Or is it pious because it's loved?

EUTHYPHRO: I don't know what you mean, Socrates.

SOCRATES: All right, I'll try to put it more clearly. We speak of a thing's being carried or carrying, and of its being led or leading, and of being seen or seeing. And you understand that these things are all different from one another and how they differ?

EUTHYPHRO: I think I understand, at any rate.

SOCRATES: Then is there also something that's loved, and is it different from something that's loving?

EUTHYPHRO: Certainly.

SOCRATES: Then tell me whether the carried thing is a carried thing because it's carried or because b
of something else.

EUTHYPHRO: No, it's because of that.

SOCRATES: Again, the led thing is so, then, because it's led and the seen thing because it's seen?

EUTHYPHRO: Of course.

SOCRATES: So it's not seen because it's a seen thing; on the contrary, it's a seen thing because it's seen; nor is it because it's a led thing that it's led, rather it's because it's led that it's a led thing; nor is something carried because it's a carried thing, rather

it's a carried thing because it's carried. So is what I
c mean completely clear, Euthyphro? I mean this: if something's changed in some way or affected in some way, it's not changed because it's a changed thing; rather, it's a changed thing because it's changed. Nor is it affected because it's an affected thing; rather, it's an affected thing because it's affected. Or don't you agree with that?

EUTHYPHRO: I do.

SOCRATES: Then isn't a loved thing, too, either a thing changed or a thing affected by something?

EUTHYPHRO: Of course.

SOCRATES: And so the same holds of it as of our earlier examples: it's not because it's a loved thing that it's loved by those who love it; rather it's because it's loved that it's a loved thing?

EUTHYPHRO: Necessarily.

SOCRATES: Now what are we saying about the
d pious, Euthyphro? On your account, isn't it loved by all the gods?

EUTHYPHRO: Yes.

SOCRATES: So is that because it's pious or because of something else?

EUTHYPHRO: No, it's because it's pious.

SOCRATES: So it's loved because it's pious, not pious because it's loved?

EUTHYPHRO: Apparently.

SOCRATES: On the other hand, what's god-loved is loved—that is to say, god-loved—because the gods love it?

EUTHYPHRO: Certainly.

SOCRATES: Then the god-loved is not what's pious, Euthyphro, nor is the pious what's god-loved, as you claim, but one differs from the other.

e EUTHYPHRO: How so, Socrates?

SOCRATES: Because we agreed that the pious is loved because it's pious, not pious because it's loved. Didn't we?

EUTHYPHRO: Yes.

SOCRATES: The god-loved, on the other hand, is so because it is loved by the gods; it's god-loved by the very fact of being loved. But it's not because it's god-loved that it's being loved.

EUTHYPHRO: That's true.

SOCRATES: But if the god-loved and the pious were really the same thing, my dear Euthyphro, then, if the pious were loved because it's pious, what's god-loved would in turn be loved because it's god-loved; and if what's god-loved were god-loved because it was 11a
loved by the gods, the pious would in turn be pious because it was loved by them. But, as it is, you can see that the two are related in the opposite way, as things entirely different from one another. For one of them is lovable because it's loved, whereas the other is loved because it's lovable.

And so, Euthyphro, when you're asked what the pious is, it looks as though you don't want to reveal its being to me, but rather to tell me one of its affections—that this happens to the pious, that it's loved by all the gods. What explains it's being loved, however, you still haven't said. So please don't keep b
it hidden from me, but rather say again from the beginning what it is that explains the pious' being loved by the gods or having some other affection—for we won't disagree about which ones it has. Summon up your enthusiasm, then, and tell me what the pious and the impious are.

EUTHYPHRO: But Socrates, *I* have no way of telling you what I have in mind. For whatever proposals we put forward keep somehow moving around and won't stay put.

SOCRATES: Your proposals, Euthyphro, seem to be the work of my ancestor, Daedalus! Indeed, if I were to state them and put them forward myself, you c
might perhaps make a joke of me, and say that it's because of my kinship with him that my works of art in words run away and won't stay put.[14] But, as it is, the proposals are your own. So you need a different joke, since it's for *you* that they won't stay put, as you can see yourself.

EUTHYPHRO: But it seems to me, Socrates, that pretty much the same joke does apply in the case of our definitions. You see, *I'm* not the one who makes them move around and not stay put. Rather, *you* seem to me to be the Daedalus, since as far as I'm concerned they would have stayed put. d

14. [Daedalus was a legendary sculptor of great skill. His statues were so lifelike that they moved around by themselves just like living things. Socrates' father, Sophroniscus, is alleged to have been a sculptor or stone carver (Diogenes Laertius II.18), and some of the statues on the Acropolis may have been attributed to Socrates himself (Pausanias I.22).]

SOCRATES: Then, my friend, it looks as though I've grown cleverer in my area of expertise than my venerated ancestor, in that he made only his own works not stay put, whereas I do this to my own, it seems, and also to other people's. And the most subtle thing about my area of expertise is that I'm wise in it without wanting to be. You see, I'd prefer to have accounts stay put and be immovably established for me than to acquire the wealth of Tantalus[15] and the *e* wisdom of Daedalus combined. But enough of this. Since you seem to me to be getting sated, I'll do my best to help you teach me about the pious—and don't you give up before you do. See whether you don't think that the pious as a whole must be just.

EUTHYPHRO: Yes, I do.

SOCRATES: Then is the just as a whole also pious? Or while the pious as a whole is just, is the just as a *12a* whole not pious, but part of it pious and part of it something else?

EUTHYPHRO: I don't follow what you're saying, Socrates.

SOCRATES: And yet you're as much younger as wiser than I. But as I say, your wealth of wisdom has weakened you. Well, pull yourself together, my dear fellow. What I'm saying isn't hard to understand. You see, what I'm saying is just the opposite of what the poet said, who wrote:

> With Zeus the maker, who caused all these
> things to come about,
> You will not quarrel, since where there's
> *b* dread there's shame too.[16]

I disagree with this poet. Shall I tell you where?

EUTHYPHRO: Of course.

SOCRATES: It doesn't seem to me that "where there's dread there's shame too." For many people seem to me to dread disease and poverty and many other things of that sort, but though they dread them, they feel no shame at what they dread. Or don't you agree?

EUTHYPHRO: Of course.

SOCRATES: But where there's shame, there is also dread. For if anyone feels shame at a certain action—if he's ashamed of it—doesn't he fear, doesn't he dread, a reputation for wickedness at the same time? *c*

EUTHYPHRO: He certainly does dread it.

SOCRATES: Then it isn't right to say that "where there's dread, there's shame too." But where there's shame there's also dread, even though shame isn't found everywhere there's dread. You see, dread is broader than shame, I think. For shame is a part of fear, just as odd is of number. Hence where there's a number, there isn't something odd too, but where there's something odd there is also a number. Do you follow me now at least?

EUTHYPHRO: Of course.

SOCRATES: Well, that's the sort of thing I was asking just now: whenever there's something just, is there also something pious? Or is something just whenever it's pious, but not pious whenever it's just, *d* because the pious is part of the just? Is that what we're to say, or do you disagree?

EUTHYPHRO: No, let's say that, since it seems to me you're right.

SOCRATES: Then consider the next point. If the pious is a part of what's just, we must, it seems, find out what part of the just the pious is. Now if you asked me about one of the things we just mentioned, for example, which part of number is the even—that is to say, what sort of number it is—I'd say that it's any number not indivisible by two, but divisible by it. Or don't you agree?

EUTHYPHRO: Yes, I do.

SOCRATES: Then you try to teach me in the same fashion what part of the just is pious. Then we can *e* tell Meletus not to treat us unjustly any longer or indict us for impiety, since I've now been sufficiently instructed by you about what things are holy or pious and what aren't.

EUTHYPHRO: Well then, it seems to me, Socrates, that the part of the just that's holy or pious is the one concerned with tending to the gods, while the remaining part of the just is concerned with tending to human beings.

15. [Tantalus, son of Zeus, was a legendary king proverbial for his wealth, who enjoyed the privilege of dining with the gods. He killed and cooked his son, Pelops, and mixed pieces of his flesh in with their food to see if they could detect it. He was punished in Hades by being "tantalized"—any food or water he reached for always eluded his grasp.]

16. [Author unknown.]

SOCRATES: You seem to me to have put that very well, Euthyphro. But I'm still lacking one small piece
13a of information. You see, I don't yet understand this tending you're talking about. You surely don't mean that in just the way that there's tending to other things, there's tending to the gods too. We do speak this way, don't we? We say, for example, that not everyone knows how to tend to horses, but only horse trainers. Isn't that right?

EUTHYPHRO: Of course.

SOCRATES: Because horse training is expertise in tending to horses?

EUTHYPHRO: Yes.

SOCRATES: Nor does everyone know how to tend to dogs, but only dog trainers.

EUTHYPHRO: That's right.

SOCRATES: Because dog training is expertise in tending to dogs.

b EUTHYPHRO: Yes.

SOCRATES: And cattle breeding is expertise in tending to cattle.

EUTHYPHRO: Of course.

SOCRATES: Well, but piety or holiness is tending to the gods, Euthyphro? That's what you're saying?

EUTHYPHRO: It is.

SOCRATES: But doesn't all tending accomplish the same end? I mean something like some good or benefit for what's being tended to—as you see that horses tended to by horse trainers are benefited and made better. Or don't you agree that they are?

EUTHYPHRO: Yes, I do.

SOCRATES: And so dogs, of course, are benefited by dog training and cattle by cattle breeding, and
c similarly for all the others. Or do you think that tending aims to harm what's being tended?

EUTHYPHRO: No, by Zeus, I don't.

SOCRATES: Rather, it aims to benefit it?

EUTHYPHRO: Certainly.

SOCRATES: Then if piety is tending to the gods, does it benefit the gods and make the gods better? Would you concede that whenever you do something pious, you're making some god better?

EUTHYPHRO: No, by Zeus, I wouldn't.

SOCRATES: No, I didn't think that that was what you meant, Euthyphro—far from it. But it is why I asked what you did mean by tending to the gods,
d because I didn't think you meant that sort of tending.

EUTHYPHRO: And you were right, Socrates, since that's not the sort I meant.

SOCRATES: All right. But then what sort of tending to the gods would the pious be?

EUTHYPHRO: The very sort of tending, Socrates, that slaves provide to their masters.

SOCRATES: I understand. Then it would seem to be some sort of service to the gods.

EUTHYPHRO: It is indeed.

SOCRATES: Now could you tell me about service to doctors? What result does that service—insofar as it is service—aim to produce? Don't you think it aims at health?

EUTHYPHRO: I do.

SOCRATES: What about service to shipbuilders? What result does the service aim to produce? e

EUTHYPHRO: Clearly, Socrates, its aim is a ship.

SOCRATES: And in the case of service to builders, I suppose, the aim is a house?

EUTHYPHRO: Yes.

SOCRATES: Then tell me, my good friend, at what result does service to the gods aim? Clearly, you know, since you say you've a finer knowledge of religious matters than any other human being.

EUTHYPHRO: Yes, and what I say is true, Socrates.

SOCRATES: Then tell me, in the name of Zeus, what is that supremely fine result that the gods produce by using our services?

EUTHYPHRO: They produce many fine ones, Socrates.

SOCRATES: So too do generals, my friend. Nonetheless, you could easily tell me the main one, which 14a
is to produce victory in war, is it not?

EUTHYPHRO: Certainly.

SOCRATES: And farmers, too, I think, produce many fine results. Nonetheless, the main one is to produce food from the earth.

EUTHYPHRO: Of course.

SOCRATES: What, then, about the many fine results that the gods produce? Which is the main one they produce?

EUTHYPHRO: I told you a moment ago, Socrates, that it's a pretty difficult task to learn the exact truth about all these matters. But to put it simply: if a b
person knows how to do and say the things that are pleasing to the gods in prayer and sacrifice—those are the ones that are pious. And actions like them

preserve both the private welfare of households and the common welfare of the city, whereas those that are the opposite of pleasing are unholy, and they, of course, overturn and destroy everything.

SOCRATES: If you'd wanted to, Euthyphro, you could have put the main point I asked about much more briefly. But you're not eager to teach me—that's
c clear. You see, when you were just now on the point of answering you turned away. If you had given the answer, I'd already have been adequately instructed by you about piety. But as it is, the questioner must follow the one being questioned wherever he leads. Once again, then, what are you saying that the pious, or piety, is? Didn't you say that it was some sort of knowledge of sacrificing and praying?

EUTHYPHRO: Yes, I did.

SOCRATES: And sacrificing is giving to the gods, and praying is asking from them?

EUTHYPHRO: Yes, indeed, Socrates.

SOCRATES: So, on that account, piety would be knowing how to ask from the gods and how to give
d to them.

EUTHYPHRO: You've grasped my meaning perfectly, Socrates.

SOCRATES: Yes, my friend, that's because I really desire your wisdom and apply my mind to it, so that what you say won't fall on barren ground. But tell me, what is this service to the gods? You say it's asking for things from them and giving things to them?

EUTHYPHRO: I do.

SOCRATES: Well then, wouldn't asking in the right way consist of asking for the things we need from them?

EUTHYPHRO: What else could it be?

SOCRATES: And, conversely, giving in the right
e way would consist of giving them, in turn, the things they need from us? For surely giving someone what he didn't at all need isn't something that an expert in the art of giving would do.

EUTHYPHRO: That's true, Socrates.

SOCRATES: Then piety, Euthyphro, would be a sort of expertise in mutual trading between gods and men.

EUTHYPHRO: Yes, trading, if that's what you prefer to call it.

SOCRATES: I don't prefer anything, if it isn't true. But tell me, what benefit do the gods get from the gifts they receive from us? I mean, what they give is clear to everyone, since we possess nothing good that they don't give us. But how are they benefited by 15a
what they receive from us? Or do we get so much the better of them in the trade that we receive all our good things from them while they receive nothing from us?

EUTHYPHRO: But Socrates, do you really think gods are benefited by what they receive from us?

SOCRATES: If not, Euthyphro, what could those gifts of ours to gods possibly be?

EUTHYPHRO: What else do you think but honor and reverence and—as I said just now—what's pleasing to them.

SOCRATES: So is the pious pleasing to the gods, Euthyphro, but not beneficial to them or loved by b
them?

EUTHYPHRO: No, I think that it's in fact the most loved of all.

SOCRATES: So, once again, it seems, the pious is what's loved by the gods.

EUTHYPHRO: Absolutely.

SOCRATES: Well, if you say that, can you wonder that your accounts seem not to stay put but to move around? And will you accuse me of being the Daedalus who makes them move, when you yourself are far more expert than Daedalus in the art of making them move in a circle? Or don't you see that our account has circled back again to the same place? For surely you remember that earlier we discovered the pious and the god-loved c
are not the same, but different from one another. Or don't you remember that?

EUTHYPHRO: Yes, I do.

SOCRATES: Then don't you realize that you're now saying the pious is what the gods love? And that's the same, isn't it, as what's god-loved? Or is that not so?

EUTHYPHRO: Of course, it is.

SOCRATES: Then either we weren't right to agree before, or, if we were right, our present suggestion is wrong.

EUTHYPHRO: So it seems.

SOCRATES: So we must examine again from the beginning what the pious is, since I won't willingly give up until I learn this. Don't scorn me, but apply your mind to the matter in as many ways and as fully d
as you can, and then tell me the truth—for you must

know it, if indeed any human being does, and, like Proteus,[17] you mustn't be let go until you tell it. For if you didn't know with full clarity what the pious and the impious are, you'd never have ventured to prosecute your old father for murder on behalf of a day laborer. On the contrary, you wouldn't have risked acting wrongly because you'd have been afraid before the gods and ashamed before men. As things stand, however, I well know that you think you have fully clear knowledge of what's pious and what isn't. So tell me what you think it is, my excellent Euthyphro, and don't conceal it.

EUTHYPHRO: Some other time, Socrates. You see, I'm in a hurry to get somewhere, and it's time for me to be off.

SOCRATES: What a way to treat me, my friend! Going off like that and dashing the high hopes I had that I'd learn from you what things are pious and what aren't. Then I'd escape Meletus' indictment by showing him that Euthyphro had now made me wise in religious matters, and ignorance would no longer cause me to improvise and innovate about them. What's more, I'd live a better way for the rest of my life.

17. [Proteus, the Old Man of the Sea, was a god who could change himself into any shape he wished. In this way, he avoided being captured, until his daughter, Eidothea, revealed the secret: keep tight hold of him, no matter what he changes into. See Homer, *Odyssey* IV.351–569.]

Apology

I don't know, men of Athens,[1] how you were
17a affected by my accusers. As for me, I was almost carried away by them, they spoke so persuasively. And yet almost nothing they said is true. Among their many falsehoods, however, one especially amazed me: that you must be careful not to be deceived by me, since I'm a dangerously clever speaker.
b That they aren't ashamed at being immediately refuted by the facts, once it becomes apparent that I'm not a clever speaker at all, that seems to me most shameless of them. Unless, of course, the one they call "clever" is the one who tells the truth. If that's what they mean, I'd agree that I'm an orator—although not one of their sort. No, indeed. Rather, just as I claimed, they have said little or nothing true, whereas from me you'll hear the whole truth. But not, by Zeus, men of Athens, expressed in elegant language like theirs, arranged in fine words and
c phrases. Instead, what you hear will be spoken extemporaneously in whatever words come to mind, and let none of you expect me to do otherwise—for I put my trust in the justice of what I say. After all, it wouldn't be appropriate at my age, gentlemen, to come before you speaking in polished, artificial language like a young man.[2]

Indeed, men of Athens, this I positively entreat of you: if you hear me making my defense using the same sort of language[3] that I'm accustomed to use both in the marketplace next to the bankers' tables—where many of you have heard me—and also in other places, please don't be surprised or create an uproar on that account. For the fact is that this is the first time I've appeared before a law court, although I'm d
seventy years old. So the language of this place is totally foreign to me. Now, if I were really a foreigner, you'd certainly forgive me if I spoke in the accents and manner in which I'd been raised. So now, too, I'm asking you, justly it seems to me, to overlook my 18a
manner of speaking (maybe it will be less good, maybe it will be better), but consider and apply your mind to this alone, whether I say what's just or not. For that's the virtue or excellence of a juror,[4] just as the orator's lies in telling the truth.

The first thing justice demands, then, men of Athens, is that I defend myself from the first false accusations made against me and from my first accusers, and then from the later accusations and the later accusers. You see, many people have been accusing me in front of you for very many years now—and nothing they say b
is true. And I fear them more than Anytus[5] and the

1. [Socrates reserves the more common formula "gentlemen of the jury" (*ō andres dikastai*) for those who, because they vote for his acquittal, merit the name "juror." See 40a2.—C.D.C.R.]

2. [A reference to Socrates' accuser Meletus (19b1), who is characterized as "young and unknown" (*Euthyphro* 2b8–9) and as guilty of "youthful rashness" (26e9 below).]

3. [At 27a10–b2 Socrates makes clear he is referring especially to his characteristic style of argumentative questioning and examining—the so-called elenchus.]

4. [A member of an Athenian jury (a *dikastēs*) combined the responsibilities divided between judge and jury in our legal system. Hence *dikastēs* is sometimes translated as "judge" and sometimes (as in the present translation) as "juror."]

5. [Anytus was a democratic leader who helped restore democracy to Athens in 403 B.C.E. after the overthrow of the Thirty Tyrants (32c4 note), under whom he had lost most of his wealth. As a general in the Athenian army he faced indictment, but allegedly "bribed the jury and was acquitted" (Aristotle, *Constitution of Athens* 27.5). There is evidence that he believed Socrates was responsible for the ruin of his son (Xenophon, *Socrates'*

rest, though the latter are dangerous as well. But the earlier ones, gentlemen, are more dangerous. They got hold of most of you from childhood and persuaded you with their accusations against me—accusations no more true than the current ones. They say there's a man called Socrates, a "wise" man, a thinker about things in the heavens, an investigator of all things below the earth, and someone who makes the weaker
c argument the stronger. Those who've spread this rumor, men of Athens, are my dangerous accusers, since the people who hear them believe that those who investigate such things do not acknowledge the gods either. Moreover, those accusers are numerous and have been accusing me for a long time now. Besides, they also spoke to you at that age when you would most readily believe them, when some of you were children or young boys. Thus they simply won their case by default, as there was no defense. But what's most unreasonable in all this is that I can't discover even their names and tell them to you—unless one
d of them happens to be a comic playwright.[6] In any case, the ones who used malicious slander to persuade you—as well as those who persuaded others after having been persuaded themselves—all of these are impossible to deal with. One cannot bring any of them here to court or cross-examine them. One must literally fight with shadows to defend oneself and cross-examine with no one to respond.

So you too, then, should allow, as I claimed, that there are two groups of accusers: those who accused me just now and the older ones I've been discussing.
e Moreover, you should consider it proper for me to defend myself against the latter first, since you've heard them accusing me earlier, and at much greater length, than these recent ones here.

All right. I must defend myself, then, men of Athens, and try to take away in this brief time prejudices
19a you acquired such a long time ago. Certainly, that's the outcome I'd wish for—if it's in any way better for you and for me—and I'd like to succeed in my defense. But I think it's a difficult task, and I am not at all unaware of its nature. Let it turn out, though, in whatever way pleases the god. I have to obey the law and defend myself.

Let's examine, then, from the beginning, what the charge is from which the slander against me arose—the very one on which Meletus relied when he wrote b
the present indictment of me. Well, then, what exactly did the slanderers say to slander me? Just as if they were real accusers their affidavit must be read. It's something like this:

> Socrates commits injustice and is a busybody, in that he investigates the things beneath the earth and in the heavens, makes the weaker argument the stronger, and teaches these things to others. c

Indeed, you saw these charges expressed yourselves in Aristophanes' comedy.[7] There, some fellow named Socrates swings around claiming he's walking on air and talking a lot of other nonsense on subjects that I know neither a lot nor a little but nothing at all about. Not that I mean to disparage this knowledge, if anyone's wise in such subjects—I don't want to have to defend myself against more of Meletus' lawsuits!—but I, men of Athens, take no part in them. I call on the majority of you as witnesses to this, and d
I appeal to you to make it perfectly plain to one another—those of you who've heard me conversing (as many of you have). Tell one another, then, whether any of you has ever heard me discussing such subjects, either briefly or at length, and from this you'll realize that the other things commonly said about me are of the same baseless character.

In any case, none of them is true. And if you've heard from anyone that I undertake to educate people and charge fees, that's not true either. Although, it also seems to me to be a fine thing if anyone's able e
to educate people in the way Gorgias of Leontini does, and Prodicus of Ceos, and Hippias of Elis.[8] For

---

Defense 29–31), and that he was passionately opposed to the sophists (Plato, *Meno* 89e6–92c5).]

6. [The great Athenian dramatist Aristophanes (c. 450–385 B.C.E.), whose play *Clouds*, referred to below, presents a hostile portrait of Socrates.]

7. [The version of *Clouds* referred to here, which is earlier than the revised version we possess, was first staged in 423 B.C.E..]

8. [All three, like Evenus of Paros mentioned below, were sophists—itinerant professors who charged sometimes substantial fees for popular lectures and specialized instruction in a wide variety of fields, including natural

each of them, gentlemen, can enter any city and persuade the young—who may associate with any of their own fellow citizens they want to free of charge—
20a to abandon those associations, and associate with them instead, pay them a fee, and be grateful to them besides.

Since we're on that topic, I heard that there's another wise gentleman here at present, from Paros. For I happened to run into a man who has spent more money on sophists than everyone else put together—Callias, the son of Hipponicus.[9] So I questioned him, since he has two sons himself.

"Callias," I said, "if your two sons had been born colts or calves, we could engage and pay a knowledgeable supervisor—one of those expert horse breeders or farmers—who could turn them into fine and good examples of their proper virtue or
b excellence. But now, seeing that they're human beings, whom do you have in mind to engage as a supervisor? Who is it that has the knowledge of *this* virtue, the virtue of human beings and of citizens? I assume you've investigated the matter, because you have two sons. Is there such a person," I asked, "or not?"

"Certainly," he replied.

"Who is he?" I said.

"His name's Evenus, Socrates," he replied, "from Paros. He charges five minas."[10]

I thought Evenus blessedly happy if he truly did possess that expertise and taught it for so modest a fee. I, at any rate, would pride myself and give myself c
airs if I had knowledge of those things. But in fact, men of Athens, I don't know them.

Now perhaps one of you will interject: "But Socrates, what, then, is *your* occupation? What has given rise to these slanders against you? Surely if you weren't in fact occupied with something out of the ordinary, if you weren't doing something different from most people, all this rumor and talk wouldn't have arisen. Tell us, then, what it is, so that we don't judge you hastily." These are fair questions, I think, d
for the speaker to ask, and I'll try to show you just what it is that has brought me this slanderous reputation. Listen, then. Perhaps, some of you will think I'm joking. But you may be sure that I'll be telling you the whole truth.

You see, men of Athens, I've acquired this reputation because of nothing other than a sort of wisdom. What sort of wisdom, you ask, is that? The very sort, perhaps, that is *human* wisdom. For it may just be that I really do have that sort of wisdom, whereas the people I mentioned just now may, perhaps, be wise because they possess *superhuman* wisdom. I don't know what else to call it, since I e
myself certainly don't possess that knowledge, and whoever says I do is lying and speaking in order to slander me.

Please don't create an uproar, men of Athens, even if you think I'm somehow making grand claims. You see, I'm not the author of the story I'm about to tell, though I'll refer you to a reliable source. In fact, as a witness to the existence of my wisdom—if indeed it is a sort of wisdom—and to its nature, I'll present the god at Delphi to you.[11]

---

science, rhetoric, grammar, ethics, and politics. Sophists did not constitute a single school or movement, however, and were neither doctrinally nor organizationally united. Gorgias of Leontini in Sicily (c. 480–376) was primarily a teacher of rhetoric, noted for his distinctive style. He is the author of the *Defense of Palamedes*, parts of which bear a striking resemblance to the *Apology* and may have either influenced or been influenced by it. Plato named a dialogue critical of rhetoric after him. Prodicus of Ceos, about whom little is known, was also a fifth-century teacher of rhetoric, with an interest in fine distinctions of meaning (*Protagoras* 337a1–c4) and the correctness of names (*Cratylus* 384a8–c2). Hippias of Elis, like Prodicus a contemporary of Socrates, claimed expertise in astronomy, physics, grammar, poetry, and other subjects. Two Platonic dialogues are named after him; he also appears in *Protagoras* (315b9–c7, 337c6–338b1).]

9. [Callias was one of the richest men in Greece and a patron of the sophists. Both Plato's *Protagoras* and Xenophon's *Symposium* are set in his house.]

10. [Evenus is described as a poet (*Phaedo* 60c8–e1) and as an orator (*Phaedrus* 267a1–5). A few fragments of his elegies survive. A drachma was a day's pay for someone engaged in public works; a mina was a hundred silver drachmas.]

11. [Apollo—god of, among other things, healing, prophecy, purification, care for young citizens, music, poetry.]

You remember Chaerephon, no doubt.[12] He was a friend of mine from youth and also a friend
21a of your party, who shared your recent exile and restoration.[13] You remember, then, what sort of man Chaerephon was, how intense he was in whatever he set out to do. Well, on one occasion in particular he went to Delphi and dared to ask the oracle[14]—as I said, please don't create an uproar, gentlemen—he asked, exactly as I'm telling you, whether anyone was wiser than myself. The Pythia[15] drew forth the response that no one is wiser. His brother here will testify to you about it, since Chaerephon himself is dead.[16]

Please consider my purpose in telling you this,
b since I'm about to explain to you where the slander against me has come from. You see, when I heard these things, I thought to myself as follows: "What can the god be saying? What does his riddle mean?[17] For I'm only too aware that I've no claim to being wise in anything either great or small. What can he mean, then, by saying that I'm wisest? Surely he can't be lying: that isn't lawful[18] for him."

For a long time I was perplexed about what he meant. Then, very reluctantly, I proceeded to examine it in the following sort of way. I approached one of the people thought to be wise, assuming that in his company, if anywhere, I could refute the pronouncement and say to the oracle, "Here's someone c
wiser than I, yet you said I was wisest."

Then I examined this person—there's no need for me to mention him by name; he was one of our politicians. And when I examined him and talked with him, men of Athens, my experience was something like this: I thought this man seemed wise to many people, and especially to himself, but wasn't. Then I tried to show him that he thought himself wise, but wasn't. As a result, he came to dislike me, and so did many of the people present. For my part, d
I thought to myself as I left, "I'm wiser than that person. For it's likely that neither of us knows anything fine and good, but he thinks he knows something he doesn't know, whereas I, since I don't in fact know, don't think that I do either. At any rate, it seems that I'm wiser than he in just this one small way: that what I don't know, I don't think I know." Next, I approached another man, one of those thought to be wiser than the first, and it seemed to me that the same thing occurred, and so I came to be disliked by that man too, as well as by many others. e

After that, then, I kept approaching one person after another. I realized, with distress and alarm, that I was arousing hostility. Nevertheless, I thought I must attach the greatest importance to what pertained to the god. So, in seeking what the oracle meant, I had to go to all those with any reputation for knowledge. And, by the dog,[19] men of Athens—for I'm obliged 22a
to tell the truth before you—I really did experience something like this: in my investigation in response to the god, I found that, where wisdom is concerned, those who had the best reputations were practically

12. [A long-time companion of Socrates.]

13. [Members of the democratic party left Athens when the Thirty Tyrants came to power in 404 B.C.E. They returned to power when the tyrants were overthrown in 403.]

14. [The Delphic Oracle was one of the most famous in antiquity. There were two methods of consulting it. One, involving the sacrifice of sheep and goats, was quite expensive but resulted in a written response. The other—the so-called method of the two beans—was substantially cheaper but resulted only in a response by lot. Since Chaerephon was notoriously poor, it seems probable that he consulted the oracle by the latter method (something also suggested by Socrates' characterization of the priestess as *drawing forth* the response at 21a6–7). The inscriptions on the walls of the temple well convey the spirit the oracle stood for: know thyself; nothing in excess; observe the limit; hate hubris; bow before the divine; glory not in strength.]

15. [The priestess at Delphi who delivered the oracle's pronouncement.]

16. [The brother is Chaerecrates.]

17. [Many of the attested Delphic pronouncements were riddles. Delphi seems to have encouraged care in their interpretation, treating a cavalier acceptance of them at face value as an example of the hubris it condemned.]

18. [What is lawful (*themis*) in the relevant sense accords with the divine law embodied in the universe, in contravention of which nothing can occur.]

19. [Probably the dog-headed Egyptian god Anubis. The oath is an emphatic one, like "my goodness" or "by all that's holy," with no particular religious significance.]

the most deficient, whereas men who were thought to be their inferiors were much better off. Accordingly, I must present all my wanderings to you as if they were labors of some sort that I undertook in order to prove the oracle utterly irrefutable.

You see, after the politicians, I approached the poets—tragic, dithyrambic,[20] and the rest—thinking
b that in their company I'd catch myself in the very act of being more ignorant than they. So I examined the poems with which they seemed to me to have taken the most trouble and questioned them about what they meant, in order that I might also learn something from them at the same time.

Well, I'm embarrassed to tell you the truth, gentlemen, but nevertheless it must be told. In a word, almost all the people present could have discussed these poems better than their authors themselves. And so, in the case of the poets as well, I soon realized it wasn't wisdom that enabled them to compose their poems, but some sort of natural inspiration, of just
c the sort you find in prophets and soothsayers. For these people, too, say many fine things, but know nothing of what they speak about. The poets also seemed to me to be in this sort of situation. At the same time, I realized that, because of their poetry, they thought themselves to be the wisest of people about the other things as well when they weren't. So I left their company, too, thinking that I had gotten the better of them in the very same way as of the politicians.

Finally, I approached the craftsmen. You see, I was
d conscious of knowing practically nothing myself, but I knew I'd discover that they, at least, would know many fine things. And I wasn't wrong about this. On the contrary, they did know things that I didn't know, and in that respect they were wiser than I. But, men of Athens, the good craftsmen also seemed to me to have the very same flaw as the poets: because he performed his own craft well, each of them also thought himself to be wisest about the other things, the most important ones; and this error of theirs seemed to overshadow their wisdom. So I asked myself
e on behalf of the oracle whether I'd prefer to be as I am, not in any way wise with their wisdom nor ignorant with their ignorance, or to have both qualities as they did. And the answer I gave to myself, and to the oracle, was that it profited me more to be just the way I was.

From this examination, men of Athens, much hostility has arisen against me of a sort that is harshest 23a
and most onerous. This has resulted in many slanders, including that reputation I mentioned of being "wise." You see, the people present on each occasion think that I'm wise about the subjects on which I examine others. But in fact, gentlemen, it's pretty certainly the god who is really wise, and by his oracle he meant that human wisdom is worth little or nothing. And it seems that when he refers to the Socrates here before you and uses my name, he makes me an example, as if he were to say, "That one among you b
is wisest, mortals, who, like Socrates, has recognized that he's truly worthless where wisdom's concerned."

So even now I continue to investigate these things and to examine, in response to the god, any person, citizen, or foreigner I believe to be wise. Whenever he seems not to be so to me, I come to the assistance of the god and show him that he's not wise. Because of this occupation, I've had no leisure worth talking about for either the city's affairs or my own domestic ones; rather, I live in extreme poverty because of my service to the god. c

In addition to these factors, the young people who follow me around of their own accord, those who have the most leisure, the sons of the very rich, enjoy listening to people being cross-examined. They often imitate me themselves and in turn attempt to cross-examine others. Next, I imagine they find an abundance of people who think they possess some knowledge, but in fact know little or nothing. The result is that those they question are angry not at themselves, but at me, and say that Socrates is a d
thoroughly pestilential fellow who corrupts the young. Then, when they're asked what he's doing or teaching, they've nothing to say, as they don't know. Yet, so as not to appear at a loss, they utter the stock phrases used against all who philosophize: "things in the sky and beneath the earth," and "not acknowledging the gods," and "making the weaker argument the stronger." For they wouldn't be willing to tell the truth, I imagine: that it has become manifest they pretend to know, but know nothing. So, seeing that these people are, I imagine, ambitious, vehement,

20. [A dithyramb was a choral song in honor of the god Dionysus.]

and numerous, and have been speaking earnestly and persuasively about me, they've long been filling your ears with vehement slanders. On the basis of these slanders, Meletus has brought his charges against me, and Anytus and Lycon[21] along with him: Meletus is aggrieved on behalf of the poets, Anytus on behalf of the artisans and politicians, and Lycon on behalf of the orators. So, as I began by saying, I'd be amazed if I could rid your minds of this slander in the brief time available, when there's so much of it in them.

There, men of Athens, is the truth for you. I've spoken it without concealing or glossing over anything, whether great or small. And yet I pretty much know that I make enemies by doing these very things. And that's further evidence that I'm right—that this is the prejudice against me and these its causes. Whether you investigate these matters now or later, you'll find it to be so.

Enough, then, for my defense before you against the charges brought by my first accusers. Next, I'll try to defend myself against Meletus—who is, he claims, both good and patriotic—and against my later accusers. Once again, then, just as if they were really a different set of accusers, their affidavit must be examined in turn. It goes something like this:

> Socrates is guilty of corrupting the young, and of not acknowledging the gods the city acknowledges, but new daimonic activities instead.

Such, then, is the charge. Let us examine each point in this charge.

Meletus says, then, that I commit injustice by corrupting the young. But I, men of Athens, reply that it's Meletus who is guilty of playing around with serious matters, of lightly bringing people to trial, and of professing to be seriously concerned about things he has never cared about at all—and I'll try to prove this.[22]

Step forward, Meletus, and answer me. You regard it as most important, do you not, that our young people be as good as possible?

I certainly do.

Come, then, and tell these jurors who improves them. Clearly you know, since you care. For having discovered, as you assert, the one who corrupts them—namely, myself—you bring him before these jurors and accuse him. Come, then, speak up, tell the jurors who it is that improves them. Do you see, Meletus, that you remain silent and have nothing to say? Yet don't you think that's shameful and sufficient evidence of exactly what I say, that you care nothing at all? Speak up, my good man. Who improves them?

The laws.

But that's not what I'm asking, my most excellent fellow, but rather which *person*, who knows the laws themselves in the first place, does this?

These gentlemen, Socrates, the jurors.

What are you saying, Meletus? Are they able to educate and improve the young?

Most certainly.

All of them, or some but not others?

All of them.

That's good news, by Hera, and a great abundance of benefactors that you speak of! What, then, about the audience present here? Do they improve the young or not?

Yes, they do so too.

And what about the members of the Council?[23]

Yes, the councilors too.

But, if that's so, Meletus, surely those in the Assembly, the assemblymen, won't corrupt the young, will they? Won't they all improve them too?

Yes, they will too.

---

21. [Otherwise unknown.]

22. [Under Athenian law, any citizen could bring an indictment against another whom he believed to be guilty of wrongdoing. As a result, a citizen who brought such a legal action typically played two roles, which in our system of criminal law are kept separate, that of prosecutor and that of chief witness for the prosecution. Meletus is both charging Socrates with impiety, therefore, and attesting (together with Anytus and Lycon) that he did specific impious things. Meletus' indictment is both a charge, then, and a sworn affidavit supporting the charge.]

23. [The Council consisted of 500 male citizens over the age of 30, elected annually by lot, 50 from each of the 10 tribes of Athens. The Council met daily (except for some holidays and the like) as a steering committee for the Assembly. Its responsibilities included state finance, public buildings, and the equipment of navy and cavalry.]

But then it seems that all the Athenians except for me make young people fine and good, whereas I alone corrupt them. Is that what you're saying?

Most emphatically, that's what I'm saying.

I find myself, if you're right, in a most unfortunate situation. Now answer me this. Do you think that the same holds of horses? Do people in general improve
b them, whereas one particular person corrupts them or makes them worse? Or isn't it wholly the opposite: one particular person—or the very few who are horse trainers—is able to improve them, whereas the majority of people, if they have to do with horses and make use of them, make them worse? Isn't that true, Meletus, both of horses and of all other animals? Of course it is, whether you and Anytus say so or not. Indeed, our young people are surely in a very happy situation if only one person corrupts them, whereas all the rest benefit them.

Well then, Meletus, it has been adequately estab-
c lished that you've never given any thought to young people—you've plainly revealed your indifference—and that you care nothing about the issues on which you bring me to trial.

Next, Meletus, tell us, in the name of Zeus, whether it's better to live among good citizens or bad ones. Answer me, sir. Surely, I'm not asking you anything difficult. Don't bad people do something bad to whoever's closest to them at the given moment, whereas good people do something good?

Certainly.

d Now is there anyone who wishes to be harmed rather than benefited by those around him? Keep answering, my good fellow. For the law requires you to answer. Is there anyone who wishes to be harmed?

Of course not.

Well, then, when you summon me here for corrupting the young and making them worse, do you mean that I do so intentionally or unintentionally?

Intentionally, *I* say.

What's that, Meletus? Are you so much wiser at your age than I at mine, that you know bad people do something bad to whoever's closest to them at the given moment, and good people something good?
e Am I, by contrast, so very ignorant that I don't know even this: that if I do something bad to an associate, I risk getting back something bad from him in return? And is the result, as you claim, that I do so very bad a thing intentionally?

I'm not convinced by you of that, Meletus, and neither, I think, is anyone else. No, either I'm not corrupting the young or, if I am corrupting them, it's *un*intentionally, so that in either case what you say is false. But if I'm corrupting them unintentionally, 26a
the law doesn't require that I be brought to court for such mistakes—that is, unintentional ones—but that I be taken aside for private instruction and admonishment. For it's clear that if I'm instructed, I'll stop doing what I do unintentionally. You, however, avoided associating with me and were unwilling to instruct me. Instead, you bring me here, where the law requires you to bring those in need of punishment, not instruction.

Well, men of Athens, what I said before is absolutely clear by this point, namely, that Meletus has never cared about these matters to any extent, great or small. Nevertheless, please tell us now, b
Meletus, how is it you say I corrupt the young? Or is it absolutely clear, from the indictment you wrote, that it's by teaching them not to acknowledge the gods the city acknowledges, but new daimonic activities instead? Isn't that what you say I corrupt them by teaching?

I most emphatically do say that.

Then, in the name of those very gods we're now discussing, Meletus, speak yet more clearly, both for my sake and for that of these gentlemen. You see, I'm unable to tell what you mean. Is it that I teach c
people to acknowledge that some gods exist—so that I, then, acknowledge their existence myself and am not an out-and-out atheist and am not guilty of that—yet not, of course, the very ones acknowledged by the city, but different ones? Is that what you're charging me with, that they're different ones? Or are you saying that I myself don't acknowledge any gods at all, and that that's what I teach to others?

That's what I mean, that you don't acknowledge any gods at all.

You're a strange fellow, Meletus! What makes you say that? Do I not even acknowledge that the sun d
and the moon are gods, then, as other men do?

No, by Zeus, gentlemen of the jury, he doesn't, since he says that the sun's a stone and the moon earth.

My dear Meletus, do you think it's Anaxagoras[24] you're accusing? Are you that contemptuous of the jury? Do you think they're so illiterate that they don't know that the books of Anaxagoras of Clazomenae are full of such arguments? And, in particular, do young people learn these views from me, views they can occasionally acquire in the Orchestra[25] for a *e* drachma at most and that they'd ridicule Socrates for pretending were his own—especially as they're so strange? In the name of Zeus, is that really how I seem to you? Do I acknowledge the existence of no god at all?

No indeed, by Zeus, none at all.

You aren't at all convincing, Meletus, not even, it seems to me, to yourself. You see, men of Athens, this fellow seems very arrogant and intemperate to me and to have written this indictment simply out of some sort of arrogance, intemperance, and youthful rashness. Indeed, he seems to have composed a sort *27a* of riddle in order to test me: "Will the so-called wise Socrates recognize that I'm playing around and contradicting myself? Or will I fool him along with the other listeners?" You see, he seems to me to be contradicting himself in his indictment, as if he were to say, "Socrates is guilty of not acknowledging gods, but of acknowledging gods." And that's just childish playing around, isn't it?

Please examine with me, gentlemen, why it seems to me that this is what he's saying. And you, Meletus, answer us. But you, gentlemen, please remember what I asked of you at the beginning: don't create an *b* uproar if I make my arguments in my accustomed manner.

Is there anyone, Meletus, who acknowledges that human activities exist but doesn't acknowledge human beings? Make him answer, gentlemen, and don't let him make one protest after another. Is there anyone who doesn't acknowledge horses but does acknowledge equine activities? Or who doesn't acknowledge that musicians[26] exist but does acknowledge musical activities? There's no one, best of men—if you don't want to answer, I must answer for you and for the others here. But at least answer my next question. Is there anyone who acknowledges the existence of daimonic activities but doesn't acknowledge daimons? *c*

No, there isn't.

How good of you to answer, if reluctantly and when compelled to by these gentlemen. Well then, you say that I acknowledge daimonic activities, whether new or familiar, and teach about them. But then, on your account, I do at any rate acknowledge daimonic activities, and to this you've sworn in your indictment against me. However, if I acknowledge daimonic activities, surely it's absolutely necessary that I acknowledge daimons. Isn't that so? Yes, it is—I assume you agree, since you don't answer. But don't we believe that daimons are either gods or, at any rate, children of gods? Yes or no? *d*

Of course.

Then, if indeed I do believe in daimons, as you're saying, and if daimons are gods of some sort, that's precisely what I meant when I said that you're presenting us with a riddle and playing around: you're saying that I don't believe in gods and, on the contrary, that I do believe in gods, since in fact I do at least believe in daimons. But if, on the other hand, daimons are children of gods, some sort of bastard offspring of a nymph, or of whomever else tradition says each one is the child, what man could possibly believe that children of gods exist, but not gods? That would be just as unreasonable as believing in the children of horses and asses—namely, mules—while not believing in the existence of horses and asses. *e*

Well then, Meletus, you must have written these things to test us or because you were at a loss about what genuine injustice to charge me with. There's no conceivable way you could persuade any man with even the slightest intelligence that the same person believes in both daimonic activities and gods, and,

24. [Anaxogoras of Clazomenae (c. 500–428 B.C.E.) settled in Athens (c. 456 B.C.E.) where he remained until he fled to Lampsacus to escape indictment for impiety (c. 436 B.C.E.). He was a friend of the great Athenian statesman Pericles, and the indictment may have been motivated at least in part by political hostility to the latter. Anaxagoras accorded a fundamental cosmological role to (divine) Mind.]

25. [The Orchestra was part of the marketplace (*agora*) in Athens.]

26. [Literally, aulos players. The aulos was a reed instrument rather like an oboe.]

on the contrary, that this same person believes neither
28a in daimons, nor in gods, nor in heroes.[27]

In fact, then, men of Athens, it doesn't seem to me to require a long defense to show that I'm not guilty of the charges in Meletus' indictment, but what I've said is sufficient. But what I was also saying earlier, that much hostility has arisen against me and among many people—you may be sure that's true. And *it's* what will convict me, if I am convicted: not Meletus or Anytus, but the slander and malice of many people. It has certainly convicted many other good men as well, and I imagine it will do so again. There's no
b danger it will stop with me.

But perhaps someone may say, "Aren't you ashamed, Socrates, to have engaged in the sort of occupation that has now put you at risk of death?" I, however, would be right to reply to him, "You're not thinking straight, sir, if you think that a man who's any use at all should give any opposing weight to the risk of living or dying, instead of looking to this alone whenever he does anything: whether his actions are just or unjust, the deeds of a good or bad man. You
c see, on your account, all those demigods who died on the plain of Troy were inferior people, especially the son of Thetis, who was so contemptuous of danger when the alternative was something shameful.[28] When he was eager to kill Hector, his mother, since she was a goddess, spoke to him, I think, in some such words as these: 'My child, if you avenge the death of your friend Patroclus and slay Hector, you will die yourself immediately,' so the poem goes, 'as your death is fated to follow next after Hector's.' But though he heard that, he was contemptuous of death and danger, for he was far more afraid of living as a bad man and of failing to avenge his friends: 'Let me
d die immediately, then,' it continues, 'once I've given the wrongdoer his just deserts,[29] so that I do not remain here by the curved ships, a laughingstock and a burden upon the earth.' Do you really suppose he gave a thought to death or danger?"

You see, men of Athens, this is the truth of the matter: Wherever someone has stationed himself because he thinks it best, or wherever he's been stationed by his commander, there, it seems to me, he should remain, steadfast in danger, taking no account at all of death or of anything else, in comparison to what's shameful. I'd therefore have been acting scandalously, men of Athens, if, when I'd been stationed in Potidea, Amphipolis, e
or Delium[30] by the leaders you had elected to lead me, I had, like many another, remained where they'd stationed me and run the risk of death. But if, when the god stationed me here, as I became thoroughly convinced he did, to live practicing philosophy, examining myself and others, I had—for fear of death or anything else—abandoned my station. 29a

That would have been scandalous, and someone might have rightly and justly brought me to court for not acknowledging that gods exist, by disobeying the oracle, fearing death, and thinking I was wise when I wasn't. You see, fearing death, gentlemen, is nothing other than thinking one is wise when one isn't, since it's thinking one knows what one doesn't know. I mean, no one knows whether death may not be the greatest of all goods for people, but they fear it as if they knew for certain that it's the worst thing of all. Yet surely this is the most blameworthy ignorance of b
thinking one knows what one doesn't know. But I, gentlemen, may perhaps differ from most people by just this much in this matter too. And if I really were to claim to be wiser than anyone in any way, it would be in this: that as I don't have adequate knowledge about things in Hades, so too I don't think that I have knowledge. To act unjustly, on the other hand, to disobey someone better than oneself, whether god or man, that I do know to be bad and shameful. In any case, I'll never fear or avoid things that may for all I know be good more than things I know are bad.

Suppose, then, you're prepared to let me go now and to disobey Anytus, who said I shouldn't have been c
brought to court at all,[31] but that since I had been

27. [Heroes are demigods (28c2), children of gods and mortals, whose existence therefore entails the existence of gods. Hence someone who denies the existence of gods denies that of heroes too.]

28. [Thetis' son, born of a mortal father, Peleus, and hence a demigod, is Achilles.]

29. ["Once I've given . . . deserts" is a Socratic addition to Homer's text.]

30. [Three battles in the Peloponnesian War between Athens and its allies and Sparta and its allies.]

31. [Anytus presumably thought that Socrates would exile himself to escape trial, as Anaxagoras had done.]

brought to court, you had no alternative but to put me to death because, as he stated before you, if I were acquitted, soon your sons would all be entirely corrupted by following Socrates' teachings. Suppose, confronted with that claim, you were to say to me, "Socrates, we will not obey Anytus this time. Instead, we are prepared to let you go. But on the following condition: that you spend no more time on this investigation and don't practice philosophy, and if you're caught doing so, you'll die." Well, as I just said, if
d you were to let me go on these terms, I'd reply to you, "I've the utmost respect and affection for you, men of Athens, but I'll obey the god rather than you, and as long as I draw breath and am able, I won't give up practicing philosophy, exhorting you and also showing the way to any of you I ever happen to meet, saying just the sorts of things I'm accustomed to say:

> My excellent man, you're an Athenian, you belong to the greatest city, renowned for its wisdom and strength; are you not ashamed that you take care to acquire as much wealth as possible—and reputation and honor—but that
> *e* about wisdom and truth, about how your soul may be in the best possible condition, you take neither care nor thought?

Then, if one of you disagrees and says that he *does* care, I won't let him go away immediately, but I'll question, examine, and test him. And if he doesn't seem to me to possess virtue, though he claims he does, I'll reproach him, saying that he treats the most
30a important things as having the least value, and inferior ones as having more. This I will do for anyone I meet, young or old, alien or fellow citizen—but especially for you, my fellow citizens, since you're closer kin to me. This, you may be sure, is what the god orders me to do. And I believe that no greater good for you has ever come about in the city than my service to the god. You see, I do nothing else except go around trying to persuade you, both young and old alike, not to care about your bodies or your money as intensely
b as about how your soul may be in the best possible condition. I say,

> It's not from wealth that virtue comes, but from virtue comes money, and all the other things that are good for human beings, both in private and in public life.

Now if by saying this, I'm corrupting the young, *this* is what you'd have to think to be harmful. But if anyone claims I say something other than this, he's talking nonsense."

"It's in that light," I want to say, "men of Athens, that you should obey Anytus or not, and let me go or not—knowing that I wouldn't act in any other way, not even if I were to die many times over." *c*

Don't create an uproar, men of Athens. Instead, please abide by my request not to create an uproar at what I say, but to listen. For I think it will profit you to listen. You see, I'm certainly going to say some further things to you at which you may perhaps exclaim—but by no means do so.

You may be sure that if you put me to death—a man of the sort I said I was just now—you won't harm me more than you harm yourselves. Certainly, Meletus or Anytus couldn't harm me in any way: that's not possible. For I don't think it's lawful for a better man to be harmed by a worse. He may, of *d*
course, kill me, or perhaps banish or disenfranchise me. And these *he* believes to be very bad things, and others no doubt agree. But *I* don't believe this. Rather, I believe that doing what he's doing now—attempting to kill a man unjustly—is far worse.

So, men of Athens, I'm far from pleading in my own defense now, as might be supposed. Instead, I'm pleading in yours, so that you don't commit a great wrong against the god's gift to you by condemning me. If you put me to death, you won't easily find *e*
another like me. For, even if it seems ridiculous to say so, I've literally been attached to the city, as if to a large thoroughbred horse that was somewhat sluggish because of its size and needed to be awakened by some sort of gadfly. It's as just such a gadfly, it seems to me, that the god has attached me to the city—one that awakens, cajoles, and reproaches each and every one of you and never stops alighting everywhere on you the whole day. You won't easily find another like *31a*
that, gentlemen. So if you obey me, you'll spare my life. But perhaps you'll be resentful, like people awakened from a doze, and slap at me. If you obey Anytus, you might easily kill me. Then you might spend

the rest of your lives asleep, unless the god, in his compassion for you, were to send you someone else.

That I am indeed the sort of person to be given as a gift to the city by the god, you may recognize from this: it doesn't seem a merely human matter—does
b it?—for me to have neglected all my own affairs and to have put up with this neglect of my domestic life for so many years now, but always to have minded your business, by visiting each of you in private, like a father or elder brother, to persuade you to care about virtue. Of course, if I were getting anything out of it or if I were being paid for giving this advice, my conduct would be intelligible. But, as it is, you can plainly see for yourselves that my accusers, who so shamelessly accused me of everything else, couldn't bring themselves to be so utterly shameless as to call a witness to say that I ever
c once accepted or asked for payment. In fact, it's *I* who can call what I think is a sufficient witness that I'm telling the truth—my poverty.

But perhaps it may seem strange that I, of all people, give this advice by going around and minding other people's business in private, yet do not venture to go before your Assembly and give advice to the city in public. The reason for that, however, is one you've heard me give many times and in many places: A divine and daimonic thing comes to me—the very thing Meletus made mocking allusion to in the indict-
d ment he wrote. It's something that began happening to me in childhood: a sort of voice comes, which, whenever it does come, always holds me back from what I'm about to do but never urges me forward. *It* is what opposes my engaging in politics—and to me, at least, its opposition seems entirely right. For you may be sure, men of Athens, that if I'd tried to engage in politics I'd have perished long ago and have benefited neither you nor myself.

e Please don't resent me if I tell you the truth. The fact is that no man will be spared by you or by any other multitude of people if he genuinely opposes a lot of unjust and unlawful actions and tries to prevent them from happening in the city. On the contrary,
32a anyone who really fights for what's just, if indeed he's going to survive for even a short time, must act privately not publicly.

I'll present substantial evidence of that—not words, but what you value, deeds. Listen, then, to what happened to me, so you may see that fear of death wouldn't lead me to submit to a single person contrary to what's just, not even if I were to perish at once for not submitting. The things I'll tell you are of a vulgar sort commonly heard in the law courts, but they're true nonetheless.

You see, men of Athens, I never held any other public office in the city, but I've served on the Council. And it happened that my own tribe, Antiochis, b was presiding[32] when you wanted to try the ten generals—the ones who failed to rescue the survivors of the naval battle—as a group.[33] That was unlawful, as you all came to recognize at a later time. On that occasion, I was the only presiding member opposed to your doing something illegal, and I voted against you. And though the orators[34] were ready to lay information against me and have me summarily arrested, and you were shouting and urging them on, I thought that I should face danger on the side of law and justice, rather than go along with you for fear of c imprisonment or death when your proposals were unjust.

This happened when the city was still under democratic rule. But later, when the oligarchy had come to power, it happened once more. The Thirty[35] sum-

32. [A *phulē* is not a tribe in our sense, but an administrative division of the citizen body, most probably of military origin. The presiding committee of the Council consisted of the fifty members of one of the ten tribes, selected by lot to serve for one-tenth of the year. It arranged meetings of the Council and Assembly, received envoys and letters to the state, and conducted other routine business.]

33. [After the naval battle at Arginusae on the Ionian coast of Asia Minor (406 B.C.E.), ten Athenian generals were indicted for failing to rescue survivors and pick up the bodies of the dead. Both Council and Assembly voted to try them as a group, which was against Athenian law.]

34. [The politicians supporting the mass trial.]

35. [After Athens was defeated by Sparta in 404 B.C.E., its democratic government was replaced by a brutal oligarchy, the so-called Thirty Tyrants, which survived barely eight months. During that time it allegedly executed some fifteen hundred people, and many more went into exile to escape. Two members of the Thirty—Critias and Charmides—were relatives of Plato's and appear as Socratic interlocutors in the dialogues named

moned me and four others to the Tholus[36] and ordered us to arrest Leon of Salamis[37] and bring him from Salamis to die. They gave many such orders to many other people too, of course, since they wanted to implicate as many as possible in their crimes. On *that* occasion, however, I showed once again not by
d words but by deeds that I couldn't care less about death—if that isn't putting it too bluntly—but that all I care about is not doing anything unjust or impious. You see, that government, powerful though it was, didn't frighten me into unjust action: when we came out of the Tholus, the other four went to Salamis and arrested Leon, whereas I left and went home. I might have died for that if the government hadn't fallen shortly afterward.

There are many witnesses who will testify before
e you about these events.

Do you imagine, then, that I'd have survived all these years if I'd been regularly active in public affairs, and had come to the aid of justice like a good man, and regarded that as most important, as one should? Far from it, men of Athens, and neither would any
33*a* other man. But throughout my entire life, in any public activities I may have engaged in, it was evident I was the sort of person—and in private life I was the same—who never agreed to anything with anyone contrary to justice, whether with others or with those who my slanderers say are my students. In fact, I've never been anyone's teacher at any time. But if anyone, whether young or old, wanted to listen to me while I was talking and performing my own task, I never begrudged that to him. Neither do I engage in conversation only when I receive a fee and not when
b I don't. Rather, I offer myself for questioning to rich and poor alike, or, if someone prefers, he may listen to me and answer my questions. And if any one of these turned out well, or did not do so, I can't justly be held responsible, since I never at any time promised any of them that they'd learn anything from me or that I'd teach them. And if anyone says that he learned something from me or heard something in private that all the others didn't also hear, you may be sure he isn't telling the truth.

Why, then, you may ask, do some people enjoy spending so much time with me? You've heard the answer, men of Athens. I told you the whole truth: *c* it's because they enjoy listening to people being examined who think they're wise but aren't. For it's not unpleasant. In my case, however, it's something, you may take it from me, I've been ordered to do by the god, in both oracles and dreams, and in every other way that divine providence ever ordered any man to do anything at all.

All these things, men of Athens, are both true and easily tested. I mean, if I really do corrupt the young or have corrupted them in the past, surely if any of *d* them had recognized when they became older that I'd given them bad advice at some point in their youth, they'd now have come forward themselves to accuse me and seek redress. Or else, if they weren't willing to come themselves, some of their family members—fathers, brothers, or other relatives—if indeed their kinsmen had suffered any harm from me—would remember it now and seek redress.

In any case, I see many of these people present here: first of all, there's Crito, my contemporary and fellow demesman, the father of Critobulus here;[38] then there's Lysanius of Sphettus, father of Aeschines *e* here;[39] next, there's Epigenes' father, Antiphon of Cephisia here.[40] Then there are others whose brothers

after them. Socrates' association with them is often thought to have been one of the things that led to his indictment.]

36. [The Tholus was a dome-shaped building, also called the Skias ("parasol"). The presiding committee of the Council took its meals there.]

37. [Leon is otherwise unknown. The episode, however, is widely reported.]

38. [Crito was a well-off farm owner, able and willing to help his friends financially. His relationship with Socrates is that of an old close friend and neighbor, who is also to some degree a patron or benefactor and adviser on practical matters. Critobulus, his son, was also a member of Socrates' circle and was present at his death.]

39. [Aeschines of Sphettus (fourth-century B.C.E.) was a devoted follower of Socrates, present at his death. He taught oratory and wrote both speeches for the law courts and Socratic dialogues, only fragments of which are extant. His father is otherwise unknown.]

40. [Epigenes was present at Socrates' death and was a member of his circle. Neither he nor his father are otherwise known.]

have spent time in this way: Nicostratus, son of Theozotides,[41] brother of Theodotus—by the way, Theodotus is dead, so that Nicostratus is at any rate not being held back by him; and Paralius here, son of Demodocus, whose brother was Theages;[42] and
34a there's Adeimantus, the son of Ariston, whose brother is Plato here,[43] and Aeantodorus, whose brother here is Apollodorus.[44] And there are many others I could mention, some of whom Meletus most certainly ought to have called as witnesses in the course of his own speech. If he forgot to do so, let him call them now—I yield time to him. Let him tell us if he has any such witness. No, it's entirely the opposite, gentlemen. You'll find that they're all prepared to come to my aid, their corruptor, the one who, Meletus and Anytus claim, is doing harm to their families. Of course, the corrupted ones themselves might indeed
b have reason to come to my aid. But the *un*corrupted ones, their relatives, who are older men now, what reason could they possibly have to support me, other than the right and just one: that they know perfectly well that Meletus is lying, whereas I am telling the truth?

Well then, gentlemen, those, and perhaps other similar things, are pretty much all I have to say in my defense. But perhaps one of you might be resentful when he recalls his own behavior. Perhaps when he
c was contesting even a lesser charge than this charge, he positively entreated the jurors with copious tears, bringing forward his children and many other relatives and friends as well, in order to arouse as much pity as possible. And then he finds that I'll do none of these things, not even when I'm facing what might be considered the ultimate danger. Perhaps someone with these thoughts might feel more willful where I'm concerned and, made angry by these very same thoughts, cast his vote in anger. Well, if there's someone like that among you—of course, I don't expect d
there to be, but *if* there is—I think it appropriate for me to answer him as follows: "I do indeed have relatives, my excellent man. As Homer puts it,[45] I too 'wasn't born from oak or from rock' but from human parents. And so I do have relatives, sons too, men of Athens, three of them, one already a young man while two are still children. Nonetheless, I won't bring any of them forward here and then entreat you to vote for my acquittal."

Why, you may ask, will I do none of these things? Not because I'm willful, men of Athens, or want to dishonor you—whether I'm boldly facing death or e
not is a separate story. The point has to do with reputation—yours and mine and that of the entire city: it doesn't seem noble to me to do these things, especially at my age and with my reputation—for whether truly or falsely, it's firmly believed in any case that Socrates is superior to the majority of people 35a
in some way. Therefore, if those of *you* who are believed to be superior—in either wisdom or courage or any other virtue whatever—behave like that, it would be shameful.

I've often seen people of this sort when they're on trial: they're thought to be someone, yet they do astonishing things—as if they imagined they'd suffer something terrible if they died and would be immortal if only you didn't kill them. People like that seem to me to bring such shame to the city that any foreigner might well suppose that those among the Athenians who are superior in virtue—the ones they select from b
among themselves for political office and other positions of honor—are no better than women. I say this, men of Athens, because none of us who are in any way whatever thought to be someone should behave like that, nor, if we attempt to do so, should you allow it. On the contrary, you should make it clear you're far more likely to convict someone who makes the city despicable by staging these pathetic scenes than someone who minds his behavior.

41. [Theozotides introduced two important democratic reforms after the fall of the Thirty Tyrants. His sons are otherwise unknown.]

42. [Otherwise largely unknown. Spurious works in the Platonic canon are named after Theages and Demodocus.]

43. [This is one of three places in his dialogues that Plato mentions himself—38b6 and *Phaedo* 59b10 are the others. Adeimantus, with his brother Glaucon, plays an important role in the *Republic*.]

44. [Apollodorus, an enthusiastic follower of Socrates, given to emotion is the narrator in the *Symposium*. His brother is otherwise unknown.]

45. [Penelope is speaking to her husband, Odysseus, whom she hasn't yet recognized.]

Reputation aside, gentlemen, it doesn't seem just to me to entreat the jury—nor to be acquitted by
c entreating it—but rather to inform it and persuade it. After all, a juror doesn't sit in order to grant justice as a favor, but to decide where justice lies. And he has sworn on oath not that he'll favor whomever he pleases, but that he'll judge according to law.[46] We shouldn't accustom you to breaking your oath, then, nor should you become accustomed to doing so—neither of us would be doing something holy if we did. Hence don't expect me, men of Athens, to act toward you in ways I consider to be neither noble,
d nor just, nor pious—most especially, by Zeus, when I'm being prosecuted for *impiety* by Meletus here. You see, if I tried to persuade and to force you by entreaties, after you've sworn an oath, I clearly would be teaching you not to believe in the existence of gods, and my defense would literally convict me of not acknowledging gods. But that's far from being the case: I do acknowledge them, men of Athens, as none of my accusers does. I turn it over to you and to the god to judge me in whatever way will be best for me and for yourselves.[47]

• • •

There are many reasons, men of Athens, why I'm not
e resentful at this outcome—that you voted to convict
36a me—and this outcome wasn't unexpected by me. I'm much more surprised at the number of votes cast on each side: I didn't think that the decision would be by so few votes but by a great many. Yet now, it seems, that if a mere thirty votes had been cast differently, I'd have been acquitted.[48] Or rather, it seems to me that where Meletus is concerned I've been acquitted even as things stand. And not merely acquitted. On the contrary, one thing at least is clear to everyone: if Anytus had not come forward with Lycon to accuse me, Meletus would have been fined a thousand drachmas, since he wouldn't have received a fifth of the b votes.[49]

But be that as it may, the man demands the death penalty for me. Well then, what counterpenalty should I now propose to you, men of Athens? Or is it clear that it's whatever I deserve? What then should it be? What do I deserve to suffer or pay just because I didn't mind my own business throughout my life? Because I didn't care about the things most people care about—making money, managing an estate, or being a general, a popular leader, or holding some other political office, or joining the cabals and factions that come to exist in a city—but thought myself too honest, in truth, to engage in these things and survive? c Because I didn't engage in things, if engaging in them was going to benefit neither you nor myself, but instead went to each of you privately and tried to perform what I claim is the greatest benefaction? That was what I did. I tried to persuade each of you to care first not about any of his possessions, but about himself and how he'll become best and wisest; and not primarily about the city's possessions, but about the city itself; and to care about all other things in the same way. d

What, then, do I deserve to suffer for being such a man? Something good, men of Athens, if I'm indeed to propose a penalty that I truly deserve. Yes, and the sort of good thing, too, that would be appropriate for me. What, then, is appropriate for a poor man who is a public benefactor and needs to have the leisure to exhort you? Nothing could be more appropriate,

46. [The gist of this oath, which may be pieced together from references such as this one, was as follows: "I will judge according to the laws and decrees of Athens, and I will decide matters about which there are no laws by the most just opinion."]

47. [The jury returns a guilty verdict. Meletus proposes the death penalty. The law permits Socrates to propose an alternative, or counterpenalty, which he proceeds to do in the next part of his defense. Later members of the jury will choose whichever of the penalty and the counterpenalty they deem the more appropriate punishment.]

48. [A jury of 500 (or 501) was usual for an indictment of impiety. It follows that the vote was 280 to 220, since a tied vote resulted in acquittal.]

49. [Socrates is imagining that his accusers received around 90 votes each, or a third of the 280 guilty votes. This is less than the 100 votes that Meletus needed to receive in order to avoid paying the fine to which Socrates refers, which was instituted by law to deter frivolous suits.]

men of Athens, than for such a man to be given free meals in the Prytaneum—much more so for him, at any rate, than for anyone of you who has won a victory at Olympia, whether with a single horse or with a pair or a team of four.[50] You see, he makes you think you're happy, whereas I make you actually happy. Besides, he doesn't need to be sustained in that way, e but I do need it. So if, as justice demands, I must propose a penalty I deserve, that's the penalty I pro- 37a pose: free meals in the Prytaneum.

Now perhaps when I say this, you may think I'm speaking in a quite willful manner—just as when I talked about appeals to pity and supplications. That's not so, men of Athens, rather it's something like this: I'm convinced that I never intentionally do injustice to any man—but I can't get you to share my conviction, because we've talked together a short time. I say this, because if you had a law, as other men in fact do, not to try a capital charge in a single day, but over several, I think you'd be convinced.[51] But as b things stand, it isn't easy to clear myself of huge slanders in a short time.

Since *I'm* convinced that I've done injustice to no one, however, I'm certainly not likely to do myself injustice, to announce that I deserve something bad and to propose a penalty of that sort for myself. Why should I do that? In order not to suffer what Meletus proposes as a penalty for me, when I say that I don't know whether it's a good or a bad thing? As an alternative to that, am I then to choose one of the things I know very well to be bad and propose it? Imprisonment, for example? And why should I live in prison, c enslaved to the regularly appointed officers, the Eleven?[52] All right, a fine with imprisonment until I pay? But in my case the effect would be precisely the one I just now described, since I haven't the means to pay.

Well then, should I propose exile? Perhaps that's what *you'd* propose for me. But I'd certainly have to have an excessive love of life, men of Athens, to be so irrational as to do that. I see that you, my fellow citizens, were unable to tolerate my discourses and discussions but came to find them so burdensome and odious that you're now seeking to get rid of them. d Is it likely, then, that I'll infer that others will find them easy to bear? Far from it, men of Athens. It would be a fine life for me, indeed, a man of my age, to go into exile and spend his life exchanging one city for another, because he's always being expelled. You see, I well know that wherever I go, the young will come to hear me speaking, just as they do here. And if I drive them away, they will themselves persuade their elders to expel me; whereas if I don't drive them away, their fathers and relatives will expel me e because of these same young people.

Now perhaps someone may say, "But by keeping quiet and minding your own business, Socrates, wouldn't it be possible for you to live in exile for us?" This is the very hardest point on which to convince some of you. You see, if I say that to do *that* would be to disobey the god, and that this is why I can't mind my own business, you won't believe me, since you'll suppose I'm being ironical.[53] But again, if I say 38a it's the greatest good for a man to discuss virtue every day, and the other things you've heard me discussing and examining myself and others about, on the grounds that the unexamined life isn't worth living for a human being, you'll believe me even less when I say that. But in fact, things are just as I claim them to be, men of Athens, though it isn't easy to convince you of them. At the same time, I'm not accustomed to thinking that I deserve anything bad. If I had the means, I'd have proposed a fine of as much as I could b afford to pay, since that would have done me no harm at all. But as things stand, I don't have them—unless you want me to propose as much as I'm in fact able to pay. Perhaps I could pay you about a mina of silver. So I propose a fine of that amount.

One moment, men of Athens. Plato here, and Crito, Critobulus, and Apollodorus as well, are urging me to propose thirty minas and saying that they

50. [The Prytaneum, a building on the northeast slope of the Acropolis, was the symbolic center of Athens, where the communal hearth was housed. Guests of the city and victors in the Olympic and other games were given free meals there.]

51. [Sparta had a law of this sort.]

52. [Officials appointed by lot to be in charge of prisons and executions.]

53. [Ancient irony (*eirōneia*) involved not simply meaning the contrary of what one said, but saying it with the intention to deceive.]

themselves will guarantee it.[54] I propose a fine of that amount, therefore, and these men will be sufficient guarantors to you of the silver.

• • •

c For the sake of a little time, men of Athens, you're going to earn from those who wish to denigrate our city both the reputation and the blame for having killed Socrates—that wise man. For those who wish to reproach you will, of course, claim that I'm wise, even if I'm not. In any case, if you'd waited a short time, this would have happened of its own accord. You, of course, see my age, you see that I'm already far along in life and close to death. I'm saying this *d* not to all of you, but to those who voted for the death penalty. And to those same people I also say this: Perhaps you imagine, gentlemen, that I was convicted for lack of the sort of arguments I could have used to convince you, if I'd thought I should do or say anything to escape the penalty. Far from it. I *have* been convicted for a lack—not of arguments, however, but of boldfaced shamelessness and for being unwilling to say the sorts of things to you you'd have been most pleased to hear, with me weeping and wailing, and doing and saying many other things I claim are unworthy of me, but that are the very sorts *e* of things you're used to hearing from everyone else. No, I didn't think then that I should do anything servile because of the danger I faced, and so I don't regret now that I defended myself as I did. I'd far rather die after such a defense than live like that.

You see, whether in a trial or in a war, neither I nor anyone else should contrive to escape death at *39a* all costs. In battle, too, it often becomes clear that one might escape death by throwing down one's weapons and turning to supplicate one's pursuers. And in each sort of danger there are many other ways one can contrive to escape death, if one is shameless enough to do or say anything. The difficult thing, gentlemen, isn't escaping death; escaping villainy is much more difficult, since it runs faster than death. *b* And now I, slow and old as I am, have been overtaken by the slower runner while my accusers, clever and sharp-witted as they are, have been overtaken by the faster one—vice. And now I take my leave, convicted by you of a capital crime, whereas they stand forever convicted by the truth of wickedness and injustice. And just as I accept my penalty, so must they. Perhaps, things *had* to turn out this way, and I suppose it's good they have.

Next, I want to make a prophecy to those who con- *c* victed me. Indeed, I'm now at the point at which men prophesy most—when they're about to die. I say to you men who condemned me to death that as soon as I'm dead vengeance will come upon you, and it will be much harsher, by Zeus, than the vengeance you take in killing me. You did this now in the belief that you'll escape giving an account of your lives. But I say that quite the opposite will happen to you. There will be more people to test you, whom I now restrain, *d* though you didn't notice my doing so. And they'll be all the harsher on you, since they're younger, and you'll resent it all the more. You see, if you imagine that by killing people you'll prevent anyone from reproaching you for not living in the right way, you're not thinking straight. In fact, to escape is neither possible nor noble. On the contrary, what's best and easiest isn't to put down other people, but to prepare oneself to be the best one can. With that prophecy to those of you who voted to convict me, I take my leave.

However, I'd gladly discuss this result with those who voted for my acquittal while the officers of the court *e* are busy and I'm not yet on my way to the place where I must die. Please stay with me, gentlemen, just for that short time. After all, there's nothing to prevent us from having a talk with one another while it's still in our power. To you whom I regard as friends I'm willing to show the meaning of what has just now *40a* happened to me. You see, gentlemen of the jury—for in calling *you* "jurors" I no doubt use the term correctly—an amazing thing has happened to me. In previous times, the usual prophecies of my daimonic sign were always very frequent, opposing me even on trivial matters, if I was about do something that wasn't right. Now, however, something has happened to me, as you can see for yourselves, that one might think to be, and that's generally regarded as being, the worst

54. [Thirty minas (three thousand silver drachmas) was almost ten years' salary for someone engaged in public works.]

of all bad things. Yet the god's sign didn't oppose me
b when I left home this morning, or when I came up here to the law court, or anywhere in my speech when I was about to say something, even though in other discussions it has often stopped me in the middle of what I was saying. Now, however, where this affair is concerned, it has opposed me in nothing I either said or did.

What, then, do I suppose is the explanation for that? I'll tell you. You see, it's likely that what has happened to me is a good thing and that those of you who suppose death to be bad make an incorrect
c supposition. I've strong evidence of this, since there's no way my usual sign would have failed to oppose me, if I weren't about to achieve something good.

But let's bear in mind that the following is also a strong reason to hope that death may be something good. Being dead is one of two things: either the dead are nothing, as it were, and have no awareness whatsoever of anything at all; or else, as we're told, it's some sort of change, a migration of the soul from here to another place. Now, if there's in fact no awareness, but it's like sleep—the kind in which the sleeper has no dream whatsoever—then death would be an
d amazing advantage. For I imagine that if someone had to pick a night in which he slept so soundly that he didn't even dream and had to compare all the other nights and days of his life with that one, and then, having considered the matter, had to say how many days or nights of his life he had spent better or more pleasantly than that night—I imagine that not just some private individual, but even the great king,[55]
e would find them easy to count compared to the other days and nights. Well, if death's like that, *I* say it's an advantage, since, in that case, the whole of time would seem no longer than a single night.

On the other hand, if death's a sort of journey from here to another place, and if what we're told is true, and all who've died are indeed there, what could be
41a a greater good than that, gentlemen of the jury? If on arriving in Hades and leaving behind the people who claim to be jurors here, one's going to find those who are truly jurors or judges, the very ones who are said to sit in judgment there too—Minos, Rhadamanthys, Aeachus, Triptolemus,[56] and all the other demigods who were just in their own lifetimes—would the journey be a wretched one?

Or again, what would any one of you not give to talk to Orpheus and Museus, Hesiod and Homer?[57] I'd be willing to die many times over, if that were true. You see, for myself, at any rate, spending time there would be amazing: when I met Palamedes[58] or b
Ajax, the son of Telemon,[59] or anyone else of old who died because of an unjust verdict, I could compare my own experience with theirs—as I suppose it wouldn't be unpleasing to do. And in particular, the most important thing: I could spend time examining and searching people there, just as I do here, to find out who among them is wise, and who thinks he is, but isn't.

55. [The king of Persia, whose wealth and power made him a popular exemplar of human success and happiness.]

56. [Minos was a legendary king of Crete. He judges among the dead in Hades as he did among the living—though not for wrongs they committed in this life. Rhadamanthys is usually thought to judge not in Hades but in the Isles of the Blessed. Aeachus is the judge and lawgiver of Aegina and an arbiter among the gods. Triptolemus, a hero from Eleusis, had a prominent role in mystery cults.]

57. [Orpheus was a legendary bard and founder of the mystical religion of Orphism. Museus, usually associated with Orpheus, was also a legendary bard. Hesiod, an early Greek poet, is the author of *Theogony* (a work on the genealogy of the gods) and *Works and Days* (a work of practical advice and moral suasion). Homer, the greatest Greek epic poet, is the author of the *Iliad* (which deals with events in the war between the Greeks and the Trojans) and the *Odyssey* (which deals with the adventures of Odysseus during his journey home from the Trojan War).]

58. [Aeschylus, Sophocles, and Euripides all wrote tragedies named after him, and Gorgias wrote a defense of him. Odysseus hid gold in his tent, forged a letter that compromised him, accused him of treason, and had him stoned to death.]

59. [Ajax was cheated of the armor of Achilles in competition with Odysseus. Driven mad, as a result of this injustice, he committed suicide. Sophocles' *Ajax* deals with these events.]

What wouldn't one give, gentlemen of the jury, to be able to examine the leader of the great expedition against Troy,[60] or Odysseus,[61] or
c Sisyphus,[62] or countless other men and women one could mention? To talk to them there, to associate with them and examine them, wouldn't that be inconceivable happiness? In any case, the people there certainly don't kill one for doing it. For if what we're told is true, the people there are both happier in all other respects than the people here and also deathless for the remainder of time.

But you too, gentlemen of the jury, should be of good hope in the face of death, and bear in mind this single truth: nothing bad can happen to a good
d man, whether in life or in death, nor are the gods unconcerned about his troubles. What has happened to me hasn't happened by chance; rather, it's clear to me that to die now and escape my troubles was a better thing for me. It was for this very reason that my sign never opposed me. And so, for my part, I'm not at all angry with those who voted to condemn me or with my accusers. And yet this wasn't what they had in mind when they were condemning and accusing me. No, they thought to harm me—and for that they deserve to be blamed.

This small favor, however, I ask of them. When *e* my sons come of age, gentlemen, punish them by harassing them in the very same way that I harassed you, if they seem to you to take care of wealth or anything before virtue, if they think they're someone when they're no one. Reproach them, just as I reproached you: tell them that they don't care for the things they should and think they're someone when they're worth nothing. If you will do that, I'll have received my own just deserts from you, as will my *42a* sons.

But now it's time to leave, I to die and you to live. Which of us goes to the better thing, however, is unclear to everyone except the god.

60. [Agamemnon, king of Mycenae.]

61. [Odysseus is a legendary hero of the Trojan War, prominent in Homer's *Iliad* and central to his *Odyssey*. He was as famous for his cunning as for his skill in battle.]

62. [Sisyphus is a legendary king and founder of Corinth. A trickster who tried to cheat death, he was punished in Hades by having to roll a boulder to the top of a hill, only to have to do so over and over again, since it always rolled back down.]

Crito

Socrates: Why have you come at this hour,
43a Crito? Isn't it still early?

Crito: It is indeed.

Socrates: About what time?

Crito: Just before dawn.

Socrates: I'm surprised the prison warden was willing to let you in.

Crito: He knows me by now, Socrates, I come here so often. And besides I've done him a good turn.

Socrates: Have you just arrived or have you been here for a while?

Crito: For quite a while.

Socrates: Then why didn't you wake me right
b away, instead of sitting there in silence?

Crito: In the name of Zeus, Socrates, I wouldn't do that! I only wish I weren't so sleepless and distressed myself. I've been amazed all this time to see how peacefully you were sleeping, and I deliberately kept from waking you, so that you could pass the time as pleasantly as possible. In the past—indeed, throughout my entire life—I've often counted you happy in your disposition, but never more so than in this present misfortune. You bear it so easily and calmly.

Socrates: Well, Crito, it would be an error for someone of my age to complain when the time has come when he must die.

c Crito: Other people get overtaken by such misfortunes too, Socrates, but their age doesn't prevent them in the least from complaining about their fate.

Socrates: That's right. But tell me, why *have* you come so early?

Crito: I bring bad news, Socrates. Not bad in your view, it seems to me, but bad and hard in mine and that of all your friends—and hardest of all, I think, for me to bear.

Socrates: What news is that? Or has the ship returned from Delos, at whose return I must die?[1] d

Crito: No, it hasn't returned *yet*, but I think it will arrive today, judging from the reports of people who've come from Sunium,[2] where they left it. It's clear from these reports that it will arrive today. And so tomorrow, Socrates, you must end your life.

Socrates: I pray that it may be for the best, Crito. If it pleases the gods, let it be so. All the same, I don't think it will arrive today.

Crito: What evidence have you for that? 44a

Socrates: I'll tell you. I must die on the day after the ship arrives.

Crito: That's what the authorities say, at least.

Socrates: Then I don't think it will arrive today, but tomorrow. My evidence for this comes from a dream I had in the night a short while ago. So it looks as though you chose the right time not to wake me.

Crito: What was your dream?

Socrates: I thought a beautiful, graceful woman came to me, robed in white. She called me and said, "Socrates, you will arrive 'in fertile Phthia' on the b third day."[3]

1. [Legend had it that Athens was once obliged to send King Minos of Crete an annual tribute of seven young men and seven maidens to be given to the Minotaur—a monster, half man and half bull, that he kept in a labyrinth. With the help of a thread given to him by Minos' daughter Ariadne, Theseus, a legendary king of Athens, made his way through the labyrinth, killed the Minotaur, and escaped, thus ending the tribute. Each year, Athens commemorated these events by sending a mission of thanks to the sanctuary of Apollo on the sacred island of Delos. No executions could take place in Athens until it returned from its voyage.—C.D.C.R.]

2. [A headland on the southeast coast of Attica, about 30 miles from Athens.]

3. [The quotation is from Homer, *Iliad* IX.363. Agamemnon, leader of the Greek forces, has insulted Achilles by taking back his war prize, Briseis. Achilles

CRITO: What a strange dream, Socrates.

SOCRATES: Yet its meaning is quite clear, Crito—at least, it seems so to me.

CRITO: All too clear, apparently. But look here, Socrates, it's still not too late to take my advice and save yourself. You see, if you die, I won't just suffer a single misfortune. On the contrary, not only will I lose a friend the like of whom I'll never find again, but, in addition, many people, who don't know you or me well, will think that I didn't care about you, since I could have saved you if I'd been willing to
c spend the money. And indeed what reputation could be more shameful than being thought to value money more than friends? For the majority of people won't believe that it was you yourself who refused to leave this place, though we were urging you to do so.

SOCRATES: But my dear Crito, why should we care so much about what the majority think? After all, the most decent ones, who are worthier of consideration, will believe that matters were handled in just the way they were in fact handled.

d CRITO: But you can surely see, Socrates, that one should care about majority opinion too. Your present situation itself shows clearly that the majority can do not just minor harms but the very worst things to someone who's been slandered in front of them.

SOCRATES: I only wish, Crito, that the majority *could* do the very worst things, then they might also be able to do the very best ones—and everything would be fine. But as it is, they can do neither, since they can't make someone either wise or unwise—the effects *they* produce are really the result of chance.

CRITO: Well, if you say so. But tell me this,
e Socrates. You're not worried about me and your other friends, are you—fearing that if you escaped, the informers would give us trouble, and that we might be forced to give up all our property, pay heavy fines, or even suffer some further penalty? If you're afraid of anything like that, dismiss it from your mind. After all, we're surely justified in running this risk to save *45a* you or an even greater one if need be. Now take my advice, and don't refuse me.

SOCRATES: Yes, those things do worry me, Crito, among many others.

CRITO: Then don't fear them: the sum of money that certain people I know will accept in order to save you and get you out of here isn't that large. Next, don't you see how cheap these informers are and how little money is needed to deal with them? My own wealth's available to you, and it, I think, should be *b* enough. Next, even if your concern for me makes you unwilling to spend my money, there are foreign visitors here who are willing to spend theirs. One of them, Simmias of Thebes, has even brought enough money for this very purpose; and Cebes, too, and a good many others are also willing to contribute.[4] So, as I say, don't let these fears make you hesitate to save yourself. And don't let it trouble you, as you were saying in court, that if you went into exile you wouldn't know what to do with yourself. You see, wherever else you may go, there'll be people to wel- *c* come you. If you want to go to Thessaly, I have friends there who'll make much of you and protect you, so that no one in Thessaly will give you any trouble.[5]

Besides, Socrates, I think that what you're doing isn't just: throwing away your life, when you could save it, and hastening the very sort of fate for yourself that your enemies would hasten—and indeed have hastened—in their wish to destroy you. What's more I think you're also betraying those sons of yours by going away and deserting them when you could bring them up and educate them. So far as you're con- *d* cerned, they must take their chances in life; and the chance they'll get, in all likelihood, is just the one that orphans usually get when they lose their parents. No. Either one shouldn't have children at all, or one ought to see their upbringing and education through

withdraws from the battle, so that the Greeks suffer terrible losses. Agamemnon, realizing his mistake, offers enormous recompense but without coming to apologize in person. In response, Achilles threatens to set sail the next morning, so that with good weather he will arrive at his home "in fertile Phthia" on the third day. The dream means that Socrates' soul will find its home on the third day (counting, as usual among the Greeks, both the first and last member of the series).]

4. [Simmias and Cebes (also from Thebes) were followers of Socrates and serve as his chief interlocutors in *Phaedo*.]

5. [Thessaly is a region in the north of Greece.]

to the end. But you seem to me to be choosing the easiest way out, whereas one should choose whatever a good and brave man would choose—particularly when one claims to have cared about virtue throughout one's life.

I feel ashamed on your behalf and on behalf of myself and your friends. I fear that it's going to seem
e that this whole business of yours has been handled with a certain cowardice on our part. The case was brought to court when it needn't have been brought. Then there was the actual conduct of the trial. And now, to crown it all, this absurd finale to the affair. It's going to seem that we let the opportunity slip because of some vice, such as cowardice, on our part,
46a since we didn't save you nor did you save yourself, although it was quite possible had we been of even the slightest use.

See to it, then, Socrates, that all this doesn't turn out badly and a shameful thing both for you and for us. Come, deliberate—or rather, at this hour it's not a matter of deliberating but of having deliberated already—and only one decision remains. You see, everything must be done this coming night; and if we delay, it will no longer be possible. For all these reasons, Socrates, please take my advice and don't refuse me.

Socrates: My dear Crito, your enthusiasm's
b most valuable, provided it's of the right sort. But if it isn't, the greater it is, the more difficult it will be to deal with. We must therefore examine whether we should do what you advise or not. You see, I'm not the sort of person who's just now for the first time persuaded by nothing within me except the argument that on rational reflection seems best to me; I've *always* been like that. I can't now reject the arguments I stated before just because this misfortune has befallen me. On the contrary, they seem pretty much the same
c to me, and I respect and value the same ones as I did before. So if we have no better ones to offer in the present situation, you can be sure I won't agree with you—not even if the power of the majority to threaten us, as if we were children, with the bogeymen of imprisonment, execution, and confiscation of property were far greater than it is now.

What, then, is the most reasonable way to examine these matters? Suppose we first take up the argument you stated about people's opinions. Is it true or not
d that one should pay attention to some opinions but not to others? Or was it true before I had to die, whereas it's now clear that it was stated idly, for the sake of argument, and is really just childish nonsense? For my part, I'm eager to join you, Crito, in a joint examination of whether this argument will appear any differently to me, now that I'm here, or the same, and of whether we should dismiss it from our minds or be persuaded by it.

It used to be said, I think, by people who thought they were talking sense, that, as I said a moment ago, one should take some people's opinions seriously but e
not others. By the gods, Crito, don't you think that was true? You see, in all human probability, *you* are not going to die tomorrow, and so the present situation won't distort your judgment. Consider, then, don't you 47a
think it's a sound argument that one shouldn't value all the opinions people have, but some and not others, and not those of everyone, but those of some people and not of others? What do you say? Isn't that true?

Crito: It is.

Socrates: And we should value good opinions, but not bad ones?

Crito: Yes.

Socrates: And the good ones are those of wise people and the bad ones those of unwise people?

Crito: Of course.

Socrates: Come then, what of such questions as this? When a man's primarily engaged in physical training, does he pay attention to the praise or blame or opinion of every man or only to those of the one b
man who's a doctor or a trainer?

Crito: Only to those of the one man.

Socrates: Then he should fear the blame and welcome the praise of that one man, but not those of the majority of people.

Crito: Clearly.

Socrates: So his actions and exercises, his eating and drinking, should be guided by the opinion of the one man, the knowledgeable and understanding supervisor, rather than on that of all the rest?

Crito: That's right.

Socrates: Well, then, if he disobeys that one man and sets no value on his opinion or his praises c
but values those of the majority of people who have no understanding, won't something bad happen to him?

Crito: Of course.

SOCRATES: And what is this bad effect? Where does it occur? In what part of the one who disobeys?

CRITO: Clearly, it's in his body, since that's what it destroys.

SOCRATES: That's right. And isn't the same true in other cases, Crito? No need to go through them all, but, in particular, in cases of just and unjust things, shameful and fine ones, good and bad ones—in cases of what we're now deliberating about—is it the opinion of the majority we should follow and
d fear? Or is it the opinion of the one man—if there is one who understands these things—we should respect and fear above all others? On the grounds that, if we don't follow it, we shall seriously damage and maim that part of us which, as we used to say, is made better by what's just but is destroyed by what's unjust. Or is there no truth in that?

CRITO: I certainly think there is, Socrates.

SOCRATES: Come then, suppose we destroy the part of us that is made better by what's healthy but is seriously damaged by what causes disease when we don't follow the opinion of people who have understanding. Would our lives be worth living once it has been seriously damaged? And that part, of course, is
e the body, isn't it?

CRITO: Yes.

SOCRATES: Then are our lives worth living with a wretched, seriously damaged body?

CRITO: Certainly not.

SOCRATES: But our lives *are* worth living when the part of us that's maimed by what's unjust and benefited by what's just is seriously damaged? Or do we consider it—whichever part of us it is to which justice and injustice pertain—to be inferior to the
48a body?

CRITO: Certainly not.

SOCRATES: On the contrary, it's more valuable?

CRITO: Far more.

SOCRATES: Then, my very good friend, we should not give so much thought to what the majority of people will say about us, but think instead of what the person who understands just and unjust things will say—the one man and the truth itself. So your first claim—that we should give thought to the opinion of the majority about what's just, fine, good, and their opposites—isn't right.

"But," someone might say, "the majority can put us to death."

CRITO: That's certainly clear too. It would indeed be said, Socrates. *b*

SOCRATES: That's right. And yet, my dear friend, the argument we've gone through still seems the same to me, at any rate, as it did before. And now examine this further one to see whether we think it still stands or not: the most important thing isn't living, but living well.

CRITO: Yes, it still stands.

SOCRATES: And the argument that living well, living a fine life, and living justly are the same—does it still stand or not?

CRITO: It still stands.

SOCRATES: Then in the light of these agreements, we should examine whether or not it would be just for me to try to get out of here when the Athenians haven't acquitted me. And if it does seem just, we *c* should make the attempt, and if it doesn't, we should abandon the effort.

As for those other considerations you raise about loss of money and people's opinions and bringing up children—they, in truth, Crito, are appropriate considerations for people who readily put one to death and would as readily bring one back to life again if they could, without thinking; I mean, the majority of people. For us, however, the argument has made the decision. There's nothing else to be examined besides the very thing we just mentioned: whether we—both the ones who are rescued and also the rescuers themselves—will be acting justly if we pay money to those who would get me out of here and do them favors, or whether we will in truth be acting *d* unjustly if we do those things. And if it appears that we will be acting unjustly in doing them, we have no need at all to give any opposing weight to our having to die—or suffer in some other way—if we stay here and mind our behavior when the alternative is doing injustice.

CRITO: What you *say* seems true to me, Socrates. But I wish you'd consider what we're to *do*.

SOCRATES: Let's examine that question together, my dear friend, and if you can oppose anything I say, oppose it, and I'll be persuaded by you. But if you can't, be a good fellow and stop telling me the same *e* thing over and over, that I should leave here against

the will of the Athenians. You see, I think it very important that I act in this matter having persuaded you, rather than against your will. Consider, then, the starting point of our inquiry, to see if you find it adequately formulated, and try to answer my ques-
49a tions as you really think best.

CRITO: I'll certainly try.

SOCRATES: Do we say that one should never do injustice intentionally? Or may injustice be done in some circumstances but not in others? Is doing injustice never good or fine, as we have often agreed in the past? Or have all these former agreements been discarded during these last few days? Can you and I at our age, Crito, have spent so long in serious discussion with one another without realizing that we ourselves were no better than a pair of children? Or is what
b we used to say true above all else: that whether the majority of people agree or not, and whether we must suffer still worse things than at present or ones that are easier to bear, it's true, all the same, that doing injustice in any circumstances is bad and shameful for the one who does it? Is that what we say or not?

CRITO: It is what we say.

SOCRATES: So one should never do injustice.

CRITO: Certainly not.

SOCRATES: So one shouldn't do injustice in return for injustice, as the majority of people think—seeing that one should *never* do injustice.

c CRITO: Apparently not.

SOCRATES: Well then, should one do wrong or not?

CRITO: Certainly not, Socrates.

SOCRATES: Well, what about when someone does wrong in return for having suffered wrongdoing? Is that just, as the majority of people think, or not just?

CRITO: It's not just at all.

SOCRATES: No, for there's no difference, I take it, between doing wrong and doing injustice?

CRITO: That's right.

SOCRATES: So one must neither do injustice in return nor wrong any man, no matter what one has suffered at his hands. And, Crito, in agreeing to this, watch out that you're not agreeing to anything con-
d trary to what you believe. You see, I know that only a few people do believe or will believe it. And between those who believe it and those who don't, there's no common basis for deliberation, but each necessarily regards the other with contempt when they see their deliberations. You too, then, should consider very carefully whether you share that belief with me and whether the following is the starting point of our deliberations: that it's never right to do injustice, or to do injustice in return, or to retaliate with bad treatment when one has been treated badly. Or do you disagree and not share this starting point? You see, I've believed this for a long time myself and still believe it now. But if you've come to some other e opinion, say so. Instruct me. If you stand by the former one, however, then listen to my next point.

CRITO: Yes, I do stand by it and share it with you, so go on.

SOCRATES: Then I'll state the next point—or rather, ask a question: should one do the things one has agreed with someone to do, provided they are just, or should one cheat?

CRITO: One should do them.

SOCRATES: Then consider what follows. If we leave this place without having persuaded the city, are we treating some people badly—and those whom 50a we should least of all treat in that way—or not? Are we standing by agreements that are just or not?

CRITO: I can't answer your question, Socrates, since I don't understand it.

SOCRATES: Well, look at it this way. Suppose we were about to run away from here—or whatever what we'd be doing should be called. And suppose the Laws and the city community came and confronted us, and said,

"Tell us, Socrates, what do you intend to do? Do you intend anything else by this act you're attempting than to destroy us Laws, and the city as a whole, to b the extent that you can? Or do you think that a city can continue to exist and not be overthrown if the legal judgments rendered in it have no force, but are deprived of authority and undermined by the actions of private individuals?"

What shall we say in response to that question, Crito, and to others like it? For there's a lot that one might say—particularly, if one were an orator—on behalf of this law we're destroying, the one requiring that legal judgments, once rendered, have authority. Or shall we say to them, "Yes, that's what we intend, for the city treated us unjustly and didn't judge our c lawsuit correctly." Is that what we're to say—or what?

CRITO: Yes, by Zeus, that's what we're to say, Socrates.

SOCRATES: Then what if the Laws replied, "Was that also part of the agreement between you and us, Socrates? Or did you agree to stand by whatever judgments the city rendered?" Then, if we were surprised at the words, perhaps they might say, "Don't be surprised at what we're saying, Socrates, but answer us—since you're so accustomed to using question and answer. Come now, what charge have you to bring against the city and ourselves that you should
d try to destroy us? In the first place, wasn't it we who gave you birth—wasn't it through us that your father married your mother and produced you? Tell us, do you have some complaint about the correctness of those of us Laws concerned with marriage?"

"No, I have no complaint," I'd reply.

"Well then, what about the Laws dealing with the bringing up and educating of children, under which you were educated yourself? Didn't those of us Laws who regulate that area prescribe correctly when we ordered your father to educate you in the arts and physical training?"

"They prescribed correctly," I'd reply.

e "Good. Then since you were born, brought up, and educated, can you deny, first, that you're our offspring and slave, both yourself and your ancestors? And if that's so, do you think that what's just is based on an equality between you and us, that whatever we try to do to you it's just for you to do to us in return? As regards you and your father (or you and your master, if you happened to have one), what's just isn't based on equality, and so you don't return whatever treatment you receive—answering back when you're
51a criticized or striking back when you're struck, or doing many other such things. As regards you and your fatherland and its Laws, then, are these things permitted? If we try to destroy you, believing it to be just, will you try to destroy us Laws and your fatherland, to the extent that you can? And will you claim that you're acting justly in doing so—you the man who really cares about virtue? Or are you so wise that it has escaped your notice that your fatherland is more worthy of honor than your mother and father and all your other ancestors; that it is more to be revered and
b more sacred and is held in greater esteem both among the gods and among those human beings who have any sense; that you must treat your fatherland with piety, submitting to it and placating it more than you would your own father when it is angry; that you must either persuade it or else do whatever it commands; that you must mind your behavior and undergo whatever treatment it prescribes for you, whether a beating or imprisonment; that if it leads you to war to be wounded or killed, that's what you must do, and that's what is just—not to give way or retreat or leave where you were stationed, but, on the contrary, in war and law courts, and everywhere else, to do whatever your city or fatherland commands or else persuade it as to what is really just; and that while it is impious to violate the will of your mother or *c* father, it is yet less so than to violate that of your fatherland."

What are we to say to that, Crito? Are the Laws telling the truth or not?

CRITO: Yes, I think they are.

SOCRATES: "Consider, then, Socrates," the Laws might perhaps continue, "whether we're also telling the truth in saying this: that you aren't treating us justly in what you're now trying to do. You see, we gave you birth, upbringing, and education, and have provided you, as well as every other citizen, with a share of all the fine things we could. Nonetheless, if *d* any Athenian—who has been admitted to adult status and has observed both how affairs are handled in the city and ourselves, the Laws—is dissatisfied with us and wishes to leave, we grant him permission to take his property and go wherever he pleases. Not one of us Laws stands in his way or forbids it. If any one of you is dissatisfied with us and the city and wishes to go to a colony or to live as an alien elsewhere,[6] he may go wherever he wishes and hold on to what's his. *e*

"*But* if any of you stays here, after he has observed the way we judge lawsuits and the other ways in which we manage the city, then we say that he has agreed with us by his action to do whatever we command. And we say that whoever does not obey commits a threefold injustice: he disobeys us as his parents; he

6. [When the population of a Greek city became too large for its available resources, it often sent some of its citizens out to found a new city elsewhere. This so-called colony (*apoikia*) was politically autonomous but typically retained some significant ties with its mother city.]

disobeys us as those who brought him up; and, after having agreed to obey us, he neither obeys nor persuades us, if we're doing something that isn't right. Yet we offer him a choice and do not harshly com- 52a mand him to do what he's told. On the contrary, we offer two alternatives: he must either persuade us or do what we say. And he does neither. These, then, are the charges, Socrates, to which we say you too will become liable, if you do what you have in mind—and you won't be among the least liable of the Athenians, but among the most."

Then, if I were to say, "Why is that?" perhaps they might justifiably reproach me by saying that I am among the Athenians who have made that agreement with them in the strongest terms.

"Socrates," they would say, "we have the strongest b evidence that you were satisfied with us and with the city. After all, you'd never have stayed at home here so much more consistently than all the rest of the Athenians if you weren't also much more consistently satisfied. You never left the city for a festival, except once to go to the Isthmus.[7] You never went anywhere else, except for military service. You never went abroad as other people do. You had no desire to acquaint yourself with other cities or other laws. On the contrary, we and our city sufficed for you. So c emphatically did you choose us and agree to live as a citizen under us, that you even produced children here. *That's* how satisfied you were with the city.

"Moreover, even at your very trial, you could have proposed exile as a counterpenalty if you'd wished, and what you're now trying to do against the city's will, you could then have done with its consent. On that occasion, you prided yourself on not feeling resentful that you had to die. You'd choose death before exile—so you said. Now, however, you feel no shame at those words and show no regard for us Laws as you try to destroy us. You're acting exactly the way the d most wretched slave would act by trying to run away, contrary to your commitments and your agreements to live as a citizen under us.

"First, then, answer us on this very point: are we telling the truth when we say that you agreed, by deeds not words, to live as a citizen under us? Or is that untrue?"

What are we to reply to that, Crito? Mustn't we agree?

CRITO: We must, Socrates.

SOCRATES: "Well then," they might say, "surely you're breaking the commitments and agreements you made with us. You weren't coerced or tricked into agreeing or forced to decide in a hurry. On the e contrary, you had seventy years in which you could have left if you weren't satisfied with us or if you thought those agreements unjust. You, however, preferred neither Sparta nor Crete—places you often say have good law and order—nor any other Greek or 53a foreign city. On the contrary, you went abroad less often than the lame, the blind, or other handicapped people. Hence it's clear that you, more than any other Athenian, have been consistently satisfied with your city and with us Laws—for who would be satisfied by a city but not by its laws? Won't you, then, stand by your agreements now? Yes, you will, if you're persuaded by us, Socrates, and at least you won't make yourself a laughingstock by leaving the city.

"For consider now: if you break those agreements, if you commit any of these wrongs, what good will you do yourself or your friends? You see, it's pretty clear that your friends will risk being exiled them- b selves as well as being disenfranchised and having their property confiscated. As for you, if you go to one of the nearest cities, Thebes or Megara—for they both have good laws—you will be arriving there, Socrates, as an enemy of their political systems, and those who care about their own cities will look on you with suspicion, regarding you as one who undermines laws. You will also confirm your jurors in their opinion, so that they will think they judged your lawsuit correctly. For anyone who undermines laws might c very well be considered a corruptor of young and ignorant people.

"Will you, then, avoid cities with good law and order, and men of the most respectable kind? And if so, will your life be worth living? Or will you associate with these people and be shameless enough to converse with them? And what will you say, Socrates? The very things that you said here, about how virtue and justice are man's most valuable possessions, along with law and lawful conduct. Don't you think Socrates

7. [The narrow strip of land connecting the Peloponnese to the rest of Greece, where the Isthmian Games were held.]

and everything about him will look unseemly? Surely, you must.

d "Or will you keep away from those places and go to Crito's friends in Thessaly? After all, there's complete disorder and laxity there, so perhaps they'd enjoy hearing about your absurd escape from prison when you dressed up in disguise, wore a peasant's leather jerkin or some other such escapee's outfit, and altered your appearance. And will no one remark on the fact that you, an old man, with probably only *e* a short time left to live, were so greedy for life that you dared to violate the most important laws? Perhaps not, provided you don't annoy anyone. Otherwise, you'll hear many disparaging things said about you. Will you live by currying favor with every man and acting the slave—and do nothing in Thessaly besides eat, as if you'd gone to live in Thessaly for a good dinner? As for those arguments about justice and the *54a* rest of virtue, where, tell us, will they be?

"Is it that you want to live for your children's sake, then, to bring them up and educate them? Really? Will you bring them up and educate them by taking them to Thessaly and making foreigners of them, so they can enjoy that privilege too? If not, will they be better brought up and educated here without you, provided that you're still alive? 'Of course,' you may say, because your friends will take care of them. Then will they take care of them if you go to Thessaly, but not take care of them if you go to Hades? If those who call themselves your friends are worth anything *b* at all, you surely can't believe that.

"No, Socrates, be persuaded by us who reared you. Don't put a higher value on children, on life, or on anything else than on what's just, so that when you reach Hades you may have all this to offer as your defense before the authorities there. For if you do do that, it doesn't seem that it will be better for you *here*, or for any of your friends, or that it will be more just or more pious. And it won't be better for you when you arrive *there* either. As it is, you'll leave here—if you do leave—as one who has been treated unjustly not by us Laws, but by men. But suppose you leave, *c* suppose you return injustice for injustice and bad treatment for bad treatment in that shameful way, breaking your agreements and commitments with us and doing bad things to those whom you should least of all treat in that way—yourself, your friends, your fatherland, and ourselves. Then we'll be angry with you while you're still alive, and our brothers, the Laws of Hades, won't receive you kindly there, knowing that you tried to destroy us to the extent you could. Come, then, don't let Crito persuade you to follow his advice rather than ours." *d*

That, Crito, my dear friend, is what I seem to hear them saying, you may be sure. And, just like those Corybantes who think they are still hearing the flutes,[8] the echo of their arguments reverberates in me and makes me incapable of hearing anything else. No, as far as my present thoughts go, at least, you may be sure that if you argue against them, you will speak in vain. All the same, if you think you can do any more, please tell me.

CRITO: No, Socrates, I've nothing to say.

SOCRATES: Then, let it be, Crito, and let's act in that way, since that's the way the god is leading us. *e*

8. [The Corybantes dance to the sound of flutes in the orgiastic rites of Dionysus—the god of wine and intoxication. Their music was supposed to induce a state of frenzied exhaustion in hysterical or emotionally disturbed people, from which they awoke relieved of their symptoms.]

Phaedo Death Scene
(115B1–118A17)

A number of Socrates' friends have come to visit him in prison on the last day of his life. Their conversation focuses on the nature of the soul, arguments for its immortality, and the afterlife. We join it in its final stage. Phaedo—a close friend of Socrates from Elis in the Peloponnese—is the narrator.

115b "Well, Socrates," Crito said, "what are your final instructions for these others or for me concerning your children or anything else? What can we do that would please you most?"

"Just the things I'm always saying, Crito," he said. "Nothing very new. If you take care of your own selves,[1] you'll please both me and mine and yourselves in whatever you do—even if you make no agreements now. But if you don't take care of your own selves and are unwilling to live following the tracks, as it were, of our present and past discussions, then however much you may agree to do at this moment, and however earnestly, you'll accomplish c nothing."

"We'll try hard, then, to do as you say," he said. "But how are we to bury you?"

"Whatever way you like," he said, "provided you can catch me, and I don't elude you." And laughing quietly and looking toward us, he said, "Gentlemen, I can't persuade Crito that I am Socrates here, the one who's talking to you now and setting out in order each of the arguments put forward. He thinks I'm that corpse he'll see in a little while and actually d asks how to bury me! As for the lengthy argument I've been making, that when I drink the poison[2] I'll no longer stay put, but will take my leave of you and depart for certain happy conditions of the blessed—all that, I suppose, he regards as idle talk, intended to console all of you and myself as well. So I want you to give a guarantee to Crito on my behalf," he said, "the opposite guarantee to the one he gave to the jurors. His was that I'd stay put, whereas you must guarantee that I won't stay put when I die, but take my leave of you and depart. In that way, Crito will bear it more easily when he e sees my body being burned or buried, and he won't feel resentful on my behalf, as if I were suffering terrible things, and won't say at the funeral that it's *Socrates* they're laying out, or bearing to the grave, or burying. You see, you may be sure, my dearest Crito," he said, "that false speaking is not only an error in its own terms, but also does something bad to men's souls. No, you should be of good cheer, and say you're burying *my body*, and bury it in any way you like and think most customary." 116a

After saying that, he got up and went into another room to take his bath.[3] Crito followed him, but he told us to stay where we were. So we stayed there, talking among ourselves about what had been said and reexamining it, and sometimes going over again how great a misfortune had befallen us. It was, we thought, simply as if we'd lost a father and would spend the rest of our lives as orphans.

When he had bathed and his children had been brought to him—two of his sons were small while b

2. [Executions in Athens were by poison hemlock.]

3. [Socrates has said that he will bathe before taking the hemlock so as "to save the women the trouble of washing the corpse" (115a8–9).]

one was older—and those women of his household[4] had come, he spoke with them in Crito's presence and gave instructions as to his wishes. He then asked the women and children to leave while he himself returned to us.

It was now almost sunset, since he'd spent a long time inside. He came and sat down, fresh from his bath, and didn't talk much after that. Then the agent of the Eleven came and stood by him: "Socrates," he
c said, "I won't reproach you, as I reproach others, if you're angry with me and curse me, when, on the orders of the officials, I tell you to drink the poison. During the rest of the time you've spent here, I've known you as the most decent, gentlest, and best man who's ever come to this place. And now, in particular, I'm sure that you won't be angry with me, but with those whom you know to be responsible. Now then, you know the message I've come to bring. Fare you well, and try to bear the inevitable as easily as you
d can." As he said this, he burst into tears and turned to leave.

Socrates looked up at him: "Fare you well too," he said, "we'll do that." And turning to us, he said, "What a courteous fellow! During the entire time I've been here he's come in and talked to me on occasion, like the excellent man he is. And now how decent of him to weep for me! Come then, Crito, let's do as he asks and have the poison brought if it's ready. If not, have the man prepare it."

e "But Socrates," said Crito, "I think the sun's still on the mountains and hasn't yet set. What's more, I know that other people drink the poison long after the order's been given, enjoying themselves with a good dinner and plenty to drink and even, in some cases, by having sex with whomever they happen to desire. Don't be in a hurry: there's still time left."

And Socrates replied, "It's quite reasonable, Crito, for those people to do those things, since they think they gain something by doing them. And it's reasonable too for me not to do them, since I think I'll gain nothing by drinking the poison a little later—apart,
117a that is, from making myself look absurd in my own eyes by clinging greedily to life and sparing the dregs.[5] Go on, now, do as I ask," he said, "and don't refuse me."

Hearing this, Crito nodded to the slave who was standing nearby. The slave went out and after a time returned with the man who was going to administer the poison and was carrying it already mixed in a cup. When Socrates saw the man, he said, "Well, my friend, you know all about these things: what should I do?"

"Just drink it," he said, "and walk around until your legs feel heavy; then lie down, and it will act of itself." *b*
With that, he handed Socrates the cup.

He took it quite calmly, Echecrates,[6] without a tremor or any change of color or countenance; but giving the man his customary mischievous stare, he said, "What do you say about pouring a libation to someone from this drink? Is it permitted or not?"

"We prepare only as much as we think will be the sufficient dose, Socrates," he said.

"I understand," he said. "But one is, I suppose, permitted to utter a prayer to the gods—and one *c*
should do so—that one's journey from this world to the next will prove fortunate. That is my prayer; may it be fulfilled." And with these words, he put the cup to his lips and without the least difficulty or distaste drained it. Most of us had been fairly well able to restrain our tears till then. But when we saw him drinking it, and then that he had drunk it, we could do so no longer. In my own case, the tears were pouring down my cheeks despite my efforts, so that I covered my face and wept for myself—not for *him*, certainly not, but for my own misfortune in losing such a man as a friend. Crito had got up and moved *d*
away even before I did, when he was unable to hold back his tears. And Apollodorus, who earlier still had been weeping steadily, now burst forth in such a storm of tears and distress that he made everyone present break down—except, that is, for Socrates himself.

4. [Presumably his wife, Xanthippe, and others (60a3–5).]

5. [See Hesiod, *Works and Days* 368–9: "When the cask has just been opened, and when it's almost gone, drink as much as you want; / Be sparing when its half full; but it's useless to spare the dregs."]

6. [Echecrates, an adherent of Pythagorean philosophy, is the person to whom Phaedo is narrating his account.]

"What a way to behave, my friends!" he said. "Why it was for just this reason, you know, that I sent the women away, so they wouldn't commit these sorts of errors. I've heard indeed that one should die in rever-
e ent silence. Come, mind your behavior and control yourselves."

When we heard this we were ashamed and checked our tears. He walked around, and when his legs felt heavy, as he said, he lay down on his back—as the man told him—and then the man, the one who'd given him the poison, took hold of him[7] and after a while examined his feet and legs. He then pinched his foot hard and asked if he could feel it, and Socrates said, "No." After that, he did the same thing in turn
118a to his shins; and moving upward in this way he showed us that he was becoming cold and numb. He himself continued to keep hold of him and said that when the coldness reached his heart, he'd be gone.

Well, by this time the coldness was somewhere in the region of his groin, when, uncovering his head—it had been covered up—he spoke—and these were in fact the last words he uttered. "Crito," he said, "we owe a cock to Asclepius.[8] Please, don't forget to pay the debt."

"It shall be done," said Crito. "Is there anything else you want to say?"

To this question he gave no answer. But shortly afterward he stirred, and when the man uncovered him his eyes were fixed. Seeing this, Crito closed his mouth and his eyes.

Such was the end of our friend, Echecrates, a man who, we would say, was the best of all those we've experienced and, generally speaking, the wisest and the most just.

7. [Probably in order to steady Socrates during the convulsions that usually accompany hemlock poisoning. Plato may have omitted more explicit reference to these in order, among other things, to dramatize Socrates' tranquil acceptance of his fate. See C. Gill, "The Death of Socrates," *Classical Quarterly* 23 (1973): 225–8.]

8. [Asclepius is the god of healing. The significance of Socrates' dying words has been much debated. See Glenn W. Most, "'A Cock for Asclepius,'" *Classical Quarterly* 43 (1993): 96–111.]

Republic

BOOK I

Socrates' narration begins: *I went down to the Piraeus yesterday with Glaucon, the son* 327a *of Ariston, to say a prayer to the goddess,*[1] *and also because I wanted to see how they would manage the festival, since they were holding it for the first time. I thought the procession of the local residents was beautiful, but the show put on by the Thracians was no less so, in my view. After we had said our prayer and watched the* b *procession, we started back toward town. Then Polemarchus, the son of Cephalus, saw us from a distance as we were hurrying homeward, and told his slave boy to run and ask us to wait for him. The boy caught hold of my cloak from behind.*

Slave: Polemarchus wants you to wait.

I turned around and asked where he was.

Slave: He is coming up behind you; please wait for him.

Glaucon: All right, we will.

Shortly after that, Polemarchus caught up with c *us. Adeimantus, Glaucon's brother, was with him, and so were Niceratus, the son of Nicias, and some others, all of whom were apparently on their way from the procession.*

Polemarchus: It looks to me, Socrates, as if you two are hurrying to get away to town.

Socrates: That isn't a bad guess.

Polemarchus: But do you see how many we are?

Socrates: Certainly.

Polemarchus: Well, then, either you must prove yourselves stronger than all these people or you will have to stay here.

Socrates: Isn't there another alternative still: that we persuade you that you should let us go?

Polemarchus: But could you persuade us, if we won't listen?

Glaucon: There is no way we could.

Polemarchus: Well, we won't listen; you had better make up your mind to that.

Adeimantus: You mean to say you don't know 328a that there is to be a torch race on horseback for the goddess tonight?

Socrates: On horseback? That is something new. Are they going to race on horseback and hand the torches on in relays, or what?

Polemarchus: In relays. And, besides, there will be an all-night celebration that will be worth seeing. We will get up after dinner and go to see the festivities. We will meet lots of young men there and have a discussion. So stay and do as we ask. b

Glaucon: It looks as if we will have to stay.

Socrates: If you think so, we must.

So, we went to Polemarchus' house, and there we found Lysias and Euthydemus, the brothers of Polemarchus, and what is more, Thrasymachus of Chalcedon was there too, and Charmantides of Paeania, and Clitophon, the son of Aristonymus. Polemarchus' father, Cephalus, was also inside, and I thought he looked quite old. You see, I hadn't seen him for some time. He was sitting on a sort of chair with cushions c *and had a wreath on his head, as he had been offering a sacrifice in the courtyard. We sat down*

1. [*Hê theos:* Most probably—as 354a10–11 implies—the Thracian goddess Bendis, whose cult had recently been introduced in Piraeus. However, for Athenians, Athena is *hê theos.*—C.D.C.R.]

beside him, since some chairs were arranged in a circle there. As soon as he saw me, Cephalus greeted me:

Socrates, you don't often come down to the Piraeus to see us. Yet you should. If it were still easy for me to make the trip to town, you wouldn't have to come here. On the contrary, we would come to you. But
d as it is, you ought to come here more often. I want you to know, you see, that in my case at least, as the other pleasures—the bodily ones—wither away, my appetites for discussions and their pleasures grow stronger. So please do as I ask: have your conversation with these young men, and stay here with us, as you would with your close friends and relatives.

Socrates: I certainly will, Cephalus. In fact, I enjoy engaging in discussion with the very old. I
e think we should learn from them—since they are like people who have traveled a road that we too will probably have to follow—what the road is like, whether rough and difficult or smooth and easy. And I would be particularly glad to find out from you what you think about it, since you have reached the point in life the poets call old age's threshold. Is it a difficult time of life? What have you to report about it?

Cephalus: By Zeus, Socrates, I will tell you ex-
329a actly what I think. You see, a number of us who are more or less the same age often get together, so as to preserve the old saying.[2] When they meet, the majority of our members lament, longing for the lost pleasures of their youth and reminiscing about sex, drinking parties, feasts, and the other things that go along with them. They get irritated, as if they had been deprived of important things, and had lived well then but are not living now. Some others, too, even moan about the abuse heaped on old people by their
b relatives, and for *that* reason recite a litany of all the evils old age has caused them. But I don't think they blame the real cause, Socrates. After all, if that were the cause, I too would have had the same experiences, at least as far as old age is concerned, and so would everyone else of my age. But as it is, I have met others in the past who don't feel that way—in particular, the poet Sophocles. I was once present when he was asked by someone, "How are you as far as sex goes, Sophocles? Can you still make love to a woman?" c "Quiet, man," he replied, "I am very glad to have escaped from all that, like a slave who has escaped from a deranged and savage master." I thought at the time what he said was sensible, and I still do. You see, old age brings peace and freedom from all such things. When the appetites cease to stress and importune us, everything Sophocles said comes to pass, and we escape from many insane masters. But in these d matters, and in those concerning one's relatives, the real cause isn't old age, Socrates, but the way people live. If they are orderly and contented, old age, too, is only moderately onerous; if they aren't, both old age, Socrates, *and* youth are hard to bear.

I admired him for saying that, and I wanted him to tell me more, so I urged him on.

I imagine when you say that, Cephalus, the masses e do not accept it. On the contrary, they think you bear old age more easily, not because of the way you live, but because you are wealthy. For the wealthy, they say, have many consolations.

Cephalus: That's true, they are not convinced. And there is something in their objection, though not as much as they think. Themistocles' retort is relevant here. When someone from Seriphus insulted him by saying his high reputation was due to his city, not to himself, he replied that, had he been a 330a Seriphian, he would not be famous; but nor would the other, had he been an Athenian. The same account applies to those who are not rich and find old age hard to bear: a good person would not easily bear old age if it were coupled with poverty, but one who wasn't good would not be contented himself even if he were wealthy.

Socrates: Did you inherit most of your wealth, Cephalus, or did you make it yourself?

Cephalus: What did I make for myself, Socrates, you ask. As a moneymaker I am in between my grand- b father and my father. You see, my grandfather and namesake inherited about the same amount of wealth as I possess and multiplied it many times. However, my father, Lysanias, diminished that amount to even less than I have now. As for me, I am satisfied to

2. ["God ever draws together like to like."]

leave my sons here no less, but a little more, than I inherited.

SOCRATES: The reason I asked is that you do not seem particularly to love money. And those who have
c not made it themselves are usually like that. But those who have made it themselves love it twice as much as anyone else. For just as poets love their poems and fathers their children, so those who have made money take their money seriously both as something they have made themselves and—just as other people do—because it is useful. This makes them difficult even to be with, since they are unwilling to praise anything except money.

CEPHALUS: That's true.

SOCRATES: Indeed, it is. But tell me something
d else. What do you think is the greatest good you have enjoyed as a result of being very wealthy?

CEPHALUS: What I have to say probably would not persuade the masses. But you are well aware, Socrates, that when someone thinks his end is near, he becomes frightened and concerned about things he did not fear before. It is then that the stories told about Hades, that a person who has been unjust here must pay the penalty there—stories he used to make
e fun of—twist his soul this way and that for fear they are true. And whether because of the weakness of old age, or because he is now closer to what happens in Hades and has a clearer view of it, or whatever it is, he is filled with foreboding and fear, and begins to calculate and consider whether he has been unjust to anyone. If he finds many injustices in his life, he often even awakes from sleep in terror, as children do, and lives in anticipation of evils to come. But
331*a* someone who knows he has not been unjust has sweet good hope as his constant companion—a nurse to his old age, as Pindar says. For he puts it charmingly, Socrates, when he says that when someone lives a just and pious life,

> Sweet hope is in his heart
> Nurse and companion to his age
> Hope, captain of the ever-twisting
> Mind of mortal men.

How amazingly well he puts that. It is in this connection I would say the possession of wealth is most valuable, not for every man, but for a good and orderly one. Not cheating someone even unintentionally, not *b* lying to him, not owing a sacrifice to some god or money to a person, and as a result departing for that other place in fear—the possession of wealth makes no small contribution to this. It has many other uses, too, but putting one thing against the other, Socrates, I would say that for a man with any sense, that is how wealth is most useful.

SOCRATES: A fine sentiment, Cephalus. But speaking of that thing itself, justice, are we to say it *c* is simply speaking the truth and paying whatever debts one has incurred? Or is it sometimes just to do these things, sometimes unjust? I mean this sort of thing, for example: everyone would surely agree that if a man borrows weapons from a sane friend, and if he goes mad and asks for them back, the friend should not return them, and would not be just if he did. Nor should anyone be willing to tell the whole truth to someone in such a state.

CEPHALUS: That's true. *d*

SOCRATES: Then the following is not the definition of justice: to speak the truth and repay what one has borrowed.

Polemarchus interrupted:

It certainly is, Socrates, if indeed we are to trust Simonides at all.

CEPHALUS: Well, then, I will hand over the discussion to you, since it is time for me to look after the sacrifices.

POLEMARCHUS: Am I, Polemarchus, not heir of all your possessions?

Cephalus replied with a laugh:

Certainly.

And off he went to the sacrifice.

SOCRATES: Then tell us, heir to the discussion, just what Simonides said about justice that you think *e* is correct.

POLEMARCHUS: He said it is just to give to each what is owed to him. And a fine saying it is, in my view.

SOCRATES: Well, now, it is not easy to disagree

with Simonides, since he is a wise and godlike man. But what exactly does he mean? Perhaps you know, Polemarchus, but I do not understand. Clearly, he does not mean what we said a moment ago—namely, giving back to someone whatever he has lent to you, even if he is out of his mind when he asks for it. And
332a yet what he has lent to you is surely something that is owed to him, isn't it?

POLEMARCHUS: Yes.

SOCRATES: But when he is out of his mind, it is, under no circumstances, to be given to him?

POLEMARCHUS: True.

SOCRATES: Then it seems Simonides must have meant something else when he says that to return what is owed is just.

POLEMARCHUS: Something else indeed, by Zeus! He meant friends owe something good to their friends, never something bad.

SOCRATES: I understand. You mean someone does not give a lender what he is owed by giving him gold, when the giving and taking would be harmful,
b and both he and the lender are friends. Isn't that what you say Simonides meant?

POLEMARCHUS: It certainly is.

SOCRATES: Now what about this? Should one also give to one's enemies whatever is owed to them?

POLEMARCHUS: Yes, by all means. What is *in fact* owed to them. And what an enemy owes an enemy, in my view, is also precisely what is appropriate—something bad.

SOCRATES: It seems, then, Simonides was speaking in riddles—just like a poet!—when he said what
c justice is. For what he meant, it seems, is that it is just to give to each *what is appropriate to him*, and this is what he called giving him *what he is owed*.

POLEMARCHUS: What else did you think he meant?

SOCRATES: Then what, in the name of Zeus, do you think he would answer if someone asked him: "Simonides, what owed or appropriate things does the craft we call medicine give, and to which things?"

POLEMARCHUS: Clearly, he would say it gives drugs, food, and drink to bodies.

SOCRATES: And what owed or appropriate things does the craft we call cooking give, and to which things?

POLEMARCHUS: It gives pleasant flavors to food. d

SOCRATES: Good. Now what does the craft we would call justice give, and to whom or what does it give it?

POLEMARCHUS: If we are to follow the previous answers, Socrates, it gives benefit to friends and harm to enemies.

SOCRATES: Does Simonides mean, then, that treating friends well and enemies badly is justice?

POLEMARCHUS: I believe so.

SOCRATES: And who is most capable of treating sick friends well and enemies badly in matters of disease and health?

POLEMARCHUS: A doctor.

SOCRATES: And who can do so best in a storm at sea? e

POLEMARCHUS: A ship's captain.

SOCRATES: What about the just person? In what actions and what work is he most capable of benefiting friends and harming enemies?

POLEMARCHUS: In wars and alliances, I imagine.

SOCRATES: All right. Now when people are not sick, Polemarchus, a doctor is useless to them.

POLEMARCHUS: True.

SOCRATES: And so is a ship's captain to those who are not sailing?

POLEMARCHUS: Yes.

SOCRATES: So to people who are not at war, a just man is useless?

POLEMARCHUS: No, I don't think that at all.

SOCRATES: So justice is also useful in peacetime?

POLEMARCHUS: Yes, it is useful. 333a

SOCRATES: And so is farming, isn't it?

POLEMARCHUS: Yes.

SOCRATES: For providing produce?

POLEMARCHUS: Yes.

SOCRATES: And shoemaking as well, of course?

POLEMARCHUS: Yes.

SOCRATES: For the acquisition of shoes, I suppose you would say?

POLEMARCHUS: Of course.

SOCRATES: Tell me, then, what is justice useful for using or acquiring in peacetime?

POLEMARCHUS: Contracts, Socrates.

SOCRATES: And by contracts you mean partnerships, or what?

POLEMARCHUS: Partnerships, of course.

SOCRATES: So is it a just man who is a good and
b useful partner in a game of checkers, or an expert checkers player?

POLEMARCHUS: An expert checkers player.

SOCRATES: And in laying bricks and stones, is a just person a better and more useful partner than a builder?

POLEMARCHUS: Not at all.

SOCRATES: Well, in what kind of partnership, then, is a just person a better partner than a builder or a lyre player, in the way a lyre player is better than a just person at hitting the right notes?

POLEMARCHUS: In money matters, I think.

SOCRATES: Except, I presume, Polemarchus, in using money. You see, whenever one needs to buy or sell a horse jointly, I think a horse breeder is a
c more useful partner. Isn't he?

POLEMARCHUS: Apparently.

SOCRATES: And when it is a boat, a boat builder or a ship's captain?

POLEMARCHUS: It would seem so.

SOCRATES: In what joint use of silver or gold, then, is a just person a more useful partner than anyone else?

POLEMARCHUS: When yours must be deposited for safekeeping, Socrates.

SOCRATES: You mean whenever there is no need to use it, but only to keep it?

POLEMARCHUS: Of course.

SOCRATES: So when money is not being used,
d that is when justice is useful for it?

POLEMARCHUS: It looks that way.

SOCRATES: And when one needs to keep a pruning knife safe, justice is useful both in partnerships and for the individual. When you need to use it, however, it is the craft of vine pruning that is useful?

POLEMARCHUS: Apparently.

SOCRATES: And would you also say that when one needs to keep a shield and a lyre safe and not use them, justice is a useful thing, but when you need to use them it is the soldier's craft or the musician's that is useful?

POLEMARCHUS: I would have to.

SOCRATES: And so in all other cases, too, justice is useless when they are in use, but useful when they are not?

POLEMARCHUS: It looks that way.

SOCRATES: Then justice cannot be something ex-
cellent, can it, my friend, if it is only useful for useless *e*
things. But let's consider the following point. Isn't the person who is cleverest at landing a blow, whether in boxing or any other kind of fight, also cleverest at guarding against it?

POLEMARCHUS: Of course.

SOCRATES: And the one who is clever at guarding against disease is also cleverest at producing it unnoticed?

POLEMARCHUS: That is my view, at any rate.

SOCRATES: And the one who is a good guardian
of an army is the very one who can steal the enemy's *334a*
plans and dispositions?

POLEMARCHUS: Of course.

SOCRATES: So whenever someone is a clever guardian of something, he is also clever at stealing it.

POLEMARCHUS: It seems so.

SOCRATES: So if a just person is clever at guarding money, he must also be clever at stealing it.

POLEMARCHUS: So the argument suggests, at least.

SOCRATES: It seems, then, that a just person has turned out to be a kind of thief. You probably got that idea from Homer. For he loves Autolycus, the
maternal grandfather of Odysseus, whom he describes *b*
as better than everyone at stealing and swearing false oaths.[3] According to you, Homer, and Simonides, then, justice seems to be some sort of craft of stealing—one that benefits friends and harms enemies. Isn't that what you meant?

POLEMARCHUS: No, by Zeus, it isn't. But I do not know anymore what I meant. I still believe this, however, that benefiting one's friends and harming one's enemies is justice.

SOCRATES: Speaking of friends, do you mean
those a person believes to be good and useful, or *c*
those who actually are good and useful, even if he does not believe they are, and similarly with enemies?

POLEMARCHUS: Probably, one loves those one considers good and useful and hates those one considers bad.

SOCRATES: But don't people make mistakes about this, so that lots of those who seem to them to be good and useful aren't, and vice versa?

3. [*Odyssey* 19.392–8.]

POLEMARCHUS: They do.

SOCRATES: So, for them, good people are enemies and bad ones friends?

POLEMARCHUS: Of course.

SOCRATES: All the same, it is then just for them
d to benefit bad people and harm good ones?

POLEMARCHUS: Apparently.

SOCRATES: Yet good people are just and are not the sort to do injustice.

POLEMARCHUS: True.

SOCRATES: According to your account, then, it is just to do bad things to those who do no injustice.

POLEMARCHUS: Not at all, Socrates. It is *my account* that seems to be bad.

SOCRATES: It is just, then, is it, to harm unjust people and benefit just ones?

POLEMARCHUS: That seems better than the other view.

SOCRATES: Then it follows, Polemarchus, that it is just for many people—the ones who are mistaken
e in their judgment—to harm their friends, since they are bad for them, and benefit their enemies, since they are good. And so we will find ourselves claiming the very opposite of what we said Simonides meant.

POLEMARCHUS: Yes, that certainly follows. But let's change our definition. For it looks as though we did not define friends and enemies correctly.

SOCRATES: How did we define them, Polemarchus?

POLEMARCHUS: We said that a friend is someone who is believed to be good.

SOCRATES: And how are we to change that now?

POLEMARCHUS: Someone who is both believed to be good and is good is a friend; someone who is believed to be good, but is not, is believed to be a
335a friend but is not. And the same goes for enemies.

SOCRATES: According to that account, then, a good person will be a friend and a bad one an enemy.

POLEMARCHUS: Yes.

SOCRATES: So you want us to add something to what we said before about the just man. Then we said that it is just to treat friends well and enemies badly. Now you want us to add to this: to treat a friend well, *provided he is good*, and to harm an enemy, *provided he is bad?*

b POLEMARCHUS: Yes, that seems well put to me.

SOCRATES: Should a just man really harm anyone whatsoever?

POLEMARCHUS: Of course. He should harm those who are both bad and enemies.

SOCRATES: When horses are harmed, do they become better or worse?

POLEMARCHUS: Worse.

SOCRATES: With respect to the virtue that makes dogs good, or to the one that makes horses good?

POLEMARCHUS: With respect to the one that makes horses good.

SOCRATES: And when dogs are harmed, they become worse with respect to the virtue that makes dogs, not horses, good?

POLEMARCHUS: Necessarily.

SOCRATES: And what about human beings, comrade; shouldn't we say that, when they are harmed, c
they become worse with respect to human virtue?

POLEMARCHUS: Of course.

SOCRATES: But isn't justice human virtue?

POLEMARCHUS: Yes, that's necessarily so, too.

SOCRATES: Then, my dear Polemarchus, people who have been harmed are bound to become more unjust.

POLEMARCHUS: So it seems.

SOCRATES: Now, can musicians use music to make people unmusical?

POLEMARCHUS: No, they can't.

SOCRATES: Or can horsemen use horsemanship to make people unhorsemanlike?

POLEMARCHUS: No.

SOCRATES: Well, then, can just people use justice to make people unjust? In a word, can good people use their virtue or goodness to make people bad? d

POLEMARCHUS: No, they can't.

SOCRATES: For it isn't the function of heat to cool things down, I imagine, but that of its opposite.

POLEMARCHUS: Yes.

SOCRATES: Nor the function of dryness to make things wet, but that of its opposite.

POLEMARCHUS: Of course.

SOCRATES: So the function of a good person isn't to harm, but that of his opposite.

POLEMARCHUS: Apparently.

SOCRATES: And a just person is a good person?

POLEMARCHUS: Of course.

SOCRATES: So it isn't the function of a just person

to harm a friend or anyone else, Polemarchus, but that of his opposite, an unjust person.

POLEMARCHUS: I think you are absolutely right, Socrates.

SOCRATES: So if someone tells us it is just to give
e to each what he is owed, and understands by this that a just man should harm his enemies and benefit his friends, the one who says it is not wise. I mean, what he says is not true. For it has become clear to us that it is never just to harm anyone.

POLEMARCHUS: I agree.

SOCRATES: You and I will fight as partners, then, against anyone who tells us that Simonides, Bias, Pittacus, or any of our other wise and blessedly happy men said this.

POLEMARCHUS: I, for my part, am willing to be your partner in the battle.

SOCRATES: Do you know whose saying I think it
336a is, that it is just to benefit friends and harm enemies?

POLEMARCHUS: Whose?

SOCRATES: I think it is a saying of Periander, or Perdiccas, or Xerxes, or Ismenias of Thebes, or some other wealthy man who thought he had great power.

POLEMARCHUS: That's absolutely true.

SOCRATES: All right. Since it has become apparent, then, that neither justice nor the just consists in benefiting friends and harming enemies, what else should one say it is?

Now, while we were speaking, Thrasymachus
b *had tried many times to take over the discussion but was restrained by those sitting near him, who wanted to hear our argument to the end. When we paused after what I had just said, however, he could not keep quiet any longer: crouched up like a wild beast about to spring, he hurled himself at us as if to tear us to pieces. Polemarchus and I were frightened and flustered as he roared into our midst:*

What nonsense you two have been talking all this
c time, Socrates! Why do you act like naïve people, giving way to one another? If you really want to know what justice is, don't just ask questions and then indulge your love of honor by refuting the answers. You know very well it is easier to ask questions than to answer them. Give an answer yourself and tell us what *you* say the just is. And don't tell me it is the right, the beneficial, the profitable, the gainful, or d
the advantageous, but tell me clearly and exactly what you mean. For I won't accept such nonsense from you.

His words startled me and, looking at him, I was afraid. And I think if I had not seen him before he looked at me, I would have been dumbstruck.[4] *But as it was, I happened to look at him just as he began to be exasperated by our argument, so I was able to answer; and trembling a little,* e
I said:

Do not be too hard on us, Thrasymachus. If Polemarchus and I made an error in our investigation of the accounts, you may be sure we did so involuntarily. If we were searching for gold, we would never voluntarily give way to each other, if by doing so we would destroy our chance of finding it. So do not think that in searching for justice, a thing more honorable than a large quantity of gold, we would foolishly give way to one another or be less than completely serious about finding it. You surely must not think that, my friend, but rather—as I do—that we are incapable of finding it. Hence it is surely far more appropriate for us to be pitied by you clever people than to be given rough treatment. 337a

When he heard that, he gave a loud sarcastic laugh:

By Heracles! That is Socrates' usual irony for you! I knew this would happen. I even told these others earlier that you would be unwilling to answer, that you would be ironic and do anything rather than give an answer, if someone questioned *you*.

SOCRATES: That is because you are a wise fellow, Thrasymachus. You knew very well if you ask someone how much twelve is, and in putting the question you warn him, "Don't tell me, man, that twelve is b
twice six, or three times four, or six times two, or four times three; for I won't accept such nonsense from you"—it was obvious to you, I imagine, that no one

4. [In Greek superstition, anyone seen by a wolf before he sees it is struck dumb.]

could respond to a person who inquired in that way. But suppose he said to you: "What do you mean, Thrasymachus; am I not to give any of the answers you mention, not even if twelve happens to be one of those things? You are amazing. Do you want me to say something other than the truth? Or do you mean something
c else?" What answer would you give him?

THRASYMACHUS: Well, so you think the two cases are alike?

SOCRATES: Why shouldn't I? But even if they are not alike, yet seem so to the person you asked, do you think he is any less likely to give the answer that seems right to him, whether we forbid him to do so or not?

THRASYMACHUS: Is that what you are going to do, give one of the forbidden answers?

SOCRATES: I would not be surprised—provided it is the one that seems right to me after I have investigated the matter.

THRASYMACHUS: What if I show you another answer about justice, one that is different from all these
d and better than any of them? What penalty would you deserve then?

SOCRATES: The very one that is appropriate for someone who does not know—what else? And what is appropriate is to learn from the one who does know. That, therefore, is what I deserve to suffer.

THRASYMACHUS: What a pleasant fellow you are! But in addition to learning, you must pay money.

SOCRATES: I will if I ever have any.

GLAUCON: He has it already. If it is a matter of money, speak, Thrasymachus. We will all contribute for Socrates.

THRASYMACHUS: Oh yes, sure, so that Socrates
e can carry on as usual: he gives no answer himself, and if someone else does, he takes up his account and refutes it.

SOCRATES: How can someone give an answer, my excellent man, when, first of all, he does not know and does not claim to know, and then, even if he does have some opinion about the matter, is forbidden by no ordinary man to express any of the things he thinks? No, it is much more appropriate for you to
338a answer, since you say you do know and can tell us. Don't be obstinate. Give your answer as a favor to me and do not begrudge your teaching to Glaucon and the others.

While I was saying this, Glaucon and the others begged him to do as I asked. Thrasymachus clearly wanted to speak in order to win a good reputation, since he thought he had a very good answer. But he pretended to want to win a victory at my expense by having me do the answering. However, he agreed in the end, and then said:

That is Socrates' wisdom for you: he himself isn't b willing to teach but goes around learning from others and isn't even grateful to them.

SOCRATES: When you say I learn from others, you are right, Thrasymachus; but when you say I do not give thanks, you are wrong. I give as much as I can. But I can give only praise, since I have no money. And just how enthusiastically I give it, when someone seems to me to speak well, you will know as soon as you have answered, since I think you will speak well.

THRASYMACHUS: Listen, then. I say justice is nothing other than what is advantageous for the stronger. c Well, why don't you praise me? No, you are unwilling.

SOCRATES: First, I must understand what you mean. For, as things stand, I do not. What is advantageous for the stronger, you say, is just. What on earth do you mean, Thrasymachus? Surely you do not mean something like this: Polydamas, the pancratist, is stronger than we are. Beef is advantageous for his body. So, this food is also both advantageous and just for us who are weaker than he? d

THRASYMACHUS: You disgust me, Socrates. You interpret my account in the way that does it the most evil.

SOCRATES: That's not it at all, my very good man; I only want you to make your meaning clearer.

THRASYMACHUS: Don't you know, then, that some cities are ruled by a tyranny, some by a democracy, and some by an aristocracy?

SOCRATES: Of course I do.

THRASYMACHUS: And that what is stronger in each city is the ruling element?

SOCRATES: Certainly.

THRASYMACHUS: And each type of rule makes laws that are advantageous for itself: democracy makes e democratic ones, tyranny tyrannical ones, and so on with the others. And by so legislating, each declares that what is just for its subjects is what is advantageous for itself—the ruler—and it punishes anyone who

deviates from this as lawless and unjust. That, Socrates, is what I say justice is, the same in all cities: what is advantageous for the established rule. Since
339a the established rule is surely stronger, anyone who does the rational calculation correctly will conclude that the just is the same everywhere—what is advantageous for the stronger.

SOCRATES: Now I see what you mean. Whether it is true or not, I will try to find out. But you yourself have answered that what is just is what is advantageous, Thrasymachus, whereas you forbade me to answer that. True, you have added *for the stronger* to it.

THRASYMACHUS: And I suppose you think that is
b an insignificant addition.

SOCRATES: It isn't clear yet whether it is significant. What *is* clear is that we must investigate whether or not it is true. I agree that what is just is something advantageous. But you add *for the stronger*. I do not know about that. We will have to look into it.

THRASYMACHUS: Go ahead and look.

SOCRATES: That is just what I am going to do. Tell me, then, you also claim, don't you, that it is just to obey the rulers?

THRASYMACHUS: I do.

SOCRATES: And are the rulers in each city infalli-
c ble, or are they liable to error?

THRASYMACHUS: No doubt, they are liable to error.

SOCRATES: So, when they attempt to make laws, they make some correctly, others incorrectly?

THRASYMACHUS: I suppose so.

SOCRATES: And a law is correct if it prescribes what is advantageous for the rulers themselves, and incorrect if it prescribes what is disadvantageous for them? Is that what you mean?

THRASYMACHUS: It is.

SOCRATES: And whatever laws the rulers make must be obeyed by their subjects, and that is what is just?

THRASYMACHUS: Of course.

SOCRATES: According to your account, then, it
d isn't only just to do what is advantageous for the stronger, but also the opposite: what is not advantageous.

THRASYMACHUS: What is that you are saying?

SOCRATES: The same as you, I think. But let's examine it more closely. Haven't we agreed that the rulers are sometimes in error as to what is best for themselves when they give orders to their subjects, and yet that it is just for their subjects to do whatever their rulers order? Wasn't that agreed?

THRASYMACHUS: I suppose so.

SOCRATES: You will also have to suppose, then, that you have agreed that it is just to do what is e
disadvantageous for the rulers and those who are stronger, whenever they unintentionally order what is bad for themselves. But you say, too, that it is just for the others to obey the orders the rulers gave. You are very wise, Thrasymachus, but doesn't it necessarily follow that it is just to do the opposite of what you said, since the weaker are then ordered to do what is disadvantageous for the stronger?

POLEMARCHUS: By Zeus, Socrates, that's abso- 340a
lutely clear.

And Clitophon interrupted:

Of course it is, if you are to be his witness, at any rate.

POLEMARCHUS: Who needs a witness? Thrasymachus himself agrees that the rulers sometimes issue orders that are bad for them, and that it is just for the others to obey them.

CLITOPHON: That, Polemarchus, is because Thrasymachus maintained that it is just to obey the orders of the rulers.

POLEMARCHUS: Yes, Clitophon, and he also maintained that what is advantageous for the stronger is just. And having maintained both principles, he b
went on to agree that the stronger sometimes order the weaker, who are subject to them, to do things that are disadvantageous for the stronger themselves. From these agreements it follows that what is advantageous for the stronger is no more just than what is not advantageous.

CLITOPHON: But what he meant by what is advantageous for the stronger is what the stronger *believes* to be advantageous for him. That is what he maintained the weaker must do, and that is what he maintained is what is just.

POLEMARCHUS: But it is not what he said.

SOCRATES: It makes no difference, Polemarchus. If Thrasymachus wants to put it that way now, let's c
accept it. But tell me, Thrasymachus, is that what you intended to say, that what is just is what the

stronger believes to be advantageous for him, whether it is in fact advantageous for him or not? Is that what we are to say you mean?

THRASYMACHUS: Not at all. Do you think I would call someone who is in error stronger at the very moment he errs?

SOCRATES: I did think you meant that, when you agreed that the rulers are not infallible but sometimes make errors.

THRASYMACHUS: That is because you are a quibd bler in arguments, Socrates. I mean, when someone makes an error in the treatment of patients, do you call him a doctor in virtue of the fact that he made that very error? Or, when someone makes an error in calculating, do you call him an accountant in virtue of the fact that he made that very error in calculation? I think we express ourselves in words that, taken literally, do say that a doctor is in error, or an accountant, or a grammarian. But each of these, to the extent that he is what we call him, never makes e errors, so that, according to the precise account (and you are a stickler for precise accounts), no craftsman ever makes errors. It is when his knowledge fails him that he makes an error, and, in virtue of the fact that he made that error, he is no craftsman. No craftsman, wise man, or ruler makes an error at the moment when he is ruling, even though everyone will say that a physician or a ruler makes errors. It is in this loose way that you must also take the answer I gave just now. But the most precise answer is this: a ruler, to the extent that he is a ruler, never makes errors and 341a unerringly decrees what is best for himself, and that is what his subject must do. Thus, as I said from the first, it is just to do what is advantageous for the stronger.

SOCRATES: Well, Thrasymachus, so you think I quibble, do you?

THRASYMACHUS: Yes, I do.

SOCRATES: And you think that I asked the questions I did in a premeditated attempt to do you evil in the argument?

THRASYMACHUS: I am certain of it. But it won't do you any good. You will never be able to do me b evil by covert means, and without them, you will never be able to overpower me by argument.

SOCRATES: Bless you, Thrasymachus; I would not so much as try! But to prevent this sort of confusion from happening to us again, would you define whether you mean the ruler and stronger in the ordinary sense or in what you were just now calling the precise sense, when you say that it is just for the weaker to do what is advantageous for him, since he is the stronger?

THRASYMACHUS: I mean the ruler in the most precise sense. Now do *that* evil, if you can, and practice your quibbling on it—I ask no favors. But you will find there is nothing you can do.

SOCRATES: Do you think that I am crazy enough to try to shave a lion[5] and quibble with Thrasymachus? c

THRASYMACHUS: Well, you certainly tried just now, although you were a good-for-nothing at it, too!

SOCRATES: That's enough of that! Tell me: is a doctor—in the precise sense, the one you mentioned before—a moneymaker or someone who treats the sick? Tell me about the one who is really a doctor.

THRASYMACHUS: Someone who treats the sick.

SOCRATES: What about a ship's captain? Is the true captain a ruler of sailors, or a sailor?

THRASYMACHUS: A ruler of sailors.

SOCRATES: In other words, we should not take any account of the fact that he sails in a ship, and d he should not be called a sailor for that reason. For it is not because he is sailing that he is called a ship's captain, but because of the craft he practices and his rule over sailors?

THRASYMACHUS: True.

SOCRATES: And is there something that is advantageous for each of these?

THRASYMACHUS: Certainly.

SOCRATES: And isn't it also the case that the natural aim of the craft is to consider and provide what is advantageous for each?

THRASYMACHUS: Yes, that is its aim.

SOCRATES: And is anything advantageous for each of the crafts themselves besides being as perfect as possible?

THRASYMACHUS: How do you mean? e

SOCRATES: It is like this: suppose you asked me whether it is satisfactory for a body to be a body, or whether it needs something else. I would answer, "Of

5. [Proverbial characterization of an almost impossible task.]

course it needs something. In fact, that is why the craft of medicine has been discovered—because a body is deficient and it is not satisfactory for it to be like that. To provide what is advantageous, that is what the craft was developed for." Do you think I am speaking correctly in saying this, or not?

THRASYMACHUS: Correctly.

SOCRATES: What about medicine itself? Is it deficient? Does a craft need some further virtue, as the eyes are in need of sight and the ears of hearing, so that another craft is needed to consider and provide what is advantageous for them? Does a craft have some similar deficiency itself, so that each craft needs another to consider what is advantageous for it? And does the craft that does the considering need still another, and so on without end? Or does each consider by itself what is advantageous for it? Does it need neither itself nor another craft to consider what—in light of its own deficiency—is advantageous for it? Indeed, is there no deficiency or error in any craft? And is it inappropriate for any craft to consider what is advantageous for anything besides that with which it deals? And since it is itself correct, is it without fault or impurity so long as it is wholly and precisely the craft it is? Consider this with that precision of language you mentioned. Is it so or not?

THRASYMACHUS: It appears to be so.

SOCRATES: Doesn't it follow that medicine does not consider what is advantageous for medicine, but for the body?

THRASYMACHUS: Yes.

SOCRATES: And horse breeding does not consider what is advantageous for horse breeding, but for horses? Indeed, no other craft considers what is advantageous for itself—since it has no further needs—but what is advantageous for that with which it deals?

THRASYMACHUS: Apparently so.

SOCRATES: Now surely, Thrasymachus, the various crafts rule over and are stronger than that with which they deal?

He gave in at this point as well, very reluctantly.

SOCRATES: So no kind of knowledge considers or enjoins what is advantageous for itself, but what is advantageous for the weaker, which is subject to it.

He finally agreed to this too, although he tried to fight it. When he had agreed, however, I said:

Surely then, no doctor, to the extent that he is a doctor, considers or enjoins what is advantageous for himself, but what is advantageous for his patient? For we agreed that a doctor, in the precise sense, is a ruler of bodies, not a moneymaker. Isn't that what we agreed?

THRASYMACHUS: Yes.

SOCRATES: So a ship's captain, in the precise sense, is a ruler of sailors, not a sailor?

THRASYMACHUS: That is what we agreed.

SOCRATES: Doesn't it follow that a ship's captain and ruler won't consider and enjoin what is advantageous for a captain, but what is advantageous for a sailor and his subject?

He reluctantly agreed.

SOCRATES: So then, Thrasymachus, no one in any position of rule, to the extent that he is a ruler, considers or enjoins what is advantageous for himself, but what is advantageous for his subject—that on which he practices his craft. It is to his subject and what is advantageous and proper for it that he looks, and everything he says and does, he says and does for it.

When we reached this point in the argument and it was clear to all that his account of justice had turned into its opposite, instead of answering, Thrasymachus said:

Tell me, Socrates, do you still have a wet nurse?

SOCRATES: What is that? Shouldn't you be giving answers rather than asking such things?

THRASYMACHUS: Because she is letting you run around sniveling and doesn't wipe your nose when you need it, since it is her fault that you do not know the difference between sheep and shepherds.

SOCRATES: What exactly is it I do not know?

THRASYMACHUS: You think that shepherds and cowherds consider what is good for their sheep and cattle, and fatten them and take care of them with some aim in mind other than what is good for their master and themselves. Moreover, you believe that

rulers in cities—true rulers, that is—think about their subjects in a different way than one does about sheep, and that what they consider night and day is something other than what is advantageous for themselves. c You are so far from understanding justice and what is just, and injustice and what is unjust, that you do not realize that justice is really the good of another, what is advantageous for the stronger and the ruler, and harmful to the one who obeys and serves. Injustice is the opposite, it rules those simpleminded—for that is what they really are—just people, and the ones it rules do what is advantageous for the other who is stronger; and they make the one they serve happy, but they do not make themselves the least bit happy.

d You must consider it as follows, Socrates, or you will be the most naïve of all: a just man must always get less than does an unjust one. First, in their contracts with one another, when a just man is partner to an unjust, you will never find, when the partnership ends, that the just one gets more than the unjust, but less. Second, in matters relating to the city, when taxes are to be paid, a just man pays more on an equal amount of property, an unjust one less; but when the city is giving out refunds, a just man gets nothing while an unjust one makes a large profit. e Finally, when each of them holds political office, a just person—even if he is not penalized in other ways—finds that his private affairs deteriorate more because he has to neglect them, that he gains no advantage from the public purse because of his justice, and that he is hated by his relatives and acquaintances because he is unwilling to do them an unjust favor. The opposite is true of an unjust man in every respect. I mean, of course, the person I described before: the man of great power who does better than everyone else. He is the one you 344a should consider if you want to figure out how much more advantageous it is for the individual to be unjust than just. You will understand this most easily if you turn your thoughts to injustice of the most complete sort, the sort that makes those who do injustice happiest, and those who suffer it—those who are unwilling to do injustice—most wretched. The sort I mean is tyranny, because it uses both covert means and force to appropriate the property of others—whether it is sacred or secular, public or private—not little by little, but all at once. If someone commits a part of this sort of injustice and gets caught, he is punished and b greatly reproached—temple robbers,[6] kidnappers, housebreakers, robbers, and thieves are what these partly unjust people are called when they commit those harms. When someone appropriates the possessions of the citizens, on the other hand, and then kidnaps and enslaves the possessors as well, instead of these shameful names he is called happy and blessed: not only by the citizens themselves, but even c by all who learn that he has committed the whole of injustice. For it is not the fear of doing injustice, but of suffering it, that elicits the reproaches of those who revile injustice.

So you see, Socrates, injustice, if it is on a large enough scale, is stronger, freer, and more masterful than justice. And, as I said from the beginning, justice is what is advantageous for the stronger, while injustice is profitable and advantageous for oneself.

Having, like a bath attendant, emptied this great flood of words into our ears all at once, Thrasy- d machus was thinking of leaving. But those present wouldn't let him. They made him stay and give an account of what he had said. And I myself was particularly insistent:

You are marvelous, Thrasymachus; after hurling such a speech at us, you surely cannot be thinking of leaving before you have adequately instructed us—or learned yourself—whether you are right or not. Or do you think it is a trivial matter you are trying e to determine, and not rather a way of life—the one that would make living life that way most profitable for each of us?

THRASYMACHUS: Do you mean that I do not think it is a serious matter?

SOCRATES: Either that, or you care nothing for us and so are not worried about whether we will live better or worse lives because of our ignorance of what you claim to know. No, be a good fellow and show

6. [The temples served as public treasuries, so that a temple robber is the equivalent of a present-day bank robber.]

some willingness to teach us—you won't do badly for
345a yourself if you help a group as large as ours. For my own part, I will tell you that I am not persuaded. I do not believe that injustice is more profitable than justice, not even if you should give it full scope to do what it wants. Suppose, my good fellow, that there *is* an unjust person, and suppose he *does* have the power to do injustice, whether by covert means or open warfare; nonetheless, he does not persuade me that injustice is more profitable than justice. Perhaps
b someone here besides myself feels the same as I do. So, blessed though you are, you are going to have to fully persuade us that we are wrong to value justice more highly than injustice in deliberating.

THRASYMACHUS: And how am I to persuade you? If you are not persuaded by what I said just now, what more can I do? Am I to take my argument and pour it into your very soul?

SOCRATES: No, by Zeus, do not do that! But first, stick to what you have said, or, if you change your position, do it openly and do not try to deceive us. You see, Thrasymachus, having defined the true doctor—to continue examining the things you said
c before—you did not consider it necessary to maintain the same level of exactness when you later turned to the true shepherd. You do not think a shepherd—to the extent that he is a shepherd—fattens sheep with the aim of doing what is best for them. But you think that, like a guest about to be entertained at a feast, his aim is to eat well or to make a future sale—
d as if he were a moneymaker rather than a shepherd. But of course, the only concern of the craft of shepherding is to provide what is best for that with which it deals, since it itself is adequately provided with all it needs to be at its best, as we know, when it does not fall short in any way of being the craft of shepherding. That is why I, at any rate, thought it necessary for us to agree before that every kind of rule—to the extent that it is a kind of rule—does not seek anything other than what is best for the thing it rules and cares for, and this is true both in political
e and in private rule. But do you think that those who rule cities—the ones who are truly rulers—rule willingly?

THRASYMACHUS: I do not think it, by Zeus, I know it.

SOCRATES: But, Thrasymachus, don't you realize that in other kinds of rule there is no willing ruler? On the contrary, they demand to be paid on the assumption that their ruling will benefit not themselves, but their subjects. For tell me, don't we say that each craft differs from every other in what it is 346a capable of doing? Blessed though you are, please don't answer contrary to your belief, so that we can come to some definite conclusion.

THRASYMACHUS: Yes, that is what differentiates them.

SOCRATES: And doesn't each craft provide us with a particular benefit, different from the others? For example, medicine provides us with health, captaincy with safety at sea, and so on with the others?

THRASYMACHUS: Certainly.

SOCRATES: And doesn't wage-earning provide us with wages, since that is what it is capable of doing? Or b would you call medicine the same craft as captaincy? Indeed, if you want to define matters precisely, as you proposed, even if someone who is a ship's captain becomes healthy because what is advantageous for him is sailing on the sea, you would not for that reason call what he does medicine, would you?

THRASYMACHUS: Of course not.

SOCRATES: Nor would you call wage-earning medicine, even if someone becomes healthy while earning wages?

THRASYMACHUS: Of course not.

SOCRATES: Nor would you call medicine wage-earning, even if someone earns pay while healing?

THRASYMACHUS: No. c

SOCRATES: We are agreed then, aren't we, that each craft brings its own special benefit?

THRASYMACHUS: Yes, we are.

SOCRATES: So whatever benefit all craftsmen jointly receive must clearly derive from their joint practice of some additional craft that is the same for each of them.

THRASYMACHUS: It seems so.

SOCRATES: And we say that the additional craft in question, which benefits the craftsmen by earning them wages, is the craft of wage-earning?

He reluctantly agreed.

SOCRATES: Then this very benefit, receiving wages, is not provided to each of them by his own

craft. On the contrary, if we are to examine the matter precisely, medicine provides health and wage-earning provides a wage; house-building provides a house, and wage-earning, which accompanies it, provides a wage; and so on with the other crafts. Each of them does its own work and benefits that with which it deals. So, wages aside, is there any benefit that craftsmen get from their craft?

THRASYMACHUS: Apparently not.

SOCRATES: But he still provides a benefit, even when he works for nothing?

THRASYMACHUS: Yes, I think he does.

SOCRATES: Then, it is clear now, Thrasymachus, that no type of craft or rule provides what is beneficial for itself; but, as we have been saying for some time, it provides and enjoins what is beneficial for its subject, and aims at what is advantageous for *it*—the weaker, not the stronger. That is why I said just now, my dear Thrasymachus, that no one chooses to rule voluntarily and take other people's troubles in hand and straighten them out, but each asks for wages. You see, anyone who is going to practice his type of craft well never does or enjoins what is best for himself—at least not when he is acting as his craft prescribes—but what is best for his subject. It is because of this, it seems, that wages must be provided to a person if he is going to be willing to rule, whether they are in the form of money or honor or a penalty if he refuses.

GLAUCON: What do you mean, Socrates? I am familiar with the first two kinds of wages, but I do not understand what penalty you mean, or how you can call it a wage.

SOCRATES: Then you do not understand the sort of wages for which the best people rule, when they are willing to rule. Don't you know that those who love honor and those who love money are despised, and rightly so?

GLAUCON: I do.

SOCRATES: Well, then, that is why good people won't be willing to rule for the sake of money or honor. You see, if they are paid wages openly for ruling, they will be called hirelings, and if they take them covertly as the fruits of their rule, they will be called thieves. On the other hand, they won't rule for the sake of honor either, since they are not ambitious honor-lovers. So, if they are going to be willing to rule, some compulsion or punishment must be brought to bear on them—that is probably why wanting to rule when one does not have to is thought to be shameful. Now, the greatest punishment for being unwilling to rule is being ruled by someone worse than oneself. And I think it is fear of that that makes good people rule when they do rule. They approach ruling, not as though they were going to do something good or as though they were going to enjoy themselves in it, but as something necessary, since it cannot be entrusted to anyone better than—or even as good as—themselves. In a city of good men, if it came into being, the citizens would fight in order *not to rule*, just as they now do in order to rule. There it would be quite clear that anyone who is really and truly a ruler does not naturally seek what is advantageous for himself, but what is so for his subject. As a result, anyone with any sense would prefer to be benefited by another than to go to the trouble of benefiting him. So I cannot at all agree with Thrasymachus that justice is what is advantageous for the stronger. But we will look further into that another time. What Thrasymachus is now saying—that the life of an unjust person is better than that of a just one—seems to be of far greater importance. Which life would you choose, Glaucon? And which of our views do you think is closer to the truth?

GLAUCON: I think the life of a just person is more profitable.

SOCRATES: Did you hear all the good things Thrasymachus attributed a moment ago to the unjust man?

GLAUCON: I did, but I am not persuaded.

SOCRATES: Then do you want us to persuade him, if we can find a way, that what he says is not true?

GLAUCON: Of course I do.

SOCRATES: Well, if we oppose him with a speech parallel to his speech enumerating in turn the many good things that come from being just, and he replies, and then we do, we will have to count and measure the good things mentioned on each side, and we will need a jury to decide the case. But if, on the other hand, we investigate the question, as we have been doing, by seeking agreement with each other, we ourselves can be both jury and advocates at once.

GLAUCON: Certainly.

SOCRATES: Then which approach do you prefer?

GLAUCON: The second.

SOCRATES: Come on then, Thrasymachus, answer us from the beginning. You say, don't you, that complete injustice is more profitable than complete justice?

THRASYMACHUS: I certainly have said that. And I
c have told you why.

SOCRATES: Well, then, what do you say about this? Do you call one of the two a virtue and the other a vice?

THRASYMACHUS: Of course.

SOCRATES: That is to say, you call justice a virtue and injustice a vice?

THRASYMACHUS: Is that likely, sweetest one, when I say that injustice is profitable and justice is not?

SOCRATES: Then what exactly do you say?

THRASYMACHUS: The opposite.

SOCRATES: That justice is a vice?

THRASYMACHUS: No, just very noble naiveté.[7]

d SOCRATES: So you call injustice deviousness?

THRASYMACHUS: No, I call it being prudent.

SOCRATES: Do you also consider unjust people to be wise and good, Thrasymachus?

THRASYMACHUS: Yes, if they do complete injustice and can bring cities and whole nations under their power. Perhaps, you thought I meant pickpockets? Not that such crimes aren't also profitable, if they are not found out. But they are not worth discussing by comparison to what I described.

SOCRATES: Yes, I am not unaware of what you
e mean. But this did surprise me: that you include injustice with virtue and wisdom, and justice with their opposites.

THRASYMACHUS: Nevertheless, that is where I put them.

SOCRATES: That is now a harder problem, comrade, and it is not easy to know what to say in response. If you had declared that injustice is more profitable, but agreed that it is a vice or shameful, as some others do, we could be discussing the matter on the basis of conventional views. But now, obviously, you will say that injustice is fine and strong and apply to it all the attributes we used to apply to justice, since you *349a* dare to include it with virtue and wisdom.

THRASYMACHUS: You have guessed my views exactly.

SOCRATES: All the same, we must not shrink from pursuing the argument and looking into this, just as long as I take you to be saying what you really think. You see, I believe that you really are not joking now, Thrasymachus, but saying what you believe to be the truth.

THRASYMACHUS: What difference does it make to you, whether *I* believe it or not? Isn't it *my account* you are supposed to be refuting?

SOCRATES: It makes no difference. But here is a further question I would like you to try to answer: do you think that a just person wants to do better than *b* another just person?

THRASYMACHUS: Not at all. Otherwise, he would not be the civilized and naïve person he actually is.

SOCRATES: What about than the just action?

THRASYMACHUS: No, not than that, either.

SOCRATES: And does he claim that he deserves to do better than an unjust person and believe that it is just for him to do so, or doesn't he believe that?

THRASYMACHUS: He would want to do better than him, and he would claim to deserve to do so, but he would not be able.

SOCRATES: That is not what I am asking, but whether a just person wants, and claims to deserve, to do better than an unjust person, but not than a *c* just one?

THRASYMACHUS: He does.

SOCRATES: What about an unjust person? Does he claim that he deserves to do better than a just person or a just action?

THRASYMACHUS: Of course he does; he thinks he deserves to do better than everyone.

SOCRATES: Then will an unjust person also do better than an *unjust* person or an *unjust* action, and will he strive to get the most he can for himself from everyone?

THRASYMACHUS: He will.

SOCRATES: Then let's put it this way: a just person does not do better than someone like himself, but someone unlike himself, whereas an unjust person does better than those who are like *and* those who are unlike him. *d*

7. [*Euêtheia, kakoêtheia:* Thrasymachus uses *euêtheia* in the bad sense, to mean stupidity. Socrates takes him to mean it in the good sense of being straightforward, and so contrasts it with *kakoêtheia*—deviousness.]

THRASYMACHUS: Very well put.

SOCRATES: Now, an unjust person is wise and good, and a just one is neither?

THRASYMACHUS: That is well put, too.

SOCRATES: So isn't an unjust person also *like* a wise and good person, while the just person is not?

THRASYMACHUS: Of course. How could he fail to be like people who have such qualities, when he has them himself? But the unjust person is not like them.

SOCRATES: Fine. Then each of them has the qualities of the people he is like?

THRASYMACHUS: What else could he have?

SOCRATES: All right, Thrasymachus. Do you call
e one person musical and another non-musical?

THRASYMACHUS: I do.

SOCRATES: Which of them is wise in music and which is not?

THRASYMACHUS: The musical one is wise, presumably, and the other not wise.

SOCRATES: And in the things in which he is wise, he is good; and in the things in which he is not wise, he is bad?

THRASYMACHUS: Yes.

SOCRATES: Isn't the same true of a doctor?

THRASYMACHUS: It is.

SOCRATES: Do you think, then, Thrasymachus, that a man who is a musician, when he is tuning his lyre and tightening and loosening the strings, wants to do better than another musician, and does he claim that that is what he deserves?

THRASYMACHUS: I do not.

SOCRATES: But he does want to do better than a non-musician?

THRASYMACHUS: Necessarily.

SOCRATES: What about a doctor? When he is pre-
350a scribing food and drink, does he want to do better than another doctor or than medical practice?

THRASYMACHUS: Certainly not.

SOCRATES: But he does want to do better than a non-doctor?

THRASYMACHUS: Yes.

SOCRATES: In any branch of knowledge or ignorance, do you think that a knowledgeable person would intentionally try to take more for himself than another knowledgeable person, or to do or say more, and not rather exactly what the one like himself would do in the same situation?

THRASYMACHUS: No, I imagine it must be as you say.

SOCRATES: And what about an ignorant person? Doesn't he want to do better than both a knowledgeable person and an ignorant one? *b*

THRASYMACHUS: I suppose so.

SOCRATES: A knowledgeable person is wise?

THRASYMACHUS: I agree.

SOCRATES: And a wise one is good?

THRASYMACHUS: I agree.

SOCRATES: So, a good and wise person does not want to do better than someone like himself, but someone both unlike and opposite to him.

THRASYMACHUS: So it seems.

SOCRATES: But a bad and ignorant person wants to do better than both his like and his opposite.

THRASYMACHUS: Apparently.

SOCRATES: Well, Thrasymachus, we found that an unjust person tries to do better than those like him and those unlike him. Didn't you say that?

THRASYMACHUS: I did.

SOCRATES: And that a just person won't do better than those like him, but those unlike him? *c*

THRASYMACHUS: Yes.

SOCRATES: Then a just person is like a wise and good person, and an unjust person is like an ignorant and bad one.

THRASYMACHUS: It looks that way.

SOCRATES: Moreover, we agreed that each has the qualities of the one he resembles.

THRASYMACHUS: Yes, we did.

SOCRATES: A just person has turned out to be good and wise, then, and an unjust one ignorant and bad.

Thrasymachus agreed to all this, not easily as I am telling it, but reluctantly, with toil, trouble, *d*
and—since it was summer—a quantity of sweat that was amazing to behold. And then I saw something I had never seen before—Thrasymachus blushing. But in any case, after we had agreed that justice is virtue and wisdom and that injustice is vice and ignorance, I said:

All right, let's take that as established. But we also said that injustice is a strong thing, or don't you remember that, Thrasymachus?

THRASYMACHUS: I remember. But I am not satisfied with what you are now saying. I could make a speech about it, but if I did, I know that you would say I was engaging in demagoguery. So, either allow
e me to say as much as I want to say or, if you want to keep on asking questions, go ahead and ask them, and I shall say to you—as one does to old women telling stories—"All right," and nod or shake my head.

SOCRATES: No, don't do that; not contrary to your own belief.

THRASYMACHUS: Then I will answer to please you, since you won't let me make a speech. What else do you want?

SOCRATES: Nothing, by Zeus. But if that is what you are going to do, do it, and I will ask the questions.

THRASYMACHUS: Ask them, then.

SOCRATES: All right, I will ask precisely what I asked before, so that we may proceed in an orderly fashion with our argument about what sort of thing
351a justice is, as opposed to injustice. For it was claimed, I believe, that injustice is stronger and more powerful than justice. But now, if justice is indeed wisdom and virtue, it will be easy to show, I suppose, that it is stronger than injustice, since injustice is ignorance—no one could now be ignorant of that. However, I, at any rate, do not want to consider the matter in such simple terms, Thrasymachus, but to look into it in some such way as this: would you say that a city
b may be unjust and try to enslave other cities unjustly, and succeed at enslaving them, and hold them in subjection which it enslaved in the past?

THRASYMACHUS: Of course. And that is what the best city will especially do, the one that is most completely unjust.

SOCRATES: I understand that that is your argument, but the point I want to examine is this: will the city that becomes stronger than another achieve this power without justice, or will it need the help of justice?

THRASYMACHUS: If what you said a moment ago
c stands, and justice is wisdom, it will need the help of justice; but if things are as I stated, it will need the help of injustice.

SOCRATES: I am impressed, Thrasymachus, that you are not merely nodding or shaking your head, but giving these fine answers.

THRASYMACHUS: That is because I am trying to please you.

SOCRATES: You are doing well at it, too. So please me some more by answering this question: do you think that a city, an army, a band of robbers or thieves, or any other group with a common unjust purpose would be able to achieve it if its members were unjust to each other?

THRASYMACHUS: Of course not. d

SOCRATES: What if they were not unjust to one another? Would they achieve more?

THRASYMACHUS: Certainly.

SOCRATES: Because, Thrasymachus, injustice causes factions, hatreds, and quarrels among them, while justice brings friendship and a sense of common purpose. Isn't that so?

THRASYMACHUS: I will say it is, in order not to disagree with you.

SOCRATES: You are still doing well on that front, which is very good of you. So tell me this: if the function of injustice is to produce hatred wherever it occurs, then whenever it arises, whether among free men or slaves, won't it make them hate one another, form factions, and be unable to achieve any common purpose? e

THRASYMACHUS: Of course.

SOCRATES: What if it arises between two people? Won't they be at odds, hate each other, and be enemies both to one another and to just people?

THRASYMACHUS: They will.

SOCRATES: Well, then, my amazing fellow, if injustice arises within a single individual, will it lose its power or will it retain it undiminished?

THRASYMACHUS: Let's say that it retains it undiminished.

SOCRATES: Apparently, then, its power is such that whenever it comes to exist in something—whether in a city, a family, an army, or anything else whatsoever—it makes that thing, first of all, incapable of acting in concert with itself, because of the faction 352a and difference it creates; and, second of all, an enemy to itself, and to what is in every way its opposite: namely, justice. Isn't that so?

THRASYMACHUS: Of course.

SOCRATES: And in a single individual, too, I presume, it will produce the very same effects that it is in its nature to produce. First, it will make him incapable of acting because of inner faction and not being of one mind with himself; second, it will make him

his own enemy as well as the enemy of just people. Isn't that right?

THRASYMACHUS: Yes.

SOCRATES: But, my dear fellow, aren't the gods also just?

THRASYMACHUS: Let's say they are.

SOCRATES: Then an unjust person will also be an *b* enemy of the gods, Thrasymachus, while a just person will be their friend?

THRASYMACHUS: Feast yourself confidently on the argument! Don't worry, I won't oppose you, so as not to arouse the enmity of our friends here.

SOCRATES: Come on, then, complete the banquet for me by continuing to answer as you have been doing now. We have shown that just people are wiser and better and more capable of acting, while unjust ones are not even able to act together. For *c* whenever we speak of men who are unjust acting together to effectively achieve a common goal, what we say is not altogether true. They would never have been able to keep their hands off each other if they were completely unjust. But clearly there must have been some sort of justice in them that at least prevented them from doing injustice among themselves at the same time as they were doing it to others. And it was this that enabled them to achieve what they did. When they started doing unjust things, they were only halfway corrupted by their injustice. For those who are wholly bad and completely unjust are also completely incapable of acting. All this I now see to be the truth, and not what you first maintained. *d* However, we must now examine the question, as we proposed to do before,[8] of whether just people also live better and are happier than unjust ones. I think it is clear even now from what we have said that this is so, but we must consider it further. After all, the argument concerns no ordinary topic, but the way we ought to live.

THRASYMACHUS: Go ahead and consider.

SOCRATES: I will. Tell me, do you think there is such a thing as the function of a horse?

THRASYMACHUS: I do.

e SOCRATES: And would you take the function of a horse or of anything else to be that which one can do only with it, or best with it?

THRASYMACHUS: I don't understand.

SOCRATES: Let me put it this way: is it possible for you to see with anything except eyes?

THRASYMACHUS: Certainly not.

SOCRATES: Or for you to hear with anything except ears?

THRASYMACHUS: No.

SOCRATES: Would it be right, then, for us to say that these things are their functions?

THRASYMACHUS: Of course.

SOCRATES: Again, couldn't you use a dagger, a carving knife, or lots of other things in pruning a vine? *353a*

THRASYMACHUS: Certainly.

SOCRATES: But nothing would do a better job than a pruning knife designed for the purpose?

THRASYMACHUS: That's true.

SOCRATES: Shall we take pruning to be its function, then?

THRASYMACHUS: Yes.

SOCRATES: Now I think you will understand better what I was asking earlier when I asked whether the function of each thing is what it alone can do or what it can do better than anything else.

THRASYMACHUS: I do understand, and I think that that is the function of anything. *b*

SOCRATES: All right. Does there seem to you also to be a virtue for each thing to which some function is assigned? Let's go over the same ground again. We say that eyes have some function?

THRASYMACHUS: They do.

SOCRATES: So eyes also have a virtue?

THRASYMACHUS: They do.

SOCRATES: And ears have a function?

THRASYMACHUS: Yes.

SOCRATES: So they also have a virtue?

THRASYMACHUS: They have a virtue too.

SOCRATES: What about everything else? Doesn't the same hold?

THRASYMACHUS: It does.

SOCRATES: Well, then. Could eyes perform their function well if they lacked their proper virtue but *c* had the vice instead?

THRASYMACHUS: How could they? For don't you mean if they had blindness instead of sight?

SOCRATES: Whatever their virtue is. You see, I am not now asking about that, but about whether it is by means of their own proper virtue that their

8. [347e.]

function performs the things it performs well, and by means of vice badly?

THRASYMACHUS: What you say is true.

SOCRATES: So, if ears are deprived of their own virtue, they too perform their function badly?

THRASYMACHUS: Of course.

SOCRATES: And the same argument applies to
d everything else?

THRASYMACHUS: So it seems to me, at least.

SOCRATES: Come on, then, and let's next consider this: does the soul have some function that you could not perform with anything else—for example, taking care of things, ruling, deliberating, and all other such things? Is there anything else besides a soul to which you could rightly assign these and say that they are special to it?

THRASYMACHUS: No, there is nothing else.

SOCRATES: Then what about living? Don't we say that it is a function of a soul?

THRASYMACHUS: Absolutely.

SOCRATES: And don't we also say that a soul has a virtue?

THRASYMACHUS: We do.

SOCRATES: Will a soul ever perform its functions
e well, then, Thrasymachus, if it is deprived of its own proper virtue, or is that impossible?

THRASYMACHUS: It is impossible.

SOCRATES: It is necessary, then, that a bad soul rules and takes care of things badly, and that a good soul does all these things well?

THRASYMACHUS: It is necessary.

SOCRATES: Now, didn't we agree that justice is a soul's virtue and injustice its vice?

THRASYMACHUS: Yes, we did agree.

SOCRATES: So a just soul and a just man will live well and an unjust one badly.

THRASYMACHUS: Apparently so, according to your argument.

SOCRATES: And surely anyone who lives well is
354a blessed and happy, and anyone who does not is the opposite.

THRASYMACHUS: Of course.

SOCRATES: Therefore, a just person is happy and an unjust one wretched.

THRASYMACHUS: Let's say so.

SOCRATES: But surely it is profitable, not to be wretched, but to be happy.

THRASYMACHUS: Of course.

SOCRATES: So then, blessed Thrasymachus, injustice is never more profitable than justice.

THRASYMACHUS: Let that be your banquet, Socrates, at the feast of Bendis.

SOCRATES: Given by you, Thrasymachus, after you became gentle with me and ceased to be difficult. Yet I have not had a good banquet. But that is my fault, not yours. I seem to have behaved like those *b* gluttons who snatch at every dish that passes and taste it before having properly savored the preceding one. Before finding the first thing we inquired about—namely, what justice is—I let that go, and turned to investigate whether it is a kind of vice and ignorance or a kind of wisdom and virtue. Then an argument came up about injustice being more profitable than justice, and I could not refrain from abandoning the previous one and following up on it. Hence the result of the discussion, so far as I am concerned, is that I know nothing. For when I do not know what justice is, I will hardly know whether it is a kind of virtue *c* or not, or whether a person who has it is happy or unhappy.

BOOK II

SOCRATES' NARRATION CONTINUES: *When I had said this, I thought I had done with the discussion. But it all turned out to be only a prelude,* *357a* *as it were. You see, Glaucon, who is always very courageous in everything, refused on this occasion, too, to accept Thrasymachus' capitulation. Instead, he said:*

Do you want to *seem* to have persuaded us, Socrates, that it is better in every way to be just rather than unjust, or do you want to *really* persuade us of this? *b*

SOCRATES: I want to really persuade you, if I can.

GLAUCON: Well, then, you certainly are not doing what you want. Tell me, do you think there is a sort of good we welcome, not because we desire its consequences, but because we welcome it for its own sake—enjoying, for example, and all the harmless pleasures from which nothing results afterward beyond enjoying having them?

SOCRATES: Certainly, I think there is such a thing.

GLAUCON: And is there a sort of good we love for
c its own sake, and also for the sake of its consequences—Knowing, for example, and seeing, and being healthy? For we welcome such things, I imagine, on both counts.

SOCRATES: Yes.

GLAUCON: And do you also recognize a third kind of good, such as physical training, medical treatment when sick, medicine itself, or ways of making money generally? We would say that these are burdensome but beneficial to us, and we would not choose them for their own sake, but for the sake of their rewards
d and other consequences.

SOCRATES: Yes, certainly, there is also this third kind. But what of it?

GLAUCON: In which of them do you place justice?

358a SOCRATES: I myself put it in the finest one—the one that anyone who is going to be blessed with happiness must love both because of itself and because of its consequences.

GLAUCON: That is not what the masses think. On the contrary, they think it is of the burdensome kind: the one that must be practiced for the sake of the rewards and the popularity that are the consequences of a good reputation, but that is to be avoided as intrinsically burdensome.

SOCRATES: I know that is the general view. Thrasymachus has been faulting justice and praising injustice on these grounds for some time. But it seems that I am a slow learner.

GLAUCON: Come on, then, listen to what I have to
b say as well, and see whether you still have that problem. You see, I think Thrasymachus gave up before he had to, as if he were a snake you had charmed. Yet, to my way of thinking, there was still no demonstration on either side. For I want to hear what justice and injustice are, and what power each has when it is just by itself in the soul. I want to leave out of account the rewards and the consequences of each of them.

So, if you agree, I will renew the argument of Thrasymachus. First, I will state what sort of thing
c people consider justice to be, and what its origins are. Second, I will argue that all who practice it do so unwillingly, as something necessary, not as something good. Third, I will argue that they have good reason to act as they do. For the life of the unjust person is, they say, much better than that of the just one.

It isn't, Socrates, that I believe any of that myself. I am perplexed, indeed, and my ears are deafened listening to Thrasymachus and countless others. But I have yet to hear anyone defend justice in the way I want, as being better than injustice. I want to hear d it praised *on its own*, and I think that I am most likely to learn this from you. That is why I am going to speak at length in praise of the unjust life: by doing so, I will be showing you the way I want to hear you praising justice and denouncing injustice. But see whether you want me to do what I am saying or not.

SOCRATES: I want it most of all. Indeed, what subject could a person with any sense enjoy talking and hearing about more often?

GLAUCON: Excellent sentiments. Now, listen to what I said I was going to discuss first—what justice e is like and what its origins are. People say, you see, that to do injustice is naturally good and to suffer injustice bad. But the badness of suffering it far exceeds the goodness of doing it. Hence, those who have done and suffered injustice and who have tasted both—the ones who lack the power to do it and avoid suffering it—decide that it is profitable to come to an agreement with each other neither to do injustice 359a nor to suffer it. As a result, they begin to make laws and covenants; and what the law commands, they call lawful and just. That, they say, is the origin and very being of justice. It is in between the best and the worst. The best is to do injustice without paying the penalty; the worst is to suffer it without being able to take revenge. Justice is in the middle between these two extremes. People love it, not because it is a good thing, but because they are too weak to do injustice with impunity. Someone who has the power b to do it, however—someone who is a real man—would not make an agreement with anyone, neither to do injustice nor to suffer it. For him, that would be insanity. That is the nature of justice, according to the argument, Socrates, and those are its natural origins.

We can see most clearly that those who practice it do so unwillingly, because they lack the power to do injustice, if we imagine the following thought-experiment. Suppose we grant to the just and the unjust person the freedom to do whatever they like. c We can then follow both of them and see where their appetites would lead. And we will catch the just

person red-handed, traveling the same road as the unjust one. The reason for this is the desire to do better than others. This is what every natural being naturally pursues as good. But by law and force, it is made to deviate from this path and honor equality.

They would especially have the freedom I am talking about if they had the power that the ancestor of Gyges of Lydia is said to have possessed. The story
d goes that he was a shepherd in the service of the ruler of Lydia. There was a violent thunderstorm, and an earthquake broke open the ground and created a chasm at the place where he was tending his sheep. Seeing this, he was filled with amazement and went down into it. And there, in addition to many other amazing things of which we are told stories, he saw a hollow, bronze horse. There were windowlike openings in it and, peeping in, he saw a corpse, which seemed to be of more than human size, wearing
e nothing but a gold ring on its finger. He took off the ring and came out of the chasm. He wore the ring at the usual monthly meeting of shepherds that reported to the king on the state of the flocks. And as he was sitting among the others, he happened to turn the setting of the ring toward himself, toward the inside of his hand. When he did this, he became
360*a* invisible to those sitting near him, and they went on talking as if he had gone. He was amazed at this and, fingering the ring, he turned the setting outward again and became visible. So, he experimented with the ring to test whether it indeed had this power—and it did. If he turned the setting inward, he became invisible; if he turned it outward, he became visible again. As soon as he realized this, he arranged to become one of the messengers sent to report to the king. On arriving there, he seduced the king's wife,
b attacked the king with her help, killed him, and in this way took over the kingdom.

Let's suppose, then, that there were two such rings, one worn by the just person, the other by the unjust. Now no one, it seems, would be so incorruptible that he would stay on the path of justice, or bring himself to keep away from other people's possessions and not touch them, when he could take whatever he wanted from the marketplace with impunity, go into people's houses and have sex with anyone he wished, kill or
c release from prison anyone he wished, and do all the other things that would make him like a god among humans. And in so behaving, he would do no differently than the unjust person, but both would pursue the same course.

This, some would say, is strong evidence that no one is just willingly, but only when compelled. No one believes justice to be a good thing when it is kept private, since whenever either person thinks he can do injustice with impunity, he does it. Indeed, all men believe that injustice is far more profitable to themselves than is justice. And what they believe is *d* true, so the exponent of this argument will say. For someone who did not want to do injustice, given this sort of opportunity, and who did not touch other people's property, would be thought most wretched and most foolish by everyone aware of the situation. Though, of course, they would praise him in public, deceiving each other for fear of suffering injustice. So much for my second topic.

As for decision itself about the life of the two we are discussing, if we contrast the extremes of justice *e* and injustice, we shall be able to make the decision correctly; but if we don't, we won't. What, then, is the contrast I have in mind? It is this: we will subtract nothing from the injustice of the unjust person, and nothing from the justice of the just one. On the contrary, we will take each to be perfect in his own pursuit. First, then, let the unjust person act like a clever craftsman. An eminent ship's captain or doctor, for example, knows the difference between what his craft can and cannot do. He attempts the first but lets the second go by. And if he happens to slip, he 361*a* can put things right. In the same way, if he is to be completely unjust, let the unjust person correctly attempt unjust acts and remain undetected. The one who is caught should be thought inept. For the extreme of injustice is to be believed to be just without actually being so. And our completely unjust person must be given complete injustice—nothing must be subtracted from it. We must allow that, while doing the greatest injustice, he has nonetheless provided himself with the greatest reputation for justice. If he does happen to slip up, he must be able to put it *b* right, either through his ability to speak persuasively if any of his unjust activities are discovered, or to use force if force is needed, because he is courageous and strong and has provided himself with wealth and friends.

Having hypothesized such a person, let's now put the just man next to him in our argument—someone who is simple and noble and who, as Aeschylus says, does not want to be believed to be good, but to be so.[1] We must take away his reputation. For a reputation for
c justice would bring him honor and rewards, so that it would not be clear whether he is being just for the sake of justice, or for the sake of those honors and rewards. We must strip him of everything except justice, and make his situation the opposite of the unjust person's. Though he does no injustice, he must have the greatest reputation for it, so that he may be tested with regard to justice by seeing whether or not he can withstand a bad reputation and its consequences. Let him stay like that, unchanged, until he is dead—
d just, but all his life believed to be unjust. In this way, both will reach the extremes, the one of justice and the other of injustice, and we will be able to judge which of them is happier.

SOCRATES: Whew! My dear Glaucon, how vigorously you have scoured each of the men in our competition, just as you would a pair of statues for an art competition.

GLAUCON: I am doing the best I can. Since the two are as I have described, in any case, it should not be difficult to complete the account of the sort of life that awaits each of them, but it must be done.
e And if what I say sounds crude, Socrates, remember that it is not *I* who speak, but those who praise injustice at the expense of justice. They will say that the just person in such circumstances will be whipped, stretched on a rack, chained, blinded with a red-hot iron, and, at the end, when he has suffered every sort
362a of bad thing, he will be impaled, and will realize then that one should not want to be just, but to be believed to be just. Indeed, Aeschylus' words are far more correctly applied to the unjust man. For people will say that it is really the unjust person who does not want to be believed to be unjust, but actually to be so, because he bases his practice on the truth about things and does not allow reputation to regulate his life. He is the one who "harvests a deep furrow in his mind, where wise counsels propagate." First, he
b rules his city because of his reputation for justice. Next, he marries into any family he wishes, gives his children in marriage to anyone he wishes, has contracts and partnerships with anyone he wants, and, besides benefiting himself in all these ways, he profits because he has no scruples about doing injustice. In any contest, public or private, he is the winner and does better than his enemies. And by doing better than them, he becomes wealthy, benefits his friends, and harms his enemies. He makes adequate sacrifices
c to the gods and sets up magnificent offerings to them, and takes much better care of the gods—and, indeed, of the human beings he favors—than the just person. So he may reasonably expect that the gods, in turn, will love him more than the just person. That is why they say, Socrates, that gods and humans provide a better life for the unjust person than for the just one.

When Glaucon had said this, I had it in mind to respond, but his brother Adeimantus intervened: d

You surely do not think that the argument has been adequately stated?

SOCRATES: Why shouldn't I?

ADEIMANTUS: The most important point has not been mentioned.

SOCRATES: Well, then, as the saying goes, a man's brother must stand by him.[2] So if Glaucon has omitted something, you must help him. Though, for my part at any rate, what he has already said is quite enough to throw me to the canvas and make me incapable of coming to the aid of justice.

ADEIMANTUS: Nonsense. But listen to what more I have to say, as well. You see, in order to clarify what
e Glaucon has in mind, we should also fully explore the arguments that are opposed to the ones he gave—those that praise justice and disparage injustice.

As you know, when fathers speak to their sons to give them advice, they say that one must be just, as do all those who have others in their charge. But they do not praise justice itself, only the good reputation
363a it brings: the inducement they offer is that if we are reputed to be just, then, as a result of our reputation,

1. [In *Seven against Thebes* 592–4, it is said of Amphiaraus that "he did not wish to be believed to be the best but to be it." The passage continues with the words Glaucon quotes below at 362a–b.]

2. [See Homer, *Odyssey* 16.97–8.]

we will get political offices, good marriages, and all the things that Glaucon recently said that the just man would get as a result of having a good reputation.

But these people have even more to say about the consequences of reputation. For by throwing in being well thought of by the gods, they have plenty of good things to talk about—all the ones the gods are said to give to those who are pious. For example, the noble Hesiod and Homer say such things. For Hesiod says
b that the gods make the oak trees "bear acorns at the top, bees in the middle, and fleecy sheep heavy laden with wool" for those who are just, and tells of many other good things akin to these.[3] And Homer says pretty much the same:

> When a good king, in his piety,
> Upholds justice, the black earth bears
> Wheat and barley for him, and his trees are
> *c* heavy with fruit,
> His sheep bear lambs unfailingly and the sea
> yields up its fish.[4]

Musaeus and his son claim that the gods give just people even more exciting goods than these. In their account, they lead the just to Hades, seat them on couches, provide them with a symposium of pious people, crown them with wreaths, and make them spend all their time drinking—as if they thought eter-
d nal drunkenness was the finest wage of virtue. Others stretch even further the wages that virtue receives from the gods. For they say that someone who is pious and keeps his promises leaves his children's children and a whole race behind him.

In these and other similar ways, they praise justice. But the impious and unjust they bury in mud in Hades, and they force them to carry water in a sieve. They bring them into bad repute while they are still alive. And all those penalties that Glaucon gave to
e just people who are thought to be unjust, they give to the unjust ones. But they have nothing else to say.

That, then, is the praise and blame given to each. But in addition, Socrates, there is another kind of argument about justice and injustice for you to consider—one that is used both by private individuals and by poets. With one voice they all chant the hymn *364a* that justice and temperance are fine things, but difficult and onerous, while intemperance and injustice are sweet and easy to acquire and are only shameful by repute and convention. They also say that unjust deeds are, for the most part, more profitable than just ones; and whereas they are perfectly willing to bestow public and private honors on bad people—provided they have wealth and other types of power—and to declare them to be happy, they dishonor and disregard those who happen to be in any way weak or poor, even though they admit that they are better than the others. *b*

But most amazing of all are the accounts they give of the gods and virtue, and how it is that the gods, too, assign misfortune and a bad life to many good people, and the opposite fate to their opposites. Begging priests and prophets go to the doors of rich people and persuade them that, through sacrifices and incantations, they have acquired a god-given power: if the rich person or any of his ancestors has committed *c* an injustice, they can fix it with pleasant rituals. And if he wishes to injure an enemy, he will be able to harm a just one or an unjust one alike at little cost, since by means of spells and enchantments they can persuade the gods to do their bidding.

And the poets are brought forward as witnesses to all these accounts. Some harp on the ease of vice, on the grounds that

> Vice in abundance is easy to get,
> The road is smooth and begins beside you, *d*
> But the gods have put sweat between us and
> virtue

and a road that is long, rough, and steep.[5] Others quote Homer to bear witness that the gods can be influenced by humans, since he too said:

> Even the gods themselves can be swayed by
> prayer.
> And with sacrifices and soothing promises,
> Incense and libation-drinking, human beings
> turn them from their purpose, *e*
> When someone has transgressed and sinned.[6]

3. [Hesiod, *Works and Days* 332–3.]
4. [Homer, *Odyssey* 19.109.]
5. [*Works and Days* 287–9, with minor alterations.]
6. [*Iliad* 9.497–501, with minor alterations.]

And they present a noisy throng of books by Musaeus and Orpheus—who are the offspring, they claim, of Selene and the Muses—on which they base their rituals. And they persuade not only private individuals, but whole cities, that there are in fact absolutions and purifications for unjust deeds. For the living, these consist of ritual sacrifices and pleasant games. 365a But there are also special rites for the dead. These initiations, as they call them, free people from evils hereafter, while terrible things await those who have not performed the rituals.

With so many things of this sort, my dear Socrates, being said about virtue and vice, and about how human beings and gods honor them, what effect do we suppose they have on the souls of young people? I mean those who are naturally gifted and able to flit, so to speak, from one of these sayings to another and gather from them an impression of what sort of people they should be, and of how best to travel the road of b life. He would surely ask himself Pindar's question: "Is it by justice or by crooked tricks that I will scale the higher wall," and so live out my life surrounded by secure defenses? And he will answer: "As for what people say, they say that there is no advantage in my being just if I am not also thought just, whereas the troubles and penalties of being just are apparent; but the unjust person, who has secured for himself a reputation for justice, lives the life of a god. Since, then, 'opinion forcibly overcomes truth,' and 'controls c happiness,' as the wise men say, I must surely turn entirely to it.[7] I should create an illusionist painting of virtue around me to deceive those who come near, but keep behind it the wise Archilochus' greedy and cunning fox."

"But surely," someone will object, "it is not easy for evil to remain always hidden." We will reply that nothing great is easy. And, in any case, if we are to d be happy, we must go where the tracks of the arguments lead. To remain undiscovered we will form secret societies and political clubs. And there are teachers of persuasion to make us clever in dealing with assemblies and law courts. Therefore, partly by persuasion, partly by force, we will contrive to do better than other people, without paying the penalty.

7. [The quotation is attributed to Simonides, who is cited by Polemarchus in Book 1.]

"But surely we cannot hide from the gods or overpower them by force!" Well, if the gods do not exist, or do not concern themselves with human affairs, why should we worry at all about hiding from them? On the other hand, if they do exist, and do care about us, we know nothing about them except what we e have learned from the laws and from the poets who give their genealogies. But these are the very people who tell us that the gods can be persuaded and influenced by sacrifices, gentle prayers, and offerings. Hence, we should believe them on both matters, or on neither. If we believe them, we should be unjust and offer sacrifices from the fruits of our injustice. For if we are just, our only gain is not to be punished 366a by the gods, but we will lose the profits of our injustice. But if we are unjust, we will get those profits, and afterward we will entreat the gods and, persuading them, escape with our crimes and transgressions unpunished.

"But in Hades, won't we pay the penalty for crimes committed here, either ourselves or through our children's children?" "My friend," the young man will say as he does his rational calculation, "mystery rites and the gods of absolution have great power. The greatest cities tell us this, as do those children of the gods who have become the gods' poets and prophets b and reveal it to be so."

On the basis of what further argument, then, should we choose justice over the greatest injustice? For if we possess such injustice with a false façade, we will do as we have a mind to among gods and humans, both while we are living and when we are dead, as both the masses and the eminent claim. So given all that has been said, Socrates, what device could get someone with any power—whether of mind, wealth, c body, or family—to be willing to honor justice, and not laugh aloud when he hears it praised?

Indeed, if anyone can show that what we have said is false, and has adequate knowledge that justice is best, what he feels for unjust people won't be anger, but a large measure of forgiveness. After all, he knows that apart from someone of godlike character who is disgusted by doing injustice, or someone who has gained knowledge and avoids injustice for that reason, no one is just willingly. Through cowardice or old d age or some other weakness, people do indeed object to injustice. But it is obvious that they do so only

because they lack the power to do injustice. For the first of them to gain that power is the first to do as much injustice as he can.

And all this has no other cause than the one that led to the whole of Glaucon's and my argument with you, Socrates. "Socrates, you amazing man," we said, "of all of you who claim to praise justice, beginning
e from the earliest heroes of old whose accounts survive up to the men of the present day, not one has ever blamed injustice or praised justice except by mentioning the reputations, honors, and rewards that are their consequences. No one has ever adequately described what each does itself, through its own power, by its presence in the soul of the person who possesses it, even if it remains hidden from gods and humans. No one, whether in poetry or in private discussions, has adequately argued that injustice is the greatest evil a soul can have in it, and justice the greatest good. If all of you had spoken in this way and had tried to persuade us from our earliest youth, we would not
367a now be guarding against one another's injustice, but each would be his own best guardian, afraid that by doing injustice he would be living on intimate terms with the worst thing possible."

That, Socrates, and probably other things in addition, are what Thrasymachus (or possibly someone else) might say in discussing justice and injustice—crudely inverting their power, in my view. But I—for I have no reason to hide anything from you—want to hear the opposite from you, and that is why I am
b speaking with all the force I can muster. So do not merely demonstrate to us by argument that justice is stronger than injustice, but tell us what each one itself does, because of itself, to someone who possesses it, that makes the one bad and the other good. Follow Glaucon's advice and do not take reputations into account.[8] For if you do not deprive justice and injustice of their true reputations and attach false ones to them, we will say that it is not justice you are praising, but its reputation; nor injustice you are condemning,
c but its reputation; and that you are encouraging us to be unjust but keep it secret. In that case, we will say that you agree with Thrasymachus that justice is the good of another, the advantage of the stronger, while injustice is one's own advantage and profit, though not the advantage of the weaker.

You agree that justice is one of the greatest goods, the ones that are worth having for the sake of their consequences, but much more so for their own sake—such as seeing, hearing, knowing, being healthy, of course, and all the others that are genuine goods by d
nature and not simply by repute. This is what I want you to praise about justice. How does it—because of its very self—benefit its possessor, and how does injustice harm him? Leave wages and reputations for others to praise.

I can put up with other people praising justice and blaming injustice in that way—extolling the reputations and wages of the one and denigrating those of the other. But I won't put up with that from you (unless you insist on it). For you have spent your whole life investigating this and nothing else. So do not merely demonstrate to us by argument that justice e
is stronger than injustice, but show what effect each one itself has, because of itself, on the person who has it—the one for good, the other for bad—whether it remains hidden from gods and human beings or not.

Now, I had always admired the natural characters of Glaucon and Adeimantus, but I was especially pleased when I heard what they had to say on this occasion, and I replied:

Sons of that man, Glaucon's lover was not wrong to 368a
begin the elegy he wrote, when you distinguished yourselves at the battle of Megara, by addressing you as "Sons of Ariston, godlike family of a famous man." That, my dear friends, was well said, in my view. For something altogether godlike must have affected you if you are not convinced that injustice is better than justice and yet can speak like that on its behalf. And I do believe that you really are unconvinced by your own words. I infer this from your general character, b
since if I had only your arguments to go on, I would not trust you. The more I trust you, however, the more I am at a loss as to what to do. I do not see how I can be of help. Indeed, I believe I am incapable of it. And here is my evidence: I thought that what I said to Thrasymachus showed that justice is better than injustice, but you won't accept that from me as a proof. On the other hand, I do not see how I can

8. [At 361b–c.]

refuse my help. For I fear that it may even be impious to have breath in one's body and the ability to speak, and yet stand idly by and not defend justice when it
c is being prosecuted. The best thing, then, is to give justice any assistance I can.

Glaucon and the others begged me not to abandon the argument but to help in every way to track down what justice and injustice each is, and the truth about their respective benefits. So I told them what I had in mind:

The investigation we are undertaking is not an easy one, in my view, but requires keen eyesight. So, since
d we are not clever people, I think we should adopt the method of investigation that we would use if, lacking keen eyesight, we were told to identify small letters from a distance, and then noticed that the same letters existed elsewhere in a larger size and on a larger surface. We would consider it a godsend, I think, to be allowed to identify the larger ones first, and then to examine the smaller ones to see whether they are really the same.

ADEIMANTUS: Of course we would. But how is this case similar to our investigation of justice in
e your view?

SOCRATES: I will tell you. We say, don't we, that there is a justice that belongs to a single man, and also one that belongs to a whole city?

ADEIMANTUS: Certainly.

SOCRATES: And a city is larger than a single man?

ADEIMANTUS: Yes, it is larger.

SOCRATES: Perhaps, then, there will be more justice in the larger thing, and it will be easier to discern. So, if you are willing, let's first find out what sort of
369a thing justice is in cities, and afterward look for it in the individual, to see if the larger entity is similar in form to the smaller one.

ADEIMANTUS: I think that is a fine idea.

SOCRATES: If, in our discussion, we could look at a city coming to be, wouldn't we also see its justice coming to be, and its injustice as well?

ADEIMANTUS: We probably would.

SOCRATES: And once that process is completed, could we expect to find what we are looking for more easily?

b ADEIMANTUS: Yes, much more easily.

SOCRATES: Do you think we should try to carry it out then? It is no small task, in my view. So, think it over.

ADEIMANTUS: It has been thought over. Don't do anything besides try.

SOCRATES: Well, then, a city comes to exist, I believe, because none of us is individually self-sufficient, but each has many needs he cannot satisfy. Or do you think that a city is founded on some other principle?

ADEIMANTUS: No, none.

SOCRATES: Then because we have many needs, and because one of us calls on another out of one c
need, and on a third out of a different need, we gather many into a single settlement as partners and helpers. And we call such a shared settlement a city. Isn't that so?

ADEIMANTUS: Yes, indeed.

SOCRATES: And if they share things with one another—if they give something to one another, or take something from one another—don't they do so because each believes that this is better for himself?

ADEIMANTUS: Of course.

SOCRATES: Come on, then, let's, in our discussion, create a city from the beginning. But its real creator, it seems, will be our need.

ADEIMANTUS: Certainly.

SOCRATES: Now, the first and greatest of our needs is to provide food in order to sustain existence d
and life.

ADEIMANTUS: Yes, absolutely.

SOCRATES: The second is for shelter, and the third is for clothes and things of that sort.

ADEIMANTUS: That's right.

SOCRATES: Tell me, then, how will a city be able to provide all this? Won't one person have to be a farmer, another a builder, and another a weaver? And shouldn't we add a shoemaker to them, or someone else to take care of our bodily needs?

ADEIMANTUS: Of course.

SOCRATES: A city with the barest necessities, then, would consist of four or five men?

ADEIMANTUS: Apparently. e

SOCRATES: Well, then, should each of them contribute his own work for the common use of all? I mean, should a farmer, although he is only one person, provide food for four people, and spend quad-

ruple the time and labor to provide food to be shared by them all? Or should he not be concerned about everyone else? Should he produce one quarter the food in one quarter the time for himself alone? Should
370a he spend the other three quarters providing a house, a cloak, and shoes? Should he save himself the bother of sharing with other people and mind his own business on his own?

ADEIMANTUS: The first alternative, Socrates, is perhaps easier.

SOCRATES: There is nothing strange in that, by Zeus. You see, it occurred to me while you were speaking that, in the first place, we are not all born alike. On the contrary, each of us differs somewhat in nature from the others, one being
b suited to one job, another to another. Or don't you think so?

ADEIMANTUS: I do.

SOCRATES: Well, then, would one person do better work if he practiced many crafts or if he practiced one?

ADEIMANTUS: If he practiced one.

SOCRATES: And it is also clear, I take it, that if one misses the opportune moment in any job, the work is spoiled.

ADEIMANTUS: It is clear.

SOCRATES: That, I take it, is because the thing that has to be done won't wait until the doer has the leisure to do it. No, instead the doer must, of necessity, pay close attention to what has to be done and not
c leave it for his idle moments.

ADEIMANTUS: Yes, he must.

SOCRATES: The result, then, is that more plentiful and better-quality goods are more easily produced, if each person does one thing for which he is naturally suited and does it at the opportune moment, because his time is freed from all the others.

ADEIMANTUS: Absolutely.

SOCRATES: Then, Adeimantus, we are going to need more than four citizens to provide the things we have mentioned. For a farmer won't make his own plow, it seems, if it is going to be a good one,
d nor his hoe, nor any of his other farm implements. Nor will a carpenter—and he, too, needs lots of tools. And the same is true of a weaver and a shoemaker, isn't it?

ADEIMANTUS: It is.

SOCRATES: So carpenters, metalworkers, and many other craftsmen of that sort will share our little city and make it bigger.

ADEIMANTUS: Yes, indeed.

SOCRATES: Yet it still would not be a very large settlement, even if we added cowherds, shepherds, and other herdsmen, so that the farmers would have cows to do their plowing, the builders oxen to share e
with the farmers in hauling their materials, and the weavers and shoemakers hides and fleeces to use.

ADEIMANTUS: It would not be a small city either, if it had to hold all that.

SOCRATES: Moreover, it is almost impossible, at any rate, to establish the city itself in the sort of place where it will need no imports.

ADEIMANTUS: Yes, that is impossible.

SOCRATES: Then we will need still other people who will import whatever is needed from another city.

ADEIMANTUS: We will.

SOCRATES: And if our servant goes empty-handed to another city, without any of the things needed by those from whom he is trying to get what his own people need, he will come away empty-handed, 371a
won't he?

ADEIMANTUS: I should think so.

SOCRATES: Our citizens, then, must produce not only enough for themselves at home, but also goods of the right quality and quantity to satisfy the needs of others.

ADEIMANTUS: Yes, they must.

SOCRATES: So we will need more farmers and other craftsmen in our city.

ADEIMANTUS: Yes.

SOCRATES: And also other servants, I imagine, who are to take care of imports and exports. These are merchants, aren't they?

ADEIMANTUS: Yes.

SOCRATES: We will need merchants too, then.

ADEIMANTUS: Of course.

SOCRATES: And if the trade is carried on by sea, we will need a great many others who have expert knowledge of the business of the sea. b

ADEIMANTUS: A great many, indeed.

SOCRATES: Again, within the city itself, how will people share with one another the things they each produce? It was in order to *share*, after all, that we associated with one another and founded a city.

ADEIMANTUS: Clearly, they must do it by buying and selling.

SOCRATES: Then we will need a marketplace and a currency for such exchange.

ADEIMANTUS: Yes, indeed.

SOCRATES: So if a farmer or any other craftsman
c brings some of his products to the marketplace, and he does not arrive at the same time as those who want to exchange things with him, is he to sit idly in the marketplace, neglecting his own craft?

ADEIMANTUS: Not at all. On the contrary, there will be people who notice this situation and provide the requisite service—in well-organized cities, they are generally those whose bodies are weakest and who are not fit to do any other sort of work. Their job is
d to wait there in the marketplace and exchange money for the goods of those who have something to sell, and then to exchange goods for the money of those who want to buy them.

SOCRATES: This need, then, causes retailers to be present in our city. Those who wait in the marketplace, and provide this service of buying and selling, are called retailers, aren't they, whereas those who travel between cities are merchants?

ADEIMANTUS: Yes, that's right.

SOCRATES: There are also other servants, I think, whose minds would not altogether qualify them for
e membership in our community, but whose bodies are strong enough for hard labor. So they sell the use of their strength for a price called a wage, and that is why they are called wage-earners. Isn't that so?

ADEIMANTUS: Yes.

SOCRATES: So the wage-earners too, it seems, serve to complete our city?

ADEIMANTUS: I think so.

SOCRATES: Well, then, Adeimantus, has our city now grown to completeness?

ADEIMANTUS: Maybe it has.

SOCRATES: Then where are justice and injustice to be found in it? With which of the people we considered did they come in?

ADEIMANTUS: I have no idea, Socrates, unless it
372a is somewhere in some need that these people have of one another.

SOCRATES: Perhaps what you say is right. We must look into it and not back off. First, then, let's see what sort of life people will lead who have been provided for in this way. They will make food, wine, clothes, and shoes, won't they? And they will build themselves houses. In the summer, they will mostly work naked and barefoot, but in the winter they will wear adequate clothing and shoes. For nourishment, b they will provide themselves with barley meal and wheat flour, which they will knead and bake into noble cakes and loaves and serve up on a reed or on clean leaves. They will recline on couches strewn with yew and myrtles and feast with their children, drink their wine, and, crowned with wreaths, hymn the gods. They will enjoy having sex with one another, but they will produce no more children than their resources allow, lest they fall into either poverty or war. c

At this point Glaucon interrupted and said:

It seems that you make your people feast without any relishes.

SOCRATES: True enough, I was forgetting that they will also have relishes—salt, of course, and olives and cheese, and they will boil roots and vegetables the way they boil them in the country. We will give them desserts too, I imagine, consisting of figs, chickpeas, and beans. And they will roast myrtles and acorns before the fire and drink in moderation. And so they will live in peace and good health, it seems, d and when they die at a ripe old age, they will pass on a similar sort of life to their children.

GLAUCON: If you were founding a city of pigs, Socrates, isn't that just what you would provide to fatten *them?*

SOCRATES: What, then, would you have me do, Glaucon?

GLAUCON: Just what is conventional. If they are not to suffer hardship, they should recline on proper couches, I suppose, dine at tables, and have the relishes and desserts that people have nowadays. e

SOCRATES: All right, I understand. It isn't merely the origins of a city that we are considering, it seems, but those of a city that is *luxurious*, too. And that may not be a bad idea. For by examining such a city, we might perhaps see how justice and injustice grow up in cities. Yet the true city, in my view, is the one we have described: the healthy one, as it were. But if you also want to look at a feverish city, so be it. There

373a is nothing to stop us. You see, the things I mentioned earlier, and the way of life I described, won't satisfy some people, it seems; but couches, tables, and other furniture will have to be added to it, and relishes, of course, and incense, perfumes, prostitutes, pastries—and the multifariousness of each of them. In particular, we cannot just provide them with the necessities we mentioned at first, such as houses, clothes, and shoes; no, instead we will have to get painting and embroidery going, and procure gold and ivory and all sorts of everything of that sort. Isn't that so?

b GLAUCON: Yes.

SOCRATES: Then we will have to enlarge our city again: the healthy one is no longer adequate. On the contrary, we must now increase it in size and population and fill it with a multitude of things that go beyond what is necessary for a city—hunters, for example, and all those imitators. Many of the latter work with shapes and colors; many with music—poets and their assistants, rhapsodes, actors, choral dancers, theatrical producers. And there will have to be craftsmen of multifarious devices, including, among other things, those needed for the adornment of women. In particular, then, we will need more

c servants—don't you think—such as tutors, wet nurses, nannies, beauticians, barbers, and relish cooks and meat cooks, too? Moreover, we will also need people to farm pigs. This animal did not exist in our earlier city, since there was no need for it, but we will need it in this one. And we will also need large numbers of other meat-producing animals, won't we, if someone is going to eat them?

GLAUCON: We certainly will.

SOCRATES: And if we live like that, won't we have

d a far greater need for doctors than we did before?

GLAUCON: Yes, far greater.

SOCRATES: And the land, I take it, that used to be adequate to feed the population we had then will now be small and inadequate. Or don't you agree?

GLAUCON: I do.

SOCRATES: Won't we have to seize some of our neighbors' land, then, if we are to have enough for pasture and plowing? And won't our neighbors want to seize part of ours in turn, if they too have abandoned themselves to the endless acquisition of money and overstepped the limit of their necessary desires?

e GLAUCON: Yes, that is quite inevitable, Socrates.

SOCRATES: And the next step will be war, Glaucon, don't you agree?

GLAUCON: I do.

SOCRATES: Now, let's not say yet whether the effects of war are good or bad, but only that we have now found the origin of war: it comes from those same factors, the occurrence of which is the source of the greatest evils for cities and the individuals in them.

GLAUCON: Indeed, it does.

SOCRATES: The city must be further enlarged, then, my dear Glaucon, and not just a little, but by the size of a whole army. It will do battle with the invaders in defense of the city's wealth, and of all the 374a other things we just described.

GLAUCON: Why so? Aren't the inhabitants themselves adequate for that purpose?

SOCRATES: No, not, at any rate, if the agreement that you and the rest of us made when we were founding the city was a good one. I think we agreed, if you remember, that it is impossible for a single person to practice many crafts well.

GLAUCON: True, we did say that.

SOCRATES: Well, then, don't you think that warfare is a craft? b

GLAUCON: It is, indeed.

SOCRATES: So, should we be more concerned about the craft of shoemaking than the craft of warfare?

GLAUCON: Not at all.

SOCRATES: Well, now, we prevented a shoemaker from trying to be a farmer, weaver, or builder at the same time, instead of just a shoemaker, in order to ensure that the shoemaker's job was done well. Similarly, we also assigned just the one job for which he had a natural aptitude to each of the other people, and said that he was to work at it his whole life, free from having to do any of the other jobs, so as not to miss the opportune moments for performing it well. c But isn't it of the greatest importance that warfare be carried out well? Or is fighting a war so easy that a farmer, a shoemaker, or any other artisan can be a soldier at the same time, even though no one can become so much as a good checkers player or dice player if he considers it only as a sideline and does not practice it from childhood? Can someone just pick up a shield, or any other weapon or instrument of war and immediately become a competent fighter d

in an infantry battle or whatever other sort of battle it may be, even though no other tool makes someone who picks it up a craftsman or an athlete, or is even of any service to him unless he has acquired knowledge of it and has had sufficient practice?

GLAUCON: If tools could do that, they would be valuable indeed.

SOCRATES: Then to the degree that the guardians' job is most important, it requires the most freedom from other things, as well as the greatest craft and practice.

GLAUCON: I should think so.

SOCRATES: And doesn't it also require a person whose nature is suited to that very practice?

GLAUCON: Certainly.

SOCRATES: Then our task, it seems, is to select, if we can, which natures, which sorts of natures, suit people to guard the city.

GLAUCON: Yes, that is our task.

SOCRATES: By Zeus, it is no trivial task that we have taken on, then. All the same, we must not shrink from it, but do the best we can.

GLAUCON: No, we must not.

SOCRATES: Do you think that there is any difference, when it comes to the job of guarding, between the nature of a noble hound and that of a well-bred youth?

GLAUCON: What do you mean?

SOCRATES: I mean that both of them have to be sharp-eyed, quick to catch what they see, and strong, too, in case they have to fight what they capture.

GLAUCON: Yes, they need all these things.

SOCRATES: And they must be courageous, surely, if indeed they are to fight well.

GLAUCON: Of course.

SOCRATES: Now, will a horse, a dog, or any other animal be courageous if it is not spirited? Or haven't you noticed just how invincible and unbeatable spirit is, so that its presence makes the whole soul fearless and unconquerable in any situation?

GLAUCON: I have noticed that.

SOCRATES: Then it is clear what physical qualities the guardians should have.

GLAUCON: Yes.

SOCRATES: And as far as their souls are concerned, they must, at any rate, be spirited.

GLAUCON: That too.

SOCRATES: But with natures like that, Glaucon, how will they avoid behaving like savages to one another and to the other citizens?

GLAUCON: By Zeus, it won't be easy for them.

SOCRATES: But surely they must be gentle to their own people and harsh to their enemies. Otherwise, they will not wait around for others to destroy them, but will do it themselves first.

GLAUCON: That's true.

SOCRATES: What are we to do, then? Where are we to find a character that is both gentle and high-spirited at the same time? For, of course, a gentle nature is the opposite of the spirited kind.

GLAUCON: Apparently.

SOCRATES: But surely if someone lacks either of these qualities, he cannot be a good guardian. Yet the combination of them seems to be impossible. And so it follows, then, that a good guardian is impossible.

GLAUCON: I am afraid so.

I could not see a way out, and on reexamining what had gone before, I said:

We deserve to be stuck, my dear Glaucon. For we have lost track of the analogy we put forward.

GLAUCON: How do you mean?

SOCRATES: We have overlooked the fact that there *are* natures of the sort we thought impossible, ones that include these opposite qualities.

GLAUCON: Where?

SOCRATES: You can see the combination in other animals, too, but especially in the one to which we compared the guardian. For you know, of course, that noble hounds naturally have a character of that sort. They are as gentle as can be to those they are familiar with and know, but the opposite to those they do not know.

GLAUCON: Yes, I do know that.

SOCRATES: So the combination we want *is* possible, after all, and what we are seeking in a good guardian is not contrary to nature.

GLAUCON: No, I suppose not.

SOCRATES: Now, don't you think that our future guardian, besides being spirited, must also be, by nature, philosophical?

GLAUCON: How do you mean? I don't understand.

SOCRATES: It too is something you see in dogs, and it should make us wonder at the merit of the beast.

GLAUCON: In what way?

SOCRATES: In that when a dog sees someone it does not know, it gets angry even before anything bad happens to it. But when it knows someone, it welcomes him, even if it has never received anything good from him. Have you never wondered at that?

GLAUCON: I have never paid it any mind until now. But it is clear that a dog does do that sort of thing.

SOCRATES: Well, that seems to be a naturally refined quality, and one that is truly philosophical.

GLAUCON: In what way?

SOCRATES: In that it judges anything it sees to be either a friend or an enemy on no other basis than that it knows the one and does not know the other. And how could it be anything besides a lover of learning if it defines what is its own and what is alien to it in terms of knowledge and ignorance?

GLAUCON: It surely could not be anything but.

SOCRATES: But surely the love of learning and philosophy are the same, aren't they?

GLAUCON: Yes, they are the same.

SOCRATES: Then can't we confidently assume that the same holds for a human being too—that if he is going to be gentle to his own and those he knows, he must be, by nature, a lover of learning and a philosopher?

GLAUCON: We can.

SOCRATES: Philosophy, then, and spirit, speed, and strength as well, must all be combined in the nature of anyone who is going to be a really fine and good guardian of our city.

GLAUCON: Absolutely.

SOCRATES: Then that is what he would have to be like at the outset. But how are we to bring these people up and educate them? Will inquiring into that topic bring us any closer to the goal of our inquiry, which is to discover the origins of justice and injustice in a city? We want our account to be adequate, but we do not want it to be any longer than necessary.

And Glaucon's brother replied:

I for one certainly expect that this inquiry will help us.

SOCRATES: By Zeus, in that case, my dear Adeimantus, we must not abandon it, even if it turns out to be a somewhat lengthy affair.

ADEIMANTUS: No, we must not.

SOCRATES: Come on, then, and like people in a fable telling stories at their leisure, let's in our discussion educate these men.

ADEIMANTUS: Yes, let's.

SOCRATES: What, then, will the education be? Or is it difficult to find a better one than the one that has been discovered over a long period of time—physical training for bodies and musical training for the soul?

ADEIMANTUS: Yes, it is.

SOCRATES: Now, won't we start musical training before physical training?

ADEIMANTUS: Of course.

SOCRATES: And you include stories under musical training, don't you?

ADEIMANTUS: I do.

SOCRATES: But aren't there two kinds of stories, one true and the other false?

ADEIMANTUS: Yes.

SOCRATES: And education must make use of both, but first of the false ones?

ADEIMANTUS: I do not understand what you mean.

SOCRATES: Don't you understand that we first begin by telling stories to children? And surely they are false on the whole, though they have some truth in them. And we use stories on children before physical training.

ADEIMANTUS: That's true.

SOCRATES: That, then, is what I meant by saying that musical training should be taken up before physical training.

ADEIMANTUS: And you were right.

SOCRATES: Now, you know, don't you, that the beginning of any job is the most important part, especially when we are dealing with anything young and tender? For that is when it is especially malleable and best takes on whatever pattern one wishes to impress on it.

ADEIMANTUS: Precisely so.

SOCRATES: Shall we carelessly allow our children to hear any old stories made up by just anyone, then, and to take beliefs into their souls that are, for the most part, the opposite of the ones we think they should hold when they are grown up?

ADEIMANTUS: We certainly won't allow that at all.

SOCRATES: So our first task, it seems, is to supervise the storytellers: if they make up a good story, we
c must accept it; if not, we must reject it. We will persuade nurses and mothers to tell the acceptable ones to their children, and to spend far more time shaping their souls with these stories than they do shaping their bodies by handling them. Many of the stories they tell now, however, must be thrown out.

ADEIMANTUS: Which sorts?

SOCRATES: In the more significant stories, we will see the less significant ones as well. For surely the more significant ones and the less significant ones both follow the same pattern and have the same
d effects. Don't you think so?

ADEIMANTUS: Indeed, I do. But I do not understand at all what more significant ones you mean.

SOCRATES: The ones Homer, Hesiod, and other poets tell us. After all, they surely composed false stories, which they told and are still telling to people.

ADEIMANTUS: Which stories do you mean? And what is the fault you find in them?

SOCRATES: The first and most important fault that one ought to find, especially if the falsehood has no good features.

ADEIMANTUS: Yes, but what *is* it?

SOCRATES: Using a story to create a bad image
e of what the gods and heroes are like, just as a painter might paint a picture that is not at all like the things he is trying to paint.

ADEIMANTUS: Yes, you are right to find fault with that. But what cases in particular, what sorts of cases, do you mean?

SOCRATES: First, the biggest falsehood about the most important things has no good features—I mean Hesiod telling us about how Uranus behaved, how Cronus punished him for it, and how he was in turn
378a punished by his own son.[9] But even if these stories were true, they should be passed over in silence, I would think, and not told so casually to the foolish and the young. And if, for some reason, they must be told, only a very few people should hear them—people who are pledged to secrecy and have had to sacrifice not just a pig, but something so large and scarce that the number of people who hear them is kept as small as possible.

ADEIMANTUS: Yes, those stories are certainly troubling.

SOCRATES: And they should not be told in our city, Adeimantus. No young person should hear it b
said that if he were to commit the worst crimes, he would be doing nothing amazing, or that if he were to inflict every sort of punishment on an unjust father, he would only be doing the same as the first and greatest of the gods.

ADEIMANTUS: No, by Zeus, I do not think myself that these stories are fit to be told.

SOCRATES: Indeed, we must not allow *any* stories about gods warring, fighting, or plotting against one another if we want the guardians of our city to think that it is shameful to be easily provoked into mutual hatred. After all, those stories are not true either. Still c
less should battles between gods and giants, or the many other multifarious hostilities of gods and heroes toward their families and friends, occur in the stories the guardians hear or in the embroidered pictures they see. On the contrary, if we are somehow going to persuade our people that no citizen has ever hated another, and that it is impious to do so, then *those* are the things their male and female elders should tell them from childhood on. And the poets they d
listen to as they grow older should be compelled to tell them the same sort of thing. Stories about Hera being chained by her son, on the other hand, or about Hephaestus being hurled from the heavens by his father when he tried to save his mother from a beating, or about the battle of the gods in Homer, should not be admitted into our city, either as allegories or non-allegories. For the young cannot distinguish what is allegorical from what is not. And the beliefs they absorb at that age are difficult to erase and tend to become unalterable. For these reasons, then, we e
should probably take the utmost care to ensure that the first stories they hear about virtue are the best ones for them to hear.

9. [Uranus prevented his wife, Gaia, from giving birth to his children by blocking them up inside her. Gaia gave a sickle to one of these children, Cronus, which he used to castrate his father when the latter next had intercourse with her. Cronus ate the children he had by his wife, Rhea, until, by deceiving him with a stone, she was able to save Zeus from suffering this fate. Zeus then overthrew his father. See Hesiod, *Theogony* 154–210, 453–506.]

ADEIMANTUS: Yes, that makes sense. But if, at this point too,[10] someone were once again to ask us what stories these are, how should we reply?

SOCRATES: You and I are not poets at present, 379a Adeimantus, but we *are* founding a city. And it is appropriate for the founders to know the patterns on which the poets must base their stories, and from which they must not deviate. But they should not themselves make up any poems.

ADEIMANTUS: That's right. But what precisely are the patterns that stories about the gods must follow?

SOCRATES: Something like this: whether in epic, lyric, or tragedy, a god must always be represented as he is.

ADEIMANTUS: Yes, he must.

SOCRATES: Now, gods, of course, are really good, b aren't they, and must be described as such?

ADEIMANTUS: Certainly.

SOCRATES: And surely nothing good is harmful, is it?

ADEIMANTUS: I suppose not.

SOCRATES: Well, can what is not harmful do any harm?

ADEIMANTUS: No, never.

SOCRATES: And can what does no harm do anything bad?

ADEIMANTUS: No, it can't do that either.

SOCRATES: But what does nothing bad could not be the cause of anything bad, could it?

ADEIMANTUS: No, it could not.

SOCRATES: What about what is good? Is it beneficial?

ADEIMANTUS: Yes.

SOCRATES: So, it is the cause of doing well?

ADEIMANTUS: Yes.

SOCRATES: What is good is not the cause of all things, then. Instead, it is the cause of things that are good, while of bad ones it is not the cause.

c ADEIMANTUS: Exactly.

SOCRATES: So, since gods are good, they are not—as the masses claim—the cause of everything. Instead, they are a cause of only a few things that happen to human beings, while of most they are not the cause. For good things are fewer than bad ones in our lives. Of the good things, they alone are the cause, but we must find some other cause for the bad ones, not the gods.

ADEIMANTUS: That's absolutely true in my view.

SOCRATES: Then we won't accept from Homer—or from anyone else—the foolish mistake he makes about the gods when he says: "There are two urns at d the threshold of Zeus, one filled with good fates, the other with bad ones," and the person to whom Zeus gives a mixture of these "sometimes meets with a bad fate, sometimes with a good one." But the one who receives his fate entirely from the second urn, "evil famine drives over the divine earth." Nor will we tolerate the saying that "Zeus is the dispenser of both e good and bad to mortals." As for the breaking of the oaths and the truce by Pandarus, if anyone tells us that it was brought about by Athena and Zeus, or that Themis and Zeus were responsible for strife and contention among the gods, we won't praise him. Nor will we allow the young to hear the words of Aeschylus: "A god makes mortals guilty, when he 380a wants to destroy a house utterly."[11] And if anyone composes a poem, such as the one those lines are from, about the sufferings of Niobe, or about the house of Pelops, or the tale of Troy, or anything else of that sort, he should be required to say that these things are not the works of a god. Or, if they are the works of a god, then the poet must look for roughly the sort of account of them we are now seeking: he must say that the actions of the gods are good and just, and that the people they punish are benefited b by them. We won't allow him to say that those who are punished are made wretched, and that it was a god who made them so; but we will allow him to say that bad people are wretched because they are in need of punishment, and that in paying the penalty they are benefited by that god. But as for saying that a god, who is himself good, is the cause of evils, we will fight that in every way. We won't allow anyone to say it in his own city, if it is to be well governed, or anyone to hear it either—whether young or old,

10. [As at 377d10.]

11. [The first three quotations are from *Iliad* 24.527–32. The sources for the fourth, and for the quotation from Aeschylus, are unknown. The story of Athena urging Pandarus to break the truce is told at *Iliad* 4.73–126.]

c whether with meter or without meter. For these stories are impious, disadvantageous to us, and not in concord with one another.

ADEIMANTUS: I like your law, and I will vote with you for it.

SOCRATES: This, then, will be one of the laws or patterns relating to gods that speakers and poets will have to follow: that gods are not the cause of all things, but only of good ones.

ADEIMANTUS: And an entirely satisfactory one it is.

SOCRATES: Now, what about this second law? Do
d you think that gods are sorcerers who deliberately take different forms at different times, sometimes by changing on their own and altering their own form into a large number of shapes, sometimes by deceiving us into thinking they have done so? Or are they simple beings, and least of all likely to abandon their own form?

ADEIMANTUS: I can't say offhand.

SOCRATES: Well, if something abandons its own form, mustn't it either cause the change itself or be
e changed by something else?

ADEIMANTUS: It must.

SOCRATES: Now, the best things are least liable to alteration or change, aren't they? For example, a body is altered by food, drink, and labors, and all plants by sun, winds, and other similar affections—but the healthiest and strongest is least altered, isn't that so?

381a ADEIMANTUS: Of course.

SOCRATES: And wouldn't a soul that is most courageous and most knowledgeable be least disturbed or altered by any outside influence?

ADEIMANTUS: Yes.

SOCRATES: And the same account surely also applies even to manufactured items, such as implements, houses, and clothes: those that are good and well made are least altered by time or any other influences.

ADEIMANTUS: That's right.

SOCRATES: So whatever is in good condition—
b whether due to nature or craft or both—is least subject to change by something else.

ADEIMANTUS: It seems so.

SOCRATES: But gods, of course, as well as the things belonging to them, are best in every way.

ADEIMANTUS: They certainly are.

SOCRATES: So, on this view, gods would be least likely to have many forms.

ADEIMANTUS: Least likely, indeed.

SOCRATES: Then would they change or alter themselves?

ADEIMANTUS: Clearly so, if indeed they are altered at all.

SOCRATES: Do they change themselves into something better and more beautiful, or into something worse and uglier, than themselves?

ADEIMANTUS: It would have to be into something worse, if indeed they are altered at all. For surely we c
won't say that gods are deficient in either beauty or virtue.

SOCRATES: You are absolutely right. And do you think, Adeimantus, that anyone, whether god or human, would deliberately make himself worse in any way?

ADEIMANTUS: No, that is impossible.

SOCRATES: It is also impossible, then, for a god to want to alter himself. On the contrary, since each god is, it seems, as beautiful and as good as possible, he must always unqualifiedly retain his own form.

ADEIMANTUS: In my view, at least, that is absolutely necessary.

SOCRATES: None of our poets, then, my very good man, is to say that "The gods, like strangers d
from foreign lands, assume many disguises when they visit our cities."[12] Nor must they tell lies about Proteus and Thetis, or present Hera, in their tragedies or other poems, disguised as a priestess collecting alms for "the life-giving sons of the Argive river Inachus,"[13] or tell us any of the many other such lies. Nor should mothers, influenced by these e
stories, which terrify children, tell bad tales about gods who go wandering around at night in the guises of many strange and multifarious beings, lest they blaspheme the gods and, at the same time, make their children too cowardly.

ADEIMANTUS: Indeed, they should not.

12. [*Odyssey* 17.485–6.]

13. [Inachus was the father of Io, who was persecuted by Hera because Zeus was in love with her. The source for the part of the story Plato quotes is unknown.]

SOCRATES: But, though the gods themselves are the sorts of things that cannot change, do they make us think that they appear in multifarious guises, deceiving us and using sorcery on us?

ADEIMANTUS: Perhaps they do.

SOCRATES: What? Would a god be willing to
382a lie by presenting in word or deed what is only an illusion?

ADEIMANTUS: I don't know.

SOCRATES: Don't you know that all gods and humans hate a *true* lie, if one may call it that?

ADEIMANTUS: What do you mean?

SOCRATES: I mean that no one intentionally wants to lie about the most important things to what is most important in himself. On the contrary, he fears to hold a lie there more than anything.

ADEIMANTUS: I still don't understand.

SOCRATES: That is because you think I am saying
b something deep. I simply mean that to lie and to have lied to the soul about the things that are, and to be ignorant, and to have and hold a lie there, is what everyone would least of all accept; indeed, they especially hate it there.

ADEIMANTUS: They certainly do.

SOCRATES: But surely, as I was saying just now, it would be most correct to say that it is truly speaking a lie—the ignorance in the soul of the one to whom the lie was told. For a lie in words is a sort of imitation of this affection in the soul, an image of it that comes into being after it, and not an altogether pure lie.
c Isn't that so?

ADEIMANTUS: Yes, it is.

SOCRATES: A real lie, then, is hated not only by the gods, but also by human beings.

ADEIMANTUS: I think it is.

SOCRATES: What about a lie in words? Aren't there times when it is useful, and so does not merit hatred? What about when we are dealing with enemies, or with so-called friends who, because of insanity or ignorance, are attempting to do something bad? Isn't it a useful drug for preventing them? And consider the case of those stories we were talking about just now—those we tell because
d we do not know the truth about those ancient events: by making the lies that they contain as much like the truth as possible, don't we make them useful?

ADEIMANTUS: We most certainly do.

SOCRATES: In which of these ways, then, could a lie be useful to a god? Would he lie by making likenesses of the truth about ancient events because of his ignorance of them?

ADEIMANTUS: It would be ridiculous to think that.

SOCRATES: Then there is nothing of the lying poet in a god?

ADEIMANTUS: Not in my view.

SOCRATES: Would he lie, then, through fear of his enemies?

ADEIMANTUS: Hardly. e

SOCRATES: Because of the foolishness or insanity of his family or friends, then?

ADEIMANTUS: No one who is foolish or mad is a friend of the gods.

SOCRATES: So a god has no reason to lie?

ADEIMANTUS: None.

SOCRATES: So both what is daimonic and what is divine are entirely free of lies.

ADEIMANTUS: Absolutely.

SOCRATES: A god, then, is altogether simple, true in both word and deed. He does not change himself or deceive others by means of images, by words, or by sending signs, whether they are awake or dreaming.

ADEIMANTUS: That is my view—at any rate, now that I have heard what you have to say. 383a

SOCRATES: You agree, then, that this is the second pattern people must follow when speaking or composing poems about the gods: the gods are not sorcerers who change themselves, nor do they mislead us by telling lies in word or deed.

ADEIMANTUS: I agree.

SOCRATES: Even though we praise many things in Homer, then, we won't approve of Zeus' sending the dream to Agamemnon, nor of Aeschylus when he makes Thetis say that Apollo sang, in prophecy at her wedding: b

> About the good luck my children would
> have,
> Free of disease throughout their long lives,
> And of all the blessings the friendship of the
> gods would bring me.
> I hoped that Phoebus' divine mouth would
> be free of lies,

Endowed as it is with the craft of prophecy.
But the very god who sang, the one at the feast,
The one who said all that, he himself it is
Who killed my son.[14]

Whenever anyone says such things about a god, we
c will be angry with him, refuse him a chorus, and not allow teachers to use what he says for the education of the young—not if our guardians are going to be as god-fearing and godlike as human beings can be.

ADEIMANTUS: I agree completely about these patterns, and I would use them as laws.

BOOK III

SOCRATES' NARRATION CONTINUES:

386a SOCRATES: Where the gods are concerned, then, it seems that those are the sorts of stories the future guardians should and should not hear from childhood on, if they are to honor the gods and their parents, and not treat lightly their friendship with one another.

ADEIMANTUS: I am sure we are right about that.

SOCRATES: What about if they are to be courageous? Shouldn't they be told stories that will make them least likely to fear death? Or do you think that anyone ever becomes courageous if he has that fear
b in his heart?

ADEIMANTUS: No, by Zeus, I do not.

SOCRATES: What about if someone believes that Hades exists and is full of terrible things? Can anyone with that fear be unafraid of death and prefer it to defeat in battle and slavery?

ADEIMANTUS: Not at all.

SOCRATES: Then we must also supervise those who try to tell such stories, it seems, and ask them not to disparage the life in Hades in this undiscriminating way, but to speak well of it, since what they now tell
c us is neither true nor beneficial to future warriors.

ADEIMANTUS: Yes, we must.

14. [At *Iliad* 2.1–34, Zeus sends a dream to Agamemnon to promise success if he attacks Troy immediately. The promise is false. The source for the quotation from Aeschylus is unknown.]

SOCRATES: We will start with the following lines, then, and expunge everything like them: "I would rather labor on earth in another man's service, a man who is landless, with little to live on, than be king over all the dead";[1] and this: "He feared that his home should be revealed to mortals and immortals as dread- d
ful, dank, and hated even by the gods";[2] and: "Alas, there survives in the Halls of Hades a soul, a mere phantasm, with its wits completely gone";[3] and this: "He alone can think others to be flitting shadows";[4] and: "The soul, leaving his limbs, made its way to Hades, lamenting its fate, leaving manhood and youth behind";[5] and this: "His soul went below the earth like 387a
smoke, screeching as it went";[6] and:

As when bats in an awful cave
Fly around screeching if one of them falls
From the cluster on the ceiling, all clinging to one another,
So their souls went screeching.[7]

We will beg Homer and the rest of the poets not to b
be angry if we delete these and all similar passages—not because they are not poetic and pleasing to the masses when they hear them, but because the more poetic they are, the more they should be kept away from the ears of children and men who are to be free and to fear slavery more than death.

ADEIMANTUS: Absolutely.

SOCRATES: Then, in addition, we must also get rid of the terrible and frightening names that occur

1. [*Odyssey* 11.489–91. Odysseus is being addressed by Achilles in Hades.]

2. [*Iliad* 20.64–5. Hades is afraid that the earth will split open and reveal what his home is like.]

3. [*Iliad* 23.103–4. Achilles speaks these lines as the soul of the dead Patroclus leaves for Hades.]

4. [*Odyssey* 10.493–5. Circe speaking to Odysseus about the prophet Tiresias.]

5. [*Iliad* 16.856–7. The words refer to Patroclus, who has just been mortally wounded by Hector.]

6. [*Iliad* 23.100. The soul referred to is that of Patroclus.]

7. [*Odyssey* 14.6–9. The souls are those of Penelope's suitors, whom Odysseus has killed.]

in such passages: Cocytus, Styx,[8] "those below," "the sapless ones," and all the other names of the same pattern that supposedly make everyone who hears them shudder. Perhaps they are useful for other purposes, but our fear is that all that shuddering will make our guardians more emotional and soft than they ought to be.

ADEIMANTUS: And our fear is justified.

SOCRATES: Should we remove them, then?

ADEIMANTUS: Yes.

SOCRATES: And follow the opposite pattern in speech and poetry?

ADEIMANTUS: Clearly.

SOCRATES: Shall we also remove the lamentations and pitiful speeches of famous men?

ADEIMANTUS: If what we did before was necessary, so is that.

SOCRATES: Consider, though, whether we will be right to remove them or not. What we claim is that a good man won't think that death is a terrible thing for another good one to suffer—even if the latter happens to be his friend.

ADEIMANTUS: Yes, we do claim that.

SOCRATES: So, he won't mourn for him as if he had suffered a terrible fate.

ADEIMANTUS: Certainly not.

SOCRATES: But we also claim this: a good person is most self-sufficient when it comes to living well, and is distinguished from other people by having the least need of anyone or anything else.

ADEIMANTUS: True.

SOCRATES: So it is less terrible for him than for anyone else to be deprived of a son, brother, possessions, or the like.

ADEIMANTUS: Yes, much less.

SOCRATES: So, he will lament it the least and bear it the most calmly when some such misfortune overtakes him.

ADEIMANTUS: Of course.

SOCRATES: We would be right, then, to remove the lamentations of famous men. We would leave them to women (provided they are not excellent women) and cowardly men, so that those we say we are training to guard our land will be ashamed to do such things.

ADEIMANTUS: That's right.

SOCRATES: In addition, then, we will have to ask Homer and the other poets not to represent Achilles, who was the son of a goddess, as:

> Lying now on his side, now on his back,
> now again
> On his belly; then standing up to wander
> distracted
> This way and that on the shore of the
> unharvested sea;[9]

or to make him pick up ashes with both hands and pour them over his head, weeping and lamenting to the extent and in the manner Homer describes;[10] or to represent Priam, a close descendant of the gods, as "begging and rolling around in dung, as he calls upon each of his men by name."[11] And yet more insistently than that, we will ask them at least not to make *the gods* lament and say: "Woe is me, unfortunate that I am, wretched mother of a great son."[12] But, if they do make the gods do such things, at least they must not dare to represent *the greatest of the gods* in so unlikely a fashion as to make him say: "Alas, with my own eyes I see a man who is most dear to me being chased around the city, and my heart laments";[13] or "Woe is me, that Sarpedon, who is most dear to me, should be fated to be killed by Patroclus, the son of Menoetius."[14] You see, my dear Adeimantus, if our young people listen seriously to these stories without ridiculing them as not worth hearing, none of them is going to consider such things to be unworthy of a mere human being like himself, or rebuke himself if it occurred to him to do or say any of them. On the contrary, without shame

8. ["Cocytus" means river of wailing or lamenting; "Styx," river of hatred.]

9. [*Iliad* 24.3–12.]

10. [*Iliad* 18.23–4.]

11. [*Iliad* 22.414–5.]

12. [*Iliad* 18.54. Thetis, the mother of Achilles, is mourning his fate among the Nereids.]

13. [*Iliad* 22.168–9. Zeus is watching Hector being pursued by Achilles.]

14. [*Iliad* 16.433–4.]

or perseverance, he would chant many dirges and laments at the slightest sufferings.

e ADEIMANTUS: That's absolutely true.

SOCRATES: But that must not happen, as our argument has shown—and we must remain persuaded by it until someone shows us a better one.

ADEIMANTUS: No, it must not.

SOCRATES: Moreover, they must not be lovers of laughter either. For whenever anyone gives in to violent laughter, a violent reaction pretty much always follows.

ADEIMANTUS: I agree.

SOCRATES: So, if someone represents worthwhile people as overcome by laughter, we must not accept it, and we will accept it even less if they represent
389a the gods in that way.

ADEIMANTUS: Much less.

SOCRATES: Then we must not accept the following sorts of sayings about the gods from Homer: "And unquenchable laughter arose among the blessed gods as they saw Hephaestus limping through the hall."[15] According to your argument, they must be rejected.

ADEIMANTUS: Yes, if you want to attribute it to
b me, but they must be rejected in any case.

SOCRATES: Moreover, we have to be concerned about truth as well. For if what we said just now is correct and a lie is really useless to the gods, but useful to human beings as a form of drug, it is clear that it must be assigned to doctors, whereas private individuals must have nothing to do with it.

ADEIMANTUS: It is clear.

SOCRATES: It is appropriate for the rulers, then, if anyone, to lie because of enemies or citizens for the good of the city. But no one else may have anything to do with it. On the contrary, we will say that for a
c private individual to lie to such rulers is as bad a mistake as for a sick person not to tell his doctor or an athlete his trainer the truth about his physical condition, or for someone not to tell the captain the things that are true about the ship and the sailors, or about how he himself or one of his fellow sailors is faring—indeed, it is a worse mistake.

ADEIMANTUS: That's absolutely true.

15. [*Iliad* 1.599–600.]

SOCRATES: So, if anyone else is caught telling lies in the city—"any of the craftsmen, whether a prophet, d
a doctor who heals the sick, or a carpenter who works in wood"[16]—he will be punished for introducing a practice that is as subversive and destructive of a city as of a ship.

ADEIMANTUS: Indeed it is, at any rate, if what people do is influenced by what he says.

SOCRATES: What about temperance? Won't our young people also need that?

ADEIMANTUS: Of course.

SOCRATES: And aren't the most important aspects of temperance for the majority of people, at any rate, to obey the rulers and to rule over the pleasures of drink, sex, and food for themselves? e

ADEIMANTUS: That is my view, anyway.

SOCRATES: So we will claim, I imagine, that it is fine to say the sort of thing that Diomedes says in Homer: "Sit down in silence, my friend, and be persuaded by my story";[17] and what follows it: "The Achaeans went in silently, breathing valor, afraid of their commanders";[18] and anything else of that sort.

ADEIMANTUS: Yes, it is fine.

SOCRATES: But what about things like, "You drunkard, with the eyes of a dog and the heart of a deer," and what follows it?[19] Are they, then, fine things to say? And what about all the other headstrong 390a
things that private individuals say to their rulers in works of prose or poetry?

ADEIMANTUS: No, they are not fine.

SOCRATES: That, I imagine, is because they are not suitable for inculcating temperance in the young people who hear them. But it would not be surprising if they were found pleasant in some other context. What do you think?

ADEIMANTUS: The same as you.

16. [*Odyssey* 17.384.]

17. [*Iliad* 4.412. Agamemnon has unfairly rebuked Diomedes for cowardice. Diomedes' squire protests, but Diomedes quiets him with these words. By obeying, the squire exhibits the kind of moderation that most people can come to possess.]

18. [A mix of *Iliad* 3.8 and 4.431.]

19. [*Iliad* 1.225. Achilles is insulting his commander, Agamemnon.]

SOCRATES: What about making the wisest man say that the best thing of all, as it seems to him, is when "the tables are well laden with bread and meat, and the
b wine-bearer draws wine from the mixing bowl, brings it, and pours it in the cups"?[20] Do you think that hearing things like that is suitable for inculcating self-mastery in young people? Or that "death by starvation is the most pitiful fate"?[21] Or about how Zeus stayed awake alone deliberating, when all the other gods and mortals were asleep, and then easily forgot all his plans
c because of his sexual appetite, and was so overcome by the sight of Hera that he did not even want to go to their bedroom, but to possess her there on the ground, saying that his appetite for her was even greater than it was when they first made love to one another "without their parents' knowledge"?[22] Or what about the chaining together of Ares and Aphrodite by Hephaestus[23] for similar reasons?

ADEIMANTUS: No, by Zeus, that does not seem suitable to me.

SOCRATES: On the other hand, if there are any words or deeds of famous men that express perseverd ance in the face of everything, surely they must be seen and heard. For example, "He struck his chest and spoke to his heart: 'Bear up, my heart, you have suffered more shameful things than this.'"[24]

ADEIMANTUS: Absolutely.

SOCRATES: And we must not, of course, allow our men to be bribable with gifts or to be money-lovers.

e ADEIMANTUS: Certainly not.

SOCRATES: Then they must not sing: "Gifts persuade gods, and gifts persuade revered kings."[25] Nor must we praise Phoenix, the tutor of Achilles, for being moderate, when he advises Achilles to take the gifts and defend the Achaeans, but not to lay aside his anger without gifts.[26] Nor should we agree that Achilles himself was such a money-lover as to accept the gifts of Agamemnon, or to release a corpse when he got paid for it, but otherwise to refuse.[27] 391a

ADEIMANTUS: No, it certainly is not right to praise such things.

SOCRATES: It is only out of respect for Homer, indeed, that I hesitate to say that it is positively impious to accuse Achilles of such things, or to believe them when others say them. Or to believe that he said to Apollo: "You have injured me, Farshooter, most deadly of the gods; And I would punish you, if only I had the power."[28] Or that he disobeyed the river—a god—and was ready to fight it.[29] Or that he b consecrated hair to the dead Patroclus, which he had already consecrated to the other river, Spherchеius: "To the hero, Patroclus, I give my hair to take with him."[30] We must not believe that he did that. Nor is it true that he dragged the dead Hector around the tomb of Patroclus[31] or massacred the captives on his pyre.[32] So we will deny these things. Nor will we allow our people to believe that Achilles—the son of c a goddess and of Peleus (who was himself the most temperate of men and the grandson of Zeus), and the pupil of the most wise Cheiron—was so full of inner disorder as to have two opposite diseases within him: illiberality accompanied by the love of money on the one hand, and arrogance toward gods and humans on the other.

ADEIMANTUS: That's right.

SOCRATES: Moreover, we will neither believe nor allow it to be said that Theseus, the son of Poseidon, and Peirithous, the son of Zeus, ever attempted those terrible rapes,[33] nor that any other child of a god and d hero dared to do any of the terrible and impious deeds that are now falsely attributed to them. We will compel the poets either to deny that they did such

20. [*Odyssey* 9.8–10.]

21. [*Odyssey* 12.342. Eurylochus urges the men to slay the cattle of Helios in Odysseus' absence.]

22. [*Iliad* 14.294–341.]

23. [*Odyssey* 8.266ff.]

24. [*Odyssey* 20.17–8. The speaker is Odysseus.]

26. [*Iliad* 9.602–3.]

27. [*Iliad* 19.278ff., 24.594.]

28. [*Iliad* 22.15, 20.]

29. [*Iliad* 21.232ff.]

30. [*Iliad* 23.151–2.]

31. [*Iliad* 14.14–8.]

32. [*Iliad* 23.175.]

33. [According to some legends, Theseus and Peirithous abducted Helen and tried to abduct Persephone from Hades.]

things, or else to deny that they were children of the gods. But they must not say both or attempt to persuade our young people that the gods produce evils, nor that heroes are no better than humans. After all, *e* as we were saying earlier, these things are neither pious nor true. For we demonstrated, I take it, that it is impossible for the gods to produce evils.

ADEIMANTUS: We certainly did.

SOCRATES: And they are also positively harmful to those who hear them. You see, everyone will be ready to excuse himself when he is bad, if he has been persuaded that similar things are done and were done by "close descendants of the gods, near kin of Zeus, whose ancestral altar is in the ether on Ida's peak," and "in whom the blood of daimons has not weakened."[34] That is why we must put a stop to such stories; if we do not, they will produce in our young *392a* people a very casual attitude to evil.

ADEIMANTUS: Exactly.

SOCRATES: What kind of stories are still left, then, about which we must determine whether or not they may be told? I mean, we have discussed how gods, heroes, daimons, and things in Hades should be portrayed.

ADEIMANTUS: We have.

SOCRATES: Then wouldn't stories about human beings be left?

ADEIMANTUS: Obviously so.

SOCRATES: But it is not possible, my friend, to discuss them here.

ADEIMANTUS: Why not?

SOCRATES: Because what we are going to say, I imagine, is that poets and prose writers get the most important things about human beings wrong. They *b* say that many unjust people are happy and many just ones wretched, that doing injustice is profitable if it escapes detection, and that justice is another's good but one's own loss. We will forbid them to say such things, I imagine, and order them to sing and tell the opposite. Don't you think so?

ADEIMANTUS: No, I *know* so.

SOCRATES: Well, then, if you agree that what I said is correct, won't I say to you that you have conceded the point we were investigating all along?

ADEIMANTUS: And your claim would be correct.

SOCRATES: Then we won't come to an agreement about what stories should be told about human beings until we have discovered what sort of thing justice is, and how, given its nature, it profits the one who has it, whether he is believed to be just or not.

ADEIMANTUS: That's absolutely right.

SOCRATES: Our discussion of the content of stories is complete, then. Our next task, I take it, is to investigate their style. And then we will have completely investigated both what they should say and how they should say it.

ADEIMANTUS: I don't understand what you mean.

SOCRATES: Well, we must see that you do. Maybe this will help you to grasp it better: isn't everything said *d* by poets and storytellers a narration of past, present, or future events?

ADEIMANTUS: Of course.

SOCRATES: And don't they proceed by narration alone, narration through imitation, or both?

ADEIMANTUS: I need a still clearer understanding of that, too.

SOCRATES: What a ridiculously unclear teacher I seem to be! So, I will do what incompetent speakers do: I won't try to deal with the subject as a whole. Instead, I will take up a particular example and use that to explain what I mean. Tell me, do you know *e* the beginning of the *Iliad* where the poet tells us that Chryses begged Agamemnon to release his daughter, that Agamemnon got angry, and that Chryses, having failed to get what he wanted, prayed to his god[35] to punish the Achaeans? *393a*

ADEIMANTUS: I do.

SOCRATES: You know, then, that up to the lines, "He begged all the Achaeans, but especially the commanders of the army, the two sons of Atreus,"[36] the poet himself is speaking and is not trying to make us think that the speaker is anyone but himself. After that, however, he speaks as if he himself were Chryses, and tries as hard as he can to make us think that the speaker is not Homer, but the priest himself, who is *b* an old man. And all the rest of his narration of the events in Ilium and Ithaca, and all of the *Odyssey*, are written in pretty much the same way.

34. [Thought to be from Aeschylus' lost play *Niobe*.]

35. [Apollo.]

36. [*Iliad* 1.15ff.]

ADEIMANTUS: Yes, they are.

SOCRATES: Now, each of the speeches, as well as the material between them, is narration, isn't it?

ADEIMANTUS: Of course.

SOCRATES: But when he makes a speech as if he
c were someone else, won't we say that he makes his own style as much like that of the person he tells us is about to speak?

ADEIMANTUS: We certainly will.

SOCRATES: Now, to make oneself like someone else in voice or appearance is to imitate the person one makes oneself like, isn't it?

ADEIMANTUS: Of course.

SOCRATES: Then in a passage of that sort, it seems, he, and the rest of poets as well, produce their narration through imitation.

ADEIMANTUS: Yes, indeed.

SOCRATES: But if the poet never disguised himself, his entire poem would be narration without imi-
d tation. To prevent you from saying that you still do not understand, I will tell you what that would be like. If Homer said that Chryses came with a ransom for his daughter to supplicate the Achaeans, especially the kings, and if after that Homer had gone on speaking, not as if he had become Chryses, but still as Homer, you know that it would not be imitation but narration pure and simple. It would have gone something like this—I will speak without meter since I am not a poet: the priest came and prayed that the
e gods would grant it to the Achaeans to capture Troy and have a safe return home, and he entreated them to accept the ransom and free his daughter, out of reverence for the god.[37] When he had said this, the others approved of it and consented. But Agamemnon was angry and ordered him to leave and never return, or else his priestly wand and the wreaths of the god would not protect him. He said that the priest's daughter would grow old in Argos by his side sooner than be freed. He ordered Chryses to leave and not make him angry if he wanted to get home safely. When
394a the old man heard this, he was frightened and went off in silence. And once he had left the camp, he prayed at length to Apollo, invoking the cult names of the god, reminding him of his past gifts, and asking to be repaid for any that had found favor with him, whether they were temples he had built or victims he had sacrificed. He prayed that, in return for these things, the arrows of the god would make the Achaeans pay for his tears. That, comrade, is how we get pure narration without any imitation.
b

ADEIMANTUS: I understand.

SOCRATES: Also understand, then, that the opposite occurs when one omits the words between the speeches and leaves the speeches on their own.

ADEIMANTUS: I understand that, too; it is what happens in tragedies, for example.

SOCRATES: You have got it absolutely right. And now I think I can make clear to you what I could not before. One sort of poetry and storytelling employs only imitation—tragedy, as you said, and comedy.
c Another sort, which you find primarily in dithyrambs, employs only narration by the poet himself. A third sort, which uses both, is what we find in epic poetry and many other places. Do you follow me?

ADEIMANTUS: Yes, now I understand what you meant.

SOCRATES: And before that, as you remember, we said that we had already dealt with *content*, but that we had yet to investigate *style*.

ADEIMANTUS: Yes, I remember.

SOCRATES: What I meant, then, was just this: we need to come to an agreement about whether to allow
d our poets to narrate as imitators, or as imitators of some things, but not others—and what sorts of things these are; or not to allow them to imitate at all.

ADEIMANTUS: I imagine that you are considering whether we will admit tragedy and comedy into our city or not.

SOCRATES: Perhaps so, but it may be an even wider question than that. I really do not know yet. But wherever the wind of argument blows us, so to speak, that is where we must go.

ADEIMANTUS: Yes, well put.

SOCRATES: What I want you to consider, then, Adeimantus, is whether our guardians should be imitators or not. Or does the answer follow from what
e we have said already—namely, that whereas each individual can practice one pursuit well, he cannot practice many well, and if he tried to do this and dabbled in many things, he would surely fail to achieve distinction in all of them?

37. [Apollo as at 393a1 and 394a3.]

ADEIMANTUS: Of course. Why wouldn't it?

SOCRATES: Then doesn't the same principle also apply to imitation— namely, that a single individual cannot imitate many things as well as he can imitate one?

ADEIMANTUS: No, he cannot.

SOCRATES: Then he will hardly be able to practice any pursuit worth talking about while at the same time imitating lots of things and being an imitator. For, as you know, even when two sorts of imitation are thought to be closely akin, the same people are not able to practice both of them well simultaneously. The writing of tragedy and comedy is an example. Didn't you just call both of these imitations?

ADEIMANTUS: I did, and you are quite right; the same people cannot do both.

SOCRATES: Nor can they be both rhapsodes and actors simultaneously.

ADEIMANTUS: True.

SOCRATES: Indeed, the same men cannot be used as both tragic and comic actors. And all these are imitations, aren't they?

ADEIMANTUS: They are.

SOCRATES: And human nature, Adeimantus, seems to me to be minted in even smaller coins than this, so that an individual can neither imitate many things well nor perform well the actions themselves of which those imitations are likenesses.

ADEIMANTUS: That's absolutely true.

SOCRATES: So, if we are to preserve our first argument, that our guardians must be kept away from all other crafts so as to be the most exact craftsmen of the city's freedom, and practice nothing at all except what contributes to this, then they must neither do nor imitate anything else. But if they imitate anything, they must imitate right from childhood what is appropriate for them—that is to say, people who are courageous, temperate, pious, free, and everything of that sort. On the other hand, they must not be clever at doing or imitating illiberal or shameful actions, so that they won't acquire a taste for the real thing from imitating it. Or haven't you noticed that imitations, if they are practiced much past youth, get established in the habits and nature of body, tones of voice, and mind?

ADEIMANTUS: I have indeed.

SOCRATES: Since those we claim to care about are *men*, then, and men who must become good, we won't allow them to imitate a *woman*, young or old, as she abuses her husband, quarrels with the gods, brags because she thinks herself happy, or suffers misfortune and is possessed by sorrows and lamentations—and still less a woman who is ill, passionately in love, or in labor.

ADEIMANTUS: Absolutely not.

SOCRATES: Nor must they imitate either male or female slaves doing servile actions.

ADEIMANTUS: No, they must not.

SOCRATES: Nor cowardly, bad men, it seems, or those whose actions are the opposite of what we described just now—men who libel and ridicule each other, and use shameful language when drunk or even when sober, or who wrong themselves and others by word or deed in the other ways that are typical of such people. And they must not get into the habit, I take it, of acting or talking like madmen. They must *know*, of course, about mad and evil men and women, but they must not do or imitate anything they do.

ADEIMANTUS: That's absolutely true.

SOCRATES: What about metalworkers or other craftsmen, or those who row in triremes, or their coxswains, or the like—should they imitate them?

ADEIMANTUS: No, they should not, since they are not allowed even to pay any mind to those pursuits.

SOCRATES: And what about neighing horses, bellowing bulls, roaring rivers, the crashing sea, thunder, or the like—will they imitate them?

ADEIMANTUS: No, they have already been forbidden to be mad or to imitate madmen.

SOCRATES: So you are saying, if I understand you, that there is one kind of style and narration that a really good and fine person would use whenever he had to say something, and another kind, unlike that one, which his opposite by nature and education would always favor, and in which he would narrate his story.

ADEIMANTUS: What kinds are they?

SOCRATES: In my view, when a moderate man comes upon the words or actions of a good man in the course of a narration, he will be willing to report them as if he were that man himself, and he won't be ashamed of that sort of imitation. He will be most willing to imitate the good man when he is acting in a faultless and intelligent manner, but less willing

and more reluctant to do so when he is upset by disease, passion, drunkenness, or some other misfortune. When he comes upon a character who is beneath him, however, he will be unwilling to make himself resemble this inferior character in any serious way—except perhaps for a brief period in which he is doing something good. On the contrary, he will be ashamed to do something like that, both because he is unpracticed in the imitation of such people, and also because he cannot stand to shape and mold himself on an inferior pattern. In his mind he despises
e that, except when it is for the sake of amusement.

ADEIMANTUS: Probably so.

SOCRATES: Won't he use the sorts of narration, then, that we described in dealing with the Homeric epics a moment ago? And though his style of speaking will involve both imitation and the other sort of narration, won't imitation play a small part even in a long story? Or am I talking nonsense?

ADEIMANTUS: Not at all. That must indeed be the pattern followed by that sort of speaker.

SOCRATES: As for the other sort of speaker, the
397a more inferior he is, the more willing he will be to narrate anything and to consider nothing beneath him. Hence he will undertake to imitate, before a large audience and in a serious way, all the things we just mentioned: thunder and the sounds of winds, hail, axles, and pulleys; trumpets, flutes, pipes, and all the other instruments; and even the cries of dogs, sheep, and birds. And his style will consist entirely of
b imitation in voice and gesture, won't it, with possibly a small bit of plain narration thrown in?

ADEIMANTUS: Yes, that must be so, too.

SOCRATES: Well, then, that is what I meant when I said that there are two kinds of style.

ADEIMANTUS: And you were right; there are.

SOCRATES: Now, one of them involves little variation.[38] Hence if an appropriate harmony and rhythm are provided for this style, won't anyone who speaks in it correctly come close to speaking in a single harmony and, what is more, in a rhythm of pretty much the same sort, since the variations involved in
c it are slight?

ADEIMANTUS: Yes, that's precisely what he will do.

SOCRATES: What about the other kind of style? Won't it need the opposite: namely, every harmony and every rhythm, if it, too, is going to be spoken in properly, since it is multifarious in the forms of its variations?

ADEIMANTUS: Yes, that's very much what it is like.

SOCRATES: Now, doesn't every poet and speaker adopt a style that fits one or the other of these patterns, or a mixture of both?

ADEIMANTUS: Necessarily.

SOCRATES: What are we to do, then? Shall we admit all of these into our city, or one of the pure d
sorts, or the mixed one?

ADEIMANTUS: If my view prevails, we will admit only the pure imitator of the good person.

SOCRATES: And yet, Adeimantus, the mixed style *is* pleasing. And the one that is most pleasing to children, their tutors, and the vast majority of people is the opposite of the one you chose.

ADEIMANTUS: Yes, it is the most pleasing.

SOCRATES: But perhaps you would say that it does not harmonize with our constitution, because there is no twofold or manifold man among us, since each e
does only one job.

ADEIMANTUS: Indeed, it does not harmonize with it.

SOCRATES: And isn't that the reason that it is only in a city like ours that we will find a shoemaker who is a shoemaker, not a ship's captain who also makes shoes; and a farmer who is a farmer, not a juror who also farms; and a soldier who is a soldier, not a moneymaker who also soldiers, and so on?

ADEIMANTUS: True, it is.

SOCRATES: Suppose, then, that a man whose wisdom enabled him to become multifarious and imitate 398a
everything were to arrive in person in our city and want to give a performance of his poems. It seems that we would bow down before him as someone holy, amazing, and pleasing. But we would tell him that there is no man like him in our city, and that it is not in accord with divine law for there to be one. Then we would anoint his head with perfumes, crown him with a woolen wreath,[39] and send him away to

38. [*Metabolê:* variation in general, but also a technical term in music for the transition from one harmony to another.]

39. [As was traditionally done to statues of the gods.]

another city. But, for our own benefit, we would employ a more austere and less pleasant poet and
b storyteller ourselves—one who would imitate the speech of a good person and make his stories fit the patterns we laid down at the beginning, when we undertook to educate our soldiers.

ADEIMANTUS: Yes, that is certainly what we would do, if it were up to us.

SOCRATES: And now, my friend, it looks to me as though we have completed our discussion of the branch of musical training that deals with speech and stories. After all, we have discussed both what is to be said and how it is to be said.

ADEIMANTUS: Yes, it seems that way to me, too.

SOCRATES: Wouldn't what is left for us to discuss
c next, then, be lyric odes and songs?

ADEIMANTUS: Clearly.

SOCRATES: And couldn't anyone discover by now what to say about what they must be like, if indeed it is going to be concordant with what has already been said?

And Glaucon laughed and said:

I am afraid, Socrates, that "anyone" does not include me. You see, it is not sufficiently clear to me at the moment what we are to say, though I have my suspicions.

SOCRATES: Nonetheless, you are sufficiently clear about this: first, that a song consists of three elements—
d speech, harmony, and rhythm.

GLAUCON: Yes, I do know that, at least.

SOCRATES: Now, as far as speech is concerned, at any rate, it is no different, is it, from speech that is not part of a song, in that it must still be spoken in conformity to the patterns we established just now?

GLAUCON: True.

SOCRATES: Further, the harmony and rhythm must fit the speech.

GLAUCON: Of course.

SOCRATES: But we said that there is no longer a need for dirges and laments in words.[40]

GLAUCON: No, there is not.

SOCRATES: What are the lamenting harmonies,
e then? You tell me; you are musical.

40. [387d–388e.]

GLAUCON: The mixo-Lydian, the syntono-Lydian, and some others of that sort.

SOCRATES: Shouldn't we exclude them, then? After all, they are even useless for helping women to be as good as they should be, let alone men.

GLAUCON: We certainly should.

SOCRATES: Now, surely drunkenness is also entirely inappropriate for our guardians, and softness and idleness as well.

GLAUCON: Of course.

SOCRATES: What, then, are the soft harmonies, and the ones suitable for drinking parties?

GLAUCON: There are some Ionian ones that are called "relaxed," and also some Lydian ones.

SOCRATES: Could you use any of them, my friend, on men who are warriors? 399a

GLAUCON: No, never. So it looks as though you have got the Dorian and Phrygian left.

SOCRATES: I do not know the harmonies, so just leave me that harmony that would appropriately imitate the vocal sounds and tones[41] of a courageous person engaged in battle or in other work that he is forced to do, and who—even when he fails and faces wounds or death or some other misfortune—always b
grapples with what chances to occur, in a disciplined and resolute way. And also leave me another harmony for when he is engaged in peaceful enterprises, or in those he is not forced to do but does willingly; or for when he is trying to persuade someone of something, or entreating a god though prayer, or a human being through instruction and advice; or for when he is doing the opposite—patiently listening to someone else, who is entreating or instructing him, or trying to change his mind through persuasion. Leave me the harmony that will imitate him, when he does not behave arrogantly when these things turn out as he intends; but, on the contrary, is temperate and moderate in all these enterprises, and satisfied with their outcomes. Leave me these two harmonies, then— c
the forced and the willing—that will best imitate the voices of temperate and courageous men in good fortune and in bad.

41. [*Phthongos, prosôdia: phthongos* is a human voice, an animal cry, or more generally a sound of some sort; *prosôdia* is the tone or accent of a syllable, or a song accompanied by music.]

GLAUCON: You are asking to be left with the very ones I just mentioned.

SOCRATES: Well, then, we will have no need for multi-stringed or polyharmonic instruments to accompany our odes and songs.

GLAUCON: No, it seems to me we won't.

SOCRATES: Then we won't maintain craftsmen who make triangular lutes, harps, and all other such *d* multi-stringed and polyharmonic instruments.

GLAUCON: Apparently not.

SOCRATES: What about flute-makers and flute players? Will you allow them into the city? Or isn't the flute the most multi-stringed of all? And aren't polyharmonic instruments all imitations of it?

GLAUCON: Clearly, they are.

SOCRATES: You have the lyre and the cithara left, then, as useful in our city; and in the countryside, by contrast, there would be a sort of pipe for the herdsman to play.

GLAUCON: That is what our argument suggests, anyway.

SOCRATES: Well we are certainly not doing any*e* thing new, my friend, in preferring Apollo and his instruments to Marsyas and his.[42]

GLAUCON: No, by Zeus, I suppose we aren't.

SOCRATES: And, by the dog,[43] we have certainly been unwittingly re-purifying the city we described as luxurious a while ago.

GLAUCON: That just shows how temperate we are.

SOCRATES: Then let's complete the purification. Now, the next topic after harmonies is the discussion of rhythms. We should not chase after complexity or multifariousness in the basic elements.[44] On the contrary, we should try to discover the rhythms of a life that is ordered and courageous, and then adapt the metrical foot and the melody to the speech characteristic of it, not the speech to them. What rhythms *400a* these would be is for you to say, just as you did in the case of the harmonies.

GLAUCON: No, by Zeus, I cannot tell you that. However, I can tell you from observation that there are three kinds of metrical feet[45] out of which the others are constructed, just as there are four, in the case of voices, from which come all the harmonies. But I cannot tell you which sort imitates which sort of life.

SOCRATES: Well, then, we will also have to consult with Damon, on this point, and ask him which metrical feet suit illiberality, arrogance, madness, and *b* the other vices, and which their opposites. I think I have heard him using the unclear terms "warlike," "complex," "fingerlike," and "heroic" to describe one foot, which he arranged, I do not know how, to be equal up and down in the interchange of long and short.[46] And I think he called one foot an iamb and another a trochee, and assigned long and short quantities to them. In the case of some of these, I think he *c* approved or disapproved of the tempo of the foot as much as of the rhythm itself, or of some combination of the two—I cannot tell you which. But, as I said, we will leave these things to Damon, since to decide them would take a long discussion. Or do you think we should try it?

GLAUCON: No, by Zeus, I do not.

SOCRATES: But you are able to decide this, at least, aren't you: that grace goes along with good rhythm and lack of grace with bad rhythm?

GLAUCON: Of course.

SOCRATES: Furthermore, good rhythm goes along *d* with fine speaking and is similar to it, while bad

42. [After Athena had invented the flute, she discarded it because playing it distorted her features. It was picked up by the satyr Marsyas, who was foolish enough to challenge Apollo (inventor of the lyre) to a musical contest. He was defeated, and Apollo flayed him alive. Satyrs were bestial in their behavior and desires—especially their sexual desires.]

43. [*Nê ton kuna:* probably the dog-headed Egyptian god Anubis.]

44. [Rhythm is poetic meter, and the elements are the metrical feet.]

45. [Probably those in which the foot is divided in the ratio of: (1) 2:2—e.g., the dactyl (–˘˘) or the spondee (––); (2) 3:2—e.g., the paeon (˘˘˘–); (3) 1:2 or 2:1—e.g., the iamb (˘–) or the trochee (–˘).]

46. [The foot being described is probably the dactyl (–˘˘): it is warlike and heroic, because Greek heroic poetry was written in dactylic hexameter; complex, because it consists of a long syllable and two short ones; equal up and down in the interchange of long and short, because a long syllable is equal in length to two short ones; and fingerlike, because the first joint on a finger is roughly equal in length to the other two.]

rhythm goes along with the opposite sort, and the same goes for harmony and disharmony; since, as we said just now, rhythm and harmony must conform to speech, and not vice versa.

GLAUCON: Yes, they certainly must conform to speech.

SOCRATES: And what about the style of speaking and what is said? Don't they go along with the character of the speaker's soul?

GLAUCON: Of course.

SOCRATES: And don't all the rest go along with the style of speaking?

GLAUCON: Yes.

SOCRATES: Fine speech, then, as well as harmony, grace, and rhythm, go along with naiveté. I
e do not mean the stupidity for which naiveté is a euphemism, but the quality a mind has when it is equipped with a truly good and fine character.

GLAUCON: Absolutely.

SOCRATES: And mustn't our young people try to achieve these on every occasion, if they are going to do the job that is really theirs?

GLAUCON: Yes, they must indeed.

SOCRATES: Now, surely painting and all the crafts
401a similar to it are full of these qualities—weaving is full of them, as are embroidery, architecture, and likewise the manufacture of implements generally; and so, furthermore, is the nature of bodies and that of the other things that grow. For in all these there is grace or the lack of it. And lack of grace, bad rhythm, and disharmony are akin to bad speech and bad character, while their opposites are akin to and imitate their opposite—a character that is temperate and good.

GLAUCON: Absolutely.

SOCRATES: Is it only poets we have to supervise,
b then, compelling them either to embody the image of a good character in their poems or else not to practice their craft among us? Or mustn't we also supervise all the other craftsmen, and forbid them to represent a character that is bad, intemperate, illiberal, and graceless, in their images of living beings, in their buildings, or in any of the other products of their craft? And mustn't the one who finds this impossible be prevented from practicing in our city, so that our guardians will not be brought up on images
c of evil as in a meadow of bad grass, where they crop and graze every day from all that surrounds them until, little by little, they unwittingly accumulate a large amount of evil in their souls? Instead, mustn't we look for craftsmen who are naturally capable of pursuing what is fine and graceful in their work, so that our young people will live in a healthy place and be benefited on all sides as the influence exerted by those fine works affects their eyes and ears like a healthy breeze from wholesome regions, and imperceptibly guides them from earliest childhood into *d* being similar to, friendly toward, and concordant with the beauty of reason?

GLAUCON: Yes, that would be by far the best education for them.

SOCRATES: Then aren't these the reasons, Glaucon, that musical training is most important? First, because rhythm and harmony permeate the innermost element of the soul, affect it more powerfully than anything else, and bring it grace, such education makes one graceful if one is properly trained, and the opposite if one is not. Second, because anyone *e* who has been properly trained will quickly notice if something has been omitted from a thing, or if that thing has not been well crafted or well grown. And so, since he feels distaste correctly, he will praise fine things, be pleased by them, take them into his soul, and, through being nourished by them, become fine and good. What is ugly or shameful, on the other hand, he will correctly condemn and hate while he *402a* is still young, before he is able to grasp the reason. And, because he has been so trained, he will welcome the reason when it comes and recognize it easily because of its kinship with himself.

GLAUCON: Yes, it seems to me that these are the goals of musical training.

SOCRATES: It is like learning to read, then. We became adequately proficient only when the few letters that there are did not escape us in any of the different words in which they are scattered about; and when we did not disregard them, either in a small word or a big one, as if they were not worth noticing; but tried hard to distinguish them wherever they *b* occur, knowing that we would not be competent readers until we knew our letters.

GLAUCON: True.

SOCRATES: And isn't it also true that if there are images of letters reflected in water or mirrors, we won't

know them until we know the letters themselves, for both abilities are parts of the same craft and discipline?

GLAUCON: Absolutely.

SOCRATES: Then, by the gods, aren't I right in
c saying that neither we nor the guardians we claim to be educating will be musically trained until we know the different forms of temperance, courage, generosity, high-mindedness, and all their kindred, and their opposites, too, which are carried around all over the place; and see them in the things in which they are, both themselves and their images; and do not disregard them, either in small things or in large, but accept that the knowledge of both belongs to the same craft and discipline?

GLAUCON: Yes, that necessarily follows.

SOCRATES: Then, if the fine habits in someone's
d soul and those in his physical form agree and are in concord with one another, so that both share the same pattern, wouldn't that be the most beautiful sight for anyone capable of seeing it?

GLAUCON: By far.

SOCRATES: And surely the most beautiful is also the most loveable, isn't it?

GLAUCON: Of course.

SOCRATES: A really musical person, then, would passionately love people who are most like that. But a disharmonious person, he would not passionately love.

GLAUCON: No, he would not—at least, not if the defect were in the soul. If it were only in the body, however, he would put up with it and still be willing
e to embrace the boy who had it.

SOCRATES: I understand that you love or have loved such a boy yourself, and I agree with you. But tell me this: does excessive pleasure share anything in common with temperance?

GLAUCON: How can it? It surely drives one no less mad than pain does.

SOCRATES: What about with any other virtue?

403a GLAUCON: Never.

SOCRATES: Then, what about with arrogance and intemperance?

GLAUCON: Yes, with them most of all.

SOCRATES: Can you think of any pleasure that is greater or keener than sexual pleasure?

GLAUCON: No, I cannot—or of a more insane one either.

SOCRATES: But isn't the right sort of passion a naturally moderate and musically educated passion for order and beauty?

GLAUCON: Yes.

SOCRATES: Then nothing insane and nothing akin to dissoluteness can be involved in the right love?

GLAUCON: No, they cannot.

SOCRATES: Then sexual pleasure must not be involved, must it, and the lover and the boy who passion- b
ately love and are loved in the right way must have no share in it?

GLAUCON: No, by Zeus, Socrates, it must not be involved.

SOCRATES: It seems, then, that you will lay it down as a law in the city we are founding that a lover—if he can persuade his boyfriend to let him—may kiss him, be with him, and touch him, as a father would a son, for the sake of beautiful things. But in all other respects, his association with the one he cares about must never seem to go any further than this. Otherwise, he will be reproached as untrained in c
music, and as lacking in appreciation for beautiful things.

GLAUCON: That's right.

SOCRATES: Do you agree, then, that our account of musical training has come to an end? At any rate, it ought to end where it has ended; for surely training in the musical crafts ought to end in a passion for beauty.

GLAUCON: I agree.

SOCRATES: Now, after musical training, our young people must be given physical training.

GLAUCON: Of course.

SOCRATES: And in this, too, they must have a careful training, which starts in childhood and continues throughout life. It would, I believe, be something like this—but you should consider what you think, too. You see, I, for my part, do not believe that a d
healthy body, by means of its own virtue, makes the soul good. On the contrary, I believe that the opposite is true: a good soul, by means of its own virtue, makes the body as good as possible. What do you think?

GLAUCON: I think so, too.

SOCRATES: Then if we give adequate care to the mind, entrust it with the detailed supervision of the body, and content ourselves with indicating the general patterns to be followed rather than going on

at great length, wouldn't we be proceeding in the
e right way?

GLAUCON: Yes, indeed.

SOCRATES: Now, we said that our prospective guardians must avoid drunkenness.[47] For surely a guardian is the last person who should get so drunk that he does not know where on earth he is.

GLAUCON: Yes, it would be ridiculous for a *guardian* to need a guardian himself!

SOCRATES: What about food? These men are athletes in the greatest contest, aren't they?

GLAUCON: Yes.

SOCRATES: Then would the regimen of ordinary,
404a trained athletes be suitable for them?

GLAUCON: Maybe.

SOCRATES: But it seems to be a soporific sort of regimen and unreliable as regards health. Or haven't you noticed that these athletes sleep their lives away, and that if they deviate even a little from their orderly regimen, they become seriously and violently ill?

GLAUCON: I have noticed that.

SOCRATES: Then we need a more refined sort of training for our warrior-athletes, since they must be like sleepless hounds, as it were, who have the keenest possible sight and hearing, and whose health is not so precarious that it cannot sustain the frequent changes of water and diet generally, and the heat
b waves and winter storms typical of war.

GLAUCON: I agree.

SOCRATES: Wouldn't the best physical training, then, be akin to the simple musical training we described a moment ago?

GLAUCON: How do you mean?

SOCRATES: I mean a simple and good physical training, and one that is especially adapted to the conditions of war.

GLAUCON: In what way?

SOCRATES: You could learn *that* even from Homer. For you know that when his heroes are at war, he does not portray them banqueting on fish[48]—even though they are by the sea in the Hellespont—
c or boiled meat, but roasted meat only, which is the sort most easily available to soldiers. For it is pretty much always easier to use an open fire than to carry pots and pans around everywhere.

GLAUCON: Quite right.

SOCRATES: Nor, I believe, does Homer mention rich sauces anywhere. In fact, isn't everyone else who is in training also aware that if he is planning to stay in good physical condition, he must avoid such things altogether?

GLAUCON: Yes, and they are certainly right to be aware of it and to avoid them.

SOCRATES: If you think they are right to do that, my dear Glaucon, you apparently do not approve of Syracusan cuisine or complex Sicilian relishes. d

GLAUCON: I suppose not.

SOCRATES: Then you also object to men having a Corinthian girlfriend, if they are planning to be in good physical condition.[49]

GLAUCON: Absolutely.

SOCRATES: And also to their enjoying the reputed delights of Attic pastries?

GLAUCON: I would have to.

SOCRATES: And the reason for that, I take it, is that we would be right to compare this sort of diet, and this lifestyle, to the polyharmonic songs and lyric odes that make use of every sort of rhythm. e

GLAUCON: Of course.

SOCRATES: There complexity engendered intemperance, didn't it, and here it engenders illness; whereas simplicity in musical training engenders temperance in the soul, and in physical training health in the body?

GLAUCON: That's absolutely true.

SOCRATES: And as intemperance and disease breed in a city, aren't many law courts and surgeries 405a
opened? And don't the legal and medical professions give themselves airs when even free men in large numbers take them very seriously?

GLAUCON: How could it be otherwise?

SOCRATES: Could you find better evidence that a city's education is in a bad and shameful state than when eminent doctors and lawyers are needed, not only by inferior people and handicraftsmen, but by those who claim to have been brought up in the manner of free men? Indeed, don't you think it is

47. [398e6.]

48. [Fish was a luxury item in Plato's Athens.]

49. [Corinthian prostitutes enjoyed an international reputation in the Classical period.]

b shameful and strong evidence of lack of education to be forced to make use of a justice imposed by others, as if they were one's masters and judges, because one lacks such qualities oneself?

GLAUCON: That is the most shameful thing of all.

SOCRATES: Do you really think so? Isn't it even more shameful not just to spend a good part of one's life in court defending oneself and prosecuting someone else, but to be so vulgar that one is persuaded to take pride in this and regard oneself as amazingly clever at doing injustice, and as so accomplished at c every trick and turn that one can wiggle through any loophole, and avoid punishment—and to do all that for the sake of little worthless things, and because one is ignorant of how much better and finer it is to arrange one's own life so that one won't need to find a judge who is asleep?

GLAUCON: Yes, that is even more shameful.

SOCRATES: What about needing the craft of medicine for something besides wounds or some seasonal illnesses? What about needing it because idleness and d the regimen we described has filled one full of gasses and phlegm, like a stagnant swamp, so that sophisticated Asclepiad doctors are forced to come up with names like "flatulence" and "catarrh" to describe one's diseases? Don't you think that is shameful?

GLAUCON: Yes, it is; and those truly are strange new names for diseases.

SOCRATES: And of a sort that I do not imagine even existed in the time of Asclepius himself. My e evidence for this is that his sons at Troy did not criticize the woman who treated the wounded Eurypylus with Pramneian wine that had lots of barley meal and grated cheese sprinkled on it, even though 406a such treatment is now thought to cause inflammation. Moreover, they did not criticize Patroclus, who prescribed the treatment.[50]

GLAUCON: Yet, surely it *was* a strange drink for someone in that condition.

SOCRATES: Not if you recall that the sort of modern medicine that coddles the disease was not used by the Asclepiads before the time of Herodicus. Herodicus was a physical trainer who became ill and, through a combination of physical training and medicine, tormented first and foremost himself, and then b lots of other people as well.

GLAUCON: How did he do that?

SOCRATES:By making his death a lengthy process. You see, although he was always tending his illness, he was not able to cure it, since it was terminal. And so he spent his life under medical treatment, with no free time for anything else whatsoever. He suffered torments if he departed even a little from his accustomed regimen; but, thanks to his wisdom, he struggled against death and reached old age.

GLAUCON: A fine reward for his craft that was!

SOCRATES: And appropriate for someone who did not know that it was not because of ignorance or inex- c perience of this kind of medicine that Asclepius failed to teach it to his sons, but because he knew that everyone in a well-regulated city has his own work to do, and that no one has the time to be ill and under treatment all his life. We see how ridiculous this would be in the case of craftsmen, but we do not see it in the case of those who are supposedly happy—the rich.

GLAUCON: What do you mean?

SOCRATES: When a carpenter is ill, he expects to get a drug from his doctor that will make him throw d up what is making him sick or evacuate it through his bowels; or to get rid of his disease through surgery or cautery. If anyone prescribes a lengthy regimen for him and tells him that he should rest with his head bandaged and so on, he quickly replies that he has no time to be ill, and that it is not profitable for him to live like that, always minding his illness and neglecting the work at hand. After that, he says good- e bye to his doctor, resumes his usual regimen, lives doing his own job, and recovers his health; alternatively, if his body cannot withstand the illness, he dies and escapes his troubles.

GLAUCON: That does seem to be the correct way for someone like that to use the craft of medicine.

SOCRATES: Isn't that because he had a job to do, and that if he could not do it, it would not profit him 407a to go on living?

GLAUCON: Clearly.

SOCRATES: But a rich person, it is said, has no job assigned to him of the sort that would make his life not worth living if he had to keep away from it.

50. [At *Iliad* 11.580ff. Eurypylus is wounded, but not treated in this way (see 11.828–36). However, Machaon, the son of Asclepius, does receive this treatment at 11.624–50.]

GLAUCON: So it is said, at least.

SOCRATES: What, have you not heard the saying of Phocylides that once one has the means of life, one must practice virtue?[51]

GLAUCON: And even earlier, in my view.

SOCRATES: Let's not quarrel with him about that. But let's try to find out for ourselves whether this virtue is something a rich person must practice, and if his life is not worth living if he does not practice *b* it; or whether nursing an illness, while an obstacle to putting your mind to carpentry and other crafts, is no obstacle whatever to taking Phocylides' advice.

GLAUCON: But, by Zeus, it is: excessive care of the body that goes beyond simple physical training is pretty much the biggest obstacle of all. For it's a nuisance in household management, in military service, and even in sedentary political office.

SOCRATES: And most important of all, surely, is *c* that it makes any sort of learning, thought, or private meditation difficult, by forever causing imaginary headaches or dizziness and accusing philosophy of causing them. Hence, wherever this sort of virtue is practiced and submitted to philosophical scrutiny, excessive care of the body hinders it. For it is constantly making you imagine that you are ill and never lets you stop agonizing about your body.

GLAUCON: Yes, probably so.

SOCRATES: Then won't we say that Asclepius knew this, too, and that he invented the craft of medicine for people whose bodies are healthy in nature *d* and habit, but have some specific disease in them? That is the type of person and condition for which he invented it. He rid them of their disease by means of drugs or surgery, and then prescribed their normal regimen, so that affairs of politics would not be harmed. However, he did not attempt to prescribe regimens for those whose bodies were riddled with disease, so that by drawing off a little here and pouring in a little there, he could make their life a prolonged misery and enable them to produce offspring in all probability like themselves. He did not think that he should treat someone who could not live a normal *e* life, since such a person would profit neither himself nor his city.

GLAUCON: Asclepius was a true man of politics, in your view.

SOCRATES: Clearly so. And it was because he was like that, don't you see, that his sons, too, turned out to be good men in the war at Troy, and practiced *408a* the craft of medicine as I say they did. Don't you remember that they "sucked out the blood and applied gentle drugs" to the wound Pandarus inflicted on Menelaus? But they no more prescribed what he should eat or drink after that than they did for Eurypylus?[52] That was because they assumed that their drugs were sufficient to cure men who were healthy and living an orderly life before being wounded, even if they happened to drink wine mixed with barley and cheese right afterward. But they *b* thought that the lives of naturally sick and intemperate people were profitable neither to themselves nor to anyone else, that the craft of medicine shouldn't be practiced on them, and that they should not be given treatment, not even if they were richer than Midas.

GLAUCON: The sons of Asclepius were indeed very sophisticated, in your view.

SOCRATES: It is the right view to hold of them. And yet it is on just this point that Pindar and the tragedians are not persuaded by us. They say that Asclepius, even though he was the son of Apollo, was bribed with gold to heal a rich man who was already dying, and that that is why he was struck by lightning. *c* But, in view of what we said before, we won't accept both claims from them. On the contrary, we will say that if Asclepius was the son of a god, he was not a money-grubber; and that if he was a money-grubber, he was not the son of a god.

GLAUCON: That's absolutely right. But what do you say about the following, Socrates? Won't we need to have good doctors in our city? And the best, I take it, will be those who have treated the greatest number of healthy and diseased people. In the same way, the best judges will be those who have associated with *d* people with multifarious natures.

SOCRATES: I certainly agree that we need good ones. But do you know which ones I regard as such?

GLAUCON: I will, if you will tell me.

51. [Phocylides of Miletus was a mid-sixth–century elegiac and hexameter poet best known for his epigrams.]

52. [*Iliad* 4.218–9. In the extant text, Machaon is acting alone.]

SOCRATES: Well, I will try. However, you ask about things that are not alike in the same question.

GLAUCON: What do you mean?

SOCRATES: Doctors, it is true, would become cleverest if, in addition to learning the craft of medicine, they associated with the greatest possible number of the most diseased bodies right from childhood, had themselves experienced every illness, and were
e not, by nature, very healthy. After all, they do not treat a body with a body. If they did, we would not allow their bodies to be or become bad. But it is with a soul that a body is treated, and it is not possible for a soul to treat anything well if it is or has become bad itself.

GLAUCON: That's right.

SOCRATES: But a *judge*, my friend, does rule a
409a soul with a soul. And it is not possible for a soul to be nurtured among bad souls from childhood, to have associated with them, and to have itself indulged in every sort of injustice, so as to be able to draw exact inferences from itself about the injustices of others, as in the case of diseases of the body. On the contrary, it itself must have no experience of, and be uncontaminated by, bad characters while it is young, if as a fine and good soul itself, it is going to make judgments about what is just in a healthy way. That is precisely the reason, indeed, that good people are thought to be naïve when they are young and easily deceived by unjust ones: they do not have models within them-
b selves of the behavior of bad ones.

GLAUCON: Yes, indeed, that is precisely what happens to them.

SOCRATES: That is why a good judge must not be young, but old—a late learner of what sort of thing injustice is, who has become aware of it, not as something at home in his own soul, but as an alien thing present in other people's souls. He must have trained himself over many years to discern how naturally bad it is by using his theoretical knowledge, not
c his own intimate experience of it.

GLAUCON: At any rate, it would seem that *the noblest* judge would be like that.

SOCRATES: And so is the *good* one you asked about, since the one who has a good soul is good. The clever and suspicious person, on the other hand, who has committed many injustices himself and thinks of himself to be unscrupulous and wise, appears clever when he associates with those like himself, because he is on his guard and looks to the models within himself. But when he meets with good people who are older, he is seen to be stupid, distrustful at the wrong time, and ignorant of what a healthy character is, since he has no model of this within d
himself. But because he meets bad people more often than good ones, he seems more wise than foolish, both to himself and to them as well.

GLAUCON: That's absolutely true.

SOCRATES: Then we must not look for a good judge among people like that, but among the sort we described earlier. For while a bad person could never come to know either vice or virtue, a naturally virtuous person, when educated, will in time acquire knowledge of both virtue and vice. And it is someone like that, and not a bad person, who becomes a wise judge in my view. e

GLAUCON: And I share your view.

SOCRATES: Then won't you establish by law in your city both the craft of medicine we mentioned and this craft of judging along with it? And these crafts will care for such of your citizens as have naturally good bodies and souls; but those whose bodies 410a
are not like that they will allow to die, while those whose souls are naturally and incurably bad they will themselves put to death.

GLAUCON: Yes, we have seen that that is best both for those who receive such treatment and for the city.

SOCRATES: And so it is clear that *your* young people will be wary of coming to need a judge, since they employ that simple sort of musical training, which we said engenders temperance.

GLAUCON: Of course.

SOCRATES: And won't a person who is musically trained hunt for a type of physical training by following these same tracks, and catch it, if he chooses? b
And won't the result be that he will have no need of the craft of medicine, except when absolutely necessary?

GLAUCON: That's my view, at any rate.

SOCRATES: And he will undertake even the regimens and exertions of physical training with an eye less to strength than to arousing the spirited part of his nature, unlike all other athletes who use diets and exertions only to gain muscle power.

GLAUCON: That's absolutely right.

SOCRATES: Then, doesn't it follow, Glaucon, that those who established musical training and physical training did not establish them with the aim that *c* some people attribute to them: namely, to treat the body with the former and the soul with the latter?

GLAUCON: What was it then?

SOCRATES: It looks as though they established both chiefly for the sake of the soul.

GLAUCON: How so?

SOCRATES: Have you never noticed the mind-set of those who have a lifelong association with physical training but stay away from musical training? Or, again, that of those who do the opposite?

GLAUCON: What do you mean?

SOCRATES: Savagery and toughness, in the one *d* case; softness and over-cultivation, in the other.

GLAUCON: I have certainly noticed that people who devote themselves exclusively to physical training turn out to be more savage than they should, while those who devote themselves to musical training turn out to be softer than is good for them.

SOCRATES: And surely the savageness derives from the spirited element of their nature, which, if rightly nurtured, becomes courageous, but, if overstrained, is likely to become hard and harsh.

GLAUCON: So it seems.

SOCRATES: What about the cultivation? Wouldn't *e* it derive from the philosophic element of their nature, which, if relaxed too much, becomes softer than it should, but, if well nurtured, is cultivated and orderly?

GLAUCON: That's right.

SOCRATES: Now, we said that our guardians must have both these natures.[53]

GLAUCON: Yes, they must.

SOCRATES: And mustn't the two be harmonized with one another?

GLAUCON: Of course.

SOCRATES: And isn't the soul of the person thus *411a* harmonized temperate and courageous?

GLAUCON: Certainly.

SOCRATES: And that of the inharmonious person, cowardly and savage?

GLAUCON: Exactly.

53. [375c6–8.]

SOCRATES: So when someone gives himself over to musical training and lets the flute pour into his soul through his ears, as through a funnel, those sweet, soft, and plaintive harmonies we mentioned; and when he spends his whole life humming, entranced by song, the first result is that whatever spirit he had, he softens the way he would iron and makes useful, rather than useless and brittle. But when he keeps at it unrelentingly and charms his spirit, the next result *b* is that he melts it and dissolves it completely until he has cut out, so to speak, the very sinews of his soul and makes himself "a feeble warrior."[54]

GLAUCON: Yes, indeed.

SOCRATES: And if he has a spiritless nature to begin with, this happens quickly. But if he has a spirited one, his spirit becomes weak and unstable, quickly inflamed by trivial things and quickly extinguished. As a result, people like that become quick-tempered and prone to anger, instead of spirited, and *c* filled with peevishness.

GLAUCON: Absolutely.

SOCRATES: On the other hand, what about someone who works hard at physical training, eats very well, and never touches musical training or philosophy? At first, because his body is in good strong condition, isn't he full of pride and spirit, and more courageous than he was before?

GLAUCON: He certainly is.

SOCRATES: But what happens if he does nothing but this and never enters into partnership with a Muse? Even if there was some love of learning in his soul, because it never tastes any sort of instruction or *d* investigation, and never participates in any discussion or in any of the rest of musical training, doesn't it become weak, deaf, and blind, because it never receives any stimulation or nourishment, and its senses are never purified?

GLAUCON: Yes, it does.

SOCRATES: Then a person like that, I take it, becomes an unmusical hater of argument[55] who no longer uses argument to persuade people, but force and savagery, behaves like a wild beast, and lives in *e* awkward ignorance without rhythm or grace.

54. [*Iliad* 17.588.]

55. [*Misologos:* the opposite of a philosopher, who is a *philologos*, a lover of argument.]

GLAUCON: That's exactly how it is.

SOCRATES: So I, for one, would claim that it is to deal with *these* two things, so it seems, that a god has given two crafts to human beings— musical training and physical training—to deal with the philosophical and spirited elements, and not, except as a byproduct, with the soul and the body; but with these two, so that they might be harmonized with one another by being stretched and relaxed to the appropriate degree. 412a

GLAUCON: Yes, it seems so.

SOCRATES: Then it is the person who makes the best blend of musical and physical training, and applies them in the most perfect proportion to his soul, that we would be most correct to describe as completely trained in music and as most in harmony—far more so than the one who merely attunes his strings to one another.

GLAUCON: Probably so, Socrates.

SOCRATES: Then won't we also need this sort of person in our city, Glaucon, as a permanent overseer, if indeed its constitution is to be preserved?

GLAUCON: Yes, we will need him most of all. b

SOCRATES: Those, then, would be the patterns of their education and upbringing. For why should we enumerate their dances, hunts, chases with hounds, athletic contests, and horse races? After all, it is pretty much clear that they should be consistent with these patterns, and so there should no longer be any difficulty in discovering them.

GLAUCON: No, presumably there should not.

SOCRATES: All right. Now, what is the next question we have to settle? Isn't it which of these same people will rule and which be ruled?

GLAUCON: Of course. c

SOCRATES: Well, isn't it clear that the older ones must rule, whereas the younger ones must be ruled?

GLAUCON: Yes, it is clear.

SOCRATES: And that the rulers must be the best among them?

GLAUCON: Yes, that's clear, too.

SOCRATES: And aren't the best farmers the ones who are best at farming?

GLAUCON: Yes.

SOCRATES: In the present case, then, since the rulers must be the best of the guardians, mustn't they be the ones who are best at guarding the city?

GLAUCON: Yes.

SOCRATES: Then mustn't they be knowledgeable and capable in this matter, and, in addition, mustn't they care for the city?

GLAUCON: Yes, they must. d

SOCRATES: But a person would care most for what he loved.

GLAUCON: Necessarily.

SOCRATES: And he would love something most if he thought that the same things were advantageous both for it and for himself, and if he thought that when it did well, he would do well, too; and that if it didn't, the opposite would happen.

GLAUCON: That's right.

SOCRATES: Then we must choose from among our guardians the sort of men who seem on the basis of our observation to be most inclined, throughout their entire lives, to do what they believe to be advantageous for the city, and most unwilling to do the opposite. e

GLAUCON: Yes, they would be suitable for the job.

SOCRATES: I think, then, that we will have to observe them at every stage of their lives to make sure that they are good guardians of this conviction, and that neither compulsion nor sorcery will cause them to discard or forget their belief that they must do what is best for the city.

GLAUCON: What do you mean by discarding?

SOCRATES: I will tell you. It seems to me that the departure of a belief from someone's mind is either voluntary or involuntary—voluntary when he learns that the belief is false; involuntary in the case of all true beliefs. 413a

GLAUCON: I understand the voluntary sort, but I still need instruction about the involuntary.

SOCRATES: What? Don't you know that people are involuntarily deprived of good things, but voluntarily deprived of bad ones? And isn't being deceived about the truth a bad thing, whereas possessing the truth is a good one? Or don't you think that to believe things that are is to possess the truth?

GLAUCON: No, you are right. And I do think that people are involuntarily deprived of true beliefs.

SOCRATES: Then isn't it through theft, sorcery, and compulsion that this happens? b

GLAUCON: Now I do not understand again.

SOCRATES: I suppose I am making myself as clear as a tragic poet! By those who have their beliefs stolen

from them, I mean those who are over-persuaded, or those who forget; because argument, in the one case, and time, in the other, takes away their beliefs without their noticing. You understand now, don't you?

GLAUCON: Yes.

SOCRATES: Well then, by those who are compelled, I mean those who are made to change their beliefs by some suffering or pain.

GLAUCON: I understand that, too, and you are right.

SOCRATES: And the victims of sorcery, I think *c* you would agree, are those who change their beliefs because they are charmed by pleasure or terrified by some fear.

GLAUCON: It seems to me that all deception is a form of sorcery.

SOCRATES: Well then, as I was just saying, we must discover which of them are best at safeguarding within themselves the conviction that they must always do what they believe to be best for the city. We must watch them right from childhood, and set them tasks in which a person would be most likely to forget such a conviction or be deceived out of it. And we *d* must select the ones who remember and are difficult to deceive, and reject the others. Do you agree?

GLAUCON: Yes.

SOCRATES: And we must also subject them to labors, pains, and contests, and watch for the same things there.

GLAUCON: That's right.

SOCRATES: Then we must also set up a third kind of competition for sorcery. Like those who lead colts into noise and tumult to see if they are afraid, we must subject our young people to fears and then plunge them once again into pleasures, so as to test *e* them much more thoroughly than people test gold in a fire. And if any of them seems to be immune to sorcery, preserves his composure throughout, is a good guardian of himself and of the musical training he has received, and proves himself to be rhythmical and harmonious in all these trials—he is the sort of person who would be most useful, both to himself and to the city. And anyone who is tested as a child, youth, and adult, and always emerges as being without *414a* impurities, should be established as a ruler of the city as well as a guardian, and should be honored in life and receive the most prized tombs and memorials after his death. But those who do not should be rejected. That is the sort of way, Glaucon, that I think rulers and guardians should be selected and established. Though I have provided only a pattern, not the precise details.

GLAUCON: I also think much the same.

SOCRATES: Then wouldn't it really be most correct to call these people complete guardians—the *b* ones who guard against external enemies and internal friends, so that the former will lack the power, and the latter the desire, to do any evil; but to call the young people to whom we were referring as guardians just now, *auxiliaries* and supporters of the guardians' convictions?

GLAUCON: Yes, I think it would.

SOCRATES: How, then, could we devise one of those useful lies we were talking about a while ago,[56] a single noble lie that would, preferably, persuade *c* even the rulers themselves; but, failing that, the rest of the city?

GLAUCON: What sort of lie?

SOCRATES: Nothing new, but a sort of Phoenician story[57] about something that happened in lots of places prior to this—at least, that is what the poets say and have persuaded people to believe. It has not happened in our day, and I do not know if it could happen. It would take a lot of persuasion to get people to believe it.

GLAUCON: You seem hesitant to tell the story.

SOCRATES: You will realize that I have every reason to hesitate, when I do tell it.

GLAUCON: Out with it. Do not be afraid.

SOCRATES: All right, I will—though I do not know where I will get the audacity or the words to tell it. *d* I will first be trying to persuade the rulers and the soldiers, and then the rest of the city, that the upbringing and the education we gave them were like dreams; that they only imagined they were undergoing all the things that were happening to them, while in fact they themselves were at that time down inside the earth being formed and nurtured, and that their weap-

56. [382a4–d3.]

57. [Apparently a reference, first, to the legend of the Phoenician hero, Cadmus, who sowed the earth with dragon's teeth from which giants grew; and, second, to the *Odyssey*, and the tales Odysseus tells to the Phaeacians.]

ons and the rest of their equipment were also manu-
e factured there. When they were entirely completed, the earth, their mother, sent them up, so that now, just as if the land in which they live were their mother and nurse, they must deliberate on its behalf, defend it if anyone attacks it, and regard the other citizens as their earthborn brothers.

GLAUCON: It is not for nothing that you were ashamed to tell your lie earlier.

SOCRATES: No, it was only to be expected. But all the same, you should listen to the rest of the story.
415a "Although all of you in the city are brothers," we will say to them in telling our story, "when the god was forming you, he mixed gold into those of you who are capable of ruling, which is why they are the most honorable; silver into the auxiliaries; and iron and bronze into the farmers and other craftsmen. For the most part, you will produce children like yourselves; but, because you are all related, a silver child will
b occasionally be born to a golden parent, a golden child to a silver parent, and so on. Therefore, the first and most important command from the god to the rulers is that there is nothing they must guard better or watch more carefully than the mixture of metals in the souls of their offspring. If an offspring of theirs is born with a mixture of iron or bronze, they must not pity him in any way, but assign him an honor
c appropriate to his nature and drive him out to join the craftsmen or the farmers. On the other hand, if an offspring of the latter is found to have a mixture of gold or silver, they will honor him and take him up to join the guardians or the auxiliaries. For there is an oracle that the city will be ruined if it ever has an iron or a bronze guardian." So, have you a device that will make them believe this story?

GLAUCON: No, none that would make this group
d believe it themselves. But I do have one for their sons, for later generations, and for all other people who come after them.

SOCRATES: Well, even that would have a good effect, by making them care more for the city and for each other. For I think I understand what you mean—namely, that all this will go where *tradition* leads. What *we* can do, however, when we have armed our earthborn people, is lead them forth with their rulers at their head. They must go and look for the best place in the city for a military encampment, a site from which they can most easily control anyone in the city who is unwilling to obey the laws, or repel
e any outside enemy who, like a wolf, attacks the fold. And when they have established their camp and sacrificed to the appropriate gods, they must make their sleeping quarters, mustn't they?

GLAUCON: Yes.

SOCRATES: And mustn't these provide adequate shelter against the storms of winter and the heat of summer?

GLAUCON: Yes, of course. After all, I assume you are talking about their living quarters.

SOCRATES: Yes, but ones for *soldiers*, not money-makers.

GLAUCON: What difference do you think there is between the two, again?
416a

SOCRATES: I will try to tell you. You see, it is surely the most terrible and most shameful thing in the world for shepherds to rear dogs as auxiliaries to help them with their flocks in such a way that those dogs themselves— because of intemperance, hunger, or some other bad condition—try to do evil to the sheep, acting not like sheepdogs but like wolves.

GLAUCON: Of course, that is terrible.

SOCRATES: So, mustn't we use every safeguard to prevent our auxiliaries from treating the citizens like
b that—because they are stronger—and becoming savage masters rather than gentle allies?

GLAUCON: Yes, we must.

SOCRATES: And wouldn't they have been provided with the greatest safeguard possible if they have been really well educated?

GLAUCON: But surely they have been.

SOCRATES: That is not something that deserves to be asserted so confidently, my dear Glaucon. But what does deserve it is what we were saying just now, that they must have the right education, whatever it is, if they are going to have what will do most to make
c them gentle to one another and to the ones they are guarding.

GLAUCON: That's right.

SOCRATES: But anyone with any sense will tell us that, besides this education, they must be provided with living quarters and other property of the sort that will neither prevent them from being the best guardians nor encourage them to do evil to the other citizens.
d

GLAUCON: And he would be right.

SOCRATES: Consider, then, whether or not they should live and be housed in some such way as this, if they are going to be the sort of men we described. First, none of them should possess any private property that is not wholly necessary. Second, none should have living quarters or storerooms that are not open for all to enter at will. Such provisions as are required by temperate and courageous men, who are warrior-
e athletes, they should receive from the other citizens as wages for their guardianship, the amount being fixed so that there is neither a shortfall nor a surplus at the end of the year. They should have common messes to go to, and should live together like soldiers in a camp. We will tell them that they have gold and silver of a divine sort in their souls as a permanent gift from the gods, and have no need of human gold in addition. And we will add that it is impious for them to defile this divine possession by possessing an admixture of mortal gold, because many impious deeds have been done for the sake of the currency of the masses,
417a whereas their sort is pure. No, they alone among the city's population are forbidden by divine law to handle or even touch gold and silver. They must not be under the same roof as these metals, wear them as jewelry, or drink from gold or silver goblets. And by behaving in that way, they would save both themselves and the city. But if they acquire private land, houses, and money themselves, they will be household managers and farmers instead of guardians—hostile masters of the
b other citizens, instead of their allies. They will spend their whole lives hating and being hated, plotting and being plotted against, much more afraid of internal than of external enemies—already rushing, in fact, to the brink of their own destruction and that of the rest of the city as well. For all these reasons, let's declare that *that* is how the guardians must be provided with housing and the rest, and establish it as a law. Or don't you agree?

GLAUCON: Of course I do.

BOOK IV

SOCRATES' NARRATION CONTINUES: *Adeimantus interrupted:*

How will you defend yourself, Socrates, *he said*, if 419a
someone objects that you are not making these men very happy and, furthermore, that it is their own fault that they are not? I mean, the city really belongs to them, yet they derive no good from the city. Others own land, build fine, big houses, acquire furnishings to go along with them, make their own private sacrifices to the gods, entertain guests, and also, of course, possess what you were talking about just now: gold and silver and all the things that those who are going to be blessedly happy are thought to require. Instead of that, he might say, they seem simply to be paid auxiliaries established in the city as a garrison, and nothing else. 420a

SOCRATES: Yes, and what is more, they do it just for upkeep and get no wages in addition to their upkeep, as other men do. So, they won't even be able to take a personal trip out of town if they want to, or give presents to their girlfriends, or spend money in whatever other ways they might wish, as people do who are considered happy. You have omitted these and a host of other similar facts from your list of charges.

ADEIMANTUS: Well, let them too be added to the charges.

SOCRATES: How will we defend ourselves? Is that what you are asking? b

ADEIMANTUS: Yes.

SOCRATES: I think we will discover what to say if we follow the same path as before. You see, our reply will be this: it would not be at all surprising if these people were happiest just as they are. However, in establishing our city, we are not looking to make any one group in it outstandingly happy, but to make the whole city so as far as possible. For we thought that we would be most likely to find justice in such a city, and injustice, by contrast, in the one that is governed worst. And we thought that by observing both cities, we would be able to decide the question we have been inquiring into for so long. At the moment, then, c
we take ourselves to be forming a happy city—not separating off a few happy people and putting them in it, but making the city as a whole happy. (We will look at the opposite city soon.)[1]

1. [This discussion begins at 445c, but is interrupted and does not resume again until Book VIII.]

Suppose, then, that we were painting a statue[2] and someone came up to us and started to criticize us, saying that we had not applied the most beautiful colors to the most beautiful parts of the statue; because the eyes, which are the most beautiful part, had been painted black rather than purple. We would think it reasonable to offer the following defense: "My amaz- *d* ing fellow, you must not expect us to paint the eyes so beautifully that they no longer look like eyes at all, nor the other parts either. On the contrary, you must look to see whether, by dealing with each part appropriately, we are making the whole thing beautiful. Similarly, in the present case, you must not force us to give our guardians the sort of happiness that would make them something other than guardians. *e* You see, we know how to clothe the farmers in purple robes, festoon them with gold jewelry, and tell them to work the land whenever they please. We know we could have our potters recline on couches from right to left in front of the fire,[3] drinking and feasting with their wheel beside them for whenever they have a desire to make pots. And we can make all the others happy in the same way, so that the whole city is happy. But please do not urge us to do this. For if we are persuaded by you, a farmer won't be a farmer, *421a* nor a potter a potter, nor will any of the others from which a city is constituted remain true to type. But for most of the others, it matters less: cobblers who become inferior and corrupt, and claim to be what they are not, do nothing terrible to the city. But if the guardians of our laws and city are not really what they seem to be, you may be sure that they will destroy the city utterly and, on the other hand, that they alone have the opportunity to govern it well and make it happy."

Now, if we are making genuine guardians, the sort *b* least likely to do the city evil, and if our critic is making pseudo-farmers—feasters happy at a festival, so to speak, not in a city—he is not talking about a city, but about something else. What we have to consider, then, is whether our aim in establishing the guardians is the greatest possible happiness for them, or whether—since our aim is to see this happiness develop for the whole city—we should compel or persuade the auxiliaries and guardians to ensure that *c* they, and all the others as well, are the best possible craftsmen at their own work; and then, with the whole city developing and being governed well, leave it to nature to provide each group with its share of happiness.

ADEIMANTUS: Yes, I think what you say is right.

SOCRATES: Well, then, will you also think me reasonable if I say something closely related?

ADEIMANTUS: What exactly?

SOCRATES: Take the rest of the craftsmen again, and consider whether these things corrupt them to such an extent that they actually become bad. *d*

ADEIMANTUS: What things?

SOCRATES: Wealth and poverty.

ADEIMANTUS: What do you mean?

SOCRATES: This: do you think that a potter who has become wealthy will still be willing to devote himself to his craft?

ADEIMANTUS: Not at all.

SOCRATES: Won't he become idler and more careless than he was?

ADEIMANTUS: Much more.

SOCRATES: Then won't he become a worse potter?

ADEIMANTUS: Yes, much worse.

SOCRATES: And surely if poverty prevents him from providing himself with tools, or any of the other things he needs for his craft, he will make poorer products himself and worse craftsmen of his sons or anyone else he teaches. *e*

ADEIMANTUS: Of course.

SOCRATES: So poverty and wealth make the products and the practitioners of the crafts worse.

ADEIMANTUS: Apparently.

SOCRATES: It seems, then, that we have found other things that our guardians must prevent in every way from slipping into the city undetected.

ADEIMANTUS: What things?

SOCRATES: Wealth and poverty. For the former makes for luxury, idleness, and revolution; and the *422a* latter for illiberality, bad work, and revolution as well.

ADEIMANTUS: That's right. But consider this, Socrates: how will our city be able to fight a war if

2. [Ancient Greek statues were painted and gilded.]

3. [At formal drinking parties (*sumposia*), the toastmaster (*sumposiarchos*) sat at the head of the table. The others sat in order of their importance, from his right counterclockwise around the table to his left.]

it has acquired no wealth—especially if it has to fight a great and wealthy city?

SOCRATES: Obviously, it will be harder to fight
b one such city, but easier to fight two.

ADEIMANTUS: How do you mean?

SOCRATES: First of all, if our city has to fight a city of the sort you mention, won't it be a case of warrior-athletes fighting rich men?

ADEIMANTUS: Yes, it will.

SOCRATES: Well, then, Adeimantus, don't you think that a single boxer who has had the best possible training could easily fight two non-boxers who are rich and fat?

ADEIMANTUS: Maybe not at the same time.

SOCRATES: Not even if he could start to run away and then turn and hit the one who caught up with
c him first, and could do this often, out in the stifling heat of the sun? Couldn't a man like that overcome even more than two such enemies?

ADEIMANTUS: It certainly would not be surprising if he could.

SOCRATES: Well, don't you think that rich people have more knowledge and experience of boxing than of how to fight a war?

ADEIMANTUS: I do.

SOCRATES: In all likelihood, then, our athletes will easily be able to fight two or three times their number.

ADEIMANTUS: I will have to grant you that, since I think what you say is right.

SOCRATES: Well, then, what if they sent an envoy
d to another city with the following true message: "We use no gold or silver. It is against divine law for us to do so, but not for you. So join us in this war and you can have the property of our enemy." Do you think that anyone who heard this message would choose to fight hard, lean hounds, rather than to join the hounds in fighting fat and tender sheep?

ADEIMANTUS: No, I do not. But if the wealth of all other cities were amassed by a single one, don't
e you think that would endanger your non-wealthy city?

SOCRATES: You are happily innocent if you think that any city besides the one we are constructing deserves to be called *a* city.

ADEIMANTUS: What should we call them, then?

SOCRATES: We will have to find a "greater" title for the others because each of them is a great many cities, but not *a* city, as they say in the game.[4] They contain two, at any rate, which are at war with one another: the city of the poor and that of the rich. And within each of these, there are a great many more. 423a
So if you treat them as one city, you will be making a big mistake. But if you treat them as many and offer one the money, power, and the very inhabitants of another, you will always find many allies and few enemies. And as long as your own city is temperately governed in the way we just arranged, it will be the greatest one—not in reputation; I do not mean that; but the greatest in fact—even if it has only a thousand soldiers to defend it. For you won't easily find one city so great among either Greeks or barbarians, though you will find many that are reputed to be many times greater. Or do you disagree? b

ADEIMANTUS: No, by Zeus, I do not.

SOCRATES: This, then, would also provide our rulers with the best limit for determining the proper size of the city, and how much land they should mark off for a city that size, letting the rest go.

ADEIMANTUS: What limit is that?

SOCRATES: I think it is this: as long as it is willing to remain *one* city, it may continue to grow, but not beyond that point.

ADEIMANTUS: And it is a good one. c

SOCRATES: Then we will also give our guardians this further order, that they are to guard in every possible way against the city's being either small in size or great in reputation, rather than adequate in size and one in number.

ADEIMANTUS: No doubt, *that* will be a trivial instruction for them to follow!

SOCRATES: Here is another that is even more trivial. We mentioned it earlier as well.[5] We said that if an offspring of the guardians is inferior, he must be sent off to join the other citizens, and that if the others have an excellent offspring, he must join the d
guardians. This was meant to make clear that every other citizen, too, must be assigned to what naturally

4. [The reference is obscure; it may be to a saying or proverb, or to a game like checkers called *poleis*, or cities, in which the set of pieces on each side, or perhaps any subset of them, were called cities, while the individual members of the sets were called dogs.]

5. [415a–c.]

suits him, with one person assigned to one job so that, practicing his own pursuit, each of them will become not many but one, and the entire city thereby naturally grow to be one, not many.

ADEIMANTUS: Oh, yes, that is a more minor one!

SOCRATES: Really, my good Adeimantus, the orders we are giving them are neither as numerous nor as difficult as one would think. Indeed, they are all insignificant provided, as the saying goes, they safeguard
e the one great thing—or rather not great but adequate.

ADEIMANTUS: What's that?

SOCRATES: Their education and upbringing. For if a good education makes them moderate men, they will easily discover all this for themselves—and everything else that we are now omitting, such as the possession of women, marriages, and the procreation of children, and how all these must be governed as
424a far as possible by the old proverb that friends share everything in common.

ADEIMANTUS: Yes, that would be best.

SOCRATES: And surely once our constitution is well started, it will, as it were, go on growing in a circle. For good education and upbringing, if they are kept up, produce good natures; and sound natures, which in turn receive such an education, grow up even better than their predecessors in every respect—but particularly with respect to their offspring, as in
b the case of all the other animals.

ADEIMANTUS: Yes, probably so.

SOCRATES: To put it briefly, then, what the overseers of our city must cling to, not allow to become corrupted without their noticing it, and guard against everything, is this: there must be no innovation in musical or physical training that goes against the established order. On the contrary, they must guard against that as much as they can. And they should dread to hear anyone say that "people think most of the song that floats newest from the singer's lips,"[6] in case someone happens to suppose that the poet
c means not new *songs*, but a new *way of singing*, and praises that. We should not praise such a claim, however, or take it to be what the poet meant. You see, a change to a new kind of musical training is something to beware of as wholly dangerous. For one can never change the ways of training people in music without affecting the greatest political laws. That is what Damon says, and I am convinced he is right.

ADEIMANTUS: You can also count me among those who are convinced.

SOCRATES: It seems, then, that it is in musical training that the guardhouse of our guardians must *d* surely be built.

ADEIMANTUS: At any rate, this sort of lawlessness easily inserts itself undetected.

SOCRATES: Yes, because it is supposed to be only part of a game that, as such, can do no harm.

ADEIMANTUS: And it does not do any—except, of course, that when it has established itself there, it slowly and silently flows over into people's habits and practices. From these it travels forth with greater vigor into private contracts, and then from private contracts it advances with the utmost insolence into the laws and constitution, Socrates, until in the end it over- *e* throws everything public and private.

SOCRATES: Well, is that so?

ADEIMANTUS: I think it is.

SOCRATES: Then, as we were saying at the beginning, our children must take part in games that are more law-abiding right from the start, since, if their games become lawless and the children follow suit, isn't it impossible for them to grow up into excellent and law-abiding men? *425a*

ADEIMANTUS: Of course.

SOCRATES: So whenever children play in a good way right from the start and absorb lawfulness from musical training, there is the opposite result: lawfulness follows them in everything and fosters their growth, correcting anything in the city that may have been neglected before.

ADEIMANTUS: That's true.

SOCRATES: And so such people rediscover the seemingly insignificant conventional views their predecessors had destroyed.

ADEIMANTUS: Which sort?

SOCRATES: Those dealing with things like this: the silence appropriate for younger people in the presence of their elders; the giving up of seats for *b* them and standing up in their presence; the care of parents; hairstyles; clothing; shoes; the general appearance of the body; and everything else of that sort. Don't you agree?

6. [*Odyssey* 1.351–2. Our text of Homer is slightly different.]

ADEIMANTUS: I do.

SOCRATES: To legislate about such things is naïve, in my view, since verbal or written decrees will never make them come about or last.

ADEIMANTUS: How could they?

SOCRATES: At any rate, Adeimantus, it looks as though the start of someone's education determines
c what follows. Or doesn't like always encourage like?

ADEIMANTUS: It does.

SOCRATES: And the final outcome of education, I imagine we would say, is a single, complete, and fresh product that is either good or the opposite.

ADEIMANTUS: Of course.

SOCRATES: That is why I, for my part, would not try to legislate about such things.

ADEIMANTUS: And with good reason.

SOCRATES: Then, by the gods, what about all that marketplace business, the contracts people make with one another in the marketplace, for example, and
d contracts with handicraftsmen, and slanders, injuries, indictments, establishing juries, paying or collecting whatever dues are necessary in marketplace and harbors, and, in a word, the entire regulation of marketplace, city, harbor, or what have you—dare we legislate about any of these?

ADEIMANTUS: No, it would not be appropriate to dictate to men who are fine and good. For they will easily find out for themselves whatever needs to be
e legislated about such things.

SOCRATES: Yes, my friend, provided that a god grants that the laws we have already described are preserved intact.

ADEIMANTUS: If not, they will spend their lives continually enacting and amending such laws in the hope of finding what is best.

SOCRATES: You mean they will live like those sick people who, because they are intemperate, are not willing to abandon their bad way of life.

ADEIMANTUS: That's right.

SOCRATES: Such people really do lead a charm-
426a ing life! Their medical treatment achieves nothing, except to make their illnesses worse and more complex, and they are always hoping that someone will recommend some new drug that will make them healthy.

ADEIMANTUS: Yes, that's exactly what happens to invalids of this sort.

SOCRATES: And isn't it another charming feature of theirs that they think their worst enemy of all is the one who tells them the truth—that until they give up drunkenness, overeating, sexual indulgence, and idleness, then no drug, cautery, or surgery, no charms, b
amulets, or anything else of that sort will do them any good?

ADEIMANTUS: It is not charming at all. Being harsh to someone who tells the truth is not charming.

SOCRATES: You do not approve of such men, apparently.

ADEIMANTUS: No, by Zeus, I do not.

SOCRATES: Then nor will you approve of an entire city that behaves in the way we were just describing. Or don't you think that such invalids behave in the very same way as cities where the following occurs? Because they are badly governed politically, the citizens are warned not to change the city's whole political system, and the one who does is threatened with c
the death penalty. But the one who serves these cities most pleasantly, while they remain politically governed in that way; who indulges them, flatters them, anticipates their wishes, and is clever at fulfilling them; isn't he, on that account, honored by them as a good man who is wise in the most important matters?

ADEIMANTUS: Yes, I think their behavior is the same and I do not approve of it at all.

SOCRATES: What about those who are willing and eager to provide treatment for such cities? Don't you d
approve of their courage and also their lighthearted irresponsibility?

ADEIMANTUS: I do indeed—except for those who are actually deluded and suppose themselves to be true men of politics because they are praised by the masses.

SOCRATES: What do you mean? Have you no sympathy for these men? Or do you think it is possible for a man who does not know how to measure anything not to believe that he is four cubits tall[7] when many others, who are similarly ignorant, tell him that he is? e

ADEIMANTUS: No, I do not think that.

SOCRATES: Then do not be too hard on them. You see, such people are surely the most charming of all. They pass and amend the sorts of laws we have

7. [Roughly seven feet. A cubit is between seventeen and twenty-two inches long.]

just been describing, and are always expecting that they will find a way to put a stop to cheating on contracts, and the other evildoings I mentioned just now, not realizing that they are really just cutting off a Hydra's head.[8]

427a ADEIMANTUS: Yet that is all they are really doing.

SOCRATES: I would have thought, then, that a true lawgiver should not bother with laws or constitutions of this kind, whether in a politically badly governed or in a politically well-governed city—in the one because it is useless and accomplishes nothing; in the other because some of them are discoverable by anyone, while the others follow automatically from the practices already described.

ADEIMANTUS: What remains for us to legislate,
b then?

SOCRATES: For us, nothing; but for the Delphic Apollo, there remain the greatest, finest, and first of legislations.

ADEIMANTUS: What are they about?

SOCRATES: The establishing of temples and sacrifices, and other forms of service to gods, daimons, and heroes; the burial of the dead, and the services that ensure the favor of those who have gone to the other world. For we, of course, have no knowledge of these things and so, when we are founding a city, we won't take anyone else's advice, if we have any
c sense, or employ any interpreter except our ancestral one. And in fact, this god— as he delivers his interpretations from his seat at the navel of the earth[9]— is the ancestral guide on these matters for the whole human race.

ADEIMANTUS: Well put. That is what we must do.

SOCRATES: So then, son of Ariston, your city
d would now seem to be founded. As the next step, look inside it, having got hold of an adequate light somewhere. Look yourself and invite your brother and Polemarchus and the rest of us to help you, to see where justice and injustice might be in it, how they differ from one another, and which of the two must be possessed by the person who is going to be happy, whether that fact is hidden from all gods and humans or not.

And Glaucon said:

That's nonsense! You promised you would look for them yourself, because you said it was impious for you not to defend justice in every way you could.[10] e

SOCRATES: You are right to remind me, and I must do what I promised. But you will have to help.

GLAUCON: We will.

SOCRATES: I expect, then, to find justice in the following way. I think our city, if indeed it has been correctly founded, is completely good.

GLAUCON: Yes, it must be.

SOCRATES: Clearly, then, it is wise, courageous, temperate, and just.

GLAUCON: Clearly.

SOCRATES: Then if we find any of these in it, what remains will be what we have not found?

GLAUCON: Of course. 428a

SOCRATES: Therefore, as in the case of any other four things, if we were looking for one of them in something and recognized it first, that would be enough to satisfy us. But if we recognized the other three first, that itself would enable us to recognize what we were looking for, since clearly it could not be anything other than the one that remains.

GLAUCON: That's right.

SOCRATES: So, since there also happen to be four things we are interested in, mustn't we look for them in the same way?

GLAUCON: Clearly.

SOCRATES: Now, the first thing I think I can see clearly in the city is wisdom. And there seems to be something odd about it. b

GLAUCON: What?

SOCRATES: I think that the city we described is really wise. And that is because it is prudent,[11] isn't it?

8. [The Hydra was a mythical monster. When one of its heads was cut off, two or three new heads grew in its place. Heracles (or Hercules) had to slay the Hydra as one of his labors.]

9. [The oracle of Apollo at Delphi was traditionally consulted by all Greeks on religious and other such matters. A stone there marked the supposed center of the earth.]

10. [368b7–c3.]

11. [*Euboulos:* In Greek cities, the *boulê* was the council that had day-to-day responsibility for public affairs. In kingships it served as an advisory body to the kings; in democratic Athens it served as an advisory body and

GLAUCON: Yes.

SOCRATES: And surely it is clear that this very thing, prudence, is some sort of knowledge. I mean, it certainly is not through *ignorance* that people do the prudent thing, but through knowledge.

GLAUCON: Clearly.

SOCRATES: But there are, of course, many multifarious sorts of knowledge in the city.

GLAUCON: Certainly.

SOCRATES: So, is it because of the knowledge possessed by the carpenters that the city deserves to be described as wise and prudent?

GLAUCON: Not at all. It is called skilled in carpen- *c* try because of that.

SOCRATES: So a city shouldn't be called wise because it has the knowledge that deliberates about how wooden things can be best.

GLAUCON: Certainly not.

SOCRATES: What about this, then? What about the knowledge of things made of bronze, or anything else of that sort?

GLAUCON: Not anything of that sort either.

SOCRATES: And not the knowledge of how to produce crops from the soil. On the contrary, it is skilled in farming because of that.

GLAUCON: That's my view.

SOCRATES: Then is there some knowledge in the city we have just founded, which some of its citizens have, that does not deliberate about some particular *d* thing in the city, but about the city as a whole, and about how its internal relations and its relations with other cities will be the best possible.

GLAUCON: There is indeed.

SOCRATES: What is it and who has it?

GLAUCON: It is the craft of guardianship. And the ones who possess it are those rulers we just now called complete guardians.[12]

SOCRATES: Because it has this knowledge, then, how do you describe the city?

GLAUCON: As prudent and really wise.

SOCRATES: Now, do you think that there will be more metalworkers in the city, or more of these *e* true guardians?

GLAUCON: There will be far more metalworkers.

SOCRATES: Of all those who are called by a certain name because they have some sort of knowledge, wouldn't the true guardians be the fewest in number?

GLAUCON: By far.

SOCRATES: So, it is because of the smallest group or part of itself, and the knowledge that is in it—the part that governs and rules—that a city founded according to nature would be wise as a whole. And this class— which seems to be, by nature, the smallest—is the one that inherently possesses a share of the knowledge that alone among all the other sorts of *429a* knowledge should be called wisdom.

GLAUCON: That's absolutely true.

SOCRATES: So we have found—though I do not know how—this one of the four and its place in the city, too.

GLAUCON: It seems to me, at least, that it has been well and truly found.

SOCRATES: But surely courage and the part of the city it is in, and because of which the city is described as courageous, is not very difficult to spot.

GLAUCON: How so?

SOCRATES: Who would describe a city as cowardly or courageous by looking at anything other than *b* that part which defends it and wages war on its behalf?

GLAUCON: No one would look at anything else.

SOCRATES: Because, I take it, whether the others are courageous or cowardly doesn't make it one or the other.

GLAUCON: No, it doesn't.

SOCRATES: So courage, too, belongs to a city because of a part of itself— because it has in that part the power to preserve through everything its belief that the things, and the sorts of things, that should inspire terror are the very things, and sorts of things, *c* that the lawgiver declared to be such in the course of educating it. Or don't you call that courage?

GLAUCON: I do not completely understand what you said. Would you mind repeating it?

SOCRATES: I mean that courage is a sort of preservation.

GLAUCON: What sort of preservation?

SOCRATES: The preservation of the belief, inculcated by the law through education, about what things, and what sorts of things, inspire terror. And by its preservation "through everything," I mean pre-

---

steering committee for the assembly of all the adult male citizens.]

12. [414b1–6.]

serving it though pains, pleasures, appetites, and fears
d and not abandoning it. I will compare it to something I think it resembles, if you like.

GLAUCON: I would like that.

SOCRATES: You know, then, that when dyers want to dye wool purple, they first select from wools of many different colors the ones that are naturally white. Then they give them an elaborate preparatory treatment, so that they will accept the color as well as possible. And only at that point do they dip them in the purple dye. When something is dyed in this
e way, it holds the dye fast, and no amount of washing, whether with or without detergent, can remove the color. But you also know what happens when things are not dyed in this way, when one dyes wools of other colors, or even these white ones, without preparatory treatment.

GLAUCON: I know they look washed out and ridiculous.

SOCRATES: You should take it, then, that we too were trying as hard as we could to do something similar when we selected our soldiers and educated them in musical and physical training. It was con-
430a trived, you should suppose, for no purpose other than to ensure that—persuaded by us—they would absorb the laws in the best possible way, just like wool does a dye; that as a result, their beliefs about what things should inspire terror, and about everything else, would hold fast because they had the proper nature and rearing; so fast that the dye could not be washed out even by those detergents that are so terribly effective at scouring—pleasure, which is much more terribly effective at this than any chalestrian[13] or alkali, and pain and fear and appetite, which are worse than
b any detergent. This power, then, to preserve through everything the correct and law-inculcated belief about what should inspire terror and what should not is what I, at any rate, call courage. And I will assume it is this, unless you object.

GLAUCON: No, I have no objection. For I presume that the sort of correct belief about these same matters that you find in animals and slaves, which is not the result of education and has nothing at all to do with law, is called something other than courage.

13. [Carbonate of soda from Chalestra, a town and lake in Macedonia.]

SOCRATES: You are absolutely right. c

GLAUCON: Well, then, I accept your account of courage.

SOCRATES: Yes, do accept it, at any rate, as my account of *political* courage, and you will be right to accept it. If you like, we will discuss that more fully some other time. You see, at the moment, our inquiry is not about courage but about justice. And for the purpose of that inquiry, I think that what we have said is sufficient.

GLAUCON: You are right.

SOCRATES: Two things, then, remain for us to find in the city: temperance and—the goal of our entire inquiry—justice. d

GLAUCON: Yes, indeed.

SOCRATES: How could we find justice, then, so we won't have to bother with temperance any further?

GLAUCON: Well I, for my part, do not know of any, nor would I want justice to appear first if that means that we are not going to investigate temperance any further. So if you want to please me, look for it before the other.

SOCRATES: Of course I want to. It would be wrong not to. e

GLAUCON: Go ahead and look, then.

SOCRATES: I will. And seen from here, it is more like a sort of concord and harmony than the previous ones.

GLAUCON: How so?

SOCRATES: Temperance is surely a sort of order, the mastery of certain sorts of pleasures and appetites. People indicate as much when they use the term "self-mastery"—though I do not know in what way. This and other similar things are like tracks that temperance has left. Isn't that so?

GLAUCON: Absolutely.

SOCRATES: Isn't the term "self-mastery" ridiculous, though? For, of course, the one who is master of himself is also the one who is weaker, and the one who is weaker is also the one who masters. After all, the same person is referred to in all these descriptions. 431a

GLAUCON: Of course.

SOCRATES: It seems to me, however, that what this term is trying to indicate is that within the same person's soul, there is a better thing and a worse one. Whenever the naturally better one masters the worse, this is called being master of oneself. At any rate, it

is praised. But whenever, as a result of bad upbringing or associating with bad people, the smaller and better one is mastered by the inferior majority, this is blamed as a disgraceful thing and is called being weaker than
b oneself, or being intemperate.

GLAUCON: Yes, that seems plausible.

SOCRATES: Now, then, take a look at our new city and you will find one of these conditions present in it. For you will say that it is rightly described as master of itself, if indeed anything in which the better rules the worse is to be described as temperate and master of itself.

GLAUCON: I am looking, and what you say is true.

SOCRATES: Furthermore, pleasures, pains, and appetites that are numerous and multifarious are
c things one would especially find in children, women, household slaves, and in the so-called free members of the masses—that is, the inferior people.

GLAUCON: Yes.

SOCRATES: But the pleasures, pains, and appetites that are simple and moderate, the ones that are led by rational calculation with the aid of understanding and correct belief, you would find in those few people who are born with the best natures and receive the best education.

GLAUCON: That's true.

SOCRATES: Don't you see, then, that this too is present in your city, and that the appetites of the masses—the inferior people—are mastered there by
d the wisdom and appetites of the few—the best people?

GLAUCON: I do.

SOCRATES: So, if any city is said to be master of its pleasures and appetites and of itself, it is this one.

GLAUCON: Absolutely.

SOCRATES: So isn't it also temperate because of all this?

GLAUCON: Yes, indeed.

SOCRATES: And moreover, if there is any city in which rulers and subjects share the same belief about
e who should rule, it is this one. Or don't you agree?

GLAUCON: Yes, I certainly do.

SOCRATES: And in which of them do you say temperance is located when they are in this condition? In the rulers or the subjects?

GLAUCON: In both, I suppose.

SOCRATES: Do you see, then, that the hunch we had just now—that temperance is like a sort of harmony—was quite plausible?

GLAUCON: Why is that?

SOCRATES: Because its operation is unlike that of courage and wisdom, each of which resides in one part and makes the city either courageous or wise. 432a
Temperance does not work like that, but has literally been stretched throughout the whole, making the weakest, the strongest, and those in between all sing the same song in unison—whether in wisdom, if you like, or in physical strength, if you prefer; or, for that matter, in numbers, wealth, or anything else. Hence we would be absolutely right to say that this unanimity is temperance—this concord between the naturally worse and the naturally better, about which of the two should rule both in the city and in each individual.

GLAUCON: I agree completely. b

SOCRATES: All right. We have now spotted three kinds of virtue in our city. What kind remains, then, that would give the city yet another share of virtue? For it is clear that what remains is justice.

GLAUCON: It is clear.

SOCRATES: So then, Glaucon, we must now station ourselves like hunters surrounding a wood and concentrate our minds, so that justice does not escape us and vanish into obscurity. For it is clear that it is around here somewhere. Keep your eyes peeled and do your best to catch sight of it, and if you happen c
to see it before I do, show it to me.

GLAUCON: I wish I could help. But it is rather the case that if you use me as a follower who can see only what you point out to him, you will be using me in a more reasonable way.

SOCRATES: Pray for success, then, and follow me.

GLAUCON: I will. You have only to lead.

SOCRATES: And it truly seems to be an impenetrable place and full of shadows. It is dark, at any rate, and difficult to search through. But all the same, we must go on.

GLAUCON: Yes, we must. d

And then I caught sight of something and shouted:

SOCRATES: Ah ha! Glaucon, it looks as though there is a track here, and I do not think our quarry will altogether escape us.

GLAUCON: That's good news.

SOCRATES: Oh dear, what a stupid condition in which to find ourselves!

GLAUCON: How so?

SOCRATES: It seems, blessed though you are, that the thing has been rolling around at our feet from the very beginning, and yet, like ridiculous fools, we could not see it. For just as people who are holding something in their hands sometimes search for the very thing they are holding, we did not look in the *e* right direction but gazed off into the distance, and perhaps that is the very reason we did not notice it.

GLAUCON: What do you mean?

SOCRATES: This: I think we have been talking and hearing about it all this time without understanding ourselves, or realizing that we were, in a way, talking about it.

GLAUCON: That was a long prelude! Now I want to hear what you mean!

SOCRATES: Listen, then, and see whether there is anything in what I say. You see, what we laid down *433a* at the beginning when we were founding our city, about what should be done throughout it—that, I think, or some form of that, is justice. And surely what we laid down and often repeated, if you remember, is that each person must practice one of the pursuits in the city, the one for which he is naturally best suited.

GLAUCON: Yes, we did say that.

SOCRATES: Moreover, we have heard many people say, and have often said ourselves, that justice is doing one's own work and not meddling with what *b* is not one's own.

GLAUCON: Yes, we have.

SOCRATES: This, then, my friend, provided it is taken in a certain way, would seem to be justice—this doing one's own work. And do you know what I take as evidence of that?

GLAUCON: No, tell me.

SOCRATES: After our consideration of temperance, courage, and wisdom, I think that what remains in the city is the power that makes it possible for all of these to arise in it, and that preserves them when *c* they have arisen for as long as it remains there itself. And we did say that justice would be what remained when we had found the other three.[14]

14. [428a2–9.]

GLAUCON: Yes, that must be so.

SOCRATES: Yet, surely, if we had to decide which of these will most contribute to making our city good by being present in it, it would be difficult to decide. Is it the agreement in belief between the rulers and the subjects? The preservation among the soldiers of the law-inculcated belief about what should inspire terror and what should not? The wisdom and guardianship of the rulers? Or is what most contributes to *d* making it good the fact that every child, woman, slave, free person, craftsman, ruler, and subject each does his own work and does not meddle with what is not?

GLAUCON: Of course it's a difficult decision.

SOCRATES: It seems, then, that this power—which consists in everyone's doing his own work—rivals wisdom, temperance, and courage in its contribution to the city's virtue.

GLAUCON: It certainly does.

SOCRATES: And wouldn't you say that justice is certainly what rivals them in contributing to the city's virtue? *e*

GLAUCON: Absolutely.

SOCRATES: Look at it this way, too, if you want to be convinced. Won't you assign to the rulers the job of judging lawsuits in the city?

GLAUCON: Of course.

SOCRATES: And will they have any aim in judging other than this: that no citizen should have what is another's or be deprived of what is his own?

GLAUCON: No, they will have none but that.

SOCRATES: Because that is just?

GLAUCON: Yes.

SOCRATES: So from that point of view, too, having and doing of one's own, of what belongs to one, would be agreed to be justice. *434a*

GLAUCON: That's right.

SOCRATES: Now, see whether you agree with me about this: if a carpenter attempts to do the work of a shoemaker, or a shoemaker that of a carpenter, or they exchange their tools or honors with one another, or if the same person tries to do both jobs, and all other such exchanges are made, do you think that does any great harm to the city?

GLAUCON: Not really.

SOCRATES: But I imagine that when someone who is, by nature, a craftsman or some other sort of

moneymaker is puffed up by wealth, or by having a
b majority of votes, or by his own strength, or by some other such thing, and attempts to enter the class of soldiers; or when one of the soldiers who is unworthy to do so tries to enter that of judge and guardian, and these exchange their tools and honors; or when the same person tries to do all these things at once, then I imagine you will agree that these exchanges and this meddling destroy the city.

GLAUCON: Absolutely.

SOCRATES: So, meddling and exchange among these three classes is the greatest harm that can hap-
c pen to the city and would rightly be called the worst evil one could do to it.

GLAUCON: Exactly.

SOCRATES: And wouldn't you say that the worst evil one could do to one's own city is injustice?

GLAUCON: Of course.

SOCRATES: That, then, is what injustice is. But let's put it in reverse: the opposite of this—when the moneymaking, auxiliary, and guardian class each do their own work in the city—is justice, isn't it, and makes the city just?

d GLAUCON: That's exactly what I think too.

SOCRATES: Let's not state it as fixedly established just yet. But if this kind of thing is agreed by us to be justice in the case of individual human beings as well, then we can assent to it. For what else will there be for us to say? But if it is not, we will have to look for something else. For the moment, however, let's complete the inquiry in which we supposed that if we first tried to observe justice in some larger thing that possessed it, that would make it easier to see what it is like in an individual human being.[15] We agreed that this larger thing is a city, and so we founded the
e best city we could, knowing well that justice would of course be present in one that was good. So, let's apply what has come to light for us there to an individual, and if it is confirmed, all will be well. But if something different is found in the case of the individual, we will go back to the city and test it there. And perhaps by examining them side by side and rubbing
435a them together like fire-sticks, we can make justice blaze forth and, once it has come to light, confirm it in our own case.

15. [368c7–369a3.]

GLAUCON: Well, the road you describe is the right one, and we should follow it.

SOCRATES: Well, then, if you call a bigger thing and a smaller thing by the same name, are they unalike in the respect in which they are called the same, or alike?

GLAUCON: Alike.

SOCRATES: So a just man won't differ at all from a just city with respect to the form of justice but will b be like it.

GLAUCON: Yes, he will be like it.

SOCRATES: But now, the city, at any rate, was thought to be just because each of the three natural classes within it did its own job; and to be temperate, courageous, and wise, in addition, because of certain other conditions or states of these same classes.

GLAUCON: That's true.

SOCRATES: Then, my friend, we would expect an individual to have these same kinds of things in his soul, and to be correctly called by the same names as the city because the same conditions are present c in them both.

GLAUCON: Inevitably.

SOCRATES: Well, you amazing fellow, here is another trivial investigation we have stumbled into: does the soul have these three kinds of things in it or not?

GLAUCON: It does not look at all trivial to me. Perhaps, Socrates, there is some truth in the old saying that everything beautiful is difficult.

SOCRATES: Apparently so. In fact, you should be well aware, Glaucon, that it is my belief we will never ever grasp this matter precisely by methods of the sort d we are now using in our discussions. However, there is in fact another longer and more time-consuming road that does lead there. But perhaps we can manage to come up to the standard of our previous statements and inquiries.

GLAUCON: Shouldn't we be content with that? It would be enough for me, at least for now.

SOCRATES: Well, then, it will be quite satisfactory for me, too.

GLAUCON: Then do not weary, but go on with the inquiry.

SOCRATES: Well, isn't it absolutely necessary for us to agree to this much: that the very same kinds of e things and conditions exist in each one of us as exist in the city? After all, where else would they come

from? You see, it would be ridiculous for anyone to think that spiritedness did not come to be in cities from the private individuals who are reputed to have this quality, such as the Thracians, Scythians, and others who live to the north of us; or that the same is not true of the love of learning, which is mostly
436a associated with our part of the world; or of the love of money, which is said to be found not least among the Phoenicians and Egyptians.

GLAUCON: It certainly would.

SOCRATES: We may take that as being so, then, and it was not at all difficult to discover.

GLAUCON: No, it certainly was not.

SOCRATES: But this, now, *is* difficult. Do we do each of them with the same thing or, since there are three, do we do one with one and another with another: that is to say, do we learn with one, feel anger with another, and with yet a third have an appetite for the pleasures of food, sex, and those closely akin to them? Or do we do each of them with the whole
b of our soul, once we feel the impulse? *That* is what is difficult to determine in a way that is up to the standards of our argument.

GLAUCON: I think so, too.

SOCRATES: Well, then, let's try in this way to determine whether they are the same as one another or different.

GLAUCON: What way?

SOCRATES: It is clear that the same thing cannot do or undergo opposite things; not, at any rate, in the same respect, in relation to the same thing, at the same time. So, if we ever find that happening here, we will know that we are not dealing with one
c and the same thing, but with many.

GLAUCON: All right.

SOCRATES: Consider, then, what I am about to say.

GLAUCON: Say it.

SOCRATES: Is it possible for the same thing, at the same time, and in the same respect, to be standing still and moving?

GLAUCON: Not at all.

SOCRATES: Let's come to a more precise agreement, in order to avoid disputes later on. You see, if anyone said of a person who is standing still but moving his hands and head, that the same thing is moving and standing still at the same time, we would not consider, I imagine, that he should say that; but rather that in one respect the person is standing still, while in another he is moving. Isn't that so? d

GLAUCON: It is.

SOCRATES: Then, if the one who said this became still more charming and made the sophisticated point that spinning tops, at any rate, stand still as a whole at the same time as they are also in motion, when, with the peg fixed in the same place, they revolve, or that the same holds of anything else that moves in a circle on the same spot—we would not agree, on the grounds that in such situations it is not in the same respects that these objects are both moving and standing still. On the contrary, we would say that e these objects have both a straight axis and a circumference in them, and that with respect to the straight axis they stand still—since they do not wobble to either side—whereas with respect to the circumference they move in a circle. But if their straight axis wobbles to the left or right or front or back at the same time as they are spinning, we will say that they are not standing still in any way.

GLAUCON: And we would be right.

SOCRATES: No such objection will disturb us, then, or make us any more likely to believe that the same thing can—at the same time, in the same respect, and in relation to the same thing—undergo, be, or do opposite things. 437a

GLAUCON: They won't have that effect on me at least.

SOCRATES: All the same, in order to avoid going through all these objections one by one and taking a long time to prove them all untrue, let's hypothesize that what we have said is correct and carry on—with the understanding that if it should ever be shown to be incorrect, all the consequences we have drawn from it will be invalidated.

GLAUCON: Yes, that's what we should do.

SOCRATES: Now, wouldn't you consider assent and dissent, wanting to have something and rejecting b it, taking something and pushing it away, as all being pairs of mutual opposites—whether of opposite doings or of opposite undergoings does not matter?

GLAUCON: Yes, they are pairs of opposites.

SOCRATES: What about thirst, hunger, and the appetites as a whole, and also wishing and willing? Would you include all of them somewhere among the kinds of things we just mentioned? For example, c

wouldn't you say that the soul of someone who has an appetite wants the thing for which it has an appetite, and draws toward itself what it wishes to have; and, in addition, that insofar as his soul wishes something to be given to it, it nods assent to itself as if in answer to a question, and strives toward its attainment?

GLAUCON: I would.

SOCRATES: What about not-willing, not-wishing, and not-having an appetite? Wouldn't we include them among the very opposites, cases in which the soul pushes and drives things away from itself?

d GLAUCON: Of course.

SOCRATES: Since that is so, won't we say that there is a kind consisting of appetites, and that the most conspicuous examples of them are what we call hunger and thirst?

GLAUCON: We will.

SOCRATES: Isn't the one for food, the other for drink?

GLAUCON: Yes.

SOCRATES: Now, insofar as it is thirst, is it an appetite in the soul for more than what we say it is for? I mean, is thirst a thirst for hot drink or cold, or much drink or little, or—in a word—for drink of a certain sort? Or isn't it rather that if heat is present in addition to thirst, it causes the appetite to be for *e* something cold as well, whereas the addition of cold makes it an appetite for something hot? And if there is much thirst, because of the presence of muchness, won't it cause the desire to be for much drink, and where little for little? But thirst itself will never be for anything other than the very thing that it is in its nature to be an appetite for: namely, drink itself; and, similarly, hunger is for food.

GLAUCON: That's the way it is. By itself, at any rate, each appetite is for its natural object only, while an appetite for an object of this or that sort depends on additions.

SOCRATES: No one should catch us unprepared, *438a* then, or disturb us by claiming that no one has an appetite for drink but rather for good drink, nor for food but rather for good food, since everyone's appetite is for good things. And so, if thirst is an appetite, it will be an appetite for good drink or good whatever, and similarly for the other appetites.

GLAUCON: Yes, there might seem to be something in that objection.

SOCRATES: But surely, whenever things are related to something, those that are of a particular sort are related to a particular sort of thing, as it seems to me, whereas those that are just themselves are related *b* only to a thing that is just itself.

GLAUCON: I do not understand.

SOCRATES: Don't you understand that the greater is such as to be greater than something?

GLAUCON: Of course.

SOCRATES: Than the less?

GLAUCON: Yes.

SOCRATES: And the much greater than the much less. Isn't that so?

GLAUCON: Yes.

SOCRATES: And the once greater than the once less? And the going-to-be greater than the going-to-be less?

GLAUCON: Certainly.

SOCRATES: And doesn't the same hold of the more in relation to the fewer, the double to the half, and *c* everything of that sort; and also of heavier to lighter and faster to slower; and, in addition, of hot to cold, and all other similar things?

GLAUCON: Yes, indeed.

SOCRATES: What about the various kinds of knowledge? Aren't they the same way? Knowledge itself is of what can be learned itself (or of whatever we should take the object of knowledge to be), whereas a particular knowledge of a particular sort is of a particular thing of a particular sort. I mean something like this: when knowledge of building houses was developed, it differed from the other kinds of knowledge, *d* and so was called knowledge of building. Isn't that so?

GLAUCON: Of course.

SOCRATES: And wasn't that because it was a different sort of knowledge from all the others?

GLAUCON: Yes.

SOCRATES: And wasn't it because it was of a particular sort of thing that it itself became a particular sort of knowledge? And isn't this true of all the crafts and sciences?

GLAUCON: It is.

SOCRATES: Well, then, you should think of that as what I wanted to get across before—if you understand it now—when I said that whenever things are related to something, those that are just themselves are related to things that are just themselves, whereas

those of a particular sort are related to things of a particular sort. And I do not at all mean that the sorts
e in question have to be the same for them both—that the knowledge of health and disease is healthy and diseased, or that that of good and bad things is good and bad. On the contrary, I mean that when knowledge occurred that was not just knowledge of the thing itself that knowledge is of, but of something of a particular sort, which in this case was health and disease, the result was that it itself became a particular sort of knowledge; and this caused it to be no longer called simply knowledge but, with the addition of the particular sort, medical knowledge.

GLAUCON: I understand and I think you are right.

SOCRATES: Returning to thirst, then, wouldn't
439a you include it among the things that are related to something just by being what they are? Surely thirst is related to. . . .

GLAUCON: I would. It is related to drink.

SOCRATES: So a particular sort of thirst is for a particular sort of drink. Thirst itself, however, is not for much or little, good or bad, or, in a word, for drink of a particular sort; rather, thirst itself is, by nature, just for drink itself. Right?

GLAUCON: Absolutely.

SOCRATES: Hence the soul of the thirsty person, insofar as it is simply thirsty, does not want anything else except to drink, and this is what it longs for and
b is impelled to do.

GLAUCON: Clearly.

SOCRATES: Then if anything in it draws it back when it is thirsty, wouldn't it be something different from what thirsts and, like a beast, drives it to drink? For surely, we say, the same thing, in the same respect of itself, in relation to the same thing, and at the same time, cannot do opposite things.

GLAUCON: No, it cannot.

SOCRATES: In the same way, I imagine, it is not right to say of the archer that his hands at the same time push the bow away and draw it toward him. On the contrary, we should say that one hand pushes it away, while the other draws it toward him.

c GLAUCON: Absolutely.

SOCRATES: Now, we would say, wouldn't we, that some people are thirsty sometimes, yet unwilling to drink?

GLAUCON: Many people often are.

SOCRATES: What, then, should one say about them? Isn't it that there is an element in their soul urging them to drink, and also one stopping them—something different that masters the one doing the urging?

GLAUCON: I certainly think so.

SOCRATES: Doesn't the element doing the stopping in such cases arise— when it does arise—from rational calculation, while the things that drive and drag are present because of feelings and diseases? d

GLAUCON: Apparently so.

SOCRATES: It would not be unreasonable for us to claim, then, that there are two elements, different from one another; and to call the element in the soul with which it calculates, the rationally calculating element; and the one with which it feels passion, hungers, thirsts, and is stirred by other appetites, the irrational and appetitive element, friend to certain ways of being filled and certain pleasures.

GLAUCON: No, it would not. Indeed, it would be a very natural thing for us to do. e

SOCRATES: Let's assume, then, that we have distinguished these two kinds of elements in the soul. Now, is the spirited element—the one with which we feel anger—a third kind of thing, or is it the same in nature as one of these others?

GLAUCON: As the appetitive element, perhaps.

SOCRATES: But I once heard a story and I believe it. Leontius, the son of Aglaeon, was going up from the Piraeus along the outside of the North Wall when he saw some corpses with the public executioner nearby. He had an appetitive desire to look at them, but at the same time he was disgusted and turned himself away. For a while he struggled and put his hand over his eyes, but finally, mastered by his appetite, he opened his eyes wide and rushed toward the 440a corpses, saying: "Look for yourselves, you evil wretches; take your fill of the beautiful sight."[16]

GLAUCON: I have also heard that story myself.

16. [A fragment of the comedy *Kapêlides* by Theopompus (410–370 B.C.E.) tells us that a certain Leontinus (emended to Leontius because of Plato's reference here) was known for his love of boys as pale as corpses. So his desire is probably sexual in origin, and for that reason appetitive. The North and South Walls enclosed an area connecting Athens to Piraeus.]

SOCRATES: Yet, surely, the story suggests that anger sometimes makes war against the appetites as one thing against another.

GLAUCON: Yes, it does suggest that.

SOCRATES: And don't we often notice on other occasions that when appetite forces someone contrary
b to his rational calculation, he reproaches himself and feels anger at the thing in him that is doing the forcing; and just as if there were two warring factions, such a person's spirit becomes the ally of his reason? But spirit partnering the appetites to do what reason has decided should not be done—I do not imagine you would say that you had ever seen that, either in yourself or in anyone else.

GLAUCON: No, by Zeus, I would not.

SOCRATES: And what about when a person thinks
c he is doing some injustice? Isn't it true that the nobler he is, the less capable he is of feeling angry if he suffers hunger, cold, or the like at the hands of someone whom he believes to be inflicting this on him justly; and won't his spirit, as I say, refuse to be aroused?

GLAUCON: It is true.

SOCRATES: But what about when a person believes he is being unjustly treated? Doesn't his spirit boil then, and grow harsh and fight as an ally of what he holds to be just? And even if it suffers hunger, cold, and every imposition of that sort, doesn't it stand firm and win out over them, not ceasing its noble
d efforts until it achieves its purpose, or dies, or, like a dog being called to heel by a shepherd, is called back by the reason alongside it and becomes gentle?

GLAUCON: Your simile is perfect. And, in fact, we did put the auxiliaries in our city to be like obedient sheepdogs for the city's shepherdlike rulers.

SOCRATES: You have understood what I was trying to say very well. But have you also noticed something else about it?

e GLAUCON: What?

SOCRATES: That it is the opposite of what we recently thought about the kind of thing spirit is. You see, then we thought of it as something appetitive.[17] But now, far from saying that, we say that in the faction that takes place in the soul, it is far more likely to take arms on the side of the rationally calculating element.

GLAUCON: Absolutely.

SOCRATES: Is it also different from this, then, or is it some kind of rationally calculating element, so that there are not three kinds of things in the soul, but two—the rationally calculating element and the appetitive one? Or rather, just as there were three classes in the city that held it together— the money-making, the auxiliary, and the deliberative—is there 441a also this third element in the soul, the spirited kind, which is the natural auxiliary of the rationally calculating element, if it has not been corrupted by bad upbringing?

GLAUCON: There must be a third.

SOCRATES: Yes, provided, at any rate, that it can be shown to be as distinct from the rationally calculating element as it was shown to be from the appetitive one.

GLAUCON: But it is not difficult to show that. After all, one can see it even in small children: they are full of spirit right from birth, but as for rational calculation, some of them seem to me never to possess it, while the masses do so quite late. b

SOCRATES: Yes, by Zeus, you put that really well. Besides, one can see in animals that what you say is true. But, in addition to that, our earlier quotation from Homer also bears it out: "He struck his chest and spoke to his heart."[18] You see, in it Homer clearly presents what has calculated about better and worse, c rebuking what is irrationally angry as though it were something different.

GLAUCON: That's exactly right.

SOCRATES: Well, we have had a difficult swim through all that, and we are pretty much agreed that the same classes as are in the city are in the soul of each individual, and an equal number of them too.

GLAUCON: That's true.

SOCRATES: Then doesn't it already necessarily follow that the private individual is wise in the same way and because of the same element as is the city?

GLAUCON: Of course.

SOCRATES: And that the city is courageous in the same way and because of the same element as is the

17. [439e5.]

18. [*Odyssey* 20.17. See 390d.]

d private individual? And that in everything else that pertains to virtue, both are alike?

GLAUCON: Necessarily.

SOCRATES: And so, Glaucon, I take it we will also say that a man is just in exactly the same way as is a city.

GLAUCON: That too follows with absolute necessity.

SOCRATES: But we surely have not forgotten that the city was just because each of the three classes in it does its own work.

GLAUCON: I do not think we have.

SOCRATES: We should also bear in mind, then, that in the case of each one of us as well, the one in whom each of the elements does its own job will be e just and do his own job.

GLAUCON: Certainly.

SOCRATES: Then isn't it appropriate for the rationally calculating element to rule, since it is really wise and exercises foresight on behalf of the whole soul; and for the spirited kind to obey it and be its ally?

GLAUCON: Of course.

SOCRATES: Now, as we were saying, isn't it a mixture of musical and physical training that makes these elements concordant, tightening and nurturing the 442a first with fine words and learning, while relaxing, soothing, and making gentle the second by means of harmony and rhythm?

GLAUCON: Yes, exactly.

SOCRATES: And these two elements, having been trained in this way and having truly learned their own jobs and been educated, will be put in charge of the appetitive element—the largest one in each person's soul and, by nature, the most insatiable for money. They will watch over it to see that it does not get so filled with the so-called pleasures of the body that it becomes big and strong, and no longer does its own job but attempts to enslave and rule over the classes b it is not fitted to rule, thereby overturning the whole life of anyone in whom it occurs.

GLAUCON: Yes, indeed.

SOCRATES: And wouldn't these two elements also do the finest job of guarding the whole soul and body against external enemies—the one by deliberating, the other by fighting, following the ruler, and using its courage to carry out the things on which the former had decided?

GLAUCON: Yes, they would.

SOCRATES: I imagine, then, that we call each individual courageous because of the latter part—that is, when the part of him that is spirited in kind preserves through pains and pleasures the pronouncements of c reason about what should inspire terror and what should not.

GLAUCON: That's right.

SOCRATES: But we call him wise, surely, because of the small part that rules in him, makes those pronouncements, and has within it the knowledge of what is advantageous—both for each part and for the whole, the community composed of all three.

GLAUCON: Yes, indeed.

SOCRATES: What about temperance? Isn't he temperate because of the friendly and concordant relations between these same things: namely, when both the ruler and its two subjects share the belief that the rationally calculating element should rule, and do not engage in faction against it? d

GLAUCON: Temperance in a city and in a private individual is certainly nothing other than that.

SOCRATES: But surely, now, a person will be just because of what we have so often described and in the way we have so often described.

GLAUCON: Necessarily.

SOCRATES: Well, then, has our justice become in any way blurred? Does it look like anything other than the very thing we found in the city?

GLAUCON: It doesn't seem so to me, at least.

SOCRATES: We could make perfectly sure, if there is still anything in our souls that disputes this, by applying everyday tests to it. e

GLAUCON: Which ones?

SOCRATES: For example, if we had to come to an agreement about whether a man similar in nature and training to this city of ours had embezzled gold or silver he had accepted for deposit, who do you think would consider him more likely to have done so rather than men of a different sort? 443a

GLAUCON: No one.

SOCRATES: And would he have anything to do with temple robberies, thefts, or betrayals of friends in private life or of cities in public life?

GLAUCON: No, nothing.

SOCRATES: And he would be in no way untrustworthy when it came to promises or other agreements.

GLAUCON: How could he be?

SOCRATES: And surely adultery, disrespect for parents, and neglect of the gods would be more characteristic of any other sort of person than of this one.

GLAUCON: Of any other sort, indeed.

SOCRATES: And isn't the reason for all this the
b fact that each element within him does its own job where ruling and being ruled are concerned?

GLAUCON: Yes, that and nothing else.

SOCRATES: Are you still looking for justice to be something besides this power that produces men and cities of the sort we have described?

GLAUCON: No, by Zeus, I am not.

SOCRATES: The dream we had has been completely fulfilled, then—I mean the suspicion we expressed that right from the beginning, when we were founding the city, we had, with the help of some god, chanced to hit upon the origin and pattern of
c justice.[19]

GLAUCON: Absolutely.

SOCRATES: So, Glaucon, it really was—which is why it was so helpful—a sort of image of justice, this principle that it is right for someone who is, by nature, a shoemaker to practice shoemaking and nothing else, for a carpenter to practice carpentry, and the same for all the others.

GLAUCON: Apparently so.

SOCRATES: And in truth, justice is, it seems, something of this sort. Yet it is not concerned with someone's doing his own job on the outside. On the contrary, it is concerned with what is inside; with himself,
d really, and the things that are his own. It means that he does not allow the elements in him each to do the job of some other, or the three sorts of elements in his soul to meddle with one another. Instead, he regulates well what is really his own, rules himself, puts himself in order, becomes his own friend, and harmonizes the three elements together, just as if they were literally the three defining notes of an octave—lowest, highest, and middle—as well as any others that may be in between. He binds together all of these and, from having been many, becomes entirely
e one, temperate and harmonious. Then and only then should he turn to action, whether it is to do something concerning the acquisition of wealth or concerning the care of his body, or even something political, or concerning private contracts. In all these areas, he considers and calls just and fine the action that preserves this inner harmony and helps achieve it, and wisdom the *knowledge* that oversees such action; and he considers and calls unjust any action that destroys this harmony, and ignorance the *belief* that oversees it.[20] 444a

GLAUCON: That's absolutely true, Socrates.

SOCRATES: Well, then, if we claim to have found the just man, the just city, and what justice really is in them, we won't, I imagine, be thought to be telling a complete lie.

GLAUCON: No, by Zeus, we certainly won't.

SOCRATES: Shall we claim it, then?

GLAUCON: Yes, let's.

SOCRATES: So be it, then. I take it we must look for injustice next.

GLAUCON: Clearly.

SOCRATES: Mustn't it, in turn, be a kind of faction among those three—their meddling and interfering b
with one another's jobs; the rebellion of a part of the soul against the whole in order to rule in it inappropriately, since its nature suits it to be a slave of the ruling class. We will say something like that, I imagine, and that their disorder and wandering is injustice, licentiousness, cowardice, ignorance, and, in a word, the whole of vice.

GLAUCON: That is precisely what they are.

SOCRATES: Doing unjust actions, then, and being unjust; and, the opposite, doing just ones—they all c
surely become clear at once, don't they, provided that both injustice and justice are also clear?

GLAUCON: What do you mean?

SOCRATES: That they do not differ in any way from healthy actions and unhealthy ones, that what the latter are in the body, they are in the soul.

GLAUCON: In what respect?

SOCRATES: Surely, healthy actions engender health, unhealthy ones disease.

GLAUCON: Yes.

SOCRATES: Well, doesn't doing just actions also engender justice, unjust ones injustice? d

19. [432d2–433b4.]

20. [The difference between knowledge (*epistêmê*) and belief (*doxa*) is explored at 475d1–480a13.]

GLAUCON: Necessarily.

SOCRATES: But to produce health is to put the elements that are in the body in their natural relations of mastering and being mastered by one another; while to produce disease is to establish a relation of ruling and being ruled by one another that is contrary to nature.

GLAUCON: That's right.

SOCRATES: Doesn't it follow, then, that to produce justice is to establish the elements in the soul in a natural relation of mastering and being mastered by one another, while to produce injustice is to establish a relation of ruling and being ruled by one another that is contrary to nature?

GLAUCON: Absolutely.

SOCRATES: Virtue, then, so it seems, is a sort of health, a fine and good state of the soul; whereas vice
e seems to be a shameful disease and weakness.

GLAUCON: That's right.

SOCRATES: And don't fine practices lead to the possession of virtue, shameful ones to vice?

GLAUCON: Necessarily.

SOCRATES: So it now remains, it seems, for us to
445a consider whether it is more profitable to do just actions, engage in fine practices, and be just, whether one is known to be so or not; or to do injustice and be unjust, provided that one does not have to pay the penalty and become a better person as a result of being punished.

GLAUCON: But, Socrates, that question seems to me, at least, to have become ridiculous, now that the two have been shown to be as we described. Life does not seem worth living when the body's natural constitution is ruined, not even if one has food and drink of every sort, all the money in the world, and every political office imaginable. So how—even if
b one could do whatever one wished, except what would liberate one from vice and injustice and make one acquire justice and virtue—could it be worth living when the natural constitution of the very thing by which we live[21] is ruined and in turmoil?

SOCRATES: Yes, it is ridiculous. All the same, since in fact we have reached a point from which we can see with the utmost clarity, as it were, that these things are so, we must not give up.

21. [I.e., the soul. See 353d9–10.]

GLAUCON: That's absolutely the last thing we should do.

SOCRATES: Come up here, then, so that you can see how many kinds of vice there are—the ones, at *c*
any rate, that are worth seeing.

GLAUCON: I am following. Just tell me.

SOCRATES: Well, from the vantage point, so to speak, that we have reached in our argument, it seems to me that there is one kind of virtue and an unlimited number of kinds of vice, four of which are worth mentioning.

GLAUCON: What do you mean?

SOCRATES: It seems likely that there are as many types of soul as there are types of political constitution of a specific kind.

GLAUCON: How many is that?

SOCRATES: Five types of constitution, and five of soul. *d*

GLAUCON: Tell me what they are.

SOCRATES: I will tell you that one type would be the constitution we have been describing. However, there are two ways of referring to it: if one outstanding man emerges among the rulers, it is called a kingship; if more than one, it is called an aristocracy.

GLAUCON: That's true.

SOCRATES: Well, then, that is one of the kinds I had in mind. You see, whether many arise or just one, they won't change any of the laws of the city that are worth mentioning, since they will have been *e*
brought up and educated in the way we described.

GLAUCON: No, they probably won't.

BOOK V

SOCRATES' NARRATION CONTINUES:

SOCRATES: That, then, is the sort of city and constitution—and the sort of man—I call good and *449a*
correct. And if indeed this one is correct, all the others are bad and mistaken, both as city governments and as ways of organizing the souls of private individuals. The deficient ones fall into four kinds.

GLAUCON: What are they?

I was going to describe them in the order in which I thought they developed out of one another.[1] *But*

1. [This task is taken up in Book VIII.]

Polemarchus, who was sitting not far from Adeimantus, extended his hand, gripped the latter's cloak by the shoulder from above, drew Adeimantus toward him, and, leaning forward himself, said some things in his ear. We overheard nothing of what he said, other than this:

Shall we let it go, then, or what?

ADEIMANTUS: (*Now speaking aloud.*) Certainly not.

SOCRATES: What is it exactly you won't let go?

ADEIMANTUS: You!

SOCRATES: Why exactly?

ADEIMANTUS: We think you are being lazy, that you are robbing us of a whole important section of the argument in order to avoid having to explain it. You thought we would not notice when you said—as though it were something inconsequential—that, as regards women and children, anyone could see that it will be a case of friends sharing everything in common.

SOCRATES: But isn't that correct, Adeimantus?

ADEIMANTUS: Yes, it is. But it is just like all the rest we have discussed; its correctness requires an explanation of how the sharing will be arranged, since there are many ways to bring it about. So, do not omit to tell us about the particular one you have in mind. We have all been waiting for a long time in the expectation that you would surely discuss how procreation will be handled, how the children that are born will be reared, and the whole subject of what you mean by sharing women and children. You see, we think that this makes a considerable difference—indeed, all the difference—to whether a constitution is correct or incorrect. So now that you are beginning to describe another constitution without having analyzed this matter adequately, we are resolved, as you overheard, not to let you go until you explain all this just as you did the rest.

GLAUCON: Include me, too, as having a share in this vote.

And Thrasymachus said:

In fact, you can take it as the resolution of *all* of us, Socrates.

SOCRATES: What a thing to do, attacking me like that. You have started up a huge discussion about the constitution—it will be like starting from the beginning. I was delighted to think I had already completed its description by this time and was satisfied to have what I had said earlier be accepted as is. You do not realize what a swarm of arguments you are now stirring up by making this demand. It was because I could see it that I left the topic aside, to avoid all the trouble it would cause us.

THRASYMACHUS: What of it? Don't you think these people have come here now to listen to arguments, not to smelt ore?[2]

SOCRATES: Yes—within moderation, at least.

GLAUCON: But surely it is within moderation, Socrates, for people with any sense to listen to such arguments their whole life long. So never mind about *us*. Don't *you* get tired of explaining your views on what we asked about: namely, what the sharing of children and women will amount to for our guardians, and how the children will be brought up while they are still small. After all, the time between birth and the beginning of formal education seems to be the most troublesome period of all. So, try to tell us in what way it should be handled.

SOCRATES: It is not easy to explain, my happy fellow. It raises even more doubts than the topics we have discussed so far. One might, in fact, doubt whether what we proposed is possible, and, even if one granted that it is entirely so, one might still have doubts about whether it would be for the best. That, then, is why I was somewhat hesitant to bring it up: I was afraid, my dear comrade, that our argument might seem to be no more than wishful thinking.

GLAUCON: Do not hesitate at all. You see, your audience won't be inconsiderate, or incredulous, or hostile.

SOCRATES: My very good fellow, are you saying that because you want to encourage me?

GLAUCON: I am.

SOCRATES: Well, you are having precisely the opposite effect. If I were confident that I was speaking with knowledge, your encouragement would be all very well. When one is among knowledgeable and

2. [A proverbial expression applied to those who neglect the task at hand for an uncertain profit. Thrasymachus is reminding Socrates of his own words at 336e4–9.]

beloved friends, and one is speaking what one knows to be the truth about the most important and most beloved things, one can feel both secure and confi-
e dent. But to produce arguments when one is uncertain and searching, as I am doing, is a frightening
451a thing and makes one feel insecure. I am not afraid of being ridiculed—that would be childish, indeed—but I am afraid that if I fail to secure the truth, just where it is most important to do so, I will not only fall myself but drag my friends down as well. So I bow to Adrasteia, Glaucon, for what I am about to say. You see, I suspect that involuntary homicide is a lesser crime than misleading people about beautiful, good, and just conventions. That is a risk it would be better to run among enemies than among friends.
b So you have well and truly encouraged me.

Glaucon laughed and said:

Well, Socrates, if we suffer from any false note you strike in the argument, we will release you, as we would in a homicide case, as guiltless and no deceiver of us. So you may speak with confidence.

SOCRATES: Well, it is true; the one who is acquitted in that situation is guiltless, so the law says. And if it is true there, it is probably true here, too.

GLAUCON: On these grounds, then, tell us.

SOCRATES: I will have to go back again, then, and say now what perhaps I should have said then in the
c proper place. But maybe it is all right, after having completed a male drama, to perform a female one next[3]—especially when you demand it in this way. For people born and educated as we have described, then, there is, I believe, no correct way to acquire and employ children and women other than to follow the path on which we first set them. Surely, in our argument, we tried to establish the men as guard-dogs of their flock.

GLAUCON: Yes.

SOCRATES: Then let's proceed by giving corres-
d ponding rules for birth and rearing, and see whether they suit us or not.

3. [This may be an allusion to the mimes of Sophron of Syracuse (c. 470–400 B.C.E.), which were divided into male mimes, in which men were represented, and female ones, in which women were represented.]

GLAUCON: How?

SOCRATES: As follows. Do we think that the females of our guard-dogs should join in guarding precisely what the males guard, hunt with them, and share everything with them? Or do we think that they should stay indoors and look after the house,[4] on the grounds that they are incapable of doing this because they must bear and rear the puppies, while the males should work and have the entire care of the flock?

GLAUCON: They should share everything—except that we employ the females as we would weaker animals, and the males as we would stronger ones. e

SOCRATES: Is it possible, then, to employ an animal for the same tasks as another if you do not give it the same upbringing and education?

GLAUCON: No, it is not.

SOCRATES: Then if we employ women for the same tasks as men, they must also be taught the same things.

GLAUCON: Yes. 452a

SOCRATES: Now, we gave the latter musical and physical training.

GLAUCON: Yes.

SOCRATES: So, we must also give these two crafts, as well as military training, to the women, and employ them in the same way.

GLAUCON: That seems reasonable, given what you say.

SOCRATES: But perhaps many of the things we are now saying, because they are contrary to custom, would seem ridiculous if they were put into practice.

GLAUCON: Indeed, they would.

SOCRATES: What do you see as the most ridiculous aspect of them? Isn't it obvious that it is the idea of the women exercising stripped in the palestras alongside the men?[5] And not just the young women, but the older ones too—like the old men we see b

4. [Respectable, well-to-do women lived secluded lives in most Greek states: they were confined to the household (see 579b8) and to domestic work and were largely excluded from the public spheres of culture, politics, and warfare.]

5. [The women will be *gumnozomenas,* which can mean stripped naked, but often also means wearing a tunic, or undergarment, without a cloak (see 457a6–7). A palestra was a wrestling school and training ground.]

in gymnasiums who, even though their bodies are wrinkled and not pleasant to look at, still love physical training.

GLAUCON: Yes, by Zeus, that *would* look really ridiculous, at least under present conditions.

SOCRATES: Yet, since we have started to discuss the matter, we must not be afraid of the various jokes that the wits will make both about this sort of change in musical and physical training and—even more so—about the change in the bearing of arms and the mounting of cavalry horses.[6]

GLAUCON: You are right.

SOCRATES: But since we have started, we must move on to the rougher part of the law, and ask these wits *not* to do their own job, but to be serious. And we will remind them that it is not long since the *Greeks* thought it shameful and ridiculous (as many barbarians still do) for *men* to be seen stripped, and that when first the Cretans and then the Lacedaemonians began the gymnasiums, the wits of the time had the opportunity to make a comedy of it all. Or don't you think so?

GLAUCON: I certainly do.

SOCRATES: But when it became clear, I take it, to those who employed these practices, that it was better to strip than to cover up all such parts, the laughter in the eyes faded away because of what the arguments had proved to be best. And this showed that it is a fool who finds anything ridiculous except what is bad, or tries to raise a laugh at the sight of anything except what is stupid or bad, or—putting it the other way around—who takes seriously any standard of what is beautiful other than what is good.

GLAUCON: Absolutely.

SOCRATES: Well, then, shouldn't we first agree about whether our proposals are viable or not? And mustn't we give anyone who wishes to do so—whether it is someone who loves a joke or someone serious—the opportunity to dispute whether the female human does have the natural ability to share in *all* the tasks of the male sex, or in none at all, or in some but not others; and, in particular, whether this holds in the case of warfare? By making the best beginning in this way, wouldn't one also be likely to reach the best conclusion?

GLAUCON: Of course.

SOCRATES: So, would you like us to dispute with one another on their behalf, so that their side of the argument won't be attacked without defenders?

GLAUCON: Why not?

SOCRATES: Then let's say this on their behalf: "Socrates and Glaucon, you do not need *other people* to dispute you. After all, you yourselves, when you were beginning to found your city, agreed that each one had to do the one job for which he was naturally suited."

GLAUCON: We did agree to that, I think. Of course we did.

SOCRATES: "Can it be, then, that a woman is not by nature very different from a man?"

GLAUCON: Of course she is different.

SOCRATES: "Then isn't it also appropriate to assign a different job to each of them, the one for which they are naturally suited?"

GLAUCON: Certainly.

SOCRATES: "How is it, then, that you are not making a mistake now and contradicting yourselves, when you say that men and women must do the same jobs, seeing that they have natures that are most distinct?" Do you have any defense, you amazing fellow, against that attack?

GLAUCON: It is not easy to think of one on the spur of the moment. On the contrary, I shall ask—indeed, I am asking—you to explain the argument on our side as well, whatever it is.

SOCRATES: That, Glaucon, and many other problems of the same sort, which I foresaw long ago, was what I was afraid of when I hesitated to tackle the law concerning the possession and upbringing of women and children.

GLAUCON: No, by Zeus, it certainly does not seem to be a simple matter.

SOCRATES: No, it is not. But the fact is that whether one falls into a small diving pool or into the middle of the largest sea, one has to swim all the same.

GLAUCON: Of course.

6. [A reference, perhaps, to Aristophanes, *Assembly Women*, which makes fun of the idea of women having political power and making laws like these. As in English, the term *hoplon* ("weapon" or "tool") was used to refer to the male genitals, and *ocheuein* ("mounting," "riding") to refer to sexual intercourse (as at 454e1).]

SOCRATES: Then we must swim, too, and try to save ourselves from the sea of argument, hoping for a dolphin to pick us up, or for some other unlikely rescue.[7]

e GLAUCON: It seems so.

SOCRATES: Come on, then, let's see if we can find a way out. We have agreed, of course, that different natures must have different pursuits, and that the natures of a woman and a man are different. But we now say that those different natures must have the same pursuits. Isn't that the charge against us?

GLAUCON: Yes, exactly.

SOCRATES: What a noble power, Glaucon, the *454a* craft of disputation possesses!

GLAUCON: Why is that?

SOCRATES: Because many people seem to me to fall into it even against their wills, and think they are engaging not in eristic, but in discussion. This happens because they are unable to examine what has been said by dividing it up into kinds. Instead, it is on the purely verbal level that they look for the contradiction in what has been said, and employ eristic, not dialectic, on one another.

GLAUCON: Yes, that certainly does happen to many people. But surely it is not pertinent to us at the moment, is it?

SOCRATES: It most certainly is. At any rate, we *b* are in danger of unconsciously dealing in disputation.

GLAUCON: How?

SOCRATES: We are trying to establish the principle that different natures should not be assigned the same pursuits in a bold and eristic manner, *on the verbal level*. But we did not at all investigate what kind of natural difference or sameness we had in mind, or in what regard the distinction was pertinent, when we assigned different pursuits to different natures and the same ones to the same.

GLAUCON: No, we did not investigate that.

SOCRATES: And because we did not, it is open to *c* us, apparently, to ask ourselves whether the natures of bald and long-haired men are the same or opposite. And, once we agree that they are opposite, it is open to us to forbid the long-haired ones to be shoemakers, if that is what the bald ones are to be, or *vice versa*.

GLAUCON: But that would be ridiculous.

SOCRATES: And is it ridiculous for any other reason than that we did not have in mind *every* kind of difference and sameness in nature, but were keeping our eyes only on the kind of difference and sameness that was pertinent to the pursuits themselves? We meant, for example, that a male and female whose *d* souls are suited for medicine have the same nature. Or don't you think so?

GLAUCON: I do.

SOCRATES: But a male doctor and a male carpenter have different ones?

GLAUCON: Of course, completely different.

SOCRATES: In the case of both the male and the female sex, then, if one of them is shown to be different from the other with regard to a particular craft or pursuit, we will say that is the one who should be assigned to it. But if it is apparent that they differ in this respect alone, that the female bears the offspring while the male mounts the female, we will say it has not yet been demonstrated that a woman is different *e* from a man with regard to what we are talking about, and we will continue to believe our guardians and their women should have the same pursuits.

GLAUCON: And rightly so.

SOCRATES: Next, won't we urge our opponent to tell us the precise craft or pursuit, relevant to the *455a* organization of the city, for which a woman's nature and a man's are not the same but different?

GLAUCON: That would be a fair question, at least.

SOCRATES: Perhaps, then, this other person might say, just as you did a moment ago,[8] that it is not easy to give an adequate answer on the spur of the moment, but that after reflection it would not be at all difficult.

GLAUCON: Yes, he might say that.

SOCRATES: Do you want us to ask the one who disputes things in this way, then, to follow us to see whether we can somehow show him that there is no *b* pursuit relevant to the management of the city that is peculiar to women?

GLAUCON: Of course.

SOCRATES: Come on, then, we will say to him, give us an answer: "Is this what you meant by one person being naturally well suited for something and

7. [The story of Arion's rescue by the dolphin is told in Herodotus, *Histories* 1.23–4.]

8. [453c7–9.]

another naturally unsuited: that the one learns it easily, the other with difficulty; that the one, after a little instruction, can discover a lot for himself in the subject being studied, whereas the other, even if he gets a lot of instruction and attention, does not even retain what he was taught; that the bodily capacities of the one adequately serve his mind, while those of the other obstruct his? Are there any other factors
c than these, by which you distinguish a person who is naturally well suited for each pursuit from one who is not?"

GLAUCON: No one will be able to mention any others.

SOCRATES: Do you know of anything practiced by human beings, then, at which the male sex is not superior to the female in all those ways? Or must we make a long story of it by discussing weaving and the preparation of baked and boiled food[9]—the very pursuits in which the female sex is thought to excel, and in which its defeat would expose it to the greatest
d ridicule of all?

GLAUCON: It is true that the one sex shows greater mastery than the other in pretty much every area. Yet there are many women who are better than many men at many things. But on the whole, it is as you say.

SOCRATES: Then, my friend, there is no pursuit relevant to the management of the city that belongs to a woman because she is a woman, or to a man because he is a man; but the various natural capacities are distributed in a similar way between both creatures, and women can share by nature in every pursuit, and men in every one, though for the purposes
e of all of them women are weaker than men.

GLAUCON: Of course.

SOCRATES: So shall we assign all of them to men and none to women?

GLAUCON: How could we?

SOCRATES: We could not. For we will say, I imagine, that one woman is suited for medicine, another not, and that one is naturally musical, another not.

GLAUCON: Of course.

SOCRATES: Won't one be suited for physical training or war, then, while another is unwarlike and not 456a
a lover of physical training?

GLAUCON: I suppose so.

SOCRATES: And one a philosopher (lover of wisdom), another a "misosopher" (hater of wisdom)? And one spirited, another spiritless?

GLAUCON: That too.

SOCRATES: So there is also a woman who is suited to be a guardian, and one who is not. Or wasn't that the sort of nature we selected for our male guardians, too?[10]

GLAUCON: It certainly was.

SOCRATES: A woman and a man can have the same nature, then, relevant to guarding the city—except to the extent that she is weaker and he is stronger.

GLAUCON: Apparently so.

SOCRATES: Women of that sort, then, must be selected to live and guard with men of the same sort, b
since they are competent to do so and are akin to the men by nature.

GLAUCON: Of course.

SOCRATES: And mustn't we assign the same pursuits to the same natures?

GLAUCON: Yes, the same ones.

SOCRATES: We have come around, then, to what we said before, and we are agreed that it is not against nature to assign musical and physical training to the female guardians.

GLAUCON: Absolutely.

SOCRATES: So, we are not legislating impossibilities or mere fantasies, at any rate, since the law we were proposing is in accord with nature. Rather, it is the contrary laws that we have now that turn out to c
be more contrary to nature, it seems.

GLAUCON: It does seem that way.

SOCRATES: Now, wasn't our inquiry about whether our proposals were both viable and best?

GLAUCON: Yes, it was.

SOCRATES: And that they are in fact viable has been agreed, hasn't it?

GLAUCON: Yes.

SOCRATES: So, we must next come to an agreement about whether they are for the best?

9. [Men were in charge of roasting meat. See 404b10–c4.]

10. [374e4–376c5.]

GLAUCON: Clearly.

SOCRATES: Now, as regards producing a woman who is equipped for guardianship, we won't have one sort of education that will produce our guardian men, will we, and another our women—especially not when
d it will have the same nature to work on in both cases?

GLAUCON: No, we won't.

SOCRATES: What is your belief about this, then?

GLAUCON: What?

SOCRATES: The notion that one man is better or worse than another—or do you think they are all alike?

GLAUCON: Not at all.

SOCRATES: In the city we are founding, who do you think will turn out to be better men: our guardians, who get the education we have described, or the shoemakers, who are educated in shoemaking?

GLAUCON: What a ridiculous question!

SOCRATES: I realize that. Aren't the guardians the
e best of the citizens?

GLAUCON: By far.

SOCRATES: And what about the female guardians? Won't they be the best of the women?

GLAUCON: Yes, they are by far the best, too.

SOCRATES: Is there anything better for a city than that the best possible men and women should come to exist in it?

GLAUCON: No, there is not.

SOCRATES: And that is what musical and physical training, employed as we have described, will
457a achieve?

GLAUCON: Of course.

SOCRATES: Then the law we were proposing was not only possible, but also best for a city?

GLAUCON: Yes.

SOCRATES: Then the female guardians must strip, clothing themselves in virtue instead of cloaks. They must share in warfare, and whatever else guarding the city involves, and do nothing else. But within these areas, the women must be assigned lighter tasks than the men, because of the weakness of their sex. And the man who laughs at the sight of women stripped for physical training, when their stripping is
b for the best, is "plucking the unripe fruit of laughter's wisdom,"[11] and knows nothing, it seems, about what he is laughing at or what he is doing. For it is, and always will be, the finest saying that what is beneficial is beautiful; what is harmful ugly.

GLAUCON: Absolutely.

SOCRATES: May we claim, then, that we are avoiding one wave,[12] as it were, in our discussion of the law about women, so that we are not altogether swept away when we declare that our male and female guardians must share all their pursuits, and that our argument is somehow self-consistent when it states
c that this is both viable and beneficial?

GLAUCON: It is certainly no small wave that you are avoiding.

SOCRATES: You won't think it is so big when you see the next one.

GLAUCON: I won't see it unless you tell me about it.

SOCRATES: The law that is consistent with that one, and with the others that preceded it, is this, I take it.

GLAUCON: What?

SOCRATES: That all these women should be shared among all the men, that no individual woman and man should live together, and that the children,
d too, should be shared, with no parent knowing its own offspring, and no child its parent.

GLAUCON: That wave *is* far bigger and more dubitable than the other, both as regards its viability and its benefit.

SOCRATES: As far as its benefit is concerned, at least, I do not think anyone would argue that the sharing of women and children is not the greatest good, if indeed it is viable. But I imagine there would be a lot of dispute about whether or not it is viable.

GLAUCON: No, *both* could very well be disputed.
e

SOCRATES: You mean I will have to face a coalition of arguments. I thought I had at least escaped one of them—namely, whether you thought the proposal was beneficial—and that I would just be left with the argument about whether it is viable or not.

GLAUCON: Well, you did not escape unnoticed. So you will have to give an argument for both.

11. [Plato is adapting a phrase of Pindar.]

12. [The metaphor begins at 453c10–d7.]

SOCRATES: I must pay the penalty. But do me this favor: let me take a holiday and act like those
458a lazy people who make a banquet for themselves of their own thoughts when they are walking alone. People like that, as you know, do not bother to find out how any of their appetites might actually be fulfilled, so as to avoid the trouble of deliberating about what is possible and what is not. They assume that what they want is available, and then proceed to arrange all the rest, taking pleasure in going through everything they will do when they get it—thus making their already lazy souls even lazier. Well, I, too, am
b succumbing to this weakness at the moment and want to postpone consideration of the viability of our proposals until later. I will assume now that they are viable, if you will permit me to do so, and examine how the rulers will arrange them when they come to pass. And I will try to show that, if they were put into practice, they would be the most beneficial arrangements of all, both for the city and for its guardians. These are the things I will try to examine with you first, leaving the others for later—if indeed you will permit this.

GLAUCON: You have my permission; so proceed with the examination.

SOCRATES: Well, then, I imagine that if indeed our rulers, and likewise their auxiliaries, are worthy
c of their names, the latter will be prepared to carry out orders, and the former to give orders, obeying our laws in some cases and imitating them in the others that we leave to their discretion.

GLAUCON: Probably so.

SOCRATES: Now, you are their lawgiver, and in just the way you selected these men, you will select as the women to hand over to them those who have natures as similar to theirs as possible. And because they have shared dwellings and meals, and none of them has any private property of that sort, they will
d live together; and through mixing together in the gymnasia and in the rest of their daily life, they will be driven by innate necessity, I take it, to have sex with one another. Or don't you think I am talking about necessities here?

GLAUCON: Not *geometric* necessities, certainly, but *erotic* ones; and they probably have a sharper capacity to persuade and attract most people.

SOCRATES: They do, indeed. But the next point, Glaucon, is that for them to have unregulated sexual intercourse with one another, or to do anything else of that sort, would not be a pious thing in a city of happy people, and the rulers won't allow it. e

GLAUCON: No, it would not be just.

SOCRATES: It is clear, then, that we will next have to make marriages as sacred as possible. And sacred marriages will be those that are most beneficial.

GLAUCON: Absolutely.

SOCRATES: How, then, will the most beneficial ones come about? Tell me this, Glaucon. I see you 459a have hunting dogs and quite a flock of noble birds at home.[13] Have you, by Zeus, noticed anything in particular about their "marriages" and breeding?

GLAUCON: Like what?

SOCRATES: In the first place, though they are all noble animals, aren't there some that are, or turn out to be, the very best?

GLAUCON: There are.

SOCRATES: Do you breed from them all to the same extent, then, or do you try hard to breed as far as possible from the best ones?

GLAUCON: From the best ones.

SOCRATES: And do you breed from the youngest, the oldest, or as far as possible from those in their b prime?

GLAUCON: From those in their prime.

SOCRATES: And if they were not bred in this way, do you think that your race of birds and dogs would get much worse?

GLAUCON: I do.

SOCRATES: And what do you think about horses and other animals? Is the situation any different with them?

GLAUCON: It would be strange if it were.

SOCRATES: Good heavens, my dear comrade! Then our need for eminent rulers is quite desperate, if indeed the same also holds for the human race.

GLAUCON: Well, it does hold of them. But so what? c

SOCRATES: It follows that our rulers will then have to employ a great many drugs. You know that when people do not need drugs for their bodies, and they are prepared to follow a regimen, we regard even an inferior doctor as adequate. But when drugs are

13. [Both hunting dogs and aviaries were common in rich Greek households.]

needed, we know that a much bolder doctor is required.

GLAUCON: That's true. But what is your point?

SOCRATES: This: it looks as though our rulers will have to employ a great many lies and deceptions for the benefit of those they rule. And you remember, I
d suppose, we said all such things were useful as a kind of drug.[14]

GLAUCON: And we were correct.

SOCRATES: Well, in the case of marriages and procreation, its correctness is particularly evident.

GLAUCON: How so?

SOCRATES: It follows from our previous agreement that the best men should mate with the best women in as many cases as possible, while the opposite should hold of the worst men and women; and that the offspring of the former should be reared, but not that of the latter, if our flock is going to be an
e eminent one. And all this must occur without anyone knowing except the rulers—if, again, our herd of guardians is to remain as free from faction as possible.

GLAUCON: That's absolutely right.

SOCRATES: So then, we will have to establish by law certain festivals and sacrifices at which we will bring together brides and bridegrooms, and our poets must compose suitable hymns for the marriages that
460a take place. We will leave the number of marriages for the rulers to decide. That will enable them to keep the number of males as constant as possible, taking into account war, disease, and everything of that sort; so that the city will, as far as possible, become neither too big nor too small.

GLAUCON: That's right.

SOCRATES: I imagine that some sophisticated lotteries will have to be created, then, so that an inferior person of that sort will blame chance rather than the rulers at each mating time.

GLAUCON: Yes, indeed.

SOCRATES: And presumably, the young men who
b are good at war or at other things must—among other prizes and awards—be given a greater opportunity to have sex with the women, in order that a pretext may also be created at the same time for having as many children as possible fathered by such men.

14. [382c6–d3.]

GLAUCON: That's right.

SOCRATES: And then, as offspring are born, won't they be taken by the officials appointed for this purpose, whether these are men or women or both—for surely our offices are also open to both women and men.

GLAUCON: Yes.

SOCRATES: And I suppose they will take the offspring of good parents to the rearing pen and hand them over to special nurses who live in a separate *c* part of the city. But those of inferior parents, or any deformed offspring of the others, they will hide in a secret and unknown place, as is fitting.[15]

GLAUCON: Yes, if indeed the race of guardians is going to remain pure.

SOCRATES: And won't these nurses also take care of the children's feeding by bringing the mothers to the rearing pen when their breasts are full, while devising every device to ensure that no mother will recognize her offspring? And won't they provide other women as wet nurses if the mothers themselves have *d* insufficient milk—taking care, however, that the mothers breast-feed the children for only a moderate period of time, and assigning sleepless nights and similar burdens to the nurses and wet nurses?

GLAUCON: You are making childbearing a soft job for the guardians' women.

SOCRATES: Yes, properly so. But let's take up the next thing we proposed. We said, as you know, that offspring should be bred from parents who are in their prime.[16]

GLAUCON: True.

SOCRATES: Do you agree that a woman's prime lasts, on average, for a period of twenty years and a *e* man's for thirty?

GLAUCON: Which years are those?

SOCRATES: A woman should bear children for the city from the age of twenty to that of forty; whereas a man should beget them for the city from the time that he passes his peak as a runner until he reaches fifty-five.[17]

15. [Infanticide by exposure was commonly used in ancient Greece as a method of birth control.]

16. [452b1–3.]

17. [Greek women were often married before they turned twenty.]

GLAUCON: At any rate, that is the physical and
461a mental prime for both.

SOCRATES: Then if any male who is younger or older than that engages in reproduction for the community, we will say that his offense is neither pious nor just. For the child he fathers for the city, if it escapes discovery, will be begotten and born without the benefit of sacrifices, or of the prayers that priestesses, priests, and the entire city will offer at every marriage festival, asking that from good and beneficial parents ever better and more beneficial offspring should be pro-
b duced. On the contrary, it will be born in darkness through a terrible act of lack of self-control.

GLAUCON: That's right.

SOCRATES: The same law will apply if a man who is still of breeding age has sex with a woman in her prime when the rulers have not mated them. We will say that he is imposing an illegitimate, unauthorized, and unholy child on the city.

GLAUCON: That's absolutely right.

SOCRATES: But when women and men have passed breeding age, I imagine we will leave them free to have sex with whomever they wish—except that a
c man may not have sex with his daughter, mother, daughters' daughters, or mother's female ancestors, or a woman with her son and his descendants or her father and his ancestors. And we will permit all that only after telling them to be very careful not to let even a single fetus see the light of day, if one should happen to be conceived; but if one does force its way out, they must dispose of it on the understanding that no nurture is available for such a child.

GLAUCON: All that sounds reasonable. But how will they recognize one another's fathers, daughters,
d and the others you mentioned?

SOCRATES: They won't. Instead, from the day a man becomes a bridegroom, he will call all offspring born in the tenth month afterward (and in the seventh, of course) his sons,[18] if they are male, and his daughters, if they are female; and they will call him father. Similarly, he will call their children his grandchildren, and they, in turn, will call the group to which he belongs grandfathers and grandmothers. And those who were born at the same time as their mothers and fathers were breeding, they will call their brothers and sisters. Thus, as we were saying just now, they will avoid sexual rela- e
tions with each other. However, the law *will* allow brothers and sisters to have sex with one another, if the lottery works out that way and the Pythia approves.[19]

GLAUCON: You are absolutely right.

SOCRATES: That, then, Glaucon, or something like it, is how the sharing of women and children by the guardians of your city will be handled. The next point we need to have confirmed by argument, then, is that this arrangement is both consistent with the rest of the constitution and by far the best. Isn't that so?

GLAUCON: Yes, by Zeus, it is. 462a

SOCRATES: As a beginning step toward reaching agreement, shouldn't we ask ourselves what we think is the greatest good for the organization of the city—the one at which the legislator should aim in making its laws—and what the greatest evil? And then examine whether what we have just described is in harmony with the tracks of the good we have found, and in disharmony with those of the bad?

GLAUCON: Absolutely.

SOCRATES: Now, do we know of any greater evil for a city than what tears it apart and makes it many instead of one? Or any greater good than what binds b
it together and makes it one?

GLAUCON: No, we do not.

SOCRATES: Well, doesn't sharing pleasure and pain bind it together— when, as far as possible, all the citizens feel more or less the same joy or pain at the same gains or losses?

GLAUCON: Absolutely.

SOCRATES: On the other hand, doesn't the privatization of these things dissolve the city—when some are overwhelmed with distress and others overjoyed by the same things happening to the city or some of its inhabitants? c

GLAUCON: Of course.

SOCRATES: And isn't that what happens when people do not apply such phrases as "mine" and "not mine" in unison in the city? And similarly with "someone else's"?

18. [These are lunar months. The period is from roughly seven to roughly nine calendar months. A fetus of less than seven months was considered nonviable.]

19. [Greek law did not usually permit marriage between biological siblings, who will be included in the class referred to here.]

GLAUCON: Precisely.

SOCRATES: Then isn't the city that is best governed the one in which the vast majority of people apply "mine" and "not mine" to the same things on the basis of the same principle?

GLAUCON: Certainly.

SOCRATES: And isn't it the city whose condition is most like that of a single person? I mean, when one of us somehow hurts his finger, you know the entire partnership—the one that binds body and soul together into a single system under the ruling part within it—is aware of this, and all of it as a whole feels the pain
d in unison with the part that suffers. That is why we say that this person has a pain in his finger. And the same principle applies, doesn't it, to any other part of a person, whether it is suffering pain or relieved by pleasure?

GLAUCON: Yes, the same one. And, to answer your question, the city that manages to come closest to this condition *is* the best-governed one.

SOCRATES: I imagine, then, that whenever one of its citizens has an experience, whether good or bad, such a city will most certainly say that the experi-
e ence is its own, and all of it together will share his pleasure or pain.

GLAUCON: That must be so, since it is well governed.

SOCRATES: It is time for us to return to our own city, then, to look there for the features we have agreed on and to see whether it, or rather some other city, possesses them to the greatest degree.

GLAUCON: Yes, it is.

SOCRATES: Well, now, what about those other cities? Presumably there are rulers and people in them
463a as well as in ours?

GLAUCON: There are.

SOCRATES: And won't all of them call one another "citizens"?

GLAUCON: Of course.

SOCRATES: But besides "citizens," what do the people in those other cities call the rulers?

GLAUCON: In most, they call them "masters," but in democracies they are called just that—"rulers."[20]

SOCRATES: What about the people in our city? Besides "citizens," what do they call the rulers?

GLAUCON: "Preservers" and "auxiliaries." *b*

SOCRATES: And what do *they* call the people?

GLAUCON: "Paymasters" and "providers."

SOCRATES: What do the rulers in other cities call the people?

GLAUCON: "Slaves."

SOCRATES: And what do the rulers call each other?

GLAUCON: "Co-rulers."

SOCRATES: And ours?

GLAUCON: "Co-guardians."

SOCRATES: Now, can you tell me whether a ruler in other cities could address one of his co-rulers as his kinsman and another as an outsider?

GLAUCON: Many do, at any rate.

SOCRATES: And doesn't he regard and speak of his kinsman as belonging to him, while he regards the outsider as not doing so? *c*

GLAUCON: Yes.

SOCRATES: What about your guardians? Could any of them regard or address a co-guardian as an outsider?

GLAUCON: Certainly not. He will regard everyone he meets as a brother or a sister, a father or a mother, a son or a daughter, or some ancestor or descendant of these.

SOCRATES: Very well put. But tell me this, too: will your laws require them simply to use these terms of kinship, or must they also do all the things that go along with the names? In the case of fathers, for *d* example, must they show them the customary respect, solicitude, and obedience owed to parents? Will they fare worse at the hands of gods or men, as people whose actions are neither pious nor just, if they do otherwise? Will these be the sayings that are chanted by all the citizens, and that sound in their ears right from their earliest childhood? Or will they hear something else about their fathers—or the ones they are told to regard as their fathers—or about their other relatives?

GLAUCON: They will hear those. It would be ridiculous if they only mouthed the terms of kinship, *e* without the actions.

SOCRATES: So, in this city more than in any other, when someone is doing well or badly, they will utter

20. [The Athenian democracy had nine rulers (archons) in Plato's time. These included the chief magistrates, the chief military leader, and an important authority in religious matters.]

in concord the words we mentioned a moment ago, and say "*my* such-and-such is doing well" or "*my* so-and-so is doing badly."

GLAUCON: That's absolutely true.

SOCRATES: Well, didn't we say that this conviction and way of talking are accompanied by the having of pleasures and pains in common?[21]

GLAUCON: Yes, and we were right to do so.

SOCRATES: Then won't our citizens share to the fullest, and call "mine," the very same thing? And because they share it, won't they experience to the fullest the sharing of pleasures and pains?

GLAUCON: Of course.

SOCRATES: And—in the context of the rest of the political system—isn't the sharing of women and children by the guardians responsible for it?

GLAUCON: Yes, it is by far the most important cause.

SOCRATES: But we further agreed that this sharing is the greatest good for a city, when we compared a well-governed city to the way a human body relates to pain and pleasure in one of its parts.

GLAUCON: And we were right to agree.

SOCRATES: Then we have shown that the cause of the greatest good for our city is the sharing of women and children by the auxiliaries.

GLAUCON: Yes, we certainly have.

SOCRATES: And what is more, it is consistent with what we said before. For we said, as you know, that if these people are going to be real guardians, they should not have private houses, land, or any other possession, but should receive their upkeep from the other citizens as a wage for their guardianship, and should all eat communally.[22]

GLAUCON: That's right.

SOCRATES: So, as I say, doesn't what was said earlier, as well as what is being said now, make them into even better guardians and prevent them from tearing the city apart by applying the term "mine" not to the same thing, but to different ones—with one person dragging into his own house whatever he, apart from the others, can get his hands on, and another into a different house to a different wife and children, who create private pleasures and pains at things that are private? Instead of that, don't our guardians share a single conviction about what is their own, aim at the same goal, and, as far as possible, feel pleasure and pain in unison?

GLAUCON: Absolutely.

SOCRATES: What about lawsuits and accusations? Won't they pretty much disappear from among them because they have no private possessions except their own bodies and share all the rest? As a result, won't they be free from faction—at any rate, from the sort of faction that the possession of property, children, and families causes among people?

GLAUCON: Yes, they will inevitably be entirely free of it.

SOCRATES: Moreover, neither lawsuits for violence nor for assault should justifiably occur among them. For we will declare, surely, that for people to defend themselves against others of the same age is a fine and just thing, since it will compel them to stay in good physical shape.

GLAUCON: That's right.

SOCRATES: This law is also correct for another reason: if a spirited person vents his anger in this way, he will be less likely to move on to more serious sorts of faction.

GLAUCON: He certainly will.

SOCRATES: As for an older person, he will be authorized to rule and punish all the younger ones.

GLAUCON: Clearly.

SOCRATES: And, unless the rulers command it, it is unlikely that a younger person will ever employ any sort of violence against an older one, or strike him. And I do not imagine he will fail to show him respect in other ways either, since two guardians—fear and shame—are sufficient to prevent it. Shame will prevent him from laying a hand on his parents, as will the fear that the others would come to his victim's aid—some because they are his sons, some because they are his brothers, and some because they are his fathers.

GLAUCON: Yes, that is what would happen.

SOCRATES: Then won't the laws induce men to live at peace with one another in all respects?

GLAUCON: Very much so.

SOCRATES: And if there is no faction among the guardians, there is no terrible danger that the rest of

21. [462b4–c9.]

22. [416d3–417b8.]

the city will form factions, either against them or among themselves.

GLAUCON: No, there is not.

SOCRATES: As for the pettiest of the evils the guardians would escape, they are so unseemly, I hesitate even to mention them: the flatteries of the rich
c by the poor; the perplexities and sufferings involved in bringing up children; the need to make the money necessary to feed the household— the borrowings, the defaults, and all the things people have to do to provide an income to hand over to their wives and slaves to spend on housekeeping. The various troubles men endure in these areas, my dear Glaucon, are obvious, quite demeaning, and not worth discussing.

d GLAUCON: They are obvious even to the blind.

SOCRATES: They will escape from all these things, then, and live a more blessedly happy life than the most blessedly happy one—that of the victors in the Olympian games.

GLAUCON: How so?

SOCRATES: Surely, these victors are considered happy on account of only a small part of what the guardians possess, since the latter victory is even finer, and their upkeep from public funds more complete.[23] After all, the victory they gain is the salvation of the whole city, and the crown of victory they and their children receive is their upkeep and all the necessities of life. They receive privileges from their own city
e during their lifetime and a worthy burial after their death.

GLAUCON: Yes, those are very fine rewards.

SOCRATES: Now, do you remember that earlier in our discussion we were rebuked by an argument—I forget whose—to the effect that we had not made our guardians happy, that though it was possible for them
466a to have everything that belongs to the citizens, they actually had nothing? We said, didn't we, that if this happened to come up at some point, we would look into it then, but that our concern at the time was to make our guardians *guardians*, and to make the *city* the happiest possible, rather than looking to any one group within it and molding it for happiness?[24]

GLAUCON: I remember.

SOCRATES: Well, then, if indeed the life of our auxiliaries has been shown to be much finer and better than that of Olympian victors, is there any need to compare it with the lives of shoemakers or any b other craftsmen, or with that of the farmers?

GLAUCON: I do not think there is.

SOCRATES: Nevertheless, it is surely right to repeat here what I also said on that earlier occasion: if a guardian tries to become happy in such a way that he is no longer a guardian at all, and is not satisfied with a life that is moderate, stable, and (we claim) best, but is seized by a foolish, adolescent belief about happiness, which incites him to use his power to take everything in the city for himself—he will come to c realize the true wisdom of Hesiod's saying that, in a sense, "the half is worth more than the whole."[25]

GLAUCON: If he takes my advice, he will keep to the former life.

SOCRATES: Do you agree, then, that the women should share with the men, in the way we described, in the areas of education, children, and guarding the other citizens; that whether they remain in the city or go out to war, they must guard together and hunt together, as hounds do, and share everything to the extent possible; and that by behaving in this way, they d will be doing what is best, not something contrary to the natural relationship of female to male, and the one they are most naturally fitted to share in with one another?

GLAUCON: I do agree.

SOCRATES: Then doesn't it remain for us to determine whether it is also possible among human beings, as it is among other animals, for this sort of sharing to come about, and if so, how?

GLAUCON: You took the words out of my mouth.

SOCRATES: As far as war is concerned, I think it is clear how they will wage it. e

GLAUCON: How?

SOCRATES: They will go to war together. What is more, they will take the children with them to the war, when they are sturdy enough, so that, like the children of other craftsmen, they can see what they will have to do in their own craft when they are grown

23. [Men victorious in the Olympic games were often awarded free meals for life by their cities.]

24. [419a1–421c6.]

25. [*Works and Days* 40.]

up. But in addition to observing, they should help
467a and assist in every aspect of war, and take care of their mothers and fathers. For haven't you noticed in the other crafts how the children of potters, for example, assist and watch for a long time before actually putting their hands to the clay?

GLAUCON: I have, indeed.

SOCRATES: Well, should these people take more care than the guardians in training their children by appropriate experience and observation?

GLAUCON: Of course not. That would be completely ridiculous.

SOCRATES: Besides, every animal will fight better
b in the presence of its young.

GLAUCON: That's right. But there is a risk, Socrates, and not a small one either, that in the event of a disaster of the sort that is likely to happen in a war, they will lose their children's lives as well as their own, making it impossible for the rest of the city to recover.

SOCRATES: That's true. But, in the first place, do you think they should arrange for the avoidance of all risk?

GLAUCON: Not at all.

SOCRATES: Well, then, if they must face some risk, shouldn't it be one in which they will be improved by success?

GLAUCON: Clearly.

SOCRATES: But you think, do you, that it makes little difference—and so is not worth the risk—
c whether or not men who are going to be warriors watch warfare when they are still boys?

GLAUCON: No, it does make a difference to what you are talking about.

SOCRATES: Starting from the assumption, then, that we are to make the children observers of war, we must further devise some way of keeping them safe. Then everything will be fine, won't it?

GLAUCON: Yes.

SOCRATES: Well, in the first place, their fathers won't be ignorant, will they, but rather as knowledgeable as people can be, about which military cam-
d paigns are dangerous and which are not?

GLAUCON: Presumably so.

SOCRATES: So, they will take the children on the latter, but be wary of taking them on the former.

GLAUCON: That's right.

SOCRATES: And they will not put the worst people in charge of them, I presume, but those whose experience and age qualifies them to be leaders and tutors.

GLAUCON: Yes, that would be proper.

SOCRATES: But we will say that the unexpected happens to many people and on many occasions.

GLAUCON: Yes, indeed.

SOCRATES: So, with that in mind, my friend, we must provide the young children with wings at the outset, so that, if the need arises, they can fly away and escape.

GLAUCON: What do you mean? e

SOCRATES: We must mount them on horses when they are still very young, and when they have been taught to ride, they must be taken to view the fighting, not on spirited or aggressive horses, but on the fastest and most manageable ones. In this way, they will get the best view of their own future job, and will be able to make the safest escape, if the need arises, by following their older leaders.

GLAUCON: I think you are right.

SOCRATES: What about warfare itself? How should your soldiers behave toward one another and 468a
the enemy? Are my views correct or not?

GLAUCON: Tell me what they are.

SOCRATES: If one of them leaves his post, throws away his shield, or does anything else of that sort out of cowardice, shouldn't he be demoted to craftsman or farmer?

GLAUCON: Certainly.

SOCRATES: And if anyone is captured alive by the enemy, shouldn't he be presented to his captors as a catch to use however they wish?

GLAUCON: Absolutely. b

SOCRATES: But if someone distinguishes himself and earns high honors, do you or don't you think that in the first place, while still on campaign, he should be crowned in turn by each of the adolescents and children who are with the army?

GLAUCON: I do.

SOCRATES: What about shaking him by the right hand?

GLAUCON: That too.

SOCRATES: But I do not imagine you would go so far as this.

GLAUCON: As what?

SOCRATES: That he should kiss, and be kissed by, each of them.

GLAUCON: By all means. And I would add to the law that while they are still on campaign, no one he wants to kiss shall be allowed to refuse, so that if *c* anyone passionately loves another, whether male or female, he will try harder to win the prize for bravery.

SOCRATES: Excellent! For we have already mentioned that more opportunities for marriage will be available for a good man,[26] and that men like him will be selected more often than others for such things, so that as many children as possible may be produced from them.

GLAUCON: Yes, we did mention that.

SOCRATES: Moreover, according to Homer too, it is just to honor in such ways those young people who are good. For Homer says that when Ajax distin- *d* guished himself in battle, he "was rewarded with the whole backbone,"[27] since he considered that to be an appropriate honor for a courageous young man because it honored him and built up his strength at the same time.

GLAUCON: That's absolutely right.

SOCRATES: Then we will follow Homer in this matter, at any rate. I mean that at sacrifices and all other such occasions, we too will honor good men—insofar as they have exhibited their goodness—not only with hymns and all the other things we mentioned, but also with "seats of honor, cuts of meats, and well-filled cups of wine,"[28] so that while honoring *e* our good men and women, we may train them at the same time.

GLAUCON: That's an excellent idea.

SOCRATES: All right. And if any of those who died while on campaign has had a particularly distinguished death, won't we, in the first place, declare that he belongs to the golden race?

GLAUCON: Absolutely.

SOCRATES: And won't we believe with Hesiod that, whenever any of that race die, they become *469a* "unsullied daimons living upon the earth, noble beings, protectors against evil, guardians of articulate mortals?"[29]

GLAUCON: We will certainly believe that.

SOCRATES: Won't we ask the god,[30] then, to tell us how and with what distinction these daimons, these godlike people, should be buried, and perform their burial in whatever way he prescribes?

GLAUCON: Of course.

SOCRATES: And for the remainder of time, won't we regard their graves as those of daimons, and take care of them and worship at them? And won't we follow these same rites whenever anyone who has *b* been judged outstandingly good throughout his life dies of old age, or in some other way?

GLAUCON: It would be just to do so, at any rate.

SOCRATES: Now, what about enemies? How will our soldiers behave toward them?

GLAUCON: In what respect?

SOCRATES: First, as regards enslavement, do you think it is just for Greek cities to enslave other Greeks, or should they try as hard as possible not even to allow other cities to do so, and make a habit of sparing the Greek race as a precaution against being enslaved by barbarians? *c*

GLAUCON: Sparing them is by far the best course.

SOCRATES: So, they should not possess any Greek slaves themselves, and should advise the other Greeks to do the same?

GLAUCON: By all means. In that way, at any rate, they would be more likely to turn against the barbarians and keep their hands off one another.

SOCRATES: What about despoiling the dead? Is it a good thing to strip the dead of anything besides their armor after a victory? Doesn't it give cowards a pretext for not facing the enemy, since when they *d* are greedily bending over corpses, they will be performing an important duty? And haven't many armies been lost because of such plundering?

GLAUCON: Yes, indeed.

SOCRATES: Don't you think it is illiberal and money-loving to strip a corpse? And isn't it small-minded and womanish to regard a dead body as your enemy, when the enemy himself has flitted away leaving behind only the instrument with which he fought? Do you think that people who do this are any different from dogs who get angry with the stones

26. [460b1–5.]

28. [*Iliad* 8.162.]
29. [*Works and Days* 122.]
30. [Apollo.]

e thrown at them but leave the person throwing them alone?

GLAUCON: No different at all.

SOCRATES: So they should not strip corpses, should they, or refuse the enemy permission to pick up their dead?

GLAUCON: No, by Zeus, they certainly should not.

SOCRATES: Moreover, we surely won't take weapons to the temples as offerings, and if we care anything about the goodwill of other Greeks, we especially
470a won't do this with Greek weapons. On the contrary, we would even be afraid of polluting the temples if we brought them such things from our own race, unless, of course, the god ordains otherwise.

GLAUCON: That's absolutely right.

SOCRATES: What about ravaging Greek land and burning Greek houses? How will your soldiers behave toward their enemies?

GLAUCON: I would like to hear what *you* believe about that.

SOCRATES: Well, I believe they should do neither of these things, but destroy only the year's harvest.
b Do you want me to tell you why?

GLAUCON: Of course.

SOCRATES: It seems to me that just as we have the two names "war" and "faction," so there are also two things, and the names apply to differences between the two. The two I mean are, on the one hand, what is one's own and kin, and, on the other, what is foreign and strange. "Faction" applies to hostility toward one's own, "war" to hostility toward strangers.

GLAUCON: Yes, there is nothing wrong with that claim.

SOCRATES: Consider, then, whether this too is
c correct. I say that the Greek race, in relation to itself, is its own and kin, but, in relation to barbarians, is strange and foreign.

GLAUCON: That's right.

SOCRATES: When Greeks fight with barbarians, then, or barbarians with Greeks, we will say that that is warfare, that they are natural enemies, and that such hostilities should be called war. But when Greeks engage in such things with Greeks, we will say they are natural friends, that Greece is sick and divided into factions in such a situation, and that
d such hostilities should be called faction.

GLAUCON: I, for one, agree to think that way.

SOCRATES: Now, notice that whenever something of the sort that is currently called faction occurs and a city is divided, if each side devastates the land and burns the houses of the other, the faction is thought abominable and neither party is thought to love the city—otherwise they would never have dared to ravage their own nurse and mother. But it is thought reasonable for the ones who have proved stronger to carry off the weaker ones' crops, and to have the attitude of mind of people who will one day be recon- e
ciled and won't always be at war.

GLAUCON: That attitude of mind is far more civilized than the other.

SOCRATES: What about the city you are founding? Won't it be Greek?

GLAUCON: It will have to be.

SOCRATES: So won't its citizens be good and civilized people?

GLAUCON: Indeed, they will.

SOCRATES: Then won't they be lovers of Greeks? Won't they consider Greece as their own and share the same religious festivals as other Greeks?

GLAUCON: Yes, indeed.

SOCRATES: Then won't they regard their conflicts with Greeks—their own people—as faction, and not 471a
even use the name "war"?

GLAUCON: No, they won't use it.

SOCRATES: And so, they will quarrel with the aim of being reconciled, won't they?

GLAUCON: Of course.

SOCRATES: They will discipline their foes in a friendly spirit, then, and not punish them with enslavement and destruction, since they are disciplinerS, not enemies.

GLAUCON: That's right.

SOCRATES: As Greeks, then, they won't devastate Greece or burn its houses, nor will they agree that *all* the inhabitants in any city—men, women, and children—are their enemies, but only those few responsible for the conflict. For all these reasons, they won't be willing to devastate their country, since the b
majority of the inhabitants are their friends, nor destroy the houses, and they will pursue the conflict only to the point at which those responsible are forced to pay the penalty by the innocent ones who are suffering painfully.

GLAUCON: I agree that this is how our citizens should treat their enemies, but they should treat barbarians the way Greeks currently treat each other.

SOCRATES: Then shall we also establish this law for the guardians, that they should neither ravage
c Greek land nor burn Greek houses?

GLAUCON: Yes, let's establish it. And let's assume that this law and its predecessors are right. But, Socrates, I think that if you are allowed to go on talking about this sort of thing, you will never remember the topic you set aside in order to say all this—namely, whether it is possible for this constitution to come into existence, and how it could ever do so. I agree that *if* it came into existence, everything would be lovely for the city that had it. I will even add some advantages that you have left out: they would fight excellently against their enemies because they would
d be least likely to desert each other. After all, they recognize each other as brothers, fathers, and sons, and call each other by those names. And if the women, too, joined in their campaigns, either stationed in the same ranks or in the rear, either to strike terror in the enemy or to provide support should the need ever arise, I know that this would make them quite unbeatable. And I also see all the good things they would have at home that you have omitted. Take
e it for granted that I agree that all these benefits, as well as innumerable others, would result, *if* this constitution came into existence, and say no more about it. Instead, let's now try to convince ourselves of just this: that it is possible and how it is possible, and let's leave the rest aside.

SOCRATES: All of a sudden, you have practically
472a assaulted my argument and lost all sympathy for my holding back. Perhaps you do not realize that just as I have barely escaped from the first two waves of objections, you are now bringing the biggest and most difficult of the three down upon me.[31] When you see and hear it, you will have complete sympathy and recognize that I had good reason after all for hesitating and for being afraid to state and try to examine so paradoxical an argument.

GLAUCON: The more you talk like that, the less we will let you get away without explaining how this constitution could come into existence. So explain b it, and do not delay any further.

SOCRATES: The first thing to recall, then, is that it was our inquiry into the nature of justice and injustice that brought us to this point.

GLAUCON: True. But what of it?

SOCRATES: Oh, nothing. However, if we discover the nature of justice, should we also expect the just man not to differ from justice itself in any way, but, on the contrary, to have entirely the same nature it does? Or will we be satisfied if he approximates as closely as possible to it and partakes in it far more c than anyone else?

GLAUCON: Yes, we will be satisfied with that.

SOCRATES: So, it was in order to have a model that we were inquiring into the nature of justice itself and of the completely just man, supposing he could exist, and what he would be like if he did; and similarly with injustice and the most unjust man. We thought that by seeing how they seemed to us to stand with regard to happiness and its opposite, we would also be compelled to agree about ourselves as well: that the one who was most like them would have a fate most like theirs. But d we were not doing this in order to demonstrate that it is possible for these men to exist.

GLAUCON: That's true.

SOCRATES: Do you think, then, that someone would be any less good a painter if he painted a model of what the most beautiful human being would be like, and rendered everything in the picture perfectly well, but could not demonstrate that such a man could actually exist?

GLAUCON: No, by Zeus, I do not.

SOCRATES: What about our own case, then? Weren't we trying, as we put it, to produce a model in our discussion of a good city? e

GLAUCON: Certainly.

SOCRATES: So, do you think that our discussion will be any less satisfactory if we cannot demonstrate that it is possible to found a city that is the same as the one we described in speech?

GLAUCON: Not at all.

SOCRATES: Then that is the truth of the matter. But if, in order to please you, we must do our best to demonstrate how, and under what condition, this would be most possible, you must again grant me the same points for the purposes of that demonstration.

31. [The third wave was proverbially the greatest.]

GLAUCON: Which ones?

SOCRATES: Is it possible for anything to be carried
473a out exactly as described in speech, or is it natural for practice to have less of a grasp of truth than speech does, even if some people do not think so? Do you agree with this or not?

GLAUCON: I do.

SOCRATES: Then do not compel me to demonstrate it as coming about in practice exactly as we have described it in speech. Rather, if we are able to discover how a city that most closely approximates to what we have described could be founded, you must admit that we have discovered how all you have pre-
b scribed could come about. Or wouldn't you be satisfied with that? *I* certainly would.

GLAUCON: Me, too.

SOCRATES: Then next, it seems, we should try to discover and show what is badly done in cities nowadays that prevents them from being managed our way, and what the smallest change would be that would enable a city to arrive at our sort of constitution—preferably one change; otherwise, two; otherwise, the fewest in number and the least extensive in effect.

c GLAUCON: Absolutely.

SOCRATES: Well, there is one change we could point to that I think would accomplish this. It certainly is not small or easy, but it *is* possible.

GLAUCON: What is it?

SOCRATES: I am now about to confront what we likened to the greatest wave. Yet, it must be stated, even if it is going to drown me in a wave of outright ridicule and contempt, as it were. So listen to what I am about to say.

GLAUCON: Say it.

SOCRATES: Until philosophers rule as kings in their cities, or those who are nowadays called kings and leading men become genuine and adequate
d philosophers so that political power and philosophy become thoroughly blended together, while the numerous natures that now pursue either one exclusively are forcibly prevented from doing so, cities will have no rest from evils, my dear Glaucon, nor, I think, will the human race. And until that happens, the same constitution we have now described in our dis-
e cussion will never be born to the extent that it can, or see the light of the sun. It is this claim that has made me hesitate to speak for so long. I saw how very unbelievable it would sound, since it is difficult to accept that there can be no happiness, either public or private, in any other way.

GLAUCON: Socrates, what a speech, what an argument you have let burst with! But now that you have uttered it, you must expect that a great many people—and not undistinguished ones either—will immediately throw off their cloaks and, stripped for action, 474a
snatch any available weapon and make a headlong rush at you, determined to do terrible things to you. So, if you do not defend yourself by argument and escape, you really will pay the penalty of general derision.

SOCRATES: But aren't *you* the one who is responsible for this happening to me?

GLAUCON: And I was right to do it. Still, I won't desert you. On the contrary, I will defend you in any way I can. And what I can do is provide good will and encouragement, and maybe give you more careful answers to your questions than someone else. So, with the promise of this sort of assistance, try to demon- b
strate to the unbelievers that things are as you claim.

SOCRATES: I will have to, especially when you agree to be so great an ally! If we are going to escape from the people you mention, I think we need to define for them who the philosophers are that we dare to say should rule; so that once that is clear, one can defend oneself by showing that some people are fitted by nature to engage in philosophy *and* to take c
the lead in a city, while there are others who should not engage in it, but should follow a leader.

GLAUCON: This would be a good time to define them.

SOCRATES: Come on, then, follow me on the path I am about to take, to see if it somehow leads to an adequate explanation.

GLAUCON: Lead on.

SOCRATES: Do I have to remind you, or do you recall, that when we say someone loves something, if the description is correct, it must be clear not just that he loves some part of it but not another; but, on the contrary, that he cherishes the whole of it?

GLAUCON: You will have to remind me, it seems. I do not recall the point at all. d

SOCRATES: I did not expect you to give that response, Glaucon. A passionate man should not forget that *all* boys in the bloom of youth somehow manage

to sting and arouse a passionate lover of boys, and seem to merit his attention and passionate devotion. Isn't that the way you people behave to beautiful boys? One, because he is snub-nosed, you will praise as "cute"; another who is hook-nosed you will say is "regal"; while the one in the middle you say is "well
e proportioned." Dark ones look "manly," and pale ones are "children of the gods." As for the "honey-colored," do you think that this very term is anything but the euphemistic coinage of a lover who found it easy to tolerate a sallow complexion, provided it was accompanied by the bloom of youth? In a word, you people find any excuse, and use any expression, to
475a avoid rejecting anyone whose flower is in full bloom.

GLAUCON: If you insist on taking *me* as your example of what passionate men do, I will go along with you . . . for the sake of argument!

SOCRATES: What about lovers of wine? Don't you observe them behaving in just the same way? Don't they find any excuse to indulge their passionate devotion to wine of any sort?

GLAUCON: They do, indeed.

SOCRATES: And you also observe, I imagine, that if honor-lovers cannot become generals, they serve as lieutenants,[32] and if they cannot be honored by important people and dignitaries, they are satisfied
b with being honored by insignificant and inferior ones, since it is honor as a whole of which they are desirers.

GLAUCON: Exactly.

SOCRATES: Then do you affirm this or not? When we say that someone has an appetite for something, are we to say that he has an appetite for everything of that kind, or for one part of it but not another?

GLAUCON: Everything.

SOCRATES: Then in the case of the philosopher, too, won't we say that he has an appetite for *wisdom*—not for one part and not another, but for all of it?

GLAUCON: True.

SOCRATES: So, if someone is choosy about what he learns, especially if he is young and does not have a
c rational grasp of what is useful and what is not, we won't say that he is a lover of learning or a philosopher—any more than we would say that someone who is choosy about his food is famished, or has an appetite for food, or is a lover of food rather than a picky eater.

GLAUCON: And we would be right not to say it.

SOCRATES: But someone who is ready and willing to taste every kind of learning, who turns gladly to learning and is insatiable for it, *he* is the one we would be justified in calling a philosopher. Isn't that so?

GLAUCON: In that case, many strange people will be philosophers! I mean, all the lovers of seeing are d what they are, I imagine, because they take pleasure in learning things. And the lovers of listening are very strange people to include as philosophers: they would never willingly attend a serious discussion or spend their time that way; yet, just as if their ears were under contract to listen to every chorus, they run around to all the Dionysiac festivals, whether in cities or villages, and never miss one. Are we to say that these people—and others who are students of similar things or of petty crafts—are philosophers? e

SOCRATES: Not at all, but they are *like* philosophers.

GLAUCON: Who do you think, then, are the true ones?

SOCRATES: The lovers of seeing the truth.

GLAUCON: That, too, is no doubt correct, but what exactly do you mean by it?

SOCRATES: It would not be easy to explain to someone else. But you, I imagine, will agree to the following.

GLAUCON: What?

SOCRATES: That since beautiful is the opposite of ugly, they are two things.

GLAUCON: Of course. 476a

SOCRATES: And since they are two things, each of them is also one?

GLAUCON: That's true too.

SOCRATES: And the same argument applies, then, to just and unjust, good and bad, and all the forms: each of them is itself one thing, but because they appear all over the place in partnership with actions and bodies, and with one another, each of them appears to be many things.

GLAUCON: That's right.

SOCRATES: Well, then, that is the basis of the distinction I draw: on one side are the lovers of seeing, the lovers of crafts, and the practical people you

32. [*Trittarchousi:* "command the soldiers in a trittys." A trittys was one third of one of the ten tribes of which Athens consisted.]

mentioned a moment ago; on the other, those we are
b arguing about, the only ones it is correct to call philosophers.

GLAUCON: How do you mean?

SOCRATES: The lovers of listening and seeing are passionately devoted to beautiful sounds, colors, shapes, and everything fashioned out of such things.[33] But their thought is unable to see the nature of the beautiful itself or to be passionately devoted to it.

GLAUCON: That's certainly true.

SOCRATES: On the other hand, won't those who *are* able to approach the beautiful itself, and see it by itself, be rare?

c GLAUCON: Very.

SOCRATES: What about someone who believes in beautiful things but does not believe in the beautiful itself, and would not be able to follow anyone who tried to lead him to the knowledge of it? Do you think he is living in a dream, or is he awake? Just consider. Isn't it dreaming to think—whether asleep or awake—that a likeness is not a likeness, but rather the thing itself that it is like?

GLAUCON: I certainly think that someone who does that is dreaming.

SOCRATES: But what about someone who, to take the opposite case, does believe in the beautiful itself, is able to observe both it and the things that participate
d in it, and does not think that the participants are it, or that it is the participants—do you think he is living in a dream or is awake?

GLAUCON: He is very much awake.

SOCRATES: So, because this person knows these things, we would be right to describe his thought as knowledge; but the other's we would be right to describe as belief, because he believes what he does?

GLAUCON: Certainly.

SOCRATES: What if the person we describe as believing but not knowing is angry with us and disputes the truth of what we say? Will we have any way of
e soothing and gently persuading him, while disguising the fact that he is not in a healthy state of mind?

GLAUCON: We certainly need one, at any rate.

SOCRATES: Come on, then, consider what we will say to him. Or—once we have told him that nobody envies him any knowledge he may have—that, on the contrary, we would be delighted to discover that he knows something—do you want us to question him as follows? "Tell us this: does someone who knows know something or nothing?" You answer for him.

GLAUCON: I will answer that he knows something.

SOCRATES: Something that is or something that is not?

GLAUCON: That is. How could something that is not be known? 477a

SOCRATES: We are adequately assured of this, then, and would remain so, no matter how many ways we examined it: what completely is, is completely an object of knowledge; and what in no way is, is not an object of knowledge at all?

GLAUCON: Most adequately.

SOCRATES: Good. In that case, then, if anything is such as to be and also not to be, wouldn't it lie in between what purely is and what in no way is?

GLAUCON: Yes, in between them.

SOCRATES: Then, since knowledge deals with what is, ignorance must deal with what is not, while we must look in between knowledge and ignorance for what deals with what lies in between, if there *is* anything of that sort. b

GLAUCON: Yes.

SOCRATES: So, then, do we think there is such a thing as belief?

GLAUCON: Of course.

SOCRATES: Is it a different power from knowledge, or the same?

GLAUCON: A different one.

SOCRATES: So, belief has been assigned to deal with one thing, then, and knowledge with another, depending on what power each has.

GLAUCON: Right.

SOCRATES: Now, doesn't knowledge naturally deal with what is, to know how what is is? But first I think we had better go through the following.

GLAUCON: What?

SOCRATES: We think powers are a type of thing c
that enables us—or anything else that has an ability—to do whatever we are able to do. Sight and hearing are examples of what I mean by powers, if you understand the kind of thing I am trying to describe.

GLAUCON: Yes, I do.

33. [A poem or play is fashioned out of sounds, a painting out of colors and shapes.]

SOCRATES: Listen, then, to what I think about them. A power has no color for me to see, nor a shape, nor any feature of the sort that many other things have, and that I can consider in order to distinguish them for myself as different from one another. In the case of a power, I can consider only what it
d deals with and what it does, and it is on that basis that I come to call each the power it is: those assigned to deal with the same things and do the same, I call the same; those that deal with different things and do different things, I call different. What about you? What do you do?

GLAUCON: The same.

SOCRATES: Going back, then, to where we left off, my very good fellow: do you think knowledge is itself a power? Or to what type would you assign it?

GLAUCON: To that one. It is the most effective power of all.

SOCRATES: What about belief? Shall we include
e it as a power or assign it to a different kind?

GLAUCON: Not at all. Belief is nothing other than the power that enables us to believe.

SOCRATES: But a moment ago you agreed that knowledge and belief are not the same.

GLAUCON: How could anyone with any sense think a fallible thing is the same as an infallible one?

SOCRATES: Fine. Then clearly we agree that be-
478a lief is different from knowledge.

GLAUCON: Yes, it is different.

SOCRATES: Each of them, then, since it has a different power, deals by nature with something different?

GLAUCON: Necessarily.

SOCRATES: Surely knowledge deals with what is, to know what is as it is?

GLAUCON: Yes.

SOCRATES: Whereas belief, we say, believes?

GLAUCON: Yes.

SOCRATES: The very same thing that knowledge knows? Can the object of knowledge and the object of belief be the same? Or is that impossible?

GLAUCON: It is impossible, given what we have agreed. If different powers by nature deal with different things, and both opinion and knowledge are powers but, as we claim, different ones, it follows from
b these that the object of knowledge and the object of belief cannot be the same.

SOCRATES: Then if what is is the object of knowledge, mustn't the object of belief be something other than what is?

GLAUCON: Yes, it must be something different.

SOCRATES: Does belief, then, believe what is not? Or is it impossible even to believe what is not? Consider this: doesn't a believer take his belief to deal with something? Or is it possible to believe, yet to believe nothing?

GLAUCON: No, it is impossible.

SOCRATES: In fact, there is some single thing that a believer believes?

GLAUCON: Yes.

SOCRATES: But surely what is not is most correctly characterized not as a single thing, but as nothing? *c*

GLAUCON: Of course.

SOCRATES: But we had to assign ignorance to what is not and knowledge to what is?

GLAUCON: Correct.

SOCRATES: So belief neither believes what is nor what is not?

GLAUCON: No, it does not.

SOCRATES: Then belief cannot be either ignorance or knowledge?

GLAUCON: Apparently not.

SOCRATES: Well, then, does it lie beyond these two, surpassing knowledge in clarity or ignorance in opacity?

GLAUCON: No, it does neither.

SOCRATES: Then does belief seem to you to be more opaque than knowledge but clearer than ignorance?

GLAUCON: Very much so.

SOCRATES: It lies within the boundaries determined by them? *d*

GLAUCON: Yes.

SOCRATES: So belief will lie in between the two?

GLAUCON: Absolutely.

SOCRATES: Now, didn't we say earlier that if something turned out both to be and not to be at the same time, it would lie in between what purely is and what in every way is not, and that neither knowledge nor ignorance would deal with it; but whatever it was again that turned out to lie in between ignorance and knowledge would?

GLAUCON: Correct.

SOCRATES: And now, what we are calling belief has turned out to lie in between them?

GLAUCON: It has.

SOCRATES: Apparently, then, it remains for us to
e find what partakes in both being and not being, and cannot correctly be called purely one or the other, so that if we find it, we can justifiably call it the object of belief, thereby assigning extremes to extremes and in-betweens to in-betweens. Isn't that so?

GLAUCON: It is.

SOCRATES: Now that all that has been established, I want him to tell me this—the excellent fellow who believes that there is no beautiful itself, no form of
479a beauty itself that remains always the same in all respects, but who does believe that there are many beautiful things—I mean, that lover of seeing who cannot bear to hear anyone say that the beautiful is one thing, or the just, or any of the rest—I want him to answer this question: "My very good fellow," we will say, "of all the many beautiful things, is there one that won't also seem ugly? Or any just one that won't seem unjust? Or any pious one that won't seem impious?"

GLAUCON: There is not. On the contrary, it is inevitable that they would somehow seem both beau-
b tiful and ugly; and the same with the other things you asked about.

SOCRATES: What about the many things that are doubles? Do they seem to be any the less halves than doubles?

GLAUCON: No.

SOCRATES: And again, will things that we say are big, small, light, or heavy be any more what we say they are than they will be the opposite?

GLAUCON: No, each of them is always both.

SOCRATES: Then is each of the many things any more what one says it is than it is not what one says it is?

GLAUCON: No, they are like those puzzles one hears at parties, or the children's riddle about the
c eunuch who threw something at a bat—the one about what he threw at it and what it was in.[34] For these things, too, are ambiguous, and one cannot understand them as fixedly being or fixedly not being, or as both, or as neither.

SOCRATES: Do you know what to do with them, then, or anywhere better to put them than in between being and not being? Surely they cannot be more opaque than what is not, by not-being more than it; nor clearer than what is, by *being* more than it. d

GLAUCON: That's absolutely true.

SOCRATES: So, we have now discovered, it seems, that the majority of people's many conventional views about beauty and the rest are somehow rolling around between what is not and what purely is.

GLAUCON: We have.

SOCRATES: And we agreed earlier that if anything turned out to be of that sort, it would have to be called an object of belief, not an object of knowledge—a wandering, in-between object grasped by the in-between power.

GLAUCON: We did.

SOCRATES: As for those, then, who look at many beautiful things but do not see the beautiful itself, e
and are incapable of following another who would lead them to it; or many just things but not the just itself, and similarly with all the rest—these people, we will say, have beliefs about all these things, but have no knowledge of what their beliefs are about.

GLAUCON: That is what we would have to say.

SOCRATES: On the other hand, what about those who in each case look at the things themselves that are always the same in every respect? Won't we say that they have knowledge, not mere belief?

GLAUCON: Once again, we would have to.

SOCRATES: Shall we say, then, that these people are passionately devoted to and love the things with which knowledge deals, as the others are devoted to and love the things with which belief deals? We have 480a
not forgotten, have we, that the latter love and look at beautiful sounds, colors, and things of that sort,

34. [The riddle seems to have been this: a man who is not a man saw and did not see a bird that was not a bird in a tree (*xulon*) that was not a tree; he hit (*ballein*) and did not hit it with a stone that was not a stone. The answer is that a eunuch with bad eyesight saw a bat on a rafter, threw a pumice stone at it, and missed. For "he saw a bird" is ambiguous between "he saw what was actually a bird" and "he saw what he took to be a bird," *xulon* means both "tree" and "rafter" or "roof tree," and *ballein* means both "to throw" and "to hit." The rest is obvious.]

but cannot even bear the idea that the beautiful itself is a thing that is?

GLAUCON: No, we have not.

SOCRATES: Will we be striking a false note,[35] then, if we call such people "philodoxers" (lovers of belief) rather than "philosophers" (lovers of wisdom or knowledge)? Will they be very angry with us if we call them that?

GLAUCON: Not if they take my advice. It is not in accord with divine law to be angry with the truth.

SOCRATES: So, those who in each case are passionately devoted to the thing itself are the ones we must call, not "philodoxers," but "philosophers"?

GLAUCON: Absolutely.

BOOK VI

SOCRATES' NARRATION CONTINUES:

SOCRATES: Who the philosophers are, then, Glaucon, and who they aren't has, through a some-
484a what lengthy argument and with much effort, somehow been made clear.

GLAUCON: That's probably because it could not easily have been done through a shorter one.

SOCRATES: I suppose not. Yet I, at least, think that the matter would have been made even clearer if we had had only that topic to discuss, and not the many others that remain for us to explore if we are to discover the difference between the just life and the
b unjust one.

GLAUCON: What comes after this one, then?

SOCRATES: What else but the one that comes next? Since the philosophers are the ones who are able to grasp what is always the same in all respects, while those who cannot—those who wander among the many things that vary in every sort of way—are not philosophers, which of the two should be the leaders of a city?

GLAUCON: What would be a reasonable answer for us to give?

SOCRATES: Whichever of them seems capable of guarding a city's laws and practices should be established as guardians. c

GLAUCON: That's right.

SOCRATES: So, is the answer to the following question clear: should a guardian who is going to keep watch over something be blind or keen-sighted?

GLAUCON: Of course it is.

SOCRATES: Well, do you think there is any difference, then, between the blind and those who are really deprived of the knowledge of each thing that is, and have no clear model of it in their souls—those who cannot look away, like painters, to what is most true, and cannot, by making constant reference to it and by studying it as exactly as possible, establish here on earth conventional views about beautiful, just, or d
good things when they need to be established, or guard and preserve those that have been established?

GLAUCON: No, by Zeus, there is not much difference between them.

SOCRATES: Shall we appoint these blind people as our guardians, then, or those who know each thing that is, have no less experience than the others, and are not inferior to them in any other part of virtue?

GLAUCON: It would be absurd to choose anyone but philosophers, if indeed they are not inferior in these other things. For the very area in which they are superior is just about the most important one.

SOCRATES: Shouldn't we explain, then, how the 485a
same men can have both sets of qualities?

GLAUCON: Certainly.

SOCRATES: Then, as we were saying at the beginning of this discussion, it is first necessary to understand the nature of philosophers. And I think that if we can agree sufficiently about that, we will also agree that the same people *can* have both qualities, and that they alone should be leaders in cities.

GLAUCON: How so?

SOCRATES: Let's agree that philosophic natures always love the sort of learning that makes clear to them some feature of the being that always is and b
does not wander around between coming-to-be and decaying.

GLAUCON: Yes, let's.

SOCRATES: And further, let's agree that they love all of it and are not willing to give up any part, whether large or small, significant or insignificant, just like the honor-lovers and passionate men we described before.

35. [See 451b3.]

GLAUCON: That's right.

SOCRATES: Consider next whether there is a further feature they must have in their nature if they
c are going to be the way we described.

GLAUCON: What?

SOCRATES: Truthfulness; that is to say they must never willingly tolerate falsehood in any form. On the contrary, they must hate it and have a natural affection for the truth.

GLAUCON: They probably should have that feature.

SOCRATES: But it is not only *probable*, my friend; it is entirely necessary for a naturally passionate man to love everything akin to or related to the boys he loves.

GLAUCON: That's right.

SOCRATES: Well, could you find anything that is more intimately related to wisdom than truth?

GLAUCON: Of course not.

SOCRATES: Then is it possible for the same nature to be a philosopher (lover of wisdom) and a lover
d of falsehood?

GLAUCON: Certainly not.

SOCRATES: So, right from childhood, a genuine lover of learning must strive above all for truth of every kind.

GLAUCON: Absolutely.

SOCRATES: But in addition, when someone's appetites are strongly inclined in one direction, we surely know that they become more weakly inclined in the others, just like a stream that has been partly diverted into another channel.

GLAUCON: Of course.

SOCRATES: Then when a person's desires flow toward learning and everything of that sort, they will be concerned, I imagine, with the pleasures that the soul experiences just by itself, and will be indifferent to those that come through the body—if indeed the person is not a counterfeit, but rather a true,
e philosopher.

GLAUCON: That's entirely inevitable.

SOCRATES: A person like that will be temperate, then, and in no way a lover of money. After all, money and the big expenditures that go along with it are sought for the sake of things that other people may take seriously, but that he does not.

GLAUCON: That's right.

SOCRATES: And of course, there is also this to consider when you are going to judge whether a *486a* nature is philosophic or not.

GLAUCON: What?

SOCRATES: You should not overlook its sharing in illiberality; for surely petty-mindedness is altogether incompatible with that quality in a soul that is always reaching out to grasp all things as a whole, whether divine or human.

GLAUCON: That's absolutely true.

SOCRATES: And do you imagine that a thinker who is high-minded enough to look at all time and all being will consider human life to be a very important thing?

GLAUCON: He couldn't possibly.

SOCRATES: Then he won't consider death to be a terrible thing either, will he? *b*

GLAUCON: Not in the least.

SOCRATES: Then a cowardly and illiberal nature could not partake, apparently, in true philosophy.

GLAUCON: Not in my opinion.

SOCRATES: Well, then, is there any way that an orderly person, who is not money-loving, illiberal, a lying imposter, or a coward, could come to drive a hard bargain or be unjust?

GLAUCON: There is not.

SOCRATES: Moreover, when you are considering whether someone has a philosophic soul or not, you will consider whether he is just and gentle, right from the time he is young, or unsociable and savage.

GLAUCON: Of course.

SOCRATES: And you won't ignore this either, I imagine. *c*

GLAUCON: What?

SOCRATES: Whether he is a slow learner or a fast one. Or do you expect someone to love something sufficiently well when it pains him to do it and a lot of effort brings only a small return?

GLAUCON: No, it could not happen.

SOCRATES: What if he could retain nothing of what he learned, because he was completely forgetful? Could he fail to be empty of knowledge?

GLAUCON: Of course not.

SOCRATES: Then if he is laboring in vain, don't you think that in the end he is bound to hate himself and what he is doing?

GLAUCON: Of course.

SOCRATES: So let's never include a person with a forgetful soul among those who are sufficiently
d philosophical; the one we look for should be good at remembering.

GLAUCON: Absolutely.

SOCRATES: Moreover, we would deny that an unmusical and graceless nature is drawn to anything besides what is disproportionate.

GLAUCON: Of course.

SOCRATES: And do you think that truth is akin to what is disproportionate or to what is proportionate?

GLAUCON: To what is proportionate.

SOCRATES: Then, in addition to those other things, let's look for a mind that has a natural sense of proportion and grace, one whose innate disposition makes it easy to lead to the form of each thing which is.

GLAUCON: Indeed.

SOCRATES: Well, then, do you think the proper-
e ties we have gone through aren't interconnected, or that any of them is in any way unnecessary to a soul that is going to have a sufficiently complete grasp of what is?

487a GLAUCON: No, they are all absolutely necessary.

SOCRATES: Is there any criticism you can find, then, of a pursuit that a person cannot practice adequately unless he is naturally good at remembering, quick to learn, high-minded, graceful, and a friend and relative of truth, justice, courage, and temperance?

GLAUCON: Not even Momus could criticize a pursuit like that.

SOCRATES: Well, then, when people of this sort are in perfect condition because of their education and their stage of life, wouldn't you entrust the city to them alone?

And Adeimantus replied:

No one, Socrates, would be able to contradict these
b claims of yours. But all the same, here is pretty much the experience people have on any occasion on which they hear the sorts of things you are now saying: they think that because they are inexperienced in asking and answering questions, they are led astray a little bit by the argument at every question, and that when these little bits are added together at the end of the discussion, a big false step appears that is the opposite of what they said at the outset. Like the unskilled, who are trapped by the clever checkers players in the end and cannot make a move, they too are trapped in the end, and have nothing to say in this different *c* kind of checkers, which is played not with pieces, but with words. Yet they are not a bit more inclined to think that what you claim is true. I say this in relation to the present case. You see, someone might well say now that he is unable to find the words to oppose you as you ask each of your questions. Yet, when it comes to facts rather than words, he sees that of all those who take up philosophy—not those who merely dabble in it while still young in order to complete their upbringing, and then drop it, but those who continue in it for a longer time—the majority *d* become cranks, not to say completely bad, while the ones who seem best are rendered useless to the city because of the pursuit you recommend.

When I had heard him out, I said:

Do you think that what these people say is false?

ADEIMANTUS: I do not know. But I would be glad to hear what you think.

SOCRATES: You would hear that they seem to me to be telling the truth.

ADEIMANTUS: How, then, can it be right to say that there will be no end to evils in our cities until *e* philosophers—people we agree to be useless to cities—rule in them?

SOCRATES: The question you ask needs to be answered by means of an image.[1]

ADEIMANTUS: And you, of course, are not used to speaking in images!

SOCRATES: So! After landing me with a claim that is so difficult to establish, are you mocking me, too? Anyway, listen to my image, and you will appreciate *488a* all the more how I have to strain to make up images. What the best philosophers experience in relation to cities is so difficult to bear that there is no other single experience like it. On the contrary, one must construct one's image and one's defense of these philosophers from *many* sources, just as painters paint

1. [*Eikos:* also, likeness.]

goat-stags by combining the features of different things.

Imagine, then, that the following sort of thing happens either on one ship or on many. The shipowner is taller and stronger than everyone else on board. But he is hard of hearing, he is a bit shortsighted, *b* and his knowledge of seafaring is correspondingly deficient. The sailors are quarreling with one another about captaincy. Each of them thinks that he should captain the ship, even though he has not yet learned the craft and cannot name his teacher or a time when he was learning it. Indeed, they go further and claim that it cannot be taught at all, and are even ready to cut to pieces anyone who says it can. They are always crowding around the shipowner himself, pleading *c* with him, and doing everything possible to get him to turn the rudder over to them. And sometimes, if they fail to persuade him and others succeed, they execute those others or throw them overboard. Then, having disabled their noble shipowner with mandragora[2] or drink or in some other way, they rule the ship, use up its cargo drinking and feasting, and make the sort of voyage you would expect of such people. In addition, they praise anyone who is clever at persuading or forcing the shipowner to let them rule, *d* calling him a "sailor," a "skilled captain," and "an expert about ships" while dismissing anyone else as a good-for-nothing. They do not understand that a true captain must pay attention to the seasons of the year, the sky, the stars, the winds, and all that pertains to his craft if he is really going to be expert at ruling a ship. As for *how* he is going to become captain of *e* the ship, whether people want him to or not, they do not think it possible to acquire the craft or practice of doing this at the same time as the craft of captaincy. When that is what is happening onboard ships, don't you think that a true captain would be sure to be called a "stargazer," a "useless babbler," and a "good-*489a* for-nothing" by those who sail in ships so governed?

ADEIMANTUS: I certainly do.

SOCRATES: I do not think you need to examine the image to see the resemblance to cities and how they're disposed toward true philosophers, but you already understand what I mean.

ADEIMANTUS: Indeed, I do.

SOCRATES: First teach this image, then, to the person who is surprised that philosophers are not honored in cities, and try to persuade him that it would be far more surprising if they were honored. *b*

ADEIMANTUS: I will.

SOCRATES: Furthermore, try to persuade him that you are speaking the truth when you say that the best among the philosophers are useless to the masses. But tell him to blame their uselessness on those who do not make use of them, not on those good philosophers. You see, it is not natural for the captain to beg the sailors to be ruled by him, nor for the wise to knock at the doors of the rich. The man who came up with that bit of sophistry was lying.[3] What is truly natural is for the sick person, rich or poor, to go to doctors' doors, and for anyone who needs to be ruled *c* to go to the doors of the one who can rule him. It is not for the ruler—if he is truly any use—to beg the subjects to accept his rule. Tell him he will make no mistake if he likens our present political rulers to the sailors we mentioned a moment ago, and those who are called useless stargazers by them to the true ship's captains.

ADEIMANTUS: That's absolutely right.

SOCRATES: For those reasons, then, and in these circumstances, it is not easy for the best pursuit to be highly honored by those whose pursuits are its very opposites. But by far the greatest and most serious slander is brought on philosophy by those who claim *d* to practice it—the ones about whom the prosecutor of philosophy declares, as you put it, that the majority of those who take it up are completely bad, while the best ones are useless. And I admitted that what you said was true, didn't I?[4]

ADEIMANTUS: Yes.

SOCRATES: Haven't we now explained why the good ones are useless?

ADEIMANTUS: We certainly have.

SOCRATES: Do you next want us to discuss why it is inevitable that the greater number are bad, and

2. [An intoxicant.]

3. [Aristotle, *Rhetoric* 1391a7–12, says that when Simonides was asked whether it was better to be rich or wise, he replied: "Rich—because the wise spend their time at the doors of the rich."]

4. [487d10.]

try to show, if we can, that philosophy is not responsible for this either?

ADEIMANTUS: Certainly.

SOCRATES: Then let's begin our dialogue by recalling the starting point of our description of the nature that someone must have if he is to become a fine and good person. First of all, if you remember, he was led by truth,[5] and he had to follow it wholeheartedly and unequivocally, on pain of being a lying imposter with no share at all in true philosophy.

ADEIMANTUS: That's what we said.

SOCRATES: Well, isn't that fact alone completely contrary to the belief currently held about him?

ADEIMANTUS: It certainly is.

SOCRATES: So, won't it be reasonable, then, for us to plead in his defense that a real lover of learning naturally strives for what is? He does not linger over each of the many things that are believed to be, but keeps on going, without losing or lessening his passion, until he grasps what the nature of each thing itself is with the element in his soul that is fitted to grasp a thing of that sort because of its kinship with it. Once he has drawn near to it, has intercourse with what really is, and has begotten understanding and truth, he knows, truly lives, is nourished, and—at that point, but not before—is relieved from his labor pains.

ADEIMANTUS: Nothing could be more reasonable.

SOCRATES: Well, then, will a person of that sort love falsehood or, in completely opposite fashion, will he hate it?

ADEIMANTUS: He will hate it.

SOCRATES: And if truth led the way, we would never say, I imagine, that a chorus of evils could follow it.

ADEIMANTUS: Of course not.

SOCRATES: On the contrary, it is followed by a healthy and just character, and the temperance that accompanies it.

ADEIMANTUS: That's right.

SOCRATES: What need is there, then, to go back to the beginning and compel the rest of the philosophic nature's chorus to line up all over again? You surely remember that courage, high-mindedness, ease in learning, and a good memory all belong to philosophers. Then you objected that anyone would be compelled to agree with what we are saying, but that if he left the arguments aside and looked at the very people the argument is about, he would say that some of those he saw were useless, while the majority of them were thoroughly bad. Trying to discover the reason for this slander, we have arrived now at this question: why are the majority of them bad? And *that* is why we have again taken up the nature of the true philosophers and defined what it necessarily has to be.

ADEIMANTUS: That's right.

SOCRATES: What we now have to do is look at the ways this nature gets corrupted; how it gets completely destroyed in the majority of cases, while a small number escape—the very ones that are called useless, rather than bad. After that, we must next look at those who imitate this nature and adopt its pursuit. We must see what natures the souls have that enter into a pursuit that is too valuable and too high for them—souls that, by often striking false notes, give philosophy the reputation that you said it has with everyone everywhere.

ADEIMANTUS: What sorts of corruption do you mean?

SOCRATES: I will try to explain them to you if I can. I imagine that everyone would agree with us about this: the sort of nature that possesses all the qualities we prescribed just now for the person who is going to be a complete philosopher, is seldom found among human beings, and there will be few who possess it. Or don't you think so?

ADEIMANTUS: I most certainly do.

SOCRATES: Consider, then, how many great sources of destruction there are for these few.

ADEIMANTUS: What are they?

SOCRATES: The most surprising thing of all to hear is that each one of the things we praised in that nature tends to corrupt the soul that has it and drag it away from philosophy. I mean courage, temperance, and the other things we mentioned.

ADEIMANTUS: That does sound strange.

SOCRATES: Furthermore, in addition to those, all so-called good things also corrupt it and drag it away—beauty, wealth, physical strength, powerful family connections in the city, and all that goes along with these. You understand the general pattern of things I mean?

5. [485c3.]

ADEIMANTUS: I do, and I would be glad to acquire a more precise understanding of it.

SOCRATES: Grasp the general principle correctly and the matter will become clear to you, and what I said about it before won't seem so strange.

ADEIMANTUS: What are you telling me to grasp?

SOCRATES: In the case of every seed or growing
d thing, whether plant or animal, we know that if it fails to get the food, climate, or location suitable for it, then the more vigorous it is, the more it is deficient in the qualities proper to it. For surely bad is more opposed to good than to not-good.

ADEIMANTUS: Of course.

SOCRATES: So, I suppose it is reasonable that the best nature comes off worse than an inferior one from unsuitable nurture.

ADEIMANTUS: It is.

SOCRATES: Well, then, Adeimantus, won't we
e also say that if *souls* with the best natures get a bad education, they become exceptionally bad? Or do you think that great injustices and unalloyed evil originate in an inferior nature, rather than in a vigorous one that has been corrupted by its upbringing? Or that a weak nature is ever responsible for great good things or great bad ones?

ADEIMANTUS: No, you are right.

SOCRATES: Well, then, if the nature we proposed
492a for the philosopher happens to receive the proper instruction, I imagine it will inevitably grow to attain every virtue. But if it is not sown, planted, and grown in a suitable environment, it will develop in entirely the opposite way, unless some god comes to its aid. Or do you too believe, as the masses do, that some young people are corrupted by sophists—that there are sophists, private individuals, who corrupt them to a significant extent? Isn't it, rather, the very people who say this who are the greatest sophists of all, who
b educate most effectively and produce young and old men and women of just the sort they want?

ADEIMANTUS: When do they do that?

SOCRATES: When many of them sit together in assemblies, courts, theaters, army camps, or any other gathering of a mass of people in public and, with a loud uproar, object excessively to some of the things that are said or done, then approve excessively of others, shouting and clapping; and when, in addition to these people themselves, the rocks and the surrounding space itself echo and redouble the uproar *c* of their praise or blame. In a situation like that, how do you think—as the saying goes—a young man's heart is affected?[6] How will whatever sort of private education he received hold up for him, and not get swept away by such praise and blame, and go be carried off by the flood wherever it goes, so that he will call the same things beautiful or ugly as these people, practice what they practice, and become like them?

ADEIMANTUS: The compulsion to do so will be enormous, Socrates. *d*

SOCRATES: And yet we have not mentioned the greatest compulsion of all.

ADEIMANTUS: What is that?

SOCRATES: It is what these educators and sophists impose by their actions if their words fail to persuade. Or don't you know that they punish anyone who is not persuaded, with disenfranchisement, fines, or death?

ADEIMANTUS: They most certainly do.

SOCRATES: What other sophist, then, or what sort of private conversations do you think will oppose these and prove stronger?

ADEIMANTUS: None, I imagine. *e*

SOCRATES: No, indeed, even to try would be very foolish. You see, there is not now, never has been, nor ever will be, a character whose view of virtue goes contrary to the education these provide. I mean a human character, comrade—the divine, as the saying goes, is an exception to the rule. You may be sure that if anything is saved and turns out well in the political systems that exist now, you won't be mistaken *493a* in saying that divine providence saved it.

ADEIMANTUS: That is what I think, too.

SOCRATES: Well, then, you should also agree to this.

ADEIMANTUS: What?

SOCRATES: None of those private wage-earners—the ones these people call sophists and consider to be their rivals in craft—teaches anything other than the convictions the masses hold when they are assembled together, and this he calls wisdom. It is just as if someone were learning the passions and appetites of a huge, strong beast that he is rearing—how to

6. [See Homer, *Iliad* 24.367.]

approach and handle it, when it is most difficult to deal with or most docile and what makes it so, what sounds it utters in either condition, and what tones of voice soothe or anger it. Having learned all this through associating and spending time with the beast, he calls this wisdom, gathers his information together as if it were a craft, and starts to teach it. Knowing nothing in reality about which of these convictions or appetites is fine or shameful, good or bad, just or unjust, he uses all these terms in conformity with the great beast's beliefs—calling the things it enjoys good and the things that anger it bad. He has no other account to give of them, but calls everything he is compelled to do just and fine, never having seen how much the natures of necessity and goodness really differ, and being unable to explain it to anyone. Don't you think, by Zeus, that someone like that would make a strange educator?

ADEIMANTUS: I do, indeed.

SOCRATES: Then does this person seem any different from the one who believes that wisdom is understanding the passions and pleasures of the masses—multifarious people—assembled together, whether in regard to painting, music, or politics for that matter? For if a person associates with the masses and exhibits his poetry or some other piece of craftsmanship to them or his service to the city, and gives them mastery over him to any degree beyond what is unavoidable, he will be under Diomedean compulsion,[7] as it is called, to produce the things of which they approve. But that such things are truly good and beautiful—have you ever heard anyone presenting an argument for that conclusion that was not absolutely ridiculous?

ADEIMANTUS: No, and I do not suppose I ever will.

SOCRATES: So then, bearing all that in mind, recall our earlier question: can the majority in any way tolerate or accept that the beautiful itself (as opposed to the many beautiful things), or each thing itself (as opposed to the corresponding many), exists?

ADEIMANTUS: Not in the least.

SOCRATES: It is impossible, then, for the majority to be philosophic.

ADEIMANTUS: It is impossible.

7. [An inescapable compulsion. The origin of the phrase is uncertain.]

SOCRATES: And so, those who practice philosophy are inevitably disparaged by them?

ADEIMANTUS: Inevitably.

SOCRATES: And also by those private individuals who associate with the majority and want to please them.

ADEIMANTUS: Clearly.

SOCRATES: On the basis of these facts, then, do you see any way to preserve a philosophic nature and ensure that it will continue to practice philosophy and reach the end? Consider the question in light of what we said before. We agreed that ease in learning, a good memory, courage, and high-mindedness belong to the philosophic nature.

ADEIMANTUS: Yes.

SOCRATES: Right from the start, then, won't someone like that be first among the children in everything, especially if his body's nature matches that of his soul?

ADEIMANTUS: Of course he will.

SOCRATES: So as he gets older, I imagine his family and fellow citizens will want to make use of him in connection with their own affairs.

ADEIMANTUS: Certainly.

SOCRATES: They will get down on their knees, begging favors from him and honoring him, flattering ahead of time the power that is going to be his, so as to secure it for themselves.

ADEIMANTUS: That's usually what happens, at least.

SOCRATES: What do you think someone like that will do in such circumstances—especially if he happens to be from a great city where he is rich and noble, and if he is good-looking and tall as well? Won't he be filled with an impractical expectation and think himself capable of managing the affairs, not only of the Greeks, but of the barbarians, too? And won't he exalt himself to great heights, as a result, and be brimming with pretension and empty, senseless pride?[8]

ADEIMANTUS: He certainly will.

SOCRATES: Now, suppose someone gently approaches a young man in that state of mind and tells him the truth: that he has no sense, although he

8. [Plato seems to have had Alcibiades in mind here and in what follows. Alcibiades' extraordinary career is described in Thucydides, Books 6–8.]

needs it, and that it cannot be acquired unless he works like a slave to attain it. Do you think it will be easy for him to hear that message through the evils that surround him?

ADEIMANTUS: Far from it.

SOCRATES: And suppose that, because of his noble nature and his natural affinity for such arguments, e he somehow sees the point and is turned around and drawn toward philosophy. What do we suppose those people will do if they believe that they are losing his services and companionship? Is there anything they won't do or say in his regard to prevent him from being persuaded? Or anything they won't do or say in regard to his persuader to prevent him from succeeding, whether it is in private plots or public court cases?[9]

495a ADEIMANTUS: There certainly is not.

SOCRATES: Then is there any chance that such a person will practice philosophy?

ADEIMANTUS: None at all.

SOCRATES: Do you see, then, that we weren't wrong to say that when a philosophic nature is badly brought up, its very components—together with the other so-called goods, such as wealth and every provision of that sort—are somehow the cause of its falling away from the pursuit?

ADEIMANTUS: No, we were not. What we said was right.

SOCRATES: There you are, then, you amazing fellow! That is the extent of the sort of destruction and corruption that the nature best suited for the noblest b pursuit undergoes. And such a nature is a rare occurrence anyway, we claim. Moreover, men who possess it are the ones that do the worst things to cities and individuals, and also—if they happen to be swept that way by the current—the greatest good. For a petty nature never does anything great, either to a private individual or a city.

ADEIMANTUS: That's very true.

SOCRATES: So when these men, for whom philosophy is most appropriate, fall away from her, they leave her desolate and unwed, and themselves lead c a life that is inappropriate and untrue. Then others, who are unworthy of her, come to her as to an orphan bereft of kinsmen, and shame her. They are the ones responsible for the reproaches that you say are cast upon philosophy by her detractors—that some of her consorts are useless, while the majority deserve many evils.

ADEIMANTUS: Yes, that is what they say.

SOCRATES: And it is a reasonable thing to say. For other worthless little men see that this position has become vacant, even though it is brimming with fine accolades and pretensions, and—like prisoners d escaping from jail who take refuge in a temple—leap gladly from their crafts to philosophy. These are the ones who are most sophisticated at their own petty craft. You see, at least in comparison to other crafts, and even in its present state, philosophy still has a grander reputation. And that is what many people are aiming at, people with defective natures, whose souls are as cramped and spoiled by their menial tasks as their bodies are warped by their crafts and occupations. Isn't that inevitably what happens? e

ADEIMANTUS: It certainly is.

SOCRATES: Do you think that they look any different than a little, bald-headed blacksmith who has come into some money and, newly released from debtor's prison, has taken a bath, put on a new cloak, got himself up as a bridegroom, and is about to marry the master's daughter because she is poor and abandoned?

ADEIMANTUS: They are no different at all. 496a

SOCRATES: What sort of offspring are they likely to beget, then? Won't their children be wretched illegitimates?

ADEIMANTUS: Inevitably.

SOCRATES: What about when men who are unworthy of education approach philosophy and associate with her in a way unworthy of her? What kinds of thoughts and beliefs are we to say they beget? Won't they be what are truly and appropriately called sophisms, since they have nothing genuine or truly wise about them?

ADEIMANTUS: Absolutely.

SOCRATES: Then there remains, Adeimantus, only a very small group who associate with philosophy in a way that is worthy of her: a noble and well b brought-up character, perhaps, kept down by exile, who stays true to his nature and remains with philosophy because there is no one to corrupt him; or a great

9. [The trial of Socrates in 399 B.C.E. is the obvious case in point.]

soul living in a small city, who disdains the city's affairs and looks beyond them. A very few might perhaps come to philosophy from other crafts that they rightly despise because they have good natures. And some might be held back by the bridle that restrains our friend Theages—you see, he meets all the other
c conditions needed to make him fall away from philosophy, but his physical illness keeps him out of politics and prevents it. Finally, my own case is hardly worth mentioning—my daimonic sign—since I don't suppose it has happened to anyone else or to only a few before. Now, those who have become members of this little group have tasted how sweet and blessed a possession philosophy is. At the same time, they have also seen the insanity of the masses and realized that there is nothing healthy, so to speak, in public affairs, and that there is no ally with whose aid the champion
d of justice can survive; that instead he would perish before he could profit either his city or his friends, and be useless both to himself and to others—like a man who has fallen among wild animals and is neither willing to join them in doing injustice nor sufficiently strong to oppose the general savagery alone. Taking all this into his calculations, he keeps quiet and does his own work, like someone who takes refuge under a little wall from a storm of dust or hail driven by the wind. Seeing others filled with lawlessness, the philosopher is satisfied if he can somehow lead his present life pure of injustice and impious acts, and
e depart from it with good hope, blameless and content.

ADEIMANTUS: Well, that is no small thing for him
497a to have accomplished before departing.

SOCRATES: But no very great one either, since he did not chance upon a suitable constitution. In a suitable one, his own growth will be fuller and he will save the community, as well as himself. Anyway, it seems to me that we have now said enough about the slander brought against philosophy and why it is unjust—unless, of course, you have got something to add.

ADEIMANTUS: I have nothing further to add on that issue. But which of our present constitutions do you think is suitable for philosophy?

SOCRATES: None of them. But that is exactly my
b complaint. There is not one city today with a constitution worthy of the philosophic nature. That is precisely why it is perverted and altered. It is like foreign seed sown in alien ground: it tends to be overpowered and to fade away into the native species. Similarly, the philosophic species does not maintain its own power at present, but declines into a different character. But if it were to find the best constitution, as it is itself the best, it would be clear that it is really c
divine and that other natures and pursuits are merely human. Obviously, you are going to ask next what that constitution is.

ADEIMANTUS: You are wrong there. You see, I was not going to ask that, but whether it was the constitution we described when we were founding our city or a different one.

SOCRATES: In all other respects, it is that one. But we said even then that there must always be some people in the city who have a rational account of the constitution, the same one that guided you, the lawgiver, when you made the laws. d

ADEIMANTUS: Yes, we did say that.

SOCRATES: But we did not explain it clearly enough, for fear of what our own objections have made clear: namely, that the demonstration of it would be long and difficult. Indeed, even what remains is not the easiest of all things to discuss.

ADEIMANTUS: What is that?

SOCRATES: How a city can engage in philosophy without being destroyed. You see, all great things are prone to fall and, as the saying goes, beautiful things are really difficult.

ADEIMANTUS: All the same, the demonstration won't be complete until this has been cleared up. e

SOCRATES: If anything prevents that, it won't be lack of willingness, but lack of ability. At any rate, you will see how passionate *I* am. Look now, in fact, at how passionately and recklessly I am going to argue that a city should practice philosophy in the opposite way to the present one.

ADEIMANTUS: How?

SOCRATES: At present, those who take it up at all do so as young men, just out of childhood, who have yet to take up household management and money-making. Then, just when they reach the most difficult 498a
part they abandon it and are regarded as the most fully trained philosophers. By the most difficult part, I mean the one concerned with arguments.[10] In later

10. [I.e., dialectic.]

life, if others are engaged in it and they are invited and deign to listen to them, they think they have done a lot, since they think this should only be a sideline. And, with a few exceptions, by the time they reach old age they are more thoroughly extinguished than the sun of Heraclitus, since they are never
b rekindled.[11]

ADEIMANTUS: What should they do instead?

SOCRATES: Entirely the opposite. As young men and children, they should occupy themselves with an education and philosophy suitable to the young. Their bodies are blooming and growing into manhood at this time, and they should take very good care of them, so as to acquire a helper for philosophy. But as they grow older and their soul begins to reach maturity, they should make its exercises more rigorous. Then, when their strength begins to fail and they have retired from politics and military service, they
c should graze freely in the pastures of philosophy and do nothing else, except as a sideline—I mean those who are going to live happily and, when the end comes, crown the life they have lived with a fitting providence in that other place.

ADEIMANTUS: You seem to be arguing with real passion, Socrates. But I am sure that most of your hearers will oppose you with even greater passion and won't be convinced in the least—beginning with Thrasymachus.

SOCRATES: Please do not try to raise a quarrel between me and Thrasymachus just as we have become friends—not that we were enemies before. You
d see, we won't relax our efforts until we convince him and the others—or at least do something that may benefit them in a later incarnation when, reborn, they happen upon these arguments again.

ADEIMANTUS: You are talking about the short term, I see!

SOCRATES: It is certainly nothing compared to the whole of time! However, it is no wonder that the masses are not convinced by our arguments. I mean, they have never seen a *man* that matched our *plan*—though they have more often seen words
e purposely chosen to rhyme with one another than just happening to do so as in the present case.[12] But a man who, as far as possible, matched and rhymed with virtue in word and deed, and wielded dynastic power in a city of the same type—that is something they have never seen even once. Or do 499a
you think they have?

ADEIMANTUS: No, definitely not.

SOCRATES: Nor, bless you, have they spent enough time listening to fine and free arguments that vigorously seek the truth in every way, so as to acquire knowledge and keep their distance from all the sophistries and eristic quibbles that—whether in public trials or private gatherings—strive for nothing except reputation and disputation.

ADEIMANTUS: No, they have not.

SOCRATES: It was for these reasons, and because we foresaw these difficulties, that we were afraid. All the same, we were compelled by the truth to say that b
no city, no constitution, and no individual man will ever become perfect until some chance event compels those few philosophers who are not vicious (the ones who are now called useless) to take care of a city, whether they are willing to or not, and compels the city to obey them—or until a true passion for true philosophy flows by some divine inspiration into the sons of the men now wielding dynastic power or sovereignty, or into the men themselves. Now, it can- c
not be reasonably maintained, in my view, that either or both of these things is impossible. But if they were, we would be justly ridiculed for indulging in wishful thinking. Isn't that so?

ADEIMANTUS: It is.

SOCRATES: Then if, in the limitless past, some necessity forced those who were foremost in philosophy to take charge of a city, or is doing so now in some barbaric place far beyond our ken, or will do so in the future, this is something we are prepared d
to fight about—our argument that the constitution we have described has existed, does exist, and will exist, at any rate, whenever it is that the muse of philosophy gains mastery of a city. It is not impossible

11. [Heraclitus' sun was extinguished at night but rekindled the next morning.]

12. [Plato is mocking the rhetoricians who were fond of forced rhyme. His own words *ou gar pôpote eidon genomenon to nun legomenon*—"they've never seen anything come into existence that matches our account"—exhibit the phenomenon he is mocking.]

for this to happen, so we are not speaking of impossibilities—that it is *difficult*, we agree ourselves.

ADEIMANTUS: *I* certainly think so.

SOCRATES: But the masses do not—is that what you are going to say?

ADEIMANTUS: They probably don't.

SOCRATES: Bless you, you should not make such a wholesale charge against the masses! They will surely come to hold a different belief if, instead of wanting
e to win a victory at their expense, you soothe them and try to remove their slanderous prejudice against the love of learning. You must show them what you mean by philosophers and define their nature and
500a pursuit the way we did just now. Then they will realize you do not mean the same people they do. And if they once see it that way, even you will say that they will have a different opinion from the one you just attributed to them and will answer differently. Or do you think that anyone who is gentle and without malice is harsh to one who is not harsh, or malicious to one who is not malicious? I will anticipate you and say that I think a few people may have such a harsh character, but not the majority.

ADEIMANTUS: And I agree, of course.

SOCRATES: Then don't you also agree that the
b harshness of the masses toward philosophy is caused by those outsiders who do not belong and who have burst in like a band of revelers, abusing one another, indulging their love of quarreling, and always arguing about human beings—something that is least appropriate in philosophy?

ADEIMANTUS: I do, indeed.

SOCRATES: For surely, Adeimantus, someone whose mind is truly directed toward the things that are has not the leisure to look down at human affairs and be filled with malice and hatred as a result of
c entering into their disputes. Instead, as he looks at and contemplates things that are orderly and always the same, that neither do injustice to one another nor suffer it, being all in a rational order, he imitates them and tries to become as like them as he can. Or do you think there is any way to prevent someone from associating with something he admires without imitating it?

ADEIMANTUS: He can't possibly.

SOCRATES: Then the philosopher, by associating with what is orderly and divine, becomes as divine and orderly as a human being can. Though, mind you, there are always plenty of slanders around. d

ADEIMANTUS: Absolutely.

SOCRATES: And if he should come to be compelled to make a practice—in private and in public—of stamping what he sees there into the people's characters, instead of shaping only his own, do you think he will be a poor craftsman of temperance, justice, and the whole of popular virtue?

ADEIMANTUS: Not at all.

SOCRATES: And when the masses realize that what we are saying about him is true, will they be harsh with philosophers or mistrust us when we say that e
there is no way a city can ever find happiness unless its plan is drawn by painters who use the divine model?

ADEIMANTUS: They won't be harsh, if they do realize this. But what sort of drawing do you mean? 501a

SOCRATES: They would take the city and people's characters as their sketching slate, but first they would wipe it clean—which is not at all an easy thing to do. And you should be aware that this is an immediate difference between them and others—that they refuse to take either a private individual or a city in hand, or to write laws, unless they receive a clean slate or are allowed to clean it themselves.

ADEIMANTUS: And rightly so.

SOCRATES: And after that, don't you think they would draw the plan of the constitution?

ADEIMANTUS: Of course.

SOCRATES: And I suppose that, as they work, they would look often in each direction: on the one hand, b
toward what is in its nature just, beautiful, temperate, and all the rest; and, on the other, toward what they are trying to put into human beings, mixing and blending pursuits to produce a human likeness, based on the one that Homer too called divine and godly when it appeared among human beings.

ADEIMANTUS: Right.

SOCRATES: They would erase one thing, I suppose, and draw in another, until they had made people's characters as dear to the gods as possible. c

ADEIMANTUS: At any rate, the drawing would be most beautiful that way.

SOCRATES: Are we at all persuading the people you said were rushing to attack us, then, that the philosopher we were praising to them is really this sort of painter of constitutions? They were angry

because we were entrusting cities to him; are they any calmer at hearing it now?

ADEIMANTUS: They will be much calmer, if they have any sense.

SOCRATES: After all, how could they possibly dispute it? Will they deny that philosophers are lovers both of what is and of the truth?

ADEIMANTUS: That would be silly.

SOCRATES: Or that their nature, as we have described it, is akin to the best?

ADEIMANTUS: They cannot deny that either.

SOCRATES: Or that such a nature, when it happens to find appropriate pursuits, will not be as completely good and philosophic as any other? Or are they going to claim that the people we excluded are more so?

ADEIMANTUS: Certainly not.

SOCRATES: Will they still be angry, then, when we say that until the philosopher class gains mastery of a city, there will be no respite from evils for either city or citizens, and the constitution we have been describing in our discussion will never be completed in practice?

ADEIMANTUS: They will probably be less so.

SOCRATES: If it is all right with you, then, let's not say that they will simply be less angry, but that they will become altogether gentle and persuaded; so that out of shame, if nothing else, they will agree.

ADEIMANTUS: All right.

SOCRATES: So let's assume that they have been convinced of this. Will anyone contend, then, that there is no chance that the offspring of kings or men in power could be natural-born philosophers?

ADEIMANTUS: No one could.

SOCRATES: Could anyone claim that if such offspring are born, they must inevitably be corrupted? We agree ourselves that it is difficult for them to be saved. But that in the whole of time not one of them could be saved—could anyone contend that?

ADEIMANTUS: Of course not.

SOCRATES: But surely the occurrence of one such individual is enough, provided his city obeys him, to bring to completion all the things that now seem so incredible.

ADEIMANTUS: Yes, one is enough.

SOCRATES: For I suppose that if a ruler established the laws and practices we have described, it is hardly impossible that the citizens would be willing to carry them out.

ADEIMANTUS: Not at all.

SOCRATES: Would it be either surprising or impossible, then, that others should think as we do?

ADEIMANTUS: I don't suppose so.

SOCRATES: But I think our earlier discussion was sufficient to show that these arrangements are best, provided they are possible.

ADEIMANTUS: Indeed, it was.

SOCRATES: It seems, then, that the conclusion we have now reached about legislation is that the one we are describing is best, provided it is possible; and that while it is difficult for it to come about, it certainly is not impossible.

ADEIMANTUS: Yes, that is the conclusion we have reached.

SOCRATES: Now that this conclusion has, with much effort, been reached, we must next deal with the remaining issues—in what way, by means of what subjects and pursuits, the saviors of our constitution will come to exist, and at what ages they will take up each of them.

ADEIMANTUS: Yes, we must deal with that.

SOCRATES: I gained nothing by my cleverness, then, in omitting from our earlier discussion the troublesome topic of acquiring women, begetting children, and establishing rulers, because I knew the whole truth would provoke resentment and would be difficult to bring about. As it turned out, the need to discuss them arose anyway. Now, the subject of women and children has already been discussed. But that of the rulers has to be taken up again from the beginning. We said,[13] if you remember, that they must show themselves to be lovers of the city, when tested by pleasures and pains, by not abandoning this conviction through labors, fears, and all other adversities. Anyone who was incapable of doing so was to be rejected, while anyone who always came through pure—like gold tested in a fire—was to be made ruler and receive gifts and prizes, both while he lived and after his death. These were the sorts of things we were saying while our argument veiled its

13. [At 412b–414a. The conviction referred to is identified at 412e6.]

face and slipped by, for fear of stirring up the very
b problems that now confront us.

ADEIMANTUS: That's absolutely true. I do remember.

SOCRATES: I was reluctant, my friend, to say the things we have now dared to say anyway. But now, let's also dare to say that we must establish philosophers as guardians in the most exact sense.

ADEIMANTUS: Let's do so.

SOCRATES: Bear in mind, then, that there will probably be only a few of them. You see, they have to have the nature we described, and its parts rarely consent to grow together in one person; rather, its many parts grow split off from one another.

c ADEIMANTUS: How do you mean?

SOCRATES: Ease of learning, good memory, astuteness, and smartness, as you know, and all the other things that go along with them, such as youthful passion and high-mindedness, are rarely willing to grow together simultaneously with a disposition to live an orderly, quiet, and completely stable life. On the contrary, those who possess the former traits are carried by their quick wits wherever chance leads them, and have no stability at all.

ADEIMANTUS: That's true.

SOCRATES: Those with stable characters, on the other hand, who do not change easily, whom one would employ because of their greater reliability, and
d who in battle are not easily moved by fears, act in the same way when it comes to their studies. They are hard to get moving and learn with difficulty, as if they are anesthetized, and are constantly falling asleep and yawning whenever they have to work hard at such things.

ADEIMANTUS: They are.

SOCRATES: Yet we say that someone must have a good and fine share of both characters, or he won't receive the truest education or honor, or be allowed to rule.

ADEIMANTUS: That's right.

SOCRATES: Then don't you think this will rarely occur?

ADEIMANTUS: Of course.

e SOCRATES: He must be tested, then, in the labors, fears, and pleasures we mentioned before. He must also be exercised in many other subjects, however, which we did not mention but are adding now, to see whether his nature can endure the most important subjects or will shrink from them like the cowards who shrink from the other tests. *504a*

ADEIMANTUS: It is certainly important to find that out. But what do you mean by the most important subjects?

SOCRATES: Do you remember when we distinguished three kinds of things in the soul in order to help bring out what justice, temperance, courage, and wisdom each is?[14]

ADEIMANTUS: If I didn't, I would not deserve to hear the rest.

SOCRATES: Do you also remember what preceded it?

ADEIMANTUS: No, what?

SOCRATES: We said, I believe, that in order to get the finest view of these matters, we would need to *b* take a longer road, which would make them plain to anyone who took it, but that it was possible to give demonstrations that would be up to the standard of the previous discussion.[15] All of you said that was enough. The result was that our subsequent discussion, as it seemed to me, was less than exact. But whether or not it satisfied all of you is for you to say.

ADEIMANTUS: I, at any rate, thought you gave us good measure. And so, apparently, did the others.

SOCRATES: No, my friend, any measure of such things that falls short in any way of what is, is not *c* good measure at all, since nothing incomplete is a measure of anything. Some people, however, are occasionally of the opinion that an incomplete treatment is already adequate and that there is no need for further inquiry.

ADEIMANTUS: Yes, a lot of people feel like that. Laziness is the cause.

SOCRATES: Well, that is a feeling that is least appropriate in a guardian of a city and its laws.

ADEIMANTUS: No doubt.

SOCRATES: He will have to take the longer road then, comrade, and put no less effort into learning than into physical training. For otherwise, as we were *d* just saying, he will never pursue the most important and most appropriate subject to the end.

14. [434d–444e.]
15. [435d.]

ADEIMANTUS: Why, aren't these virtues the most important things? Is there something yet more important than justice and the other virtues we discussed?

SOCRATES: Not only is it more important, but, even in the case of the virtues themselves, it is not enough to look at a mere sketch as we are doing now, while neglecting the most finished portrait. I mean, it is ridiculous, isn't it, to strain every nerve to attain the utmost exactness and clarity about other things
e of little value, while not treating the most important things as meriting the most exactness?

ADEIMANTUS: It certainly is. But do you think that anyone is going to let you off without asking you what you mean by this most important subject, and what it is concerned with?

SOCRATES: No, I do not. And you may ask it, too. You have certainly heard the answer often, but now either you are not thinking or you intend to make trouble for me again by interrupting. And I suspect
505a it is more the latter. You see, you have often heard it said that the form of the good is the most important thing to learn about, and that it is by their relation to it that just things and the others become useful and beneficial. And now you must be pretty certain that that is what I am going to say, and, in addition, that we have no adequate knowledge of it. And if we do not know it, you know that even the fullest possible knowledge of other things is of no benefit to us, any more than if we acquire any possession without the good. Or do you think there is any benefit in possess-
b ing everything but the good? Or to know everything without knowing the good, thereby knowing nothing fine or good?

ADEIMANTUS: No, by Zeus, I do not.

SOCRATES: Furthermore, you also know that the masses believe pleasure to be the good, while the more refined believe it to be knowledge.

ADEIMANTUS: Of course.

SOCRATES: And, my friend, that those who believe this cannot show us what sort of knowledge it is, but in the end are forced to say that it is knowledge of the good.

ADEIMANTUS: Which is completely ridiculous.

SOCRATES: How could it not be, when they
c blame us for not knowing the good and then turn around and talk to us as if we did know it? I mean, they say it is knowledge of the good—as if we understood what they mean when they utter the word "good."

ADEIMANTUS: That's absolutely true.

SOCRATES: What about those who define the good as pleasure? Are they any less full of confusion than the others? Or aren't even they forced to admit that there are bad pleasures?

ADEIMANTUS: Most definitely.

SOCRATES: I suppose it follows, doesn't it, that they have to admit that the same things are both good and bad?

ADEIMANTUS: It certainly does. d

SOCRATES: Isn't it clear, then, that there are lots of serious disagreements about the good?

ADEIMANTUS: Of course.

SOCRATES: Well, isn't it also clear that many people would choose things that are believed to be just or beautiful, even if they are not, and would act, acquire things, and form beliefs accordingly? Yet no one is satisfied to acquire things that are *believed* to be good. On the contrary, everyone seeks the things that *are* good. In this area, everyone disdains mere reputation.

ADEIMANTUS: Right.

SOCRATES: That, then, is what every soul pursues, and for its sake does everything. The soul has a hunch that the good is something, but it is puzzled and e
cannot adequately grasp just what it is or acquire the sort of stable belief about it that it has about other things, and so it misses the benefit, if any, that even those other things may give. Are we to accept that even the best people in the city, to whom we entrust 506a
everything, must remain thus in the dark about something of this kind and importance?

ADEIMANTUS: That's the last thing we would do.

SOCRATES: Anyway, I imagine that just and fine things won't have acquired much of a guardian in someone who does not even know why they are good. And I have a hunch that no one will have adequate knowledge of them until he knows this.

ADEIMANTUS: That's a good hunch.

SOCRATES: But won't our constitution be perfectly ordered if such a guardian, one who knows these things, oversees it? b

ADEIMANTUS: It is bound to be. But you yourself, Socrates, do you say the good is knowledge or pleasure, or is it something else altogether?

SOCRATES: What a man! You made it good and clear long ago that other people's opinions about these matters would not satisfy you.

ADEIMANTUS: Well, Socrates, it does not seem right to me for you to be willing to state other people's convictions but not your own, when you have spent so much time occupied with these matters. *c*

SOCRATES: What? Do you think it is right to speak about things you do not know as if you do know them?

ADEIMANTUS: Not as if you know them, but you ought to be willing to state what you believe as what you believe.

SOCRATES: What? Haven't you noticed that beliefs without knowledge are all shameful and ugly things, since the best of them are blind? Do you think that those who have a true belief without understanding are any different from blind people who happen to travel the right road?

ADEIMANTUS: They are no different.

SOCRATES: Do you want to look at shameful, blind, and crooked things, then, when you might hear fine, illuminating ones from other people? *d*

And Glaucon said:

By Zeus, Socrates, do not stop now, with the end in sight, so to speak! We will be satisfied if you discuss the good the way you discussed justice, temperance, and the rest.

SOCRATES: That, comrade, would well satisfy me too, but I am afraid that I won't be up to it and that I will disgrace myself and look ridiculous by trying. No, bless you, let's set aside what the good itself is for the time being. You see, even to arrive at my current beliefs about it seems beyond the range of our present discussion. But I am willing to tell you about what seems to be an offspring of the good and most like it, if that is agreeable to you; or otherwise to let the matter drop. *e*

GLAUCON: Tell us, then. The story about the father remains a debt you will pay another time.

SOCRATES: I wish I could repay it, and you recover the debt, instead of just the interest. So here, then, is this child and offspring of the good itself. But take care I do not somehow deceive you unintentionally by giving you an illegitimate account of the child.[16] *507a*

GLAUCON: We will take as much care as possible. So speak on.

SOCRATES: I will once I have come to an agreement with you and reminded you of things we have already said here as well as on many other occasions.

GLAUCON: Which things? *b*

SOCRATES: We say that there are many beautiful, many good, and many other such things, thereby distinguishing them in words.

GLAUCON: We do.

SOCRATES: We also say there is a beautiful itself and a good itself. And so, in the case of all the things that we then posited as many, we reverse ourselves and posit a single form belonging to each, since we suppose there is a single one, and call it what each is.

GLAUCON: That's true.

SOCRATES: And we say that the one class of things is visible but not intelligible, while the forms are intelligible but not visible.

GLAUCON: Absolutely.

SOCRATES: With what of ours do we see visible things? *c*

GLAUCON: With our sight.

SOCRATES: And don't we hear audible things with hearing and perceive all other perceptible things with our other senses?

GLAUCON: Of course.

SOCRATES: Have you ever thought about how lavish the craftsman of our senses was in making the power to see and be seen?

GLAUCON: No, not really.

SOCRATES: Well, think of it this way. Do hearing and sound need another kind of thing in order for the former to hear and the latter to be heard—a third thing in whose absence the one won't hear or the other be heard? *d*

GLAUCON: No.

SOCRATES: And I think there cannot be many—not to say any—others that need such a thing. Or can you think of one?

GLAUCON: No, I cannot.

16. [Throughout, Socrates is punning on the word *tokos*, which means either a child or the interest on capital.]

SOCRATES: Aren't you aware that sight and the visible realm have such a need?

GLAUCON: In what way?

SOCRATES: Surely sight may be present in the eyes and its possessor may try to use it, and colors may be present in things; but unless a third kind of thing is present, which is naturally adapted for this *e* specific purpose, you know that sight will see nothing and the colors will remain unseen.

GLAUCON: What kind of thing do you mean?

SOCRATES: The kind you call light.

GLAUCON: You are right.

SOCRATES: So it is no insignificant form of yoke, *508a* then, that yokes the sense of sight and the power to be seen. In fact, it is more honorable than any that yokes other yoked teams. Provided, of course, that light is not something without honor.

GLAUCON: And it is surely far from being without honor.

SOCRATES: Which of the gods in the heavens would you say is the controller of this—the one whose light makes our sight see best and visible things best seen?

GLAUCON: The very one you and others would name. I mean, it is clear that what you are asking about is the sun.[17]

SOCRATES: And isn't sight naturally related to that god in the following way?

GLAUCON: Which one?

SOCRATES: Neither sight itself nor that in which *b* it comes to be—namely, the eye—is the sun.

GLAUCON: No, it is not.

SOCRATES: But it is, I think, the most sunlike of the sense organs.

GLAUCON: By far the most.

SOCRATES: And doesn't it receive the power it has from the sun, just like an influx from an overflowing treasury?

GLAUCON: Certainly.

SOCRATES: The sun is not sight either; yet as its cause, isn't it seen by sight itself?

GLAUCON: It is.

SOCRATES: Let's say, then, that this is what I called the offspring of the good, which the good begot as its analogue. What the latter is in the intelligible realm in relation to understanding and intelligible things, the former is in the visible realm in relation *c* to sight and visible things.

GLAUCON: How? Tell me more.

SOCRATES: You know that when our eyes no longer turn to things whose colors are illuminated by the light of day, but by the lights of night, they are dimmed and seem nearly blind, as if clear sight were no longer in them.

GLAUCON: Of course.

SOCRATES: Yet I suppose that whenever they are turned to things illuminated by the sun, they see clearly and sight is manifest in those very same eyes? *d*

GLAUCON: Indeed.

SOCRATES: Well, think about the soul in the same way. When it focuses on something that is illuminated both by truth and what is, it understands, knows, and manifestly possesses understanding. But when it focuses on what is mixed with obscurity, on what comes to be and passes away, it believes and is dimmed, changes its beliefs this way and that, and seems bereft of understanding.

GLAUCON: Yes, it does seem like that.

SOCRATES: You must say, then, that what gives truth to the things known and the power to know to *e* the knower is the form of the good. And as the cause of knowledge and truth, you must think of it as an object of knowledge. Both knowledge and truth are beautiful things. But if you are to think correctly, you must think of the good as other and more beautiful than they. In the visible realm, light and sight are rightly thought to be sunlike, but wrongly thought to *509a* be the sun. So, here it is right to think of knowledge and truth as goodlike, but wrong to think that either of them is the good—for the state of the good is yet more honored.

GLAUCON: It is an incredibly beautiful thing you are talking about, if it provides both knowledge and truth but is itself superior to them in beauty. I mean, you surely do not think that *it* could be pleasure.

SOCRATES: No words of ill omen, please! Instead, examine our analogy in more detail.

GLAUCON: How? *b*

SOCRATES: The sun, I think you would say, not only gives visible things the power to be seen but also

17. [Helios—the sun—was considered a god.]

provides for their coming-to-be, growth, and nourishment—although it is not itself coming to be.

GLAUCON: I would.

SOCRATES: Therefore, you should also say that not only do the objects of knowledge owe their being known to the good, but their existence and being are also due to it; although the good is not being, but something yet beyond being, superior to it in rank and power.

And Glaucon quite ridiculously replied:

c By Apollo, what daimonic hyperbole![18]

SOCRATES: It is your own fault, you forced me to tell my beliefs about it.

GLAUCON: And don't you stop, either—at least, not until you have finished discussing the good's similarity to the sun, if you are omitting anything.

SOCRATES: I am certainly omitting a lot.

GLAUCON: Well don't, not even the smallest detail.

SOCRATES: I think I will have to omit a fair amount. All the same, as far as is now possible, I won't purposely omit anything.

GLAUCON: Please don't.

SOCRATES: Then you should think, as we said,
d that there are these two things, one sovereign of the intelligible kind and place, the other of the visible—I do not say "of the heavens," so as not to seem to you to be playing the sophist with the name.[19] In any case, do you understand these two kinds, visible and intelligible?

GLAUCON: I do.

SOCRATES: Represent them, then, by a line divided into two unequal sections. Then divide each section—that of the visible kind and that of the intelligible—in the same proportion as the line.[20] In terms now of relative clarity and opacity, you will have as one subsection of the visible, images. By e images I mean, first, shadows, then reflections in bodies of water and in all close-packed, smooth, and 510a shiny materials, and everything of that sort. Do you understand?

GLAUCON: I do understand.

SOCRATES: Then, in the other subsection of the visible, put the originals of these images—that is, the animals around us, every plant, and the whole class of manufactured things.

GLAUCON: I will.

SOCRATES: Would you also be willing to say, then, that, as regards truth and untruth, the division is in this ratio: as what is believed is to what is known, so the likeness is to the thing it is like?

GLAUCON: Certainly. b

SOCRATES: Next, consider how the section of the intelligible is to be divided.

GLAUCON: How?

SOCRATES: As follows: in one subsection, the soul, using as images the things that were imitated before, is forced to base its inquiry on hypotheses, proceeding not to a first principle, but to a conclusion. In the other subsection, by contrast, it makes its way to an unhypothetical first principle, proceeding from a hypothesis, but without the images used in the previous subsection, using forms themselves and making its investigation through them.

GLAUCON: I do not fully understand what you are saying.

SOCRATES: Let's try again. You see, you will understand it more easily after this explanation. I think c you know that students of geometry, calculation, and the like hypothesize the odd and the even, the various figures, the three kinds of angles, and other things akin to these in each of their investigations, regarding them as known. These they treat as hypotheses and do not think it necessary to give any argument for them, either to themselves or to others, as if they were evident to everyone. And going from these first principles through the remaining steps, they arrive d in full agreement at the point they set out to reach in their investigation.

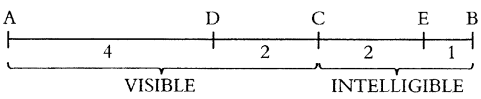
GLAUCON: I certainly know that much.

SOCRATES: Then don't you also know that they use visible forms and make their arguments about

18. [Socrates' claim ends with the words *dunamei huperechontas* ("superior in . . . power"), Glaucon responds with the punning *daimonias huperbolês*. Hence the joke.]

19. [The play seems to be on the similarity of sound between *orano* ("the heavens") and *orato* ("visible").]

20.



them, although they are not thinking about them, but about those other things that they are like? They make their arguments with a view to the square itself and the diagonal itself, not the diagonal they draw, e and similarly with the others. The very things they make and draw, of which shadows and reflections in water are images, they now in turn use as images in seeking to see those other things themselves that one 511a cannot see except by means of thought.

GLAUCON: That's true.

SOCRATES: This, then, is the kind of thing that I said was intelligible. The soul is forced to use hypotheses in the investigation of it, not traveling up to a first principle, since it cannot escape or get above its hypotheses, but using as images those very things of which images were made by the things below them, and which, by comparison to their images, were thought to be clear and to be honored as such.

GLAUCON: I understand that you mean what is b dealt with in geometry and related crafts.

SOCRATES: Also understand, then, that by the other subsection of the intelligible I mean what reason itself grasps by the power of dialectical discussion, treating its hypotheses, not as first principles, but as genuine hypotheses (that is, stepping stones and links in a chain), in order to arrive at what is unhypothetical and the first principle of everything. Having grasped this principle, it reverses itself and, keeping hold of what follows from it, comes down to a conclusion, c making no use of anything visible at all, but only of forms themselves, moving on through forms to forms, and ending in forms.

GLAUCON: I understand, though not adequately—you see, in my opinion you are speaking of an enormous task. You want to distinguish the part of what is and is intelligible, the part looked at by the science of dialectical discussion, as clearer than the part looked at by the so-called sciences—those for which hypotheses are first principles. And although those who look at the latter part are forced to do so by means of thought rather than sense perception, still, because they do not go back to a genuine first principle in considering it, but proceed from hypotheses, you do not think that they have true d understanding of them, even though—given such a first principle—they are intelligible. And you seem to me to call the state of mind of the geometers—and the others of that sort—thought but not understanding; thought being intermediate between belief and understanding.

SOCRATES: You have grasped my meaning most adequately. Join me, then, in taking these four conditions in the soul as corresponding to the four subsections of the line: understanding dealing with the highest, thought dealing with the second; assign belief to the third, and imagination to the last. Arrange them e in a proportion and consider that each shares in clarity to the degree that the subsection it deals with shares in truth.

GLAUCON: I understand, agree, and arrange them as you say.

BOOK VII

SOCRATES' NARRATION CONTINUES:

SOCRATES: Next, then, compare the effect of education and that of the lack of it on our nature to an 514a experience like this. Imagine human beings living in an underground, cavelike dwelling, with an entrance a long way up that is open to the light and as wide as the cave itself. They have been there since childhood, with their necks and legs fettered, so that they are fixed in the same place, able to see only in front of them, because their fetter prevents them from turning their heads around. Light is provided by a fire burning b far above and behind them. Between the prisoners and the fire, there is an elevated road stretching. Imagine that along this road a low wall has been built—like the screen in front of people that is provided by puppeteers, and above which they show their puppets.

GLAUCON: I am imagining it.

SOCRATES: Also imagine, then, that there are people alongside the wall carrying multifarious artifacts that project above it—statues of people and other c animals, made of stone, wood, and every material. 515a And as you would expect, some of the carriers are talking and some are silent.

GLAUCON: It is a strange image you are describing, and strange prisoners.

SOCRATES: They are like us. I mean, in the first place, do you think these prisoners have ever seen

anything of themselves and one another besides the shadows that the fire casts on the wall of the cave in front of them?

GLAUCON: How could they, if they have to keep
b their heads motionless throughout life?

SOCRATES: What about the things carried along the wall? Isn't the same true where they are concerned?

GLAUCON: Of course.

SOCRATES: And if they could engage in discussion with one another, don't you think they would assume that the words they used applied to the things they see passing in front of them?

GLAUCON: They would have to.

SOCRATES: What if their prison also had an echo from the wall facing them? When one of the carriers passing along the wall spoke, do you think they would believe that anything other than the shadow passing in front of them was speaking?

GLAUCON: I do not, by Zeus.

SOCRATES: All in all, then, what the prisoners
c would take for true reality is nothing other than the shadows of those artifacts.

GLAUCON: That's entirely inevitable.

SOCRATES: Consider, then, what being released from their bonds and cured of their foolishness would naturally be like, if something like this should happen to them. When one was freed and suddenly compelled to stand up, turn his neck around, walk, and look up toward the light, he would be pained by doing all these things and be unable to see the things whose shadows he had seen before, because of the
d flashing lights. What do you think he would say if we told him that what he had seen before was silly nonsense, but that now—because he is a bit closer to what is, and is turned toward things that *are* more—he sees more correctly? And in particular, if we pointed to each of the things passing by and compelled him to answer what each of them is, don't you think he would be puzzled and believe that the things he saw earlier were more truly real than the ones he was being shown?

GLAUCON: Much more so.

SOCRATES: And if he were compelled to look at
e the light itself, wouldn't his eyes be pained and wouldn't he turn around and flee toward the things he is able to see, and believe that they are really clearer than the ones he is being shown?

GLAUCON: He would.

SOCRATES: And if someone dragged him by force away from there, along the rough, steep, upward path, and did not let him go until he had dragged him into the light of the sun, wouldn't he be pained and angry at being treated that way? And when he came into the light, wouldn't he have his eyes filled with sunlight 516a
and be unable to see a single one of the things now said to be truly real?

GLAUCON: No, he would not be able to—at least not right away.

SOCRATES: He would need time to get adjusted, I suppose, if he is going to see the things in the world above. At first, he would see shadows most easily, then images of men and other things in water, then the things themselves. From these, it would be easier for him to go on to look at the things in the sky and the sky itself at night, gazing at the light of the stars and the moon, than during the day, gazing at the sun and the light of the sun. b

GLAUCON: Of course.

SOCRATES: Finally, I suppose, he would be able to see the sun—not reflections of it in water or some alien place, but the sun just by itself in its own place—and be able to look at it and see what it is like.

GLAUCON: He would have to.

SOCRATES: After that, he would already be able to conclude about it that it provides the seasons and the years, governs everything in the visible world, and is in some way the cause of all the things that he c
and his fellows used to see.

GLAUCON: That would clearly be his next step.

SOCRATES: What about when he reminds himself of his first dwelling place, what passed for wisdom there, and his fellow prisoners? Don't you think he would count himself happy for the change and pity the others?

GLAUCON: Certainly.

SOCRATES: And if there had been honors, praises, or prizes among them for the one who was sharpest at identifying the shadows as they passed by; and was best able to remember which usually came earlier, which later, and which simultaneously; and who was thus best able to prophesize the future, do you think d
that our man would desire these rewards or envy those among the prisoners who were honored and held power? Or do you think he would feel with Homer

that he would much prefer to "work the earth as a serf for another man, a man without possessions of his own,"[1] and go through any sufferings, rather than share their beliefs and live as they do?

GLAUCON: Yes, I think he would rather suffer
e anything than live like that.

SOCRATES: Consider this too, then. If this man went back down into the cave and sat down in his same seat, wouldn't his eyes be filled with darkness, coming suddenly out of the sun like that?

GLAUCON: Certainly.

SOCRATES: Now, if he had to compete once again with the perpetual prisoners in recognizing the shadows, while his sight was still dim and before his eyes
517a had recovered, and if the time required for readjustment was not short, wouldn't he provoke ridicule? Wouldn't it be said of him that he had returned from his upward journey with his eyes ruined, and that it is not worthwhile even to try to travel upward? And as for anyone who tried to free the prisoners and lead them upward, if they could somehow get their hands on him, wouldn't they kill him?

GLAUCON: They certainly would.

SOCRATES: This image, my dear Glaucon, must
b be fitted together as a whole with what we said before. The realm revealed through sight should be likened to the prison dwelling, and the light of the fire inside it to the sun's power. And if you think of the upward journey and the seeing of things above as the upward journey of the soul to the intelligible realm, you won't mistake my intention—since it is what you wanted to hear about. Only the god knows whether it is true. But this is how these phenomena seem to me: in the knowable realm, the last thing to be seen is the form of the good, and it is seen only with toil and trouble.
c Once one has seen it, however, one must infer that it is the cause of all that is correct and beautiful in anything, that in the visible realm it produces both light and its source, and that in the intelligible realm it controls and provides truth and understanding; and that anyone who is to act sensibly in private or public must see it.

GLAUCON: I agree, so far as I am able.

1. [*Odyssey* 11.489–90. The shade of Achilles speaks these words to Odysseus, who is visiting Hades. Plato is likening the cave dwellers to the dead.]

SOCRATES: Come on, then, and join me in this further thought: you should not be surprised that the ones who get to this point are not willing to occupy themselves with human affairs, but that, on the contrary, their souls are always eager to spend their time above. I mean, that is surely what we would expect, if indeed the image I described before is also accurate here. d

GLAUCON: It is what we would expect.

SOCRATES: What about when someone, coming from looking at divine things, looks to the evils of human life? Do you think it is surprising that he behaves awkwardly and appears completely ridiculous, if—while his sight is still dim and he has not yet become accustomed to the darkness around him—he is compelled, either in the courts or elsewhere, to compete about the shadows of justice, or about the statues of which they are the shadows; and to dispute the way these things are understood by people who have never seen justice itself? e

GLAUCON: It is not surprising at all.

SOCRATES: On the contrary, anyone with any sense, at any rate, would remember that eyes may be 518a
confused in two ways and from two causes: when they change from the light into the darkness, or from the darkness into the light. If he kept in mind that the same applies to the soul, then when he saw a soul disturbed and unable to see something, he would not laugh absurdly. Instead, he would see whether it had come from a brighter life and was dimmed through not having yet become accustomed to the dark, or from greater ignorance into greater light and was dazzled by the increased brilliance. Then he would consider the first soul happy in its experience and b
life, and pity the latter. But even if he wanted to ridicule it, at least his ridiculing it would make him less ridiculous than ridiculing a soul that had come from the light above.

GLAUCON: That's an entirely reasonable claim.

SOCRATES: Then here is how we must think about these matters, if that is true: education is not what some people boastfully declare it to be. They presumably say they can put knowledge into souls that lack it, as if they could put sight into blind eyes. c

GLAUCON: Yes, they do say that.

SOCRATES: But here is what our present account shows about this power to learn that is present in

everyone's soul, and the instrument with which each of us learns: just as an eye cannot be turned around from darkness to light except by turning the whole body, so this instrument must be turned around from what-comes-to-be together with the whole soul, until it is able to bear to look at what is and at the brightest thing that is—the one we call the good. Isn't that *d* right?

GLAUCON: Yes.

SOCRATES: Of this very thing, then, there would be a craft—namely, of this turning around—concerned with how this instrument can be most easily and effectively turned around, not of putting sight into it. On the contrary, it takes for granted that sight is there, though not turned in the right way or looking where it should look, and contrives to redirect it appropriately.

GLAUCON: That's probably right.

SOCRATES: Then the other so-called virtues of the soul do seem to be closely akin to those of the body: they really are not present in it initially, but are added *e* later by habit and practice. The virtue of wisdom, on the other hand, belongs above all, so it seems, to something more divine, which never loses its power, but is either useful and beneficial or useless and harmful, depending on the way it is turned. Or haven't *519a* you ever noticed in people who are said to be bad, but clever, how keen the vision of their little soul is and how sharply it distinguishes the things it is turned toward? This shows that its sight is not inferior, but is forced to serve vice, so that the sharper it sees, the more evils it accomplishes.

GLAUCON: I certainly have.

SOCRATES: However, if this element of this sort of nature had been hammered at right from childhood, and struck free of the leaden weights, as it were, of kinship with becoming, which have been fastened *b* to it by eating and other such pleasures and indulgences, which pull its soul's vision downward—if, I say, it got rid of these and turned toward truly real things, then the same element of the same people would see them most sharply, just as it now does the things it is now turned toward.

GLAUCON: That's probably right.

SOCRATES: Isn't it also probable, then—indeed, doesn't it follow necessarily from what was said before—that uneducated people who have no experience of true reality will never adequately govern a city, and neither will people who have been allowed *c* to spend their whole lives in education. The former fail because they do not have a single goal in life at which all their actions, public and private, inevitably aim; the latter because they would refuse to act, thinking they had emigrated, while still alive, to the Isles of the Blessed.

GLAUCON: True.

SOCRATES: It is our task as founders, then, to compel the best natures to learn what was said before[2] to be the most important thing: namely, to see the good; to ascend that ascent. And when they have ascended and looked sufficiently, we must not allow them to *d* do what they are allowed to do now.

GLAUCON: What's that, then?

SOCRATES: To stay there and refuse to go down again to the prisoners in the cave and share their labors and honors, whether the inferior ones or the more excellent ones.

GLAUCON: You mean we are to treat them unjustly, making them live a worse life when they could live a better one?

SOCRATES: You have forgotten again, my friend, that the law is not concerned with making any one *e* class in the city do outstandingly well, but is contriving to produce this condition in the city as a whole, harmonizing the citizens together through persuasion or compulsion, and making them share with each other the benefit they can confer on the community.[3] *520a* It produces such men in the city, not in order to allow them to turn in whatever direction each one wants, but to make use of them to bind the city together.

GLAUCON: That's true. Yes, I had forgotten.

SOCRATES: Observe, then, Glaucon, that we won't be unjustly treating those who have become philosophers in our city, but that what we will say to them, when we compel them to take care of the others and guard them, will be just. We will say: "When people like you come to be in other cities, they are justified in not sharing in the others' labors. *b* After all, they have grown there spontaneously, against

2. [505a–b.]

3. [420b–421c, 462a–466c.]

the will of the constitution in each of them. And when something grows of its own accord and owes no debt for its upbringing, it has justice on its side when it is not keen to pay anyone for its upbringing. But both for your own sakes and for that of the rest of the city, we have bred you to be leaders and kings in the hive, so to speak. You are better and more completely educated than the others, and better able to share in both types of life.[4] So each of you in turn must go down to live in the common dwelling place of the other citizens and grow accustomed to seeing in the dark. For when you are used to it, you will see infinitely better than the people there and know precisely what each image is, and also what it is an image of, because you have seen the truth about fine, just, and good things. So the city will be awake, governed by us and by you; not dreaming like the majority of cities nowadays, governed by men who fight against one another over shadows and form factions in order to rule—as if that were a great good. No, the truth of the matter is surely this: a city in which those who are going to rule are least eager to rule is necessarily best and freest from faction, whereas a city with the opposite kind of rulers is governed in the opposite way."

GLAUCON: Yes, indeed.

SOCRATES: Then do you think the people we have nurtured will disobey us when they hear these things, and be unwilling to share the labors of the city, each in turn, while living the greater part of their time with one another in the pure realm?

GLAUCON: No, they couldn't possibly. After all, we will be giving just orders to just people. However, each of them will certainly go to rule as to something necessary, which is exactly the opposite of what is done by those who now rule in each city.

SOCRATES: That's right, comrade. If you can find a way of life that is better than ruling for those who are going to rule, your well-governed city will become a possibility. You see, in it alone the truly rich will rule—those who are rich not in gold, but in the wealth the happy must have: namely, a good and rational life. But if beggars—people hungry for private goods of their own—go into public life, thinking that the good is there for the seizing, then such a city is impossible. For when ruling is something fought over, such civil and domestic war destroys these men and the rest of the city as well.

GLAUCON: That's absolutely true.

SOCRATES: Do you know of any other sort of life that looks down on political offices besides that of true philosophy?

GLAUCON: No, by Zeus, I do not.

SOCRATES: But surely it is those who are not lovers of ruling who must go do it. Otherwise, the rivaling lovers will fight over it.

GLAUCON: Of course.

SOCRATES: Who else, then, will you compel to go be guardians of the city if not those who know best what results in good government, and have different honors and a better life than the political?

GLAUCON: No one else.

SOCRATES: Do you want us to consider now how such people will come to exist, and how we will lead them up to the light, like those who are said to have gone up from Hades to the gods?

GLAUCON: Yes, of course that's what I want.

SOCRATES: It seems, then, that this is not a matter of flipping a potsherd,[5] but of turning a soul from a day that is a kind of night in comparison to the true day—that ascent to what is, which we say is true philosophy.

GLAUCON: Yes, indeed.

SOCRATES: Then mustn't we try to discover what subjects have the power to bring this about?

GLAUCON: Of course.

SOCRATES: So what subject is it, Glaucon, that draws the soul from what is coming to be to what is? It occurs to me as I am speaking that we said, didn't we, that these people must be athletes of war when they are young?[6]

GLAUCON: Yes, we did say that.

4. [I.e., the practical life of ruling and the theoretical life of doing philosophy.]

5. [A proverbial expression, referring to a children's game. The players were divided into two groups. A shell or potsherd—white on one side, black on the other—was thrown into space between them to the cry of "night or day?" (Note the reference to night and day in what follows.) According as the white or black fell uppermost, one group ran away pursued by the other.]

6. [404a, 412b–417b.]

SOCRATES: Then the subject we are looking for must also have this characteristic in addition to the former one.

GLAUCON: Which?

SOCRATES: It must not be useless to warlike men.

GLAUCON: If possible, it must not.

SOCRATES: Now, earlier they were educated by
e us in musical and physical training.

GLAUCON: They were.

SOCRATES: And surely physical training is concerned with what-comes-to-be and dies, since it oversees the growth and decay of the body.

GLAUCON: Obviously.

SOCRATES: So it could not be the subject we are looking for.

522a GLAUCON: No, it could not.

SOCRATES: Is it, then, the musical training we described before?

GLAUCON: But it is just the counterpart of physical training, if you remember. It educated the guardians through habits, conveying by harmony a certain harmoniousness of temper, not knowledge; and by rhythm a certain rhythmical quality. Its stories, whether fictional or nearer the truth, cultivated other habits akin to these. But as for a subject that leads to the destination you have in mind, of the sort you are looking for now, there was nothing
b of that in it.

SOCRATES: Your reminder is exactly to the point. It really does not have anything of that sort. You're a marvelous fellow, Glaucon, but what is there that does? The crafts all seemed to be somehow menial.[7]

GLAUCON: Of course. And yet, what subject is left that is separate from musical and physical training, and from the crafts?

SOCRATES: Well, if we have nothing left beyond these, let's consider one of those that touches all of them.

GLAUCON: Which?

SOCRATES: Why, for example, that common
c thing, the one that every type of craft, thought, and knowledge uses, and that is among the first things everyone has to learn.

GLAUCON: Which one is that?

SOCRATES: That inconsequential matter of distinguishing the numbers one, two, and three. In short, I mean number and calculation. Or isn't it true that every type of craft and knowledge must share in them?

GLAUCON: Indeed it is.

SOCRATES: Then warfare must too.

GLAUCON: It must.

SOCRATES: In tragedies, at any rate, Palamedes is always showing up Agamemnon as a totally ridiculous *d* general. Haven't you noticed? He says that by inventing numbers he established how many troops there were in the army at Ilium and counted their ships and everything else. The implication is that they had not been counted before, and that Agamemnon apparently did not even know how many feet he had, since he did not know how to count. What kind of general do you think that made him?

GLAUCON: A very strange one, I'd say, if there is any truth in that.

SOCRATES: Won't we posit this subject, then, as one a warrior has to learn so he can count and *e* calculate?

GLAUCON: It is more essential than anything else—if, that is, he is going to know anything at all about marshaling his troops—or if he is even going to be human, for that matter.

SOCRATES: Then do you notice the same thing about this subject as I do?

GLAUCON: What?

SOCRATES: That in all likelihood it is one of the subjects we were looking for that naturally stimulate the understanding. But no one uses it correctly, as *523a* something that really is fitted in every way to draw us toward being.

GLAUCON: How do you mean?

SOCRATES: I will try to make what I believe clear, at any rate. I will distinguish for myself the things that lead in the direction we mentioned from those that do not. Then you must look at them along with me, and either agree or disagree, so that we may see more clearly whether the distinction is as I imagine.

GLAUCON: Show me the things you mean.

SOCRATES: All right, I will show you, if you can see that some sense-perceptions do not summon the understanding to look into them, because the judg- *b* ment of sense-perception is itself adequate; whereas others encourage it in every way to look into them,

7. [495c–e.]

because sense-perception does not produce a sound result.

GLAUCON: You are obviously referring to things appearing in the distance and illusionist paintings.

SOCRATES: No, you are not quite getting what I mean.

GLAUCON: Then what do you mean?

SOCRATES: The ones that do not summon the understanding are all those that do not at the same time result in an opposite sense-perception. But the
c ones that do I call *summoners*. That is when sense-perception does not make one thing any more clear than its opposite, regardless of whether what strikes the senses is close by or far away. What I mean will be clearer if you look at it this way: these, we say, are three fingers—the smallest, the second, and the middle finger.

GLAUCON: Of course.

SOCRATES: Assume that I am talking about them as being seen from close by. Now consider this about them with me.

GLAUCON: What?

SOCRATES: It is obvious, surely, that each of them is equally a finger, and it makes no differ-
d ence whether it is seen to be in the middle or at either end; whether it is dark or pale, thick or thin, or anything else of that sort. You see, in all these cases, the soul of most people is not compelled to ask the understanding what a finger is, since sight does not at any point suggest to it that a finger is at the same time the opposite of a finger.

GLAUCON: No, it does not.

SOCRATES: It is likely, then, that a perception of that sort would not summon or awaken the under-
e standing.

GLAUCON: It is likely.

SOCRATES: Now, what about their bigness and smallness? Does sight perceive them adequately? Does it make no difference to it whether one of them is in the middle or at the end? And is it the same with the sense of touch, as regards thickness and thinness, hardness and softness? What about the other senses, then—do they make such things sufficiently clear? Or doesn't each of them work as follows: in the first place, the sense that deals with
524a hardness must also deal with softness; and it reports to the soul that it perceives the same thing to be both hard and soft?

GLAUCON: That's right.

SOCRATES: In cases of this sort then, isn't the soul inevitably puzzled as to what this sense-perception means by hardness, if it says that the same thing is also soft; and in the case of the sense-perception of lightness and heaviness, what it means lightness and heaviness are, if what is heavy is light or what is light heavy?

GLAUCON: Yes, indeed, those are strange messages for the soul to receive and do need to be ex- b
amined.

SOCRATES: It is likely, then, that it is in cases of this sort that the soul, summoning calculation and understanding, first tries to determine whether each of the things reported to it is one or two.

GLAUCON: Of course.

SOCRATES: If there are obviously two, won't each of them be obviously one and distinct?

GLAUCON: Yes.

SOCRATES: If each of them is one, then, and both together are two, the soul will understand that the two are separate. I mean, it would not understand inseparable things as two, but as one. c

GLAUCON: That's right.

SOCRATES: But sight, we say, saw bigness and smallness, not as separate, but as mixed up together. Right?

GLAUCON: Yes.

SOCRATES: And to get clear about this, understanding was compelled to see bigness and smallness, too, not mixed up together, but distinguished—the opposite way from sight.

GLAUCON: True.

SOCRATES: Isn't it in cases like this that it first occurs to us to ask what bigness is, and smallness, too?

GLAUCON: Absolutely.

SOCRATES: Which is why we called one section the intelligible and the other the visible.

GLAUCON: Right. d

SOCRATES: That, then, is what I was trying to express before when I said that some things summon thought, while others do not. I define summoners as those that strike the relevant sense at the same time as do their opposites. Those that do not do this, I said, do not wake up the understanding.

GLAUCON: I understand now, and I think you are right.

SOCRATES: Well then, to which of them does number, including the number one, belong?

GLAUCON: I do not know.

SOCRATES: Use what has already been said as an analogy. If the number one is adequately *seen* just by itself, or grasped by any of the other senses, then
e just as we were saying in the case of fingers, it would not draw the soul toward being. But if something opposite to it is always seen at the same time, so that it no more appears to be one than the opposite of one, then there would be a need at that point for someone to decide the matter. And he would compel the soul within him to be puzzled, to inquire, to stir up the understanding within itself, and to ask what the number one itself is. So, learning about the number one will be among the subjects that lead the soul
525a and turn it around to look at what is.

GLAUCON: But surely the visual perception of it has just that feature, since we do see the same thing as one and as an unlimited number at the same time.

SOCRATES: Then if this is true of the number one, won't it also be true of all numbers?

GLAUCON: Of course.

SOCRATES: But now, calculation and arithmetic are wholly concerned with numbers.

GLAUCON: Right.

SOCRATES: Then they obviously lead toward
b truth.

GLAUCON: To an unnatural degree.

SOCRATES: Then they would belong, it seems, among the subjects we are seeking. I mean, a soldier must learn them in order to marshal his troops; and a philosopher, because it is necessary to be rising up out of becoming so as to grasp being, or he will never become able to calculate.

GLAUCON: That's right.

SOCRATES: And our guardian is, in fact, both a warrior and a philosopher.

GLAUCON: Of course.

SOCRATES: Then it would be appropriate, Glaucon, to prescribe this subject in our legislation and to persuade those who are going to take part in what is most important in the city to go in for calculation
c and take it up, not as laymen do, but staying with it until they reach the point at which they see the nature of the numbers by means of understanding itself; not like tradesmen and retailers, caring about it for the sake of buying and selling, but for the sake of war and for ease in turning the soul itself around from becoming to truth and being.

GLAUCON: Very well put.

SOCRATES: Moreover, it occurs to me now that the subject of calculation has been mentioned, how refined it is and in how many ways it is useful for our purposes, provided you practice it for the sake of d
knowledge rather than trade.

GLAUCON: Which ways?

SOCRATES: Why, in the very one we were talking about just now. It gives the soul a strong lead upward and compels it to discuss the numbers themselves, never permitting anyone to propose for discussion numbers attached to visible or tangible bodies. I mean, you surely know what people who are clever in these matters are like. If, in the course of the argument, someone tries to divide the number one itself, they laugh and won't permit it. If *you* divide e
it, they multiply it, taking care that the number one never appears to be, not one, but many parts.

GLAUCON: That's very true.

SOCRATES: Then what do you think would happen, Glaucon, if someone were to ask them: "What 526a
kind of numbers are you amazing fellows discussing, where the number one is as you assume it to be, wholly equal in each and every case, without the least difference, and having no internal parts?" What do you think they would answer?

GLAUCON: I think they would answer that they are talking about those that are accessible only to thought and can be grasped in no other way.

SOCRATES: Do you see then, my friend, that this subject really does seem to be necessary to us, since b
it apparently compels the soul to use understanding itself on the truth itself?

GLAUCON: It does so very strongly, in fact.

SOCRATES: Now, have you ever noticed that those who are naturally good at calculation are also naturally quick in all subjects, so to speak, and that those who are slow, if they are educated and exercised in it, even if they are benefited in no other way, nonetheless improve and become generally sharper than they were?

GLAUCON: That's right.

SOCRATES: Moreover, I do not think you will easily find many subjects that are harder to learn or practice than it.

GLAUCON: No indeed.

SOCRATES: For all these reasons, then, this subject is not to be neglected. On the contrary, the very best natures must be educated in it.

GLAUCON: I agree.

SOCRATES: Well, then, let's require that one. Second, let's consider whether the subject that follows after it is also appropriate for our purposes.

GLAUCON: Which one? Or do you mean geometry?

SOCRATES: That's it exactly.

GLAUCON: Insofar as it pertains to war, it is clearly appropriate. You see, when it comes to setting up camp, occupying a region, gathering and ordering troops, and all the other maneuvers armies make whether in battle itself or on the march, it makes all the difference whether someone is skilled in geometry or not.

SOCRATES: But still, for things like that, even a little bit of geometry—and of calculation—would suffice. What we need to consider is whether the greater and more advanced part of it tends to make it easier to see the form of the good. And that tendency, we say, is to be found in anything that compels the soul to turn itself around toward the region in which lies the happiest of the things that are; the one the soul must do everything possible to see.

GLAUCON: You are right.

SOCRATES: Therefore, if geometry compels one to look at being, it is appropriate; but if at becoming, it is inappropriate.

GLAUCON: Yes, that's what we are saying.

SOCRATES: Now, no one with even a little experience of geometry will dispute with us that this science is itself entirely the opposite of what is said about it in the accounts of its practitioners.

GLAUCON: How so?

SOCRATES: Well, they say completely ridiculous things about it because they are so hard up. I mean, they talk as if they were practical people who make all their arguments for the sake of action. They talk of squaring, applying, adding, and the like; whereas, in fact, the entire subject is practiced for the sake of acquiring knowledge.

GLAUCON: Absolutely.

SOCRATES: Mustn't we also agree on a further point?

GLAUCON: What?

SOCRATES: That it is knowledge of what always is, not of something that comes to be and passes away.

GLAUCON: That's easy to agree to, since geometry is knowledge of what always is.

SOCRATES: In that case, my noble fellow, it can draw the soul toward truth and produce philosophical thought by directing upward what we now wrongly direct downward.

GLAUCON: More than anything else.

SOCRATES: More than anything else, then, we must require the inhabitants of your beautiful city not to neglect geometry in any way, since even its byproducts are not insignificant.

GLAUCON: What are they?

SOCRATES: The ones you mentioned that are concerned with war. And in addition, when it comes to being better able to pick up any subject, we surely know there is a world of difference between someone with a grasp of geometry and someone without one.

GLAUCON: Yes, by Zeus, a world of difference.

SOCRATES: Shall we prescribe it, then, as a second subject for the young?

GLAUCON: Let's.

SOCRATES: What about astronomy? Shall we make it the third? What do you think?

GLAUCON: That's fine with me, at least. I mean, a better awareness of the seasons, months, and years is no less appropriate for a general than for a farmer or navigator.

SOCRATES: You are funny! You are like someone who is afraid that the masses will think he is prescribing useless subjects. It is no inconsequential task—indeed it is a very difficult one—to become persuaded that in everyone's soul there is an instrument that is purified and rekindled by such subjects when it has been blinded and destroyed by other pursuits—an instrument that it is more important to preserve than 10,000 eyes, since only with it can the truth be seen. Those who share your belief that this is so will think you are speaking incredibly well, while those who are completely unaware of it will probably think you are talking nonsense, since they can see no other benefit worth mentioning in these subjects. So, de-

cide right now which group you are engaging in
528a discussion. Or is it neither of them, and are you making your arguments mostly for your own sake—though you do not begrudge anyone else whatever profit he can get from them?

GLAUCON: That's what I prefer—to speak, question, and answer mostly for my own sake.

SOCRATES: Let's backtrack a bit. You see, we were wrong just now about the subject that comes after geometry.

GLAUCON: How so?

SOCRATES: After a plain surface, we went immediately to a solid that was revolving, without taking one
b just by itself. But the right way is to take up the third dimension after the second. And it, I suppose, consists of cubes and of whatever shares in depth.

GLAUCON: Yes, you are right. But Socrates, that subject has not even been investigated yet.

SOCRATES: There are two reasons for that. Because no city values it, it is not vigorously investigated, due to its difficulty. And investigators need a director if they are to discover anything. Now, in the first place, such a director is difficult to find. Second, even if he could be found, as things stand now, those
c who investigate it are too arrogant to obey him. But if an entire city served as his co-director and took the lead in valuing this subject, then they would obey him, and consistent and vigorous investigation would reveal the facts about it. For even now, when it is not valued by the masses and is hampered by investigators who lack any account of its usefulness—all the same, in spite of all these handicaps, the force of its appeal has caused it to be developed. So it would not be at all surprising if the facts about it were revealed in any case.

GLAUCON: Yes, indeed, it *is* an outstandingly ap-
d pealing subject. But explain more clearly to me what you were saying just now. You took geometry, presumably, as dealing with plane surface.

SOCRATES: Yes.

GLAUCON: Then at first you put astronomy after it, but later you went back on that.

SOCRATES: Yes, the more I hurried to get through them all, the slower I went! You see, the subject dealing with the dimension of depth was next. But because of the ridiculous state the investigation of it is in, I passed it by and spoke of astronomy—which deals with the motion of things having depth—after geometry. e

GLAUCON: That's right.

SOCRATES: Let's then prescribe astronomy as the fourth subject, on the assumption that solid geometry, which we are now omitting, will be available if a city takes it up.

GLAUCON: That seems reasonable. And since you reproached me just now, Socrates, for praising astronomy in a vulgar manner, I will now praise it your way. You see, I think it is clear to everyone that it compels the soul to look upward and leads it from 529a things here to things there.

SOCRATES: It is clear to everyone except me, then, since that is not how I think of it.

GLAUCON: Then how do you think of it?

SOCRATES: As it is handled today by those who teach philosophy, it makes the soul look very much downward.

GLAUCON: How do you mean?

SOCRATES: In my opinion, your conception of "higher studies" is a good deal too generous! I mean, if someone were looking at something by leaning his head back and studying ornaments on a ceiling, it seems as though you would say that he is looking at b them with his understanding, not with his eyes! Maybe you are right and I am foolish. You see, I just cannot conceive of any subject making the soul look upward except the one that is concerned with what is—and that is *invisible*. If anyone tries to learn something about perceptible things, whether by gaping upward or squinting downward, I would say that he never really learns—since there is no knowledge to be had of such things—and that his soul is not looking up but down, whether he does his learning lying on c his back on land or on sea!

GLAUCON: A fair judgment! You are right to reproach me. But what did you mean, then, when you said that astronomy must be learned in a different way than people learn it at present, if it is going to be useful with regard to what we are talking about?

SOCRATES: It is like this: these ornaments in the heavens, since they are ornaments in something visible, may certainly be regarded as having the most beautiful and most exact motions that such things can have. But these fall far short of the true ones— d those motions in which the things that are really fast

or really slow, as measured in true numbers and as forming all the true geometrical figures, are moved relative to one another, and that move the things that are in them. And these, of course, must be grasped by reason and thought, not by sight. Don't you agree?

GLAUCON: Of course.

SOCRATES: Therefore, we should use the ornaments in the heavens as models to help us study these other things. It is just as if someone chanced to find *e* diagrams by Daedalus or some other craftsman or painter, which were very carefully drawn and worked out. I mean, anyone experienced in geometry who saw such things would consider them to be very beautifully executed, I suppose. But he would think it ridiculous to examine them seriously in order to find there the truth about equals, doubles, or any other *530a* ratio.

GLAUCON: How could it be anything but ridiculous?

SOCRATES: Don't you think, then, that a real astronomer will feel the same way when he looks at the motions of the stars? He will believe that the craftsman of the heavens arranged them and all that is in them in the most beautiful way possible for such things. But as for the ratio of night to day, of these to a month, of a month to a year, or of the motions of the stars to them or to each other, don't you think *b* he will consider it strange to believe that they are always the same and never deviate in the least, since they are connected to body and are visible things, or to seek by every means possible to grasp the truth about them?

GLAUCON: That's what I think—anyway, now that I hear it from you!

SOCRATES: Just as in geometry, then, it is by making use of problems that we will pursue astronomy too. We will leave the things in the heavens alone, if we are really going to participate in astronomy and make the naturally wise element in the soul useful *c* instead of useless.

GLAUCON: The task you are prescribing is a lot bigger than anything now attempted in astronomy.

SOCRATES: And I suppose we will prescribe other subjects in the same way, if we are to be of any benefit as lawgivers. But can you in fact suggest any other appropriate subjects?

GLAUCON: Not at the moment, anyway.

SOCRATES: But motion, it seems to me, presents itself, not just in one form, but in several. A wise person could probably list them all, but there are two that are evident even to us. *d*

GLAUCON: What are they?

SOCRATES: Besides the one we have discussed, there is also its counterpart.

GLAUCON: What's that?

SOCRATES: It is probable that as the eyes fasten on astronomical motions, so the ears fasten on harmonic ones, and that these two sciences are somehow akin, as the Pythagoreans say. And we agree, Glaucon. Don't we?

GLAUCON: We do.

SOCRATES: Then, since the task is so huge, *e* shouldn't we ask them their opinion and whether they have anything to add, all the while guarding our own requirement?

GLAUCON: What's that?

SOCRATES: That those we will be rearing should never attempt to learn anything incomplete,[8] anything that does not always come out at the place all things should reach—the one we mentioned just now in the case of astronomy.[9] Or don't you know that people do something similar with harmony, too? *531a* They measure audible concordances and sounds against one another, and so labor in vain, just like astronomers.

GLAUCON: Yes, by the gods, and pretty ridiculous they are, too. They talk about something they call a "dense interval" or quarter tone[10]—putting their ears to their instruments, like someone trying to overhear what the neighbors are saying. And some say they hear a tone in between, and that *it* is the shortest interval by which they must measure, while others argue that this tone sounds the same as a quarter tone. Both groups put ears before the understanding. *b*

SOCRATES: You mean those excellent fellows who vex their strings, torturing them and stretching them on pegs. I won't draw out the analogy by speaking of blows with the pick, or the charges laid against strings

8. [504c.]

9. [528b.]

10. [A dense interval is evidently the smallest difference in pitch that was recognized in ancient music.]

that are too responsive or too unresponsive. Instead, I will drop the analogy and say that I do not mean these people, but the ones we just said we were going to question about harmonics. You see, they do the same as the astronomers do. I mean, it is in these
c audible concordances that they search for numbers, but they do not ascend to problems or investigate which numbers are in concord and which are not, or what the explanation is in each case.

GLAUCON: But that would be a daimonic task!

SOCRATES: Yet, it is useful in the search for the beautiful and the good! Pursued for any other purpose, though, it is useless.

GLAUCON: I suppose so.

SOCRATES: Moreover, I take it that if the investigation of all the subjects we have mentioned arrives at
d what they share in common with one another and what their affinities are, and draws conclusions about their kinship, it does contribute something to our goal and is not labor in vain; but that otherwise it is in vain.

GLAUCON: I have the same hunch myself. But you are still talking about a very big task, Socrates.

SOCRATES: Do you mean the prelude, or what? Or don't you know that all these subjects are merely preludes to the theme[11] itself that must be learned? I mean, you surely do not think that people who are
e clever in these matters are dialecticians.

GLAUCON: No, by Zeus, I do not. Although, I have met a few exceptions.

SOCRATES: But did it ever seem to you that those who can neither give an account nor approve one know what any of the things are that we say they must know?

GLAUCON: Again, the answer is no.

SOCRATES: Then isn't this at last, Glaucon, the
532a theme itself that dialectical discussion sings? It itself is intelligible. But the power of sight imitates it. We said that sight tries at last to look at the animals themselves, the stars themselves, and, in the end, at the sun itself. In the same way, whenever someone tries, by means of dialectical discussion and without the aid of any sense-perceptions, to arrive through reason at the being of each thing itself, and does not give up until he grasps what good itself is with understanding itself, he reaches the end of the intelligible realm, just as the b other reached the end of the visible one.

GLAUCON: Absolutely.

SOCRATES: Well, then, don't you call this journey[12] dialectic?

GLAUCON: I do.

SOCRATES: Then the release from bonds and the turning around from shadows to statues and the light; and then the ascent out of the cave to the sun; and there the continuing inability to look directly at the animals, the plants, and the light of the sun, but instead at divine reflections in water and shadows of the things that are, and not, as before, merely at shadows of statues thrown by another source of light c that, when judged in relation to the sun, is as shadowy as they—all this practice of the crafts we mentioned has the power to lead the best part of the soul upward until it sees the best among the things that are, just as before the clearest thing in the body was led to the brightest thing in the bodily and visible world. d

GLAUCON: I accept that this is so. And yet, I think it is very difficult to accept; although—in another way—difficult not to accept! All the same, since the present occasion is not our only opportunity to hear these things, but we will get to return to them often in the future, let's assume that what you said about them just now is true and turn to the theme itself, and discuss it in the same way as we did the prelude. So, tell us then, in what way the power of dialectical discussion works, into what kinds it is divided, and what roads it follows. I mean, it is these, it seems, that would lead us at last to that place which is a rest e from the road, so to speak, for the one who reaches it, and an end of his journey.

SOCRATES: You won't be able to follow me any farther, my dear Glaucon—though not because of 533a any lack of eagerness on my part. You would no longer see an image of what we are describing, but the truth itself as it seems to me, at least. Whether it is really so or not—that's not something on which it is any longer worth insisting. But that there is some such thing to be seen, *that* is something on which we must insist. Isn't that so?

11. [*Nomos:* also, law.]

12. [*Poreia:* An *aporia* (puzzle, problem—literally, a blockage on one's journey forward) is what dialectic attempts to solve.]

GLAUCON: Of course.

SOCRATES: And mustn't we also insist that the power of dialectical discussion could reveal it only to someone experienced in the subjects we described, and cannot do so in any other way?

GLAUCON: Yes, that is worth insisting on, too.

SOCRATES: At the very least, no one will dispute
b our claim by arguing that there is another road of inquiry that tries to acquire a systematic and wholly general grasp of what each thing itself is. By contrast, all the other crafts are concerned with human beliefs and appetites, with growing or construction, or with the care of growing or constructed things. As for the rest, we described them as to some extent grasping what is—I mean, geometry and the subjects that follow it. For we saw that while they do dream about what is, they cannot see it while wide awake as long
c as they make use of hypotheses that they leave undisturbed, and for which they cannot give any argument. After all, when the first principle is unknown, and the conclusion and the steps in between are put together out of what is unknown, what mechanism could possibly turn any agreement reached in such cases into knowledge?

GLAUCON: None.

SOCRATES: Therefore, dialectic is the only investigation that, doing away with hypotheses, journeys to
d the first principle itself in order to be made secure. And when the eye of the soul is really buried in a sort of barbaric bog, dialectic gently pulls it out and leads it upward, using the crafts we described to help it and cooperate with it in turning the soul around. From force of habit, we have often called these branches of knowledge. But they need another name, since they are clearer than belief and darker than knowledge. We distinguished them by the term "thought" somewhere before.[13] But I don't suppose we will dispute about names, with matters as impor-
e tant as those before us to investigate.

GLAUCON: Of course not, just as long as they express the state of clarity the soul possesses.

SOCRATES: It will be satisfactory, then, to do what we did before and call the first section knowledge, the second thought, the third opinion, and the fourth imagination. The last two together we call belief, the 534a
other two, understanding.[14] Belief is concerned with becoming; understanding with being. And as being is to becoming, so understanding is to belief; and as understanding is to belief, so knowledge is to belief and thought to imagination. But as for the ratios between the things these deal with, and the division of either the believable or the intelligible section into two, let's pass them by, Glaucon, in case they involve us in discussions many times longer than the ones we have already gone through.

GLAUCON: I agree with you about the rest of them, anyway, insofar as I am able to follow. b

SOCRATES: So don't you, too, call someone a dialectician when he is able to grasp an account of the being of each thing? And when he cannot do so, won't you, too, say that to the extent that he cannot give an account of something either to himself or to another, to that extent he does not understand it?

GLAUCON: How could I not?

SOCRATES: Then the same applies to the good. Unless someone can give an account of the form of the good, distinguishing it from everything else, and can survive all examination as if in a battle, striving c
to examine[15] things not in accordance with belief, but in accordance with being; and can journey through all that with his account still intact, you will say that he does not know the good itself or any other good whatsoever. And if he does manage to grasp some image of it, you will say that it is through belief, not knowledge, that he grasps it; that he is dreaming and asleep throughout his present life; and that, before he wakes up here, he will arrive in Hades and go to sleep forever. d

GLAUCON: Yes, by Zeus, I will certainly say all that.

13. [511d6–511e4.]

14. [The reference is to 511d6–e5, where the first section is called understanding (*noêsis*), not knowledge (*epistêmê*). Since thought (*dianoia*) is not now a kind of knowledge, *noêsis* and *epistêmê* have in effect become one and the same. *Epistêmê* and *dianoia* are now jointly referred to as *noêsis*, because that whole section of the line on which they appear consists of intelligible objects (*noêton*).]

15. [*Elengchein:* ("to examine," "to refute")—as in the Socratic elenchus.]

SOCRATES: Then as for those children of yours, the ones you are rearing and educating in your discussion, if you ever reared them in fact, I don't suppose that, while they are still as irrational as the proverbial lines,[16] you would allow them to rule in your city or control the most important things.

GLAUCON: No, of course not.

SOCRATES: Won't you prescribe in your legislation, then, that they are to give the most attention to the education that will enable them to ask and answer questions most knowledgeably?

e GLAUCON: I will prescribe it—together with you.

SOCRATES: Doesn't it seem to you, then, that dialectic is just like a capstone we have placed on top of the subjects, and that no other subject can rightly be placed above it, but that our account of the subjects
535a has now come to an end?

GLAUCON: It does.

SOCRATES: Then it remains for you to deal with the distribution of these subjects: to whom we will assign them and in what way.

GLAUCON: Clearly.

SOCRATES: Do you remember what sort of people we chose in our earlier selection of rulers?[17]

GLAUCON: How could I not?

SOCRATES: Well then, as regards the other requirements too, you must suppose that these same natures are to be chosen, since we have to select the most stable, the most courageous, and—as far as possible—the best-looking. In addition, we must
b look not only for people who have a noble and valiant character, but for those who also have natural qualities conducive to this education of ours.

GLAUCON: Which ones in particular?

SOCRATES: They must be keen on the subjects, bless you, and learn them without difficulty. For people's souls are much more likely to give up during strenuous studies than during physical training. The pain is more their own, you see, since it is peculiar to them and not shared with the body.

GLAUCON: That's true.

SOCRATES: We must also look for someone who has a good memory, is persistent, and is wholeheartedly in love with hard work. How else do you suppose *c* he would be willing to carry out such hard physical labors and also complete so much learning and training?

GLAUCON: He would not, not unless his nature were an entirely good one.

SOCRATES: In any case, the mistake made at present—which, as we said before, explains why philosophy has fallen into dishonor—is that unworthy people take it up. For illegitimate people should not have taken it up, but genuine ones.

GLAUCON: How do you mean?

SOCRATES: In the first place, the one who takes it up must not be half-hearted in his love of hard work, with one half of him loving hard work and the other shirking it. That is what happens when someone *d* is a lover of physical training and a lover of hunting and a lover of all kinds of hard bodily labor; yet is not a lover of learning, a lover of listening, or a keen investigator, but hates the work involved in all such things. And someone whose love of hard work tends in the opposite direction is also defective.

GLAUCON: That's absolutely true.

SOCRATES: Similarly with regard to truth, won't we say that a soul is maimed if it hates a voluntary lie, cannot endure to have one in itself, and is greatly *e* angered when others lie; but is nonetheless content to accept an involuntary lie, does not get irritated when it is caught being ignorant, and bears its ignorance easily, wallowing in it like a pig?[18]

GLAUCON: Absolutely. *536a*

SOCRATES: And with regard to temperance, courage, high-mindedness, and all the other parts of virtue, too, we must be especially on our guard to distinguish the illegitimate from the genuine. You see, when private individuals or cities do not know how to investigate all these things fully, they unwittingly employ defectives and illegitimates as their friends or rulers for whatever services they happen to need.

GLAUCON: Yes, that's just what happens.

SOCRATES: So we must take good care in all these matters, since, if we bring people who are sound of

16. [A pun made possible by the fact that *alogon* can mean "irrational" (as applied to people) and "incommensurable" (as applied to lines in geometry).]

17. [412b8–417b9.]

18. [The difference between voluntary and involuntary lies is explained at 382a1–383a7.]

limb and mind to so important a subject, and train and educate them in it, justice itself will not find fault with us, and we will save both the city and its constitution. But if we bring people of a different sort to it, we will achieve precisely the opposite and let loose an even greater flood of ridicule upon philosophy as well.

GLAUCON: That would be a shame.

SOCRATES: It certainly would. But I seem to have made myself a little ridiculous just now.

GLAUCON: In what way?

SOCRATES: I forgot we were playing and spoke too vehemently. You see, while I was speaking I looked upon philosophy, and when I saw it undeservedly showered with abuse, I suppose I got irritated and, as if I were angry with those responsible, I said what I had to say in too serious a manner.

GLAUCON: Not too serious for me, by Zeus, as a member of the audience.

SOCRATES: But too serious for me as the speaker. In any case, let's not forget that in our earlier selection we chose older people, but here that is not permitted. You see, we must not believe Solon when he says that as someone grows older, he is able to learn a lot. On the contrary, he is even less able to learn than to run. It is to young people that all large and frequent labors properly belong.

GLAUCON: Necessarily so.

SOCRATES: Well, then, calculation, geometry, and all the preparatory education that serves as preparation for dialectic must be offered to them in childhood—and not in the shape of compulsory instruction, either.

GLAUCON: Why's that?

SOCRATES: Because a free person should learn nothing slavishly. For while compulsory physical labors do no harm to the body, no compulsory instruction remains in the soul.

GLAUCON: That's true.

SOCRATES: Well, then, do not use compulsion, my very good man, to train the children in these subjects; use play instead. That way you will also be able to see better what each of them is naturally suited for.

GLAUCON: What you say makes sense.

SOCRATES: Don't you remember that we also said that the children were to be led into war on horseback as observers, and that, wherever it is safe, they should be brought to the front and given a taste of blood, just like young dogs?

GLAUCON: I do remember.

SOCRATES: Those who always show the greatest facility in dealing with all these labors, studies, and fears must be enrolled in a unit.

GLAUCON: At what age?

SOCRATES: After they are released from compulsory physical training. For during that period, whether it is two or three years, they are incapable of doing anything else, since weariness and sleep are enemies of learning. At the same time, one of the important tests of each of them is how he fares in physical training.

GLAUCON: It certainly is.

SOCRATES: Then, after that period, those selected from among the twenty-year-olds will receive greater honors than the others. Moreover, the subjects they learned in no particular order in their education as children, they must now bring together into a unified vision of their kinship with one another and with the nature of what is.

GLAUCON: That, at any rate, is the only instruction that remains secure in those who receive it.

SOCRATES: It is also the greatest test of which nature is dialectical and which is not. For the person who can achieve a unified vision is dialectical, and the one who cannot isn't.

GLAUCON: I agree.

SOCRATES: Well, then, you will have to look out for those among them who most possess that quality; who are resolute in their studies and also resolute in war and the other things conventionally expected of them. And when they have passed their thirtieth year, you will have to select them in turn from among those selected earlier and assign them yet greater honors, and test them by means of the power of dialectical discussion to see which of them can relinquish his eyes and other senses, and travel on in the company of truth to what itself is. And here, comrade, you have a task that needs a lot of safeguarding.

GLAUCON: How so?

SOCRATES: Don't you realize the harm caused by dialectical discussion as it is currently practiced?

GLAUCON: What harm?

SOCRATES: Its practitioners are filled with lawlessness.

GLAUCON: They certainly are.

SOCRATES: Do you think it is at all surprising that this happens to them? Aren't you sympathetic?

GLAUCON: Why should I be?

SOCRATES: It is like the case of a supposititious child brought up amid great wealth, a large and pow-
538*a* erful family, and many flatterers, who finds out, when he has become a man, that he is not the child of his professed parents and that he cannot discover his real ones. Do you have any hunch as to what his attitude would be to the flatterers, and to his supposed parents, during the time when he did not know about the exchange, and, on the other hand, when he did know? Or would you rather hear my hunch?

GLAUCON: I would.

SOCRATES: Well, then, my hunch is that he would be more likely to honor his father, his mother, and
b the rest of his supposed family than the flatterers, less likely to overlook any of their needs, less likely to treat them lawlessly in word or deed, and less likely to disobey them than the flatterers in any matters of importance, in the time when he did not know the truth.

GLAUCON: Probably so.

SOCRATES: But when he became aware of the truth, on the other hand, my hunch is that he would withdraw his honor and devotion from his family and increase them for the flatterers, whom he would obey far more than before, and he would begin to live the
c way they did, spend time with them openly, and—unless he was thoroughly good by nature—care nothing for that father of his or any of the rest of his supposed family.

GLAUCON: All that would probably happen as you say. But how is it like the case of those who take up argument?

SOCRATES: As follows. I take it we hold from childhood convictions about what things are just and fine; we are brought up with them as with our parents; we obey and honor them.

GLAUCON: Yes, we do.

SOCRATES: And there are also other practices, op-
d posite to those, which possess pleasures that flatter our soul and attract it to themselves, but which do not persuade people who are at all moderate—who continue to honor and obey the convictions of their fathers.

GLAUCON: That's right.

SOCRATES: What happens, then, when someone of that sort is met by the question, "What is the fine?" and, when he answers what he has heard from the traditional lawgiver, the argument refutes him; and by refuting him often and in many ways, reduces him to the belief that the fine is no more fine than shameful, and the same with the just, the good, and *e* the things he honored most—what do you think he will do after that about honoring and obeying his earlier convictions?

GLAUCON: It is inevitable that he won't honor or obey them in the same way.

SOCRATES: Then when he no longer regards them as honorable or as his own kin the way he did before, and cannot discover the true ones, will he be likely to adopt any other sort of life than the one that flatters him? 539*a*

GLAUCON: No, he won't.

SOCRATES: And so he will be taken, I suppose, to have changed from being law-abiding to being lawless.

GLAUCON: Inevitably.

SOCRATES: Isn't it likely, then, that this is what will happen to people who take up argument in that way, and, as I said just now, don't they deserve a lot of sympathy?

GLAUCON: Yes, and pity too.

SOCRATES: Then if you do not want your thirty-year-olds to be objects of such pity, won't you have to employ every sort of precaution when they take up argument?

GLAUCON: Yes, indeed.

SOCRATES: And isn't one very effective precaution not to let them taste argument while they are young? *b* I mean, I don't suppose it has escaped your notice that when young people get their first taste of argument, they misuse it as if it were playing a game, always using it for disputation. They imitate those who have refuted them by refuting others themselves, and, like puppies, enjoy dragging and tearing with argument anyone within reach.

GLAUCON: Excessively so.

SOCRATES: Then, when they have refuted many themselves and been refuted by many, they quickly

c fall into violently disbelieving everything they believed before. And as a result of this, they themselves and the whole of philosophy as well are discredited in the eyes of others.

GLAUCON: That's absolutely true.

SOCRATES: But an older person would not be willing to take part in such madness. He will imitate someone who is willing to engage in dialectical discussion and look for the truth, rather than someone who plays at disputation as a game. He will be more moderate himself and will bring honor, rather than
d discredit, to the practice.

GLAUCON: That's right.

SOCRATES: And wasn't everything we said before this also said as a precaution—that those with whom one takes part in arguments are to be orderly and steady by nature, and not, as now, those, however unsuitable, who chance to come along?

GLAUCON: Yes, it was.

SOCRATES: Is it enough, then, if someone devotes himself continuously and strenuously to taking part in argument, doing nothing else, but training in it just as he did in the physical training that is its counterpart, but for twice as many years?

e GLAUCON: Do you mean six years or four?

SOCRATES: It does not matter. Make it five. You see, after that, you must make them go down into the cave again, and compel them to take command in matters of war and the other offices suitable for young people, so that they won't be inferior to the others in experience. And in these offices, too, they must be tested to see whether they will remain stead-
540a fast when they are pulled in different directions, or give way.

GLAUCON: How much time do you assign to that?

SOCRATES: Fifteen years. Then, at the age of fifty, those who have survived the tests and are entirely best in every practical task and every science must be led at last to the end and compelled to lift up the radiant light of their souls, and to look toward what itself provides light for everything. And once they have seen the good itself, they must use it as their model and put the city, its citizens, and themselves in order throughout the remainder of their lives, each
b in turn. They will spend the greater part of their time doing philosophy, but, when his turn comes, each must labor in politics and rule for the city's sake, not as something fine, but rather as something that must be done. In that way, always having educated others like themselves to take their place as guardians of the city, they will depart for the Isles of the Blessed and dwell there. And the city will publicly establish memorials and sacrifices to them as daimons, if the Pythia agrees; but if not, as happy and divine people. c

GLAUCON: Like a sculptor, Socrates, you have produced thoroughly beautiful ruling men!

SOCRATES: And ruling women, too, Glaucon. You see, you must not think that what I have said applies any more to men than it does to those women of theirs who are born with the appropriate natures.

GLAUCON: That's right, if indeed they are to share everything equally with the men, as we said.

SOCRATES: Well, then, do you agree that the things we have said about the city and its constitution d
are not altogether wishful thinking; that it is difficult for them to come about, but possible in a way, and in no way except the one we described: namely, when one or more true philosophers come to power in a city—people who think little of present honors, regarding them as illiberal and worthless, who prize what is right and the honors that come from it above everything, and who consider justice as the most im- e
portant and most essential thing, serving it and fostering it as they set their city in order?

GLAUCON: How will they do that?

SOCRATES: Everyone in the city who is over ten years old they will send into the country. They will 541a
take over the children, and far removed from current habits, which their parents possess, they will bring them up in their own ways and laws, which are the ones we described before. And with the city and constitution we were discussing thus established in the quickest and easiest way, it will itself be happy and bring the greatest benefit to the people among whom it comes to be.

GLAUCON: That's by far the quickest and easiest way. And in my opinion, Socrates, you have well described how it would come into existence, if it ever did. b

SOCRATES: Haven't we said enough, then, about this city and the man who is like it? For surely it is clear what sort of person we will say he has to be.

GLAUCON: Yes, it is clear. And as for your question, I think we have reached the end of this topic.

BOOK VIII

SOCRATES' NARRATION CONTINUES:

SOCRATES: All right. We are agreed, then, Glaucon, that if a city is going to be eminently well governed, women must be shared; children and their entire education must be shared; in both peace and war, pursuits must be shared; and their kings must be those among them who have proved best both in philosophy and where war is concerned.

GLAUCON: We are agreed.

SOCRATES: Moreover, we also granted this: once the rulers are established, they will lead the soldiers and settle them in the kind of dwellings we described earlier, which are in no way private, but wholly shared. And surely we also came to an agreement, if you remember, about what sort of possessions they should have.

GLAUCON: Yes, I do remember. We thought that none of them should acquire any of the things that others now do; but that, as athletes of war and guardians, they should receive their minimum yearly upkeep from the other citizens as a wage for their guardianship, and take care of themselves and the rest of the city.[1]

SOCRATES: That's right. But since we have completed that discussion, let's recall the point at which we began the digression that brought us here, so that we can continue on the same path again.

GLAUCON: That is not difficult. You see, much the same as now, you were talking as if you had completed the description of the city.[2] You were saying that you would class both the city you described and the man who is like it as good, even though, as it seems, you had a still finer city and man to tell us about. But in any case, you were saying that the others were defective, if it was correct. And you said, if I remember, that of the remaining kinds of constitution four were worth discussing, each with defects we should observe; and that we should do the same for the people like them in order to observe them all, come to an agreement about which man is best and which worst, and then determine whether the best is happiest and the worst most wretched, or whether it is otherwise. I was asking you which four constitutions you had in mind, when Polemarchus and Adeimantus interrupted.[3] And that is when you took up the discussion that led here.

SOCRATES: That's absolutely right.

GLAUCON: Like a wrestler, then, give me the same hold again, and when I ask the same question, try to tell me what you were about to say before.

SOCRATES: If I can.

GLAUCON: In any case, I really want to hear for myself what four constitutions you meant.

SOCRATES: It won't be difficult for you to hear them. You see, the ones I mean are the very ones that already have names: the one that is praised by "the many," your Cretan or Laconian[4] constitution. The second—and second in the praise it receives—is called oligarchy, a constitution filled with a host of evils. Antagonistic to it, and next in order, is democracy. And "noble" tyranny, surpassing all of them, is the fourth and most extreme disease of cities. Can you think of another form of constitution—I mean, another distinct in form from these? For, no doubt, there are dynasties and purchased kingships and other similar constitutions in between these, which one finds no less among barbarians than among Greeks.

GLAUCON: Many strange ones are certainly mentioned, at least.

SOCRATES: Are you aware, then, that there must be as many forms of human character as there are of constitutions? Or do you think constitutions arise from oak or rock[5] and not from the characters of the people in the cities, which tip the scales, so to speak, and drag the rest along with them?

GLAUCON: No, they could not possibly arise from anything other than that.

SOCRATES: So, if there are five of cities, there must also be five ways of arranging private individual souls.

GLAUCON: Of course.

1. [415d6–420a7.]
2. [445c1–450c5.]
3. [449b1–2.]
4. [I.e., Spartan.]
5. [Homer, *Odyssey* 19.163.]

SOCRATES: Now, we have already described the one who is like aristocracy, the one we rightly describe as good and just.

545a GLAUCON: Yes, we have described him.

SOCRATES: Mustn't we next describe the inferior ones—the victory-loving and honor-loving, which correspond to the Laconian constitution, followed by the oligarchic, democratic, and tyrannical—so that, having discovered the most unjust of all, we can oppose him to the most just and complete our investigation into how pure justice and pure injustice stand with regard to the happiness or wretchedness of the one who possesses them; and be persuaded either by Thrasymachus to practice injustice or by the argu-
b ment that is now coming to light to practice justice.

GLAUCON: That's exactly what we must do.

SOCRATES: Then just as we began by looking for the virtues of character in constitutions before looking for them in private individuals, thinking they would be clearer in the former, shouldn't we first examine the honor-loving constitution? I do not know another name that is commonly applied to it; it should be called either timocracy or timarchy. Then shouldn't we examine that sort of man by comparing him to
c it, and, after that, oligarchy and the oligarchic man, and democracy and the democratic man? Fourth, having come to a city that is under a tyrant and having examined it, shouldn't we look into a tyrannical soul, and so try to become adequate judges of the topic we proposed for ourselves?[6]

GLAUCON: That, at any rate, would be a reasonable way for us to go about observing and judging.

SOCRATES: Come on, then, let's try to describe how timocracy emerges from aristocracy. Or is it sim-
d ply the case that, in all constitutions, change originates in the ruling element itself when faction breaks out within it; but that if this group remains of one mind, then—however small it is—change is impossible?

GLAUCON: Yes, that's right.

SOCRATES: How, then, Glaucon, will our city be changed? How will faction arise, either between the auxiliaries and the rulers or within either group? Or do you want us to be like Homer and pray to the
e Muses to tell us "how faction first broke out,"[7] and have them speak in tragic tones, playing and jesting with us, as if we were children and they were speaking in earnest?

GLAUCON: How do you mean?

SOCRATES: Something like this: "It is difficult for a city constituted in this way to change. However, 546a since everything that comes-to-be must decay, not even one so constituted will last forever. On the contrary, it, too, must face dissolution. And this is how it will be dissolved: not only plants that grow in the earth, but also animals that grow upon it, have periods of fertility and infertility of both soul and bodies each time their cycles complete a revolution. These cycles are short for what is short-lived and the opposite for what is the opposite. However, even though they are wise, the people you have educated to be leaders in your city will, by using rational calculation combined b with sense-perception, nonetheless fail to ascertain the periods of good fertility and of infertility for your species. Instead, these will escape them, and so they will sometimes beget children when they should not.

"Now, for the birth of a divine creature there is a cycle comprehended by a perfect number;[8] while for a human being, it is the first number in which are found increases involving both roots and powers, comprehending three intervals and four terms, of factors that cause likeness and unlikeness, cause increase and decrease, and make all things mutually agreeable and rational in their relations to one another. Of these factors, the base ones—four in relation to three, c together with five—give two harmonies when thrice increased. One is a square, so many times a hundred. The other is of equal length one way, but oblong. One of its sides are 100 squares of the rational diameter of five each diminished by one, or alternatively 100 squares of the irrational diameter each diminished by two. The other side are 100 cubes of three. This whole geometrical number controls better and worse births.[9]

6. [Most recently at 544a2–8.]

7. [Apparently an adaptation of *Iliad* 16.112–3.]

8. [The divine creature seems to be the world or universe. See *Timaeus* 30b–d, 32d, 34a–b. Plato does not specify what its number is.]

9. [The human geometrical number is the product of 3, 4, and 5 "thrice increased": if $(3 \times 4 \times 5) \times (3 \times 4 \times 5) = (3 \times 4 \times 5)^2$ is one increase, $(3 \times 4 \times 5) \times (3 \times 4 \times 5)\ (3 \times 4 \times 5) \times (3 \times 4 \times 5) = (3 \times 4 \times 5)^4$ is three.

"And when, through ignorance of these, your
d guardians join brides and grooms at the wrong time, the children will be neither good-natured nor fortunate. The older generation will choose the best of these children, even though they do not deserve them. And when they in turn acquire their fathers' powers, the first thing they will begin to neglect as guardians will be us, by paying less attention to musical training than they should; and the second is physical training. Hence your young people will become more unmusical. And rulers chosen from among them won't be able to guard well the testing of Hesiod's and your own races—gold, silver, bronze, and iron.[10] e
The intermixing of iron with silver and bronze with 547a
gold will engender lack of likeness and unharmonious inequality, and these always breed war and hostility wherever they arise. We must declare faction to be 'of this lineage,'[11] wherever and whenever it arises."

GLAUCON: And we will declare that they have answered correctly.

SOCRATES: They must. They are Muses, after all!

GLAUCON: What do the Muses say next? b

SOCRATES: When faction arose, each of these two races, the iron and the bronze, pulled the constitution toward moneymaking and the acquisition of land, houses, gold, and silver. The other two, by contrast, the gold and silver races—since they are not poor, but naturally rich in their souls—led toward virtue and the old political system. Striving and struggling with one another, they compromised on a middle way: they distributed the land and houses among themselves as private property; enslaved and held as serfs and servants those whom they had previously guarded as free friends and providers of upkeep; and c
took responsibility themselves for making war and for guarding against the ones they had enslaved.

GLAUCON: I think that is how the transformation begins.

SOCRATES: Wouldn't this constitution, then, be somehow in the middle between aristocracy and oligarchy?

GLAUCON: Of course.

SOCRATES: Anyway, that is how the transformation occurs. But once transformed, how will it be managed? Or isn't it obvious that it will imitate the first constitution in some respects and oligarchy in d
others, since it is in the middle between them; and that it will also have some features unique to itself?

GLAUCON: That's right.

SOCRATES: In honoring the rulers, then, and in the fighting class's abstention from farming, handicrafts, and other ways of making money, in providing communal meals and being devoted to physical training and training for war—in all such ways, won't the constitution be like the previous one?

This formula included "increases involving both roots and powers": $(3 \times 4 \times 5)$ is a root; its indices are powers. It "comprehends" three "intervals," symbolized by ×, and four "terms"—namely, the roots. The resulting number, 12,960,000, can be represented geometrically as: (1) a square whose sides are 3,600, or (2) an "oblong" or rectangle whose sides are 4,800 and 2,700. (1) is "so many times 100": 36 times. (2) is obtained as follows. The "rational diameter" of 5 is the nearest rational number to the real diameter of a square whose sides are 5. This diameter $= \sqrt{52 + 5^2} = \sqrt{50} = 7$. Since the square of 7 is 49, we get the longer side of the rectangle by diminishing 49 by 1 and multiplying the result by 100. This gives 4,800. The "irrational diameter" of 5 is $\sqrt{50}$. When squared (= 50), diminished by 2 (= 48), and multiplied by 100, this, too, is 4,800. The short side, "100 cubes of three," = 2,700. The significance of the number is more controversial. The factors "that cause likeness and unlikeness, cause increase and decrease, and make all things mutually agreeable and rational in their relations to one another" are probably the numbers, since odd numbers were thought to cause likeness and even ones unlikeness (Aristotle, *Physics* 203ª13–5). Of the numbers significant in human life, one is surely the 100 years of its maximum span (615a8–b1). Another might be the number of days in the year (roughly 360), and a third might be the divisions of those days into smaller units determined by the sun's place in the sky, since it is the sun that provides for "the coming-to-be, growth, and nourishment" of all visible things (509b2–4). Assuming that those units are the 360 degrees of the sun's path around the earth (a suggestion due to Robin Waterfield), the number of moments in a human life that have a potential effect on its coming-to-be, growth, and nourishment would be $100 \times 360 \times 360$, or 12,960,000—Plato's human geometrical number.]

10. [414d1–415c7; Hesiod, *Works and Days* 109–202.]
11. [Homer, *Iliad* 6.211.]

GLAUCON: Yes.

SOCRATES: But in its fear of appointing wise people as rulers, on the grounds that men of that sort are no longer simple and earnest but mixed; in its inclination toward spirited and simpler people, who are more naturally suited for war than peace; in its honoring the tricks and stratagems of war; and spending all its time making war—in these respects, by contrast, isn't it pretty much unique?

GLAUCON: Yes.

SOCRATES: Such men will have an appetite for money just like those in oligarchies, passionately adoring gold and silver in secret, owning storehouses and private treasuries where they can deposit them and keep them hidden; and they will have walls around their houses, real private nests, where they can spend lavishly on their women or on anyone else they please.

GLAUCON: That's absolutely true.

SOCRATES: They will be stingy with money, since they honor it and do not possess it openly, but they will love to spend other people's money because of their appetites. They will enjoy their pleasures in secret, running away from the law like boys from their father, since they have not been educated by persuasion but by force. This is because they have neglected the true Muse, the companion of discussion and philosophy, and honored physical training more than musical training.

GLAUCON: The constitution you are describing is a thorough mixture of good and bad.

SOCRATES: Yes, it is mixed. But because of its mastery by the spirited element, only one thing really stands out in it—the love of victories and honors.

GLAUCON: And very noticeable it is.

SOCRATES: That, then, is how this constitution would come to exist, and that is what it would be like. It is just an outline sketch of the constitution in words, not an exact account of it, since even from a sketch we will be able to see the most just man and most unjust one. It would be an incredibly long task to discuss every constitution and every character without omitting any detail.

GLAUCON: Yes, that's right.

SOCRATES: Who, then, is the man corresponding to this constitution? How does he come to exist and what sort of man is he?

ADEIMANTUS: I think he would be very like Glaucon here, at least as far as the love of victory is concerned.

SOCRATES: Maybe in that respect, but in the following ones I do not think his nature would be like that.

ADEIMANTUS: Which ones?

SOCRATES: He would have to be more stubborn and less well trained in music; a lover of music and of listening, yet not at all skilled in speaking; the sort of person who is harsh to slaves instead of looking down on them, as an adequately educated person does; gentle to free people and very submissive to rulers; a lover of ruling and of honor, who does not base his claim to rule on his ability to speak or anything like that, but on his exploits in war and anything having to do with war; a lover of physical training and of hunting.

ADEIMANTUS: Yes, that is indeed the character belonging to this constitution.

SOCRATES: As regards money, too, wouldn't someone like that look down on it when he is young; but as he grows older, wouldn't he love it more and more because he shares in the money-lover's nature and is not pure in his attitude to virtue, since he lacks the best guardian?

ADEIMANTUS: What's that?

SOCRATES: Reason mixed with musical training. You see, only it dwells within the person who possesses it as the lifelong preserver of his virtue.

ADEIMANTUS: Well put.

SOCRATES: That, then, is what a timocratic youth is like; he is like the corresponding city.

ADEIMANTUS: Yes, indeed.

SOCRATES: And he comes to exist in some such way as this: sometimes he is the young son of a good father, who lives in a city that is not politically well governed; avoids honors, political office, lawsuits, and all such meddling in other people's affairs; and who is even willing to be put at a disadvantage so as to avoid trouble.

ADEIMANTUS: Yes, but how does he become timocratic?

SOCRATES: It first happens when he listens to his mother complaining that her man is not one of the rulers and that she is at a disadvantage among the other women as a result. Next, she sees that he is not

very serious about money, either; does not fight or exchange insults in private lawsuits or in the public assembly, but takes easily everything of that sort; has a mind always absorbed in its own thoughts; and does not overvalue her or undervalue her either. As a result of all those things, she complains and tells her son that his father is unmanly and too easygoing, and makes a litany of the other sorts of things women love to recite on such occasions.

ADEIMANTUS: Yes, indeed, it is just like them to have lots of such complaints.

SOCRATES: You know, then, that the servants of such men—the ones thought to be loyal—also say similar things to the sons in private. If they see someone who owes the father money or has wronged him in some other way, whom he does not prosecute, they urge the son to punish all such people when he becomes a man, and be more of a man than his father. And when he goes out, the boy hears and sees other similar things: those who do their own work in the city are called fools and held to be of little account, while those who do not are honored and praised. When the young man hears and sees all this, then, and, on the other hand, also listens to what his father says, and sees his practices from close at hand and compares them with those of the others, he is pulled by both—his father nourishing the rational element in his soul and making it grow; the others nourishing the appetitive and spirited elements. And, because he is not a bad man by nature, but has kept bad company, he compromises on a middle way when he is pulled in these two directions, and surrenders the rule within him to the middle element—the victory-loving and spirited one—and becomes a proud and honor-loving man.

ADEIMANTUS: I think you have exactly described how such a man comes to exist.

SOCRATES: So, we now have the second constitution and the second man.

ADEIMANTUS: We have.

SOCRATES: Next then, shall we, like Aeschylus, talk of "another man ordered like another city,"[12] or follow our plan and talk about the city first?

ADEIMANTUS: The latter, of course.

SOCRATES: And I suppose oligarchy would come next after such a constitution.

ADEIMANTUS: And what kind of political system do you mean by oligarchy?

SOCRATES: The constitution based on a property assessment, the one in which the rich rule and the poor man does not participate in ruling.

ADEIMANTUS: I understand.

SOCRATES: So, mustn't we first describe how timarchy is transformed into oligarchy?

ADEIMANTUS: Yes.

SOCRATES: And surely the way it is transformed is clear even to the blind.

ADEIMANTUS: How?

SOCRATES: That storehouse filled with gold we mentioned,[13] which each possesses, destroys such a constitution. First, you see, the timocrats find ways of spending their money, then they alter the laws to allow them to do so, and then they and their women disobey the laws altogether.

ADEIMANTUS: Probably so.

SOCRATES: Next, I suppose, through one person seeing another and envying him, they make the majority behave like themselves.

ADEIMANTUS: Probably so.

SOCRATES: After that then, they become further involved in moneymaking; and the more honorable they consider it, the less honorable they consider virtue. Or isn't virtue so opposed to wealth that if they were set on the scale of a balance, they would always incline in opposite directions?

ADEIMANTUS: It certainly is.

SOCRATES: So, when wealth and the wealthy are honored in a city, virtue and good people are honored less.

ADEIMANTUS: Clearly.

SOCRATES: And what is honored is always practiced, and what is not honored, neglected.

ADEIMANTUS: Yes.

SOCRATES: So, in the end, victory-loving and honor-loving men become lovers of making money and money-lovers, and they praise and admire the wealthy man and appoint him as ruler, and dishonor the poor one.

12. [The line does not occur in the extant plays, but it may be an adaptation of *Seven against Thebes* 451.]

13. [548a7–8.]

ADEIMANTUS: Of course.

SOCRATES: Isn't it then that they pass a law, which is a defining characteristic of an oligarchic constitution, establishing a wealth qualification—higher
b where it is more oligarchic, lower where it is less so—and proclaim that anyone whose property does not reach the stated assessment cannot participate in ruling? And they either put this through by force of arms, or else, without resorting to that, they use intimidation to establish this sort of constitution. Isn't that so?

ADEIMANTUS: It is.

SOCRATES: That, then, is, generally speaking, how it is established.

ADEIMANTUS: Yes, it is. But what is the constitu-
c tion like? What are the defects we said it had?[14]

SOCRATES: First of all, consider its defining characteristic. I mean, what would happen if ship captains were appointed like that, on the basis of property assessments, and a poor person was turned away even if he were a better captain?

ADEIMANTUS: People would make a very bad voyage!

SOCRATES: And doesn't the same apply to any other sort of rule whatsoever?

ADEIMANTUS: I suppose so.

SOCRATES: Except of a city? Or does it apply to that of a city, too?

ADEIMANTUS: It applies to it most of all, since it is the most difficult and most important kind of rule there is.

SOCRATES: That, then, is one major defect in
d oligarchy.

ADEIMANTUS: So it seems.

SOCRATES: And what about this one? Is it any smaller than the other?

ADEIMANTUS: Which?

SOCRATES: That a city of this sort is not one, but inevitably two—a city of the poor and one of the rich, living in the same place and always plotting against one another.

ADEIMANTUS: By Zeus, that's no smaller a defect.

SOCRATES: And this is hardly a good quality either: the likelihood of being unable to fight a war because of having to arm and use the majority, and so having to fear them more than the enemy; or else, e because of not using them, and so having to show up as true oligarchs[15] on the battlefield; and because, at the same time, the fact that they are money-lovers makes them unwilling to pay mercenaries.

ADEIMANTUS: That is not good.

SOCRATES: And what about what we condemned long ago[16]—the fact that in this constitution there is the meddling in other people's affairs that occurs when the same people are farmers, moneymakers, and soldiers simultaneously? Or do you think it is 552a right for things to be that way?

ADEIMANTUS: Not at all.

SOCRATES: Now, let's see whether it is the first to admit the greatest of all evils.

ADEIMANTUS: Which is?

SOCRATES: Allowing someone to sell all his possessions and someone else to buy them, and then allowing the seller to continue living in the city while not being any one of its parts—neither moneymaker nor craftsman, nor cavalryman, nor hoplite, but a poor person without means.

ADEIMANTUS: It is the first. b

SOCRATES: Anyway, this sort of thing certainly is not forbidden in oligarchies. I mean, if it were, some of their citizens would not be super rich and others totally impoverished.

ADEIMANTUS: That's right.

SOCRATES: Now, consider this: when a person like that was rich and spending his money, was he then of any greater use to the city in the ways we have just mentioned? Or did he merely seem to be one of the rulers, while in fact he was neither ruler nor subject of it, but only a squanderer of property?

ADEIMANTUS: That's right. He seemed to be a ruler but was nothing but a squanderer. c

SOCRATES: Do you want us to say of him, then, that as a drone existing in a cell is an affliction to the hive, so this person existing in a household is a drone and affliction to the city?

ADEIMANTUS: Yes, indeed, Socrates.

14. [544c4–5.]

15. [I.e., as being few in number. *Oligos* means few.]

16. [374b6–c2.]

SOCRATES: And hasn't the god, Adeimantus, made all the winged drones stingless, as well as some of the footed ones, while other footed ones have terrible stings? And don't those who end up as beggars in old age come from among the stingless ones, while
d all those with stings are called evildoers?

ADEIMANTUS: That's absolutely true.

SOCRATES: Clearly then, in any city where you see beggars, somewhere in the neighborhood there are thieves hidden, and pickpockets, temple robbers, and craftsmen of all such sorts of evil.

ADEIMANTUS: Clearly.

SOCRATES: What about oligarchic cities? Don't you see beggars in them?

ADEIMANTUS: Nearly everyone is one, apart from the rulers.

SOCRATES: Mustn't we suppose, then, that there
e are also many evildoers there with stings, whom the rulers forcibly keep in check by their cautiousness?

ADEIMANTUS: We certainly must suppose it.

SOCRATES: And aren't we saying that the presence of such people is the result of lack of education, bad rearing, and a bad constitutional system?

ADEIMANTUS: We are.

SOCRATES: Well, then, that is roughly what the oligarchic city would be like. It would contain all these evils and probably others as well.

ADEIMANTUS: That's pretty much it.

SOCRATES: Let's take it, then, that we have dis-
553a posed of the constitution they call oligarchy, which gets its rulers on the basis of a property assessment. Next, let's consider how the person who is like it comes to exist, and what sort of person he is when he does.

ADEIMANTUS: Yes, let's.

SOCRATES: Doesn't the transformation from timocrat to oligarch mostly occur in this way?

ADEIMANTUS: Which?

SOCRATES: It happens when a son of his is born who begins by emulating his father and following in
b his footsteps, and then sees him suddenly crashing against the city as against a reef, and sees him and all his possessions spilling overboard. He had held a generalship or some other high office, was brought to court by sycophants, and was put to death or exiled, or was disenfranchised and had all his property confiscated.

ADEIMANTUS: Probably so.

SOCRATES: Anyway, my friend, after seeing and experiencing all that, and losing his property, the son is afraid, I imagine, and immediately throws the honor-loving and spirited element headlong from the throne in his own soul. And humbled by poverty, *c* he turns greedily to moneymaking and, little by little, saving and working, he amasses property. Don't you think that someone like that will then establish the appetitive and moneymaking element on that throne, and make it a great king within himself, adorned with golden tiaras and collars and Persian swords?[17]

ADEIMANTUS: I do.

SOCRATES: And I suppose he makes the rational and spirited elements sit on the ground beneath it, one on either side, and be slaves. He won't allow the *d* first to calculate or consider anything except how a little money can be made into more; or the second to admire or honor anything except wealth and wealthy people, or to love being honored for anything besides the possession of wealth and whatever contributes to it.

ADEIMANTUS: There is no other way to turn an honor-loving young man into a money-loving one that is as swift and sure as that!

SOCRATES: Isn't this, then, the oligarchic person? *e*

ADEIMANTUS: Well, he certainly developed from the sort of man who resembled the constitution from which oligarchy came.

SOCRATES: Then let's see whether he resembles it.

ADEIMANTUS: Let's. *554a*

SOCRATES: Wouldn't he resemble it, primarily, by attaching the greatest importance to money?

ADEIMANTUS: Of course.

SOCRATES: And also by being a thrifty worker who satisfies only his necessary appetites and spends nothing on other things but enslaves his other appetites as pointless.

ADEIMANTUS: Yes, indeed.

SOCRATES: A pretty squalid fellow, at any rate, who tries to make a profit from everything: a treasury-builder—the sort the majority admire. Isn't that the sort of man who resembles this sort of constitution? *b*

17. [For the Greeks, the king of Persia was emblematic of absolute rule.]

ADEIMANTUS: *I* certainly think so. At any rate, money is honored more than anything else by both the city and the one who is like it.

SOCRATES: Because I don't suppose someone like that has paid any attention to education.

ADEIMANTUS: I don't think so. I mean, if he had, he would not have chosen a blind leader for his chorus and honored him most.[18]

SOCRATES: Well put! But consider this. Wouldn't we say that though the dronish appetites exist in him because of his lack of education, some of them beggars and others evildoers, they are forcibly kept in
c check by his general cautiousness?

ADEIMANTUS: Certainly.

SOCRATES: Do you know, then, where you should look to see the evils such people do?

ADEIMANTUS: Where?

SOCRATES: Where they are guardians of orphans, or any other situation like that, where they have ample opportunity to do injustice.

ADEIMANTUS: True.

SOCRATES: So, doesn't that make it clear that in other contractual matters, where someone like that has a good reputation and is thought to be just, something good of his is forcibly holding in check the
d other bad appetites within; not persuading them that they had better not, nor taming them with arguments, but using compulsion and fear, because he is terrified of losing his other possessions?

ADEIMANTUS: Exactly.

SOCRATES: Yes, by Zeus, my friend, you will find that most of them, when they have other people's money to spend, have appetites in them akin to those of the drone.

ADEIMANTUS: Indeed, you certainly will!

SOCRATES: So, someone like that would not be entirely free from internal faction, and would not be a single person but somehow a twofold one, although his better appetites would generally master his
e worse appetites.

ADEIMANTUS: That's right.

SOCRATES: Because of this, I suppose someone like that would be more respectable than many other people; but the true virtue of a single-minded and harmonious soul would somehow far escape him.

ADEIMANTUS: I suppose so.

SOCRATES: Furthermore, the thrifty man is a worthless individual contestant in the city for any prize of victory or any of the other fine things the love of honor craves. He is unwilling to spend money *555a*
for the sake of fame or other such results of competition, and, fearing to arouse his appetites for spending by allying them with love of victory, he fights in true oligarchic fashion, with only a few of his resources, and is mostly defeated, but remains rich!

ADEIMANTUS: Exactly.

SOCRATES: Are we still in any doubt, then, that, as regards resemblance, a thrifty moneymaker corresponds to an oligarchic city? *b*

ADEIMANTUS: Not at all.

SOCRATES: Then democracy, it seems, must be considered next—both the way it comes to exist and what it is like when it does—so that when we know the character of this sort of man, we can present him for judgment in turn.

ADEIMANTUS: At any rate, that would be consistent with what we have been doing.

SOCRATES: Well, then, isn't the change from an oligarchy to a democracy due in some way or other to the insatiable desire for the good set before it—the need to become as rich as possible?

ADEIMANTUS: How so?

SOCRATES: Since the rulers rule in it because they own a lot, I suppose they are not willing to enact laws *c*
to prevent young people who have become intemperate from spending and wasting their wealth, so that by buying and making loans on the property of such people, the rulers themselves can become even richer and more honored.

ADEIMANTUS: That's their primary goal, at any rate.

SOCRATES: So, isn't it clear by now that you cannot honor wealth in a city and maintain temperance in the citizens at the same time, but must inevitably neglect one or the other? *d*

ADEIMANTUS: That is pretty clear.

SOCRATES: The negligent encouragement of intemperance in oligarchies, then, sometimes reduces people who are not ill born to poverty.

ADEIMANTUS: Indeed, it does.

18. [I.e., Plutus, the god of wealth, who is often represented as being blind.]

SOCRATES: And these people sit around in the city, I suppose, armed with stings or weapons—some of them in debt, some disenfranchised, some both—hating and plotting against those who have acquired their property, and all the others as well; passionately
e longing for revolution.

ADEIMANTUS: That's right.

SOCRATES: These moneymakers, with their heads down,[19] pretending not to see them, inject the poison of their money into any of the rest who do not resist, and, carrying away a multitude of offspring in interest from their principal, greatly increase the size of the
556a drone and beggar class in the city.

ADEIMANTUS: They certainly do increase it greatly.

SOCRATES: In any case, they are not willing to quench evil of this sort as it flares up, either by preventing a person from doing whatever he likes with his own property, or alternatively by passing this other law to do away with such abuses.

ADEIMANTUS: What law?

SOCRATES: The one that is next best and that compels the citizens to care about virtue. You see, if someone prescribed that most voluntary contracts be
b entered into at the lender's own risk, money would be less shamelessly pursued in the city and fewer of those evils we were mentioning just now would develop in it.

ADEIMANTUS: Far fewer.

SOCRATES: But as it is, and for all these reasons, the rulers in the city treat their subjects in the way we described. And as for themselves and those belonging to them, don't they bring up the young to be fond of luxury, incapable of effort either mental or physical,
c too soft to endure pleasures or pains, and lazy?

ADEIMANTUS: Of course.

SOCRATES: And haven't they themselves neglected everything except making money and been no more concerned about virtue than poor people are?

ADEIMANTUS: Yes, they have.

SOCRATES: And when rulers and subjects, socialized in this way, meet on journeys or some other shared undertakings, whether in an embassy or a military campaign; or as shipmates or fellow soldiers; or when they watch one another in dangerous situations—in these circumstances, don't you think *d* the poor are in no way despised by the rich? On the contrary, don't you think it is often the case that a poor man, lean and suntanned, is stationed in battle next to a rich one, reared in the shade and carrying a lot of excess flesh, and sees him panting and completely at a loss? And don't you think he believes that it is because of the cowardice of the poor that such people are rich and that one poor man says to another when they meet in private: "These men are ours for the taking; they are good for nothing"? *e*

ADEIMANTUS: I know very well they do.

SOCRATES: Well, just as a sick body needs only a slight shock from outside to become ill and sometimes, even without external influence, becomes divided into factions, itself against itself, doesn't a city in the same condition need only a small pretext—such as one side bringing in allies from an oligarchy or the other from a democracy—to become ill and fight with itself? And doesn't it sometimes become divided into factions even without any external influence?

ADEIMANTUS: Yes, violently so. *557a*

SOCRATES: Then democracy comes about, I suppose, when the poor are victorious, kill or expel the others, and give the rest an equal share in the constitution and the ruling offices, and the majority of offices in it are assigned by lot.

ADEIMANTUS: Yes, that is how a democratic political system gets established, whether it comes to exist by force of arms or because intimidation drives its opponents into exile.

SOCRATES: In what way, then, do these people live? What sort of constitution do they have? For clearly the sort of man who is like it will turn out to *b* be democratic.

ADEIMANTUS: Clearly.

SOCRATES: Well, in the first place, aren't they free? And isn't the city full of freedom and freedom of speech? And isn't there license in it to do whatever one wants?

ADEIMANTUS: That's what they say, anyway.

SOCRATES: And where there is license, clearly each person would arrange his own life in whatever way pleases him.

ADEIMANTUS: Clearly.

19. [Their heads are down because their appetite for money forces their souls to look downward.]

SOCRATES: I imagine it is in this constitution, *c* then, that multifarious people come to exist.

ADEIMANTUS: Of course.

SOCRATES: It looks, then, as though it is the most beautiful of all the constitutions. For just like an embroidered cloak embroidered with every kind of ornament, it is embroidered with every sort of character, and so would appear to be the most beautiful. And presumably, many people would behave like women and children looking at embroidered objects and actually judge it to be the most beautiful.

ADEIMANTUS: They certainly would.

SOCRATES: What is more, bless you, it is also a *d* handy place in which to look for a constitution!

ADEIMANTUS: Why is that?

SOCRATES: Because it contains all kinds of constitutions, as a result of its license. So whoever wants to organize a city, as we were doing just now, probably has to go to a democracy and, as if he were in a supermarket of constitutions, pick out whatever pleases him and establish it.

ADEIMANTUS: He probably wouldn't be at a loss *e* for examples, anyway!

SOCRATES: There is no compulsion to rule in this city, even if you are qualified to rule, or to be ruled if you do not want to be; or to be at war when the others are at war, or to keep the peace when the others are keeping it, if you do not want peace; or, even if there happens to be a law preventing you from ruling or from serving on a jury, to be any the less free to rule or serve on a jury—isn't that a *558a* heavenly and pleasant way to pass the time, while it lasts?

ADEIMANTUS: It probably is—while it lasts.

SOCRATES: And what about the calm of some of their condemned criminals? Isn't that a sophisticated quality? Or have you never seen people who have been condemned to death or exile in a constitution of this sort staying on all the same and living right in the middle of things, without anyone giving them a thought or staring at them, while they stroll around like a hero?[20]

ADEIMANTUS: Yes, I have seen it a lot.

20. [Dead heroes were worshipped as minor deities in Greek religion, particularly in their birthplaces, where their spirits were thought to linger.]

SOCRATES: And what about the city's tolerance, its complete lack of petty-mindedness, and its utter *b* disregard for the things we took so seriously when we were founding the city—that unless someone had transcendent natural gifts, he would never become a good man if he did not play fine games right from early childhood and engage in practices that are all of that same sort? Isn't it magnificent how it tramples all that underfoot, gives no thought to what sort of practices someone went in for before he entered politics, and honors him if only he tells them he wishes the majority well? *c*

ADEIMANTUS: That's true nobility!

SOCRATES: These, then, and others akin to them are the characteristics a democracy would possess. And it would, it seems, be a pleasant constitution—lacking rulers but not complexity, and assigning a sort of equality to equals and unequals alike.

ADEIMANTUS: Yes, that's well known!

SOCRATES: Look and see, then, what sort of private individual resembles it. Or should we first consider, as we did in the case of the constitution, how he comes to exist?

ADEIMANTUS: Yes.

SOCRATES: Well, doesn't it happen this way? Mightn't we suppose that our thrifty oligarchic man had a son brought up by his father with his father's *d* traits of character?

ADEIMANTUS: Of course.

SOCRATES: Then he too would rule by force the pleasures that exist in him—the spendthrift ones that do not make money; the ones that are called unnecessary.

ADEIMANTUS: Clearly.

SOCRATES: In order not to have a discussion in the dark, would you like us first to define which appetites are necessary and which are not?

ADEIMANTUS: I would.

SOCRATES: Well, then, wouldn't those we cannot deny rightly be called necessary? And also those whose satisfaction benefits us? For we are by nature com- *e* pelled to try to satisfy them both. Isn't that so?

ADEIMANTUS: Of course.

SOCRATES: So, we would be right to apply the term "necessary" to them? *559a*

ADEIMANTUS: We would be right.

SOCRATES: What about those someone could get

rid of if he started practicing from childhood, those whose presence does no good but may even do the opposite? If we said that all of them were unnecessary, would we be right?

ADEIMANTUS: We would be right.

SOCRATES: Let's pick an example of each, so that we have a pattern to follow.

ADEIMANTUS: Yes, let's.

SOCRATES: Wouldn't the desire to eat to the point of health and well-being, and the desire for bread *b* and relishes be necessary ones?

ADEIMANTUS: I suppose so.

SOCRATES: The desire for bread is surely necessary on both counts, in that it is beneficial and that unless it is satisfied, we die.[21]

ADEIMANTUS: Yes.

SOCRATES: And so is the one for relishes, insofar as it is beneficial and conduces to well-being.

ADEIMANTUS: Indeed.

SOCRATES: What about an appetite that goes beyond these and seeks other sorts of foods; that, if it is restrained from childhood and educated, most people can get rid of; and that is harmful to the body and harmful to the soul's capacity for wisdom and temper- *c* ance? Wouldn't it be correct to call it unnecessary?

ADEIMANTUS: Entirely correct.

SOCRATES: Wouldn't we also say that the latter desires are spendthrift, then, whereas the former are moneymaking because they are useful where work is concerned?

ADEIMANTUS: Certainly.

SOCRATES: And won't we say the same about sexual appetites and the rest?

ADEIMANTUS: Yes.

SOCRATES: And didn't we say that the person we just now called a drone is full of such pleasures and appetites and is ruled by the unnecessary ones, while the one who is ruled by his necessary appetites is a *d* thrifty oligarch?

ADEIMANTUS: Of course we did.

SOCRATES: Let's go back, then, and say how the democrat develops from the oligarch. It seems to me as if it mostly happens this way.

ADEIMANTUS: What way?

21. [Bread is used here to mean "the staff of life." That is why one dies for want of it.]

SOCRATES: When a young man who is reared in the uneducated and thrifty manner we described just now tastes the honey of the drones and associates with wild and terrible creatures who can provide multifarious pleasures of every degree of complexity and sort, that probably marks the beginning of his transformation from having an oligarchic constitution within *e* him to having a democratic one.

ADEIMANTUS: It most certainly does.

SOCRATES: So, just as the city changed when one party received help from a like-minded alliance outside, doesn't the young man change in turn when external appetites of the same type and quality as it come to the aid of one of the parties within him?

ADEIMANTUS: Absolutely.

SOCRATES: And I suppose if a counter-alliance comes to the aid of the oligarchic party within him—whether from his father or from the rest of his family, who exhort and reproach him—then there is a faction and an opposing faction within him, and he battles *560a* against himself.

ADEIMANTUS: Of course.

SOCRATES: And sometimes, I suppose, the democratic party yields to the oligarchic, some of its appetites are overcome while others are expelled, and a kind of shame rises in the young man's soul and order is restored.

ADEIMANTUS: That does sometimes happen.

SOCRATES: Moreover, I suppose, as some appetites are expelled, others akin to them are being nurtured undetected because of the father's ignorance of upbringing, and become numerous and strong. *b*

ADEIMANTUS: At any rate, that's what usually happens.

SOCRATES: Then these desires draw him back to his old associates[22] and, in secret intercourse, breed a multitude of others.

ADEIMANTUS: Of course.

SOCRATES: Finally, I suppose, they seize the citadel of the young man's soul, since they realize that it is empty of the fine studies and practices and the true arguments that are the best watchmen and guardians in the minds of men loved by the gods.

ADEIMANTUS: By far the best. *c*

22. [Described at 559d7–e2.]

SOCRATES: Then, I suppose, beliefs and arguments that are lying imposters rush up and occupy this same part of him in place of the others.

ADEIMANTUS: They do, indeed.

SOCRATES: Won't he then return to those Lotus-eaters and live with them openly? And if any help should come to the thrifty part of his soul from his relatives, don't those imposter arguments, having barred the gates of the royal wall within him, prevent the allied force itself from entering and even refusing to admit arguments of older, private individuals as
d ambassadors? Proving stronger in the battle, won't they call reverence foolishness and drive it out as a dishonored fugitive? And calling temperance cowardliness, won't they shower it with abuse and banish it? As for moderate and orderly expenditure, won't they persuade him that it is boorish and illiberal, and join with a multitude of useless appetites to drive it over the border?

ADEIMANTUS: They will indeed.

SOCRATES: And when they have somehow emptied and purged these from the soul of the one they
e are seizing hold of and initiating with solemn rites, they then immediately proceed to return arrogance, anarchy, extravagance, and shamelessness from exile in a blaze of torchlight, accompanied with a vast chorus of followers and crowned with garlands. They praise them and give them fine names, calling arrogance "good breeding," anarchy "freedom," extravagance "magnificence," and shamelessness "courage."
561a Isn't it in some such way as this that a young person exchanges an upbringing among necessary appetites for the freeing and release of useless and unnecessary pleasures?

ADEIMANTUS: Yes, that's clearly the way it happens.

SOCRATES: Then in his subsequent life, I suppose, someone like that spends no less money, effort, and time on the necessary pleasures than on the unnecessary pleasures. But if he is lucky and does not go beyond the limits in his bacchic frenzy, and if, as a result of his growing somewhat older, the great tumult within him passes, he welcomes back some of the
b exiles and ceases to surrender himself completely to the newcomers. Then, putting all his pleasures on an equal footing, he lives, always surrendering rule over himself to whichever desire comes along, as if it were chosen by lot,[23] until it is satisfied; and after that to another, dishonoring none but satisfying all equally.

ADEIMANTUS: He does, indeed.

SOCRATES: And he does not accept or admit true argument into the guardhouse if someone tells him that some pleasures belong to fine and good appetites and others to bad ones, and that he must practice
c and honor the former and restrain and enslave the latter. On the contrary, he denies all this and declares that they are all alike and must be honored on an equal basis.

ADEIMANTUS: That's exactly what he feels and does.

SOCRATES: And so he lives from day to day, gratifying the appetite of the moment. Sometimes he drinks heavily while listening to the flute, while at others he drinks only water and is on a diet. Sometimes he goes in for physical training, while there are others when he is idle and neglects everything. Sometimes
d he spends his time engaged in what he takes to be philosophy. Often, though, he takes part in politics, leaping to his feet and saying and doing whatever happens to come into his mind. If he admires some military men, that is the direction in which he is carried; if some moneymakers, then in that different one. There is neither order nor necessity in his life, yet he calls it pleasant, free, and blessedly happy, and follows it throughout his entire life.

ADEIMANTUS: You have perfectly described the life of a man devoted to legal equality.[24]
e

SOCRATES: I certainly think he is a multifarious man and full of all sorts of characters, beautiful and complex, like the democratic city. Many men and women would envy his life because of the great number of examples of constitutions and characters it contains within it.

ADEIMANTUS: Yes, that's right.

SOCRATES: Well, then, will we set this man alongside democracy as the one who would rightly be
562a called democratic?

ADEIMANTUS: We will.

23. [Many public officials in democratic Athens were elected by lot.]

24. [*Isonomia:* an important democratic value.]

SOCRATES: The finest constitution and the finest man remain for us to discuss: tyranny and the tyrant.

ADEIMANTUS: Absolutely.

SOCRATES: Come on, then; tell me, my dear comrade, how does tyranny come to exist? That it evolves from democracy, you see, is fairly clear.

ADEIMANTUS: It is clear.

SOCRATES: So, isn't the way democracy evolves from oligarchy much the same as that in which tyranny evolves from democracy?

ADEIMANTUS: How do you mean?

SOCRATES: The good they proposed for themselves, and because of which oligarchy was established, was wealth, wasn't it?

ADEIMANTUS: Yes.

SOCRATES: And its insatiable desire for wealth and its neglect of other things for the sake of moneymaking was what destroyed it.

ADEIMANTUS: True.

SOCRATES: So, isn't democracy's insatiable desire for what it defines as the good also what destroys it?

ADEIMANTUS: What do you think it does define as the good?

SOCRATES: Freedom. For surely, in a democratic city, that is what you would hear described as its finest possession, and as what makes it the only place worth living in for someone who is naturally free.

ADEIMANTUS: Yes, you often hear that said.

SOCRATES: As I was about to say, then, isn't it the insatiable desire for this good and the neglect of other things that changes this constitution and prepares it to need a dictatorship?

ADEIMANTUS: How does it do that?

SOCRATES: I suppose it is when a democratic city, athirst for freedom, happens to get bad cupbearers for its leaders and gets drunk by drinking more than it should of unmixed wine.[25] Then, if the rulers are not very gentle and do not provide plenty of freedom, it punishes them and accuses them of being filthy oligarchs.

ADEIMANTUS: Yes, that is what it does.

SOCRATES: It showers with abuse those who obey the rulers as voluntary slaves and nonentities, but both in public and private it praises and honors rulers who are like subjects, and subjects who are like rulers. And isn't it inevitable in such a city that freedom should spread everywhere?

ADEIMANTUS: Of course.

SOCRATES: Yes, my friend, and so it is bound to make its way into private households until finally it breeds anarchy among the very animals.

ADEIMANTUS: What do you mean by that?

SOCRATES: For instance, a father gets into the habit of behaving like a child and fearing his son, and the son gets into the habit of behaving like a father, feeling neither shame nor fear in front of his parents—all in order to be *free*. A resident alien feels himself equal to a citizen and a citizen to him, and a foreigner likewise.

ADEIMANTUS: Yes, those sorts of things do happen.

SOCRATES: They do—and so do other little things of the same sort. A teacher in such circumstances is afraid of his students and flatters them, while the students belittle their teachers and do the same to their tutors, too. In general, the young are the spitting images of their elders and compete with them in words and deeds, while the old stoop to the level of the young and are full of wit and indulgence, imitating the young for fear of being thought disagreeable and masterful.

ADEIMANTUS: Absolutely.

SOCRATES: The ultimate freedom for the majority, my friend, comes about in such a city, when males and females bought as slaves are no less free than those who bought them. Then there is the case of women in relation to men, and men to women, and the extent of their legal equality and freedom—we almost forgot to mention that!

ADEIMANTUS: Are we not, with Aeschylus, going to "say whatever it was came to our lips just now?"[26]

SOCRATES: Certainly. At any rate, *I am* going to say it. I mean, no one who had not experienced it would believe how much freer domestic animals are here than in any other city. Bitches follow the proverb exactly and become like their mistresses. Horses and donkeys are in the habit of proceeding with complete freedom and dignity, bumping into anyone they meet

25. [The Greeks drank their wine mixed with water.]

26. [At 562e4–5. We no longer possess the play from which this fragment comes.]

on the road who does not get out of their way. And
d everything else is full of freedom, too.

ADEIMANTUS: It is my own dream you are telling me.[27] That often happens to me when I go to the country.

SOCRATES: Summing up all these things together, then, do you notice how sensitive they make the citizens' souls, so that if anyone tries to impose the least degree of slavery, they get irritated and cannot bear it? In the end, as I am sure you are aware, they take no notice of the laws—written or
e unwritten—in order to avoid having any master at all.

ADEIMANTUS: I certainly am aware.

SOCRATES: This, my friend, is the fine and impetuous beginning from which tyranny seems to me to grow.

ADEIMANTUS: It is certainly impetuous. But what comes next?

SOCRATES: The same disease that developed in oligarchy and destroyed it also develops here—only more widespread and virulent because of the general permissiveness—and eventually enslaves democracy. In fact, excessive action in one direction usually sets up a great reaction in the opposite direction. This happens in seasons, in plants, in bodies, and particu-
564a larly in constitutions.

ADEIMANTUS: That's probably right.

SOCRATES: For extreme freedom probably cannot lead to anything but a change to extreme slavery, whether in a private individual or a city.

ADEIMANTUS: No, it probably can't.

SOCRATES: Tyranny probably does not evolve from any constitution other than democracy, then—the most severe and cruel slavery evolving from what I suppose is the most eminent degree of freedom.

ADEIMANTUS: Yes, that's reasonable.

SOCRATES: But I think you were asking, not that, but rather what sort of disease develops both
b in oligarchy and democracy alike, and enslaves the latter.

ADEIMANTUS: That's true.

SOCRATES: Well, then, I meant that class of idle and extravagant men, with the bravest as leaders and the more cowardly as followers. We compared them to drones: the leaders to drones with stings, the followers to stingless ones.[28]

ADEIMANTUS: Rightly so.

SOCRATES: These two cause problems in any constitution in which they arise, like phlegm and bile in the body.[29] And it is against them that the good doctor and lawgiver of a city must take no less advance c
precaution than a wise beekeeper. He should preferably prevent them from arising at all. But if they should happen to arise, he must cut them out, cells and all, as quickly as possible.

ADEIMANTUS: Yes, by Zeus, and as thoroughly as possible.

SOCRATES: Then let's take up the question in this way, in order to see what we want more distinctly.

ADEIMANTUS: In what way?

SOCRATES: Let's in our discussion divide a democratic city into three parts—which is also how it is actually divided. One part is surely this class of drones, d
which, because of the general permissiveness, grows in it no less than in an oligarchy.

ADEIMANTUS: So it does.

SOCRATES: But it is much fiercer in it than in the other.

ADEIMANTUS: How so?

SOCRATES: There, because it is not honored but is excluded from the ranks of the rulers, it does not get any exercise and does not become vigorous. However, in a democracy, with few exceptions, it is surely the dominant class. Its fiercest part does all the talking and acting, while the other one settles near the speaker's platform. It buzzes and does not tolerate any dissent. As a result, this class is in charge of everything in such a constitution—with a few exceptions.[30] e

ADEIMANTUS: That's right.

SOCRATES: Then, there is a second distinct class that is constantly emerging from the majority.

27. [I.e., you are telling me what I already know.]

28. [552c2–e3.]

29. [Phlegm and bile were two of the so-called humors Greek medicine thought responsible for health and disease.]

30. [The exceptions in question are presumably the various offices—such as the chief military official—to which in the Athenian democracy were appointed on the basis of expertise.]

ADEIMANTUS: Which one?

SOCRATES: Surely, when everyone is trying to make money, the ones who are by nature most orderly generally become the wealthiest.

ADEIMANTUS: Probably so.

SOCRATES: Then that is where the most plentiful honey for the drones exists, I take it, and the easiest for them to extract.

ADEIMANTUS: How could anyone extract it from those who have very little?

SOCRATES: I suppose, then, that these rich people, as they are called, are fodder for the drones.

ADEIMANTUS: Pretty much.

SOCRATES: The people—those who work their
565a own land, take no part in politics, and own few possessions—would be the third class. This is the largest and most powerful class in a democracy when it meets in assembly.

ADEIMANTUS: Yes, it is. But it is not willing to meet often, if it does not get a share of the honey.

SOCRATES: So, it always does get a share—one that allows the leaders, in taking the wealth of the rich and distributing it to the people, to keep the greatest share for themselves.

b ADEIMANTUS: Yes, that is the sort of share they get.

SOCRATES: Then I suppose that those whose wealth is taken away are compelled to defend themselves by speaking in the popular assembly and doing whatever else they can.

ADEIMANTUS: Of course.

SOCRATES: At which point—even if they have no appetite for revolution at all—they get accused by the others of plotting against the people and of being oligarchs.

ADEIMANTUS: They do.

SOCRATES: Finally, when they see the people—not intentionally, but through misapprehension and being misled by the accusers—trying to do injustice
c to them, then, whether they wish it or not, they really do become oligarchs—not from choice, though, but because the drone, by stinging them, engenders this evil.

ADEIMANTUS: Absolutely.

SOCRATES: Then there are impeachments, judgments, and trials on both sides.

ADEIMANTUS: Right.

SOCRATES: And don't the people always tend to set up one man as their special leader, nurturing him and making him great?

ADEIMANTUS: Yes.

SOCRATES: And it is clear that when a tyrant arises, *d*
the position of popular leader is the sole root from which he springs.

ADEIMANTUS: It is.

SOCRATES: What is the beginning, then, of the transformation from popular leader to tyrant? Isn't it clear that it happens when the popular leader begins to behave like the character in the story told about the temple of the Lycaean Zeus[31] in Arcadia?

ADEIMANTUS: What story?

SOCRATES: That whoever tastes the one piece of human innards cut up with those of all the other sacrificial victims inevitably becomes a wolf. Haven't you heard that story? *e*

ADEIMANTUS: I have.

SOCRATES: Isn't it the same, then, with a popular leader? Once he really takes over a docile mob, he does not restrain himself from shedding a fellow citizen's blood. But by leveling the usual false charges and bringing people into court, he commits murder. And by blotting out a man's life, his impious tongue and lips taste kindred blood. Then he banishes and kills and drops hints about the cancellation of debts and the redistribution of land. And after that, isn't *566a*
such a man inevitably fated either to be killed by his enemies or to be a tyrant, transformed from a man into a wolf?

ADEIMANTUS: Yes. That is the inevitable outcome.

SOCRATES: He is the one, then, who stirs up faction against the rich.

ADEIMANTUS: He is.

SOCRATES: And if he happens to be exiled but, despite his enemies, manages to return, doesn't he come back as a full-fledged tyrant?[32]

31. [Zeus the wolf-god.]

32. [Plato seems to be alluding to the tyrant Peisistratus. In 560 B.C.E., Peisistratus made himself tyrant with the help of a bodyguard granted to him by the Athenian people. After five years, he was expelled. Eventually he returned to Athens and used mercenaries to establish himself firmly as tyrant. He died in 527. See Herodotus 1.59–64.]

ADEIMANTUS: Obviously.

SOCRATES: And if they are unable to expel him
b or put him to death by accusing him before the city, they plot a violent death for him by covert means.

ADEIMANTUS: That's what tends to happen, anyway.

SOCRATES: And everyone who has reached this stage soon discovers the famous tyrannical request—to ask the people to give him a bodyguard to keep their popular leader safe for them.

ADEIMANTUS: Right.

SOCRATES: And the people give it to him, I suppose, fearing for his safety but confident of their own.

c ADEIMANTUS: Right.

SOCRATES: So, when a wealthy man sees this and is charged with being an enemy of the people because of his wealth, then, comrade, in the words of the oracle to Croesus, he "flees without delay to the banks of the many-pebbled Hermus, and is not ashamed at all of his cowardice."[33]

ADEIMANTUS: He would certainly never get a second chance to be ashamed!

SOCRATES: If he is caught, I would imagine he is put to death.

ADEIMANTUS: Inevitably.

SOCRATES: As for this popular leader of ours, he clearly does not lie on the ground "mighty in his
d might,"[34] but, having brought down all those others, he stands in the chariot of the city as a complete tyrant instead of a popular leader.

ADEIMANTUS: That's for sure.

SOCRATES: Shall we next describe the happiness of this man and of the city in which such a creature arises?

ADEIMANTUS: Yes, let's.

SOCRATES: To start with, in the early days of his reign, won't he greet everyone he meets with a smile, deny he is a tyrant, promise all sorts of things in
e private and in public, free the people from debt, redistribute the land to them and to his followers, and pretend to be gracious and gentle to all?

ADEIMANTUS: Inevitably.

SOCRATES: But once he has dealt with his exiled enemies by making peace with some and destroying others, and all is calm on that front, his primary concern, I imagine, is to be constantly stirring up some war or other, so that the people will need a leader.

ADEIMANTUS: Very likely.

SOCRATES: And also, wouldn't you say, so that 567a
impoverished by war taxes, they will be forced to concentrate on their daily needs and be less likely to plot against him?

ADEIMANTUS: Clearly.

SOCRATES: And in addition, I suppose, so that if there are some free-thinking people he suspects of rejecting his rule, he can find pretexts for putting them at the mercy of the enemy and destroying them? For all these reasons, isn't a tyrant bound to be always stirring up war?

ADEIMANTUS: He is.

SOCRATES: Don't all these actions tend to make him more hateful to the citizens? b

ADEIMANTUS: Of course.

SOCRATES: And don't some of those who helped establish his tyranny and hold positions of power within it, the ones who are bravest, speak freely to him and to each other, criticizing what is happening?

ADEIMANTUS: Probably.

SOCRATES: Then the tyrant will have to do away with all of them if he intends to rule, until he is left with no friend or enemy who is worth anything at all.

ADEIMANTUS: Obviously.

SOCRATES: He will have to keep a sharp lookout, then, for anyone who is brave, magnanimous, wise, or rich. He is so happy, you see, that he is forced, whether he wants to or not, to be their enemy and c
plot against all of them until he has purged the city.

ADEIMANTUS: A fine purge that is!

SOCRATES: Yes. The opposite of the one doctors perform on our bodies. They draw off the worst and leave the best, whereas he does just the opposite!

ADEIMANTUS: Yet that's what he has to do, it seems, if he is to rule.

SOCRATES: It is a blessedly happy necessity he is bound by, then, which requires him to live with infe- d
rior masses even though hated by them, or not live at all!

ADEIMANTUS: It is.

33. [The story of the Delphic Oracle to Croesus is found in Herodotus 1.55.]

34. [See *Iliad* 16.776.]

SOCRATES: And the more he makes the citizens hate him by doing those things, the larger and more trustworthy a bodyguard he will need, won't he?

ADEIMANTUS: Of course.

SOCRATES: And who will these trustworthy people be? And from where will he get them?

ADEIMANTUS: Lots of them will come swarming of their own accord, if he pays them.

SOCRATES: Drones again, by the dog! That is what I think you are talking about. Foreign, multifarious
e ones!

ADEIMANTUS: Yes, you are right.

SOCRATES: What about the domestic ones? Wouldn't he be willing to deprive citizens of their slaves somehow, set them free, and enlist them in his bodyguard?

ADEIMANTUS: He certainly would, since they are the ones he can trust the most.

SOCRATES: What a blessedly happy thing this tyrant business is on your view, if these are the sorts of friends and trusted men he must employ after
568a destroying his former ones!

ADEIMANTUS: Nonetheless, they are the sorts he does employ.

SOCRATES: And these friends and new citizens admire and associate with him, whereas the good ones hate and avoid him?

ADEIMANTUS: Of course.

SOCRATES: It is no wonder, then, that tragedy seems to be something wholly wise, or that Euripides is outstanding in it.

ADEIMANTUS: Why is that?

SOCRATES: Because, among other things, he expressed the following shrewd thought: "tyrants are
b wise by associating with the wise." He meant evidently that these associates of the tyrant are the wise ones.[35]

ADEIMANTUS: Yes. And he also praises tyranny as godlike, and lots of other things besides—and the other poets do, too.

SOCRATES: Then surely, since the tragic poets are so wise, they will forgive us and those with constitutions like ours if we do not admit them into our city, since they hymn the praises of tyranny.

ADEIMANTUS: For my part, I think they will forgive us—the more refined of them, anyway. *c*

SOCRATES: They can go around to all the other cities instead, I suppose, drawing large crowds and hiring actors with fine, loud, persuasive voices, and lead their constitutions to become tyrannies and democracies.

ADEIMANTUS: Yes, indeed.

SOCRATES: What's more, they are paid and honored for it, primarily—as one might expect—by tyrants and secondly by democracy. But the higher they go on the ascending scale of constitutions, the more their honor diminishes, as if unable to proceed for *d* lack of breath.

ADEIMANTUS: Absolutely.

SOCRATES: But all that is a digression. Let's return to our tyrant's camp—the one that is beautiful, populous, complex, and never the same—and ask how he is going to maintain it.

ADEIMANTUS: If there are sacred treasuries in the city, he will obviously use them for as long as they last, as well as the property of those he has destroyed, so the taxes he will require from the people will be smaller.

SOCRATES: What about when these resources give out? *e*

ADEIMANTUS: Clearly, his father's estate will have to support him, his drinking companions, and his boyfriends and girlfriends, too.

SOCRATES: I understand. You mean the people who fathered the tyrant will have to support him and his friends.

ADEIMANTUS: They will have no choice.

SOCRATES: What if the people get irritated and say it is not just for a grown-up son to be supported by his father? On the contrary, the father should be supported by his son. They did not father him and establish him in power, they say, so that, when he had become strong, they would be enslaved to their *569a* own slave and have to support him, his slaves, and other assorted rabble as well; but so that, with him as their popular leader, they would get free from the rule of the rich and the so-called fine and good people in the city. At that point, they order him and his

35. [The fragment is from an unknown play. Euripides meant that tyrants gain wisdom from the wise people who, as Simonides said, "knock at the doors of the rich" (489b7–8). Plato twists his words to mean that the drones and slaves, who are the tyrant's last resort, are wise, since they associate with him.]

friends to leave the city, as a father might drive a son and his troublesome drinking companions from his house. What do you think would happen then?

ADEIMANTUS: Then, by Zeus, the people will soon learn what kind of creature they have fathered, welcomed, and made strong, and that it is a case of
b the weaker trying to drive out the stronger.

SOCRATES: What do you mean? Will the tyrant dare to use force against his father or hit him if he does not obey?

ADEIMANTUS: Yes—once he has taken away his weapons.

SOCRATES: A tyrant is a parricide as you describe him, then, and a harsh nurse of old age; and we do now seem to have an acknowledged tyranny. And so the people, by trying to avoid the proverbial frying pan of enslavement to free men, have fallen into the
c fire of having slaves as their masters; and, in exchange for the excessive and inappropriate freedom they had before, have put upon themselves the harshest and most bitter slavery to slaves.

ADEIMANTUS: That's exactly what happens.

SOCRATES: Well, then, wouldn't we be justified in saying that we have adequately described how tyranny evolves from democracy, and what it is like once it has come to exist?

ADEIMANTUS: We would. Our description was entirely adequate.

BOOK IX

SOCRATES' NARRATION CONTINUES:

SOCRATES: The tyrannical man himself remains
571a to be investigated: how he evolves from a democratic one, what he is like once he has come to exist, and whether the way he lives is wretched or blessedly happy.

ADEIMANTUS: Yes, he still remains.

SOCRATES: Do you know what else I still miss?

ADEIMANTUS: What?

SOCRATES: I do not think we have adequately distinguished the nature and number of our appetites. And if that subject is not adequately dealt with, our
b investigation will lack clarity.

ADEIMANTUS: Well, isn't now as fine a time as any?

SOCRATES: It certainly is. So, consider what I want to look at in them. It is this: among unnecessary pleasures and appetites, there are some that seem to me to be lawless. These are probably present in all of us, but they are held in check by the laws and by our better appetites allied with reason. In a few people they have been eliminated entirely or only a few weak ones remain, while in others they are stronger and more numerous. *c*

ADEIMANTUS: Which ones do you mean?

SOCRATES: The ones that wake up when we are asleep, whenever the rest of the soul—the rational, gentle, and ruling element—slumbers. Then the bestial and savage part, full of food or drink, comes alive, casts off sleep, and seeks to go and gratify its own characteristic instincts. You know it will dare to do anything in such a state, released and freed from all shame and wisdom. In fantasy, it does not shrink from trying to have sex with a mother or with anyone else— *d*
man, god, or beast. It will commit any foul murder, and there is no food it refuses to eat. In a word, it does not refrain from anything, no matter how foolish or shameful.

ADEIMANTUS: That's absolutely true.

SOCRATES: On the other hand, I suppose someone who keeps himself healthy and temperate will awaken his rational element before going to sleep and feast it on fine arguments and investigations, which he has brought to an agreed conclusion within himself. As for the appetitive element, he neither starves nor overfeeds it, so it will slumber and not *e*
disturb the best element with its pleasure or pain but will leave it alone, just by itself and pure, to investigate *572a*
and reach out for the perception of something—whether past, present, or future—that it does not know. He soothes the spirited element in a similar way and does not get angry and fall asleep with his spirit still aroused. And when he has calmed these two elements and stimulated the third, in which wisdom resides, he takes his rest. You know this is the state in which he most readily grasps the truth and in which the visions appearing in his dreams are least lawless. *b*

ADEIMANTUS: I completely agree.

SOCRATES: Well, we have been led a bit astray and said a bit too much. What we want to pay attention to

is this: there are appetites of a terrible, savage, and lawless kind in everyone—even in those of us who seem to be entirely moderate. This surely becomes clear in sleep. Do you think I am talking sense? Do you agree with me?

ADEIMANTUS: Yes, I do agree.

SOCRATES: Now, recall what we said the democratic man is like.[1] He was the result, we presumed, *c* of a childhood upbringing by a thrifty father who honored only appetites that made money and despised the unnecessary ones whose objects are amusement and showing off. Isn't that right?

ADEIMANTUS: Yes.

SOCRATES: And by associating with more sophisticated men who are full of the appetites we just described, he starts to indulge in every kind of arrogance and adopt their kind of behavior, because of his hatred of his father's thrift. But, since he has a better nature than his corrupters, he is pulled in both directions and settles in the middle between their two ways of life. And enjoying each in what he takes to be *d* moderation, he lives a life that is neither illiberal nor lawless, transformed now from an oligarch to a democrat.

ADEIMANTUS: Yes, that was—and still is—our belief about someone like that.

SOCRATES: Suppose, then, that this man has now in turn become older and has a son who is also brought up in his father's way of life.

ADEIMANTUS: I will.

SOCRATES: Suppose, too, that the same things happen to him as happened to his father: he is led into all the kinds of lawlessness that those leading *e* him call total freedom. His father and the rest of his family come to the aid of the appetites that are in the middle, while the others help the opposite ones. And when these terrible enchanters and tyrant-makers have no hope of keeping hold of the young man in any other way, they contrive to implant a powerful passion in him as the popular leader of those idle and *573a* profligate appetites—a sort-of great, winged drone. Or do you think passion is ever anything else in such people?

ADEIMANTUS: I certainly do not think it is.

SOCRATES: And when the other appetites come buzzing around—filled with incense, perfumes, wreaths, wine, and all the other pleasures found in such company, they feed the drone, make it grow as large as possible, and plant the sting of longing in it. Then this popular leader of the soul adopts madness as its bodyguard and is stung to frenzy. If it finds any *b* beliefs or appetites in the man that are regarded as good or are still moved by shame, it destroys them and throws them out, until it has purged him of temperance and filled him with imported madness.

ADEIMANTUS: You have perfectly described how a tyrannical man comes to exist.

SOCRATES: Is that, then, why Passion has long been called a tyrant?

ADEIMANTUS: Probably so.

SOCRATES: And hasn't a drunken man, my friend, something of a tyrannical cast of mind, too? *c*

ADEIMANTUS: He has.

SOCRATES: And of course someone who is mad and deranged attempts to rule not only human beings, but gods as well, and expects to be able to rule them.

ADEIMANTUS: Of course.

SOCRATES: A man becomes tyrannical in the precise sense, then, you marvelous fellow, when his nature or his practices or both together lead him to drunkenness, passion, and melancholia.

ADEIMANTUS: Absolutely.

SOCRATES: So, that, it seems, is how a tyrannical man comes to exist. Now, what is his life like?

ADEIMANTUS: Why don't *you* tell *me*, as askers of riddles usually do? *d*

SOCRATES: I will tell you. You see, I think someone in whom the tyrant of Passion dwells, and in whom it serves as captain of everything in the soul, next goes in for festivals, revelries, luxuries, girlfriends, and all that sort of thing.

ADEIMANTUS: Inevitably.

SOCRATES: And don't lots of terrible appetites sprout up each day and night beside it, creating needs for all sorts of things?

ADEIMANTUS: Indeed, they do.

SOCRATES: So, any income someone like that has is soon spent.

ADEIMANTUS: Of course.

SOCRATES: And the next thing, surely, is borrowing and expenditure of capital. *e*

1. [558c–562a2.]

ADEIMANTUS: What else?

SOCRATES: And when everything is gone, won't the violent crowd of appetites that have nested within him inevitably shout in protest? And when people of this sort are driven by the stings of these other appetites, but particularly of Passion itself, which leads all the others as if they were its bodyguard, stung to frenzy, don't they look to see who possesses anything
574a that can be taken from him by deceit or force?

ADEIMANTUS: Certainly.

SOCRATES: He must take it from every source, then, or live in great suffering and pain.

ADEIMANTUS: He must.

SOCRATES: And just as the late-coming pleasures within him do better than the older ones and steal away their satisfactions, won't he himself, young as he is, think he deserves to do better than his father and mother? And if he has spent his own share, won't he try to take some of his father's wealth by converting it to his own use?

ADEIMANTUS: Of course.

SOCRATES: And if his parents resist him, won't he
b first try to steal it and deceive them?

ADEIMANTUS: Certainly.

SOCRATES: And if he cannot, won't he next try to seize it by force?

ADEIMANTUS: I suppose so.

SOCRATES: And if, you amazing man, the old man and woman stand their ground and put up a fight, would he take care and be reluctant to act like a tyrant?

ADEIMANTUS: I am not very optimistic about the parents of someone like that!

SOCRATES: But in the name of Zeus, Adeimantus, do you really think that for the sake of his latest love, an unnecessary girlfriend, he would strike his mother, who is his oldest and necessary friend? Or that for
c the sake of his latest and unnecessary boyfriend, who is in the bloom of youth, he would strike his aged and necessary father, the oldest of his friends, who is no longer in the bloom of youth? Or that he would enslave his parents to them, if he brought them into the same house?

ADEIMANTUS: Yes, by Zeus, he would.

SOCRATES: It seems to be a great blessing to produce a tyrannical son!

ADEIMANTUS: It certainly does!

SOCRATES: What happens to someone like that when the possessions of his father and mother give out and the swarm of pleasures now inside him has d
grown dense? Won't he first try to break into someone's house or snatch the cloak of someone walking late at night? Next, won't he try to clean out some temple? And in the course of all that, his old childhood beliefs about fine or shameful things—beliefs that are accounted just—are mastered by the new ones that have been released from slavery and, as the bodyguard of Passion, hold sway along with it. These are the ones that used to be freed in sleep as a dream, when he himself, since he was still subject to the laws and his father, had a democratic constitution e
within him. But under the tyranny of Passion, what he used to become occasionally in his dreams he has now become permanently while awake, and so there is no terrible murder, no food, and no act from which he will refrain. On the contrary, Passion lives like a tyrant within him in complete anarchy and lawless- 575a
ness, as his sole ruler, and drives him, as if he were a city, to dare anything that will provide sustenance for itself and the unruly mob around it—some of which have come in from the outside as a result of his bad associates, while others have come from within, freed and let loose by his own bad habits. Isn't this the life such a man leads?

ADEIMANTUS: It is.

SOCRATES: And if there are only a few men like that in a city, and the majority of the others are temperate, they emigrate in order to become the body- b
guard of some other tyrant or serve as paid auxiliaries if there happens to be a war somewhere. But if they chance to live in a time of peace and calm, they stay right there in the city and cause lots of little evils.

ADEIMANTUS: What sort of evils do you mean?

SOCRATES: They steal, break into houses, snatch purses, steal clothes, rob temples, and kidnap people. Sometimes, if they are capable speakers, they become sycophants and bear false witness and accept bribes.

ADEIMANTUS: You mean they are small evils—provided there are only a few such people. c

SOCRATES: Yes. After all, small evils are small by comparison to big ones. And when it comes to producing corruption and misery in a city, all these evils together do not—as the saying goes—come within a mile of a tyrant. But when you get a large number of these

people and their followers in a city, and they become aware of their numbers, they are the ones who—together with the foolishness of the people—create the tyrant out of the one among them who has in his soul
d the greatest and strongest tyrant of all.

ADEIMANTUS: Naturally, since he would be the most tyrannical.

SOCRATES: That's if they submit willingly. But if the city doesn't put itself in his hands, then just as he once chastised his mother and father, he will now punish his fatherland in the same way, if he can, bringing in new friends and making and keeping his once beloved motherland—as the Cretans call it—or fatherland their slaves. And that is surely the end at which the appetites of a man like that aim.

e ADEIMANTUS: It most certainly is.

SOCRATES: So, isn't this what such men are like in private life, before they start to rule? In the first place, don't they associate with flatterers who are ready to do anything to serve them? Or, if they need something from someone themselves, won't they
576a grovel and willingly engage in any sort of posturing, the way slaves do? But once they get what they need, isn't it a different story altogether?

ADEIMANTUS: Yes, completely different.

SOCRATES: So, those with a tyrannical nature live their entire lives without ever being friends with anyone, always masters to one man or slaves to another, but never getting a taste of freedom or true friendship.

ADEIMANTUS: Exactly.

SOCRATES: Wouldn't we be right to call people like that untrustworthy?

ADEIMANTUS: Of course.

SOCRATES: And as unjust as anyone can be—assuming we were right in our earlier conclusions
b about what justice is like.

ADEIMANTUS: And we certainly were right.

SOCRATES: Let's sum up the worst type of man, then. He is surely the one who, when awake, is like the dreaming person we described earlier.

ADEIMANTUS: Exactly.

SOCRATES: And he evolves from someone who, since he is by nature most tyrannical, achieves sole rule. And the longer he lives as tyrant, the more like that he becomes.

"Inevitably," *said Glaucon, taking over the argument.*

SOCRATES: Well, then, won't the one who is plainly worst also be plainly most wretched? And the one who for the longest time is most a tyrant, won't *c* he also be most wretched for the longest time, if truth be told? Though the views of the masses[2] on the subject are naturally also many.

GLAUCON: All that, at any rate, must be true.

SOCRATES: Doesn't a tyrannical man correspond to and most resemble a city ruled by a tyrant, a democratic man a democratically ruled city, and similarly with the others?

GLAUCON: Of course.

SOCRATES: And the comparison between city and city, as regards their virtue and happiness, isn't it the same as the comparison between man and man?

GLAUCON: Certainly. *d*

SOCRATES: As regards virtue, then, how does a city ruled by a tyrant compare to a city of the sort we described first that is ruled by a king?

GLAUCON: They are absolute opposites: one is the best, and the other is the worst.

SOCRATES: I won't ask you which is which, since it is obvious. But as regards happiness and wretchedness, is your judgment the same or different? And let's not become dazzled by looking at the tyrant—since he is just one man—or at the few who surround him. Instead, as is necessary, let's go in and study the city as a whole and, when we have gone down and looked into every corner, only then present what *e* we believe.

GLAUCON: That's a good suggestion. And it is clear to everyone that there is no city more wretched than a tyrannical one and none happier than one ruled by a king.

SOCRATES: Would it also be right, then, to suggest the same thing about the men—that the only fit judge *577a* of them is someone who can, in thought, go down into a man's character and discern it—not someone who sees it from the outside, the way a child does, and is dazzled by the façade that tyrants adopt for the outside world, but someone who discerns it adequately? And what if I were to assume that the person we must all listen to is the one who has this capacity to judge; who has lived in the same house

2. [Literally, the many.]

as a tyrant and witnessed his behavior at home; who has seen how he deals with each member of his household, when he can best be observed stripped
b of his tragic costume;[3] and who has also seen how he deals with public dangers? Shouldn't we ask the one who has seen all that to tell us how the tyrant compares to the others with respect to happiness and wretchedness?

GLAUCON: That's also a very good suggestion.

SOCRATES: Then, in order to have someone to answer our questions, do you want us to pretend that we are among the ones who can make such a judgment, and that we have met tyrannical people already?[4]

GLAUCON: I certainly do.

SOCRATES: Come on, then, and examine the mat-
c ter like this for me. Bearing in mind the resemblance between the city and the man, examine each in turn and describe its condition.

GLAUCON: What kinds of things do you want me to describe?

SOCRATES: Describe the city first. Would you say that a tyrannical city is free or enslaved?

GLAUCON: As enslaved as it is possible to be.

SOCRATES: Yet you can surely see masters and free people in it.

GLAUCON: I can certainly see a small group of people like that. But pretty much the whole population, and the best part of it, is shamefully and wretchedly enslaved.

SOCRATES: If a man and his city are similar, then,
d mustn't the same structure exist in him, too? Mustn't his soul be full of slavery and illiberality, with those same parts of it enslaved, while a small part, the most wicked and most insane, is master?

GLAUCON: It must.

SOCRATES: Will you describe such a soul as enslaved, then, or as free?

GLAUCON: Enslaved, of course.

SOCRATES: And, to go back, isn't the enslaved, tyrannical city least able to do what it wishes?

GLAUCON: By far the least.

SOCRATES: So, a tyrannical soul will also least do e what it wishes—I am talking about the soul as a whole—and will be full of disorder and regret, since it is always forcibly driven by a gadfly.

GLAUCON: Of course.

SOCRATES: Rich or poor? Which must a tyrannical city be?

GLAUCON: Poor.

SOCRATES: So, a tyrannical soul, too, must always be poor and insatiable. 578a

GLAUCON: It must.

SOCRATES: What about fear? Mustn't a city of this sort and a man of this sort be filled with it?

GLAUCON: They certainly must.

SOCRATES: And do you think you will find more wailing, groaning, lamenting, or painful suffering in any other city?

GLAUCON: No.

SOCRATES: What about in a man? Do you think such things are more common in anyone than in this tyrannical man, maddened by his appetites and passions?

GLAUCON: How could I?

SOCRATES: I imagine it is in view of all these things, then, as well as others like them, that you b judged this city to be the most wretched of cities.

GLAUCON: And wasn't I right?

SOCRATES: Yes, of course. But how, again, do you describe the tyrannical man in view of these same things?

GLAUCON: He is by far the most wretched of them all.

SOCRATES: There your description is no longer right.

GLAUCON: How so?

SOCRATES: This man, I think, is not yet the most wretched.

GLAUCON: Then who is?

SOCRATES: Presumably, you will regard this next one as even more wretched.

GLAUCON: What one?

SOCRATES: The tyrannical man who does not live out his life as a private individual, but is unlucky, in c that some misfortune gives him the opportunity of becoming an actual tyrant.

GLAUCON: On the basis of what we have already said, I infer that what you are saying is true.

3. [I.e., the façade referred to earlier. Greek tragedies often had tyrants as characters.]

4. [Plato spent time with Dionysius I, tyrant of Sicily.]

SOCRATES: Yes. But it is not good enough to believe these claims; one must carefully examine someone like that by means of argument. After all, the investigation concerns the most important thing—a good life and a bad one.

GLAUCON: That's absolutely right.

SOCRATES: So, consider, then, whether there is anything in what I say. You see, I think we should
d investigate him on the basis of the following.

GLAUCON: What?

SOCRATES: On the basis of each and every one of the wealthy private citizens in our cities who own many slaves. For they resemble a tyrant in ruling over many, although the number ruled by the tyrant is different.

GLAUCON: It is different.

SOCRATES: You know, then, that these people feel secure and do not fear their slaves.

GLAUCON: Of what have they to be afraid, after all?

SOCRATES: Nothing. But do you know why?

GLAUCON: Yes. Because the whole city is ready to defend each of its private citizens.

SOCRATES: That's right. But now, suppose some
e god were to lift one of these men, who has fifty or more slaves, out of the city, and put him down—with his wife, his children, his slaves, and his other property—in a deserted place, where no free men could come to his assistance? Can you imagine the sort and amount of fear he would feel that he and his wife and children would be killed by his slaves?

GLAUCON: It would be huge, if you ask me.

SOCRATES: Wouldn't he at that point be com-
579a pelled to start fawning on some of his slaves, promising them all sorts of things and setting them free—even though there was nothing he wanted to do less—and wouldn't he turn out to be a flatterer of slaves?

GLAUCON: He would have to be. Otherwise, he would be killed.

SOCRATES: Now, suppose the god were to settle many other neighbors around him who would not tolerate anyone claiming to be master of another, but if they caught such a person, would inflict the most extreme punishments on him?

GLAUCON: I suppose he would be in even worse
b trouble, since he would be surrounded by nothing but enemies.

SOCRATES: So, isn't this, then, the kind of prison in which the tyrant is held—the one whose nature we have described, filled with multifarious fears and passions? Though his soul is really greedy, he is the only one in the city who cannot go abroad or look at the sights at which other free people yearn to look. Instead, he is mostly stuck in house, living like a woman, envying any other citizen who goes abroad and sees some good thing. *c*

GLAUCON: Absolutely.

SOCRATES: Isn't such a harvest of evils, then, a measure of the difference between a tyrannical man who is badly governed politically on the inside—whom you judged just now to be most wretched—and one who does not live out his life as a private individual, but is compelled by some chance to become an actual tyrant and try to rule others, when he cannot even master himself? It is as if someone with a body that is sick and cannot master itself were compelled, not to spend his life in private pursuits, but to compete and fight with other bodies. *d*

GLAUCON: That's exactly what he is like. Your description is absolutely true, Socrates.

SOCRATES: And so, my dear Glaucon, isn't his condition completely wretched, and isn't the life of a tyrant even harsher than the one you judged to be harshest?

GLAUCON: It certainly is.

SOCRATES: So, in truth, then, and whatever some people may think, a real tyrant is really a slave to the worst sorts of fawning and slavery, and a flatterer of the worst kind of people. He is so far from satisfying his appetites in any way that he is in the greatest need *e* of most things and truly poor—as is apparent if one knows how to look at a whole soul. He is full of fear throughout his life and overflowing with convulsions and pains, if in fact his condition is like that of the city he rules. And it is like it, isn't it?

GLAUCON: Yes, of course.

SOCRATES: And, in addition, shouldn't we also attribute to the man the qualities we mentioned earlier? We said that he is inevitably envious, untrustwor- *580a*
thy, unjust, friendless, impious, and a host and nurse to every kind of vice; that ruling makes him even more so than before; and that, as a consequence, he is extremely unfortunate and goes on to make those near him so.

GLAUCON: No one with any sense could possibly contradict that.

SOCRATES: Come on, then, and tell me now at last, like the judge who makes the final decision,[5] *b* who you believe is first in happiness and who second, and judge the others similarly, making five altogether—kingly, timocratic, oligarchic, democratic, tyrannical.

GLAUCON: That's an easy judgment. You see, I rank them in the order of their appearance, just as if they were choruses, both in virtue and vice and in happiness and its opposite.

SOCRATES: Shall we, then, hire a herald, or shall I myself announce that the son of Ariston[6] has given as his verdict that the best and most just is the most *c* happy, and that he is the one who is most kingly and rules like a king over himself; whereas the worst and most unjust is the most wretched, and he, again, is the one who, because he is most tyrannical, is the greatest tyrant over himself and his city?

GLAUCON: You have announced it!

SOCRATES: And shall I add that it holds whether or not their characters remain hidden from all human beings and gods?

GLAUCON: Do add it.

SOCRATES: Well, then, that is one of our demonstrations. But look at this second one and see if you *d* think there is anything in it.

GLAUCON: What is it?

SOCRATES: In just the way a city is divided into three classes, the soul of each person is also divided in three. That is the reason I think there is another demonstration.

GLAUCON: What is it?

SOCRATES: The following. It seems to me that the three also have three kinds of pleasure, one peculiar to each. The same holds of appetites and kinds of rule.

GLAUCON: How do you mean?

SOCRATES: One element, we say, is that with which a person learns; another, that with which he feels anger. As for the third, because it is multiform, we had no one special name for it but named it after the biggest and strongest thing it has in it. I mean *e* we called it the appetitive element because of the intensity of its appetites for food, drink, sex, and all the things that go along with them. We also called it the money-loving element,[7] because such appetites are most easily satisfied by means of money. *581a*

GLAUCON: And we were right.

SOCRATES: So, if we said its pleasure and love are for profit, wouldn't that best bring it together under one heading for the purposes of our argument and make clear to us what we mean when we speak of this part of the soul? And would we be right in calling it money-loving and profit-loving?

GLAUCON: I think so, anyway.

SOCRATES: What about the spirited element? Don't we say that its whole aim is always mastery, victory, and high repute?

GLAUCON: Certainly. *b*

SOCRATES: Then wouldn't it strike the right note for us to call it victory-loving and honor-loving?

GLAUCON: The absolutely right one.

SOCRATES: But surely it is clear to everyone that the element we learn with is always wholly straining to know where the truth lies, and that of the three it cares least for money and reputation.

GLAUCON: By far the least.

SOCRATES: Wouldn't it be appropriate, then, for us to call it learning-loving and philosophic?

GLAUCON: Of course.

SOCRATES: And doesn't it rule in some people's souls, while one of the others—whichever it happens to be—rules in other people's? *c*

GLAUCON: Yes.

SOCRATES: And isn't that why we say there are three primary types of people, philosophic, victory-loving, and profit-loving?

GLAUCON: Absolutely.

SOCRATES: And also three kinds of pleasure, one assigned to each of them?

GLAUCON: Exactly.

SOCRATES: You realize, then, that if you chose to ask each of these three types of people in turn to tell you which of their lives is most pleasant, each would give the highest praise to his own? Won't the money-

5. [The reference is to the way plays were judged at dramatic festivals in Athens. A herald announced the results.]

6. [Glaucon, but also, perhaps, his brother Plato.]

7. [At 553c5.]

maker say that, compared to that of making a profit,
d the pleasures of being honored or of learning are worthless unless there is something in them that makes money?

GLAUCON: True.

SOCRATES: What about the honor-lover? Doesn't he think the pleasure of making money is vulgar, while the pleasure of learning—except to the extent that learning brings honor—is smoke and nonsense?

GLAUCON: He does.

SOCRATES: As for the philosopher, what do you suppose he thinks of the other pleasures in compari-
e son to that of knowing where the truth lies and always enjoying some variety of it while he is learning? Won't he think they are far behind? And won't he call them really necessary, since he would have no need for them if they were not necessary for life?

GLAUCON: He will. We can be sure of that.

SOCRATES: Since the pleasures of each kind and the lives themselves dispute with one another—not about which life is finer or more shameful or better or worse—but about which is more pleasant and less painful, how are we to know which of them is speaking
582a the absolute truth?

GLAUCON: I have no idea how to answer that.

SOCRATES: Consider the matter this way: how should we judge things if we want to judge them well? Isn't it by experience, knowledge, and argument? Or could someone have better criteria than these?

GLAUCON: No, of course not.

SOCRATES: Consider, then. Of the three types of men, which has most experience of the pleasures we mentioned? Do you think the profit-lover learns what the truth itself is like, or has more experience of the pleasure of knowing, than the philosopher does of
b making a profit?

GLAUCON: There is a big difference between them. You see, the latter has to have tasted the other kinds of pleasure beginning from childhood. But it is not necessary for the profit-lover to taste or experience how sweet is the pleasure of learning the nature of the things that are—and even if he were eager to, he could not easily do so.

SOCRATES: So, the philosopher is far superior to the profit-lover in his experience of both kinds of pleasures.

GLAUCON: Very far superior. c

SOCRATES: What about compared to the honor-lover? Is he more inexperienced in the pleasure of being honored than the latter is in the pleasure of knowing?

GLAUCON: No. Honor comes to all of them, provided they accomplish their several aims. For the rich man, too, is honored by many people, as well as are the courageous and the wise ones. So, all have experienced what the pleasure of being honored is like. But the pleasure pertaining to the sight of what is cannot be tasted by anyone except the philosopher.

SOCRATES: So, as far as experience goes, then, he is the finest judge among the three types of men. d

GLAUCON: By far.

SOCRATES: And he alone will have gained his experience with the help of knowledge.

GLAUCON: Of course.

SOCRATES: Moreover, the tool that should be used to judge is not the tool of the profit-lover or the honor-lover, but of the philosopher.

GLAUCON: What one is that?

SOCRATES: Surely we said that judgment should be made by means of arguments. Didn't we?

GLAUCON: Yes.

SOCRATES: And arguments are, above all, his tool.

GLAUCON: Absolutely.

SOCRATES: If the things being judged were best judged by means of wealth and profit, the praise and criticism of the profit-lover would necessarily be e
closest to the truth.

GLAUCON: It would indeed.

SOCRATES: And if by means of honor, victory, and courage, wouldn't it be those of the honor-lover and victory-lover?

GLAUCON: Clearly.

SOCRATES: But since it is by means of experience, knowledge, and argument?

GLAUCON: The praise of the philosopher and argument-lover must be closest to the truth.

SOCRATES: So, of the three pleasures, then, the most pleasant would be that of the part of the soul 583a
with which we learn, and the one of us in whom it rules has the most pleasant life.

GLAUCON: How could it be otherwise? The knowledgeable person at least praises with authority when he praises his own life.

SOCRATES: What life and pleasure does the judge say are in second place?

GLAUCON: Clearly, those of the warrior and honor-lover, since they are closer to his own than those of the moneymaker.

SOCRATES: Then those of the profit-lover come last, apparently.

GLAUCON: Of course.

SOCRATES: Well, then, that makes two in a row. *b* And twice the just person has defeated the unjust one. Now comes the third, which is dedicated in Olympic fashion to our savior, Olympian Zeus.[8] Observe, then, that the other pleasures—apart from that of the knowledgeable person—are neither entirely true nor pure. On the contrary, they are like some sort of illusionist painting, as I think I have heard some wise person say. Yet, if that were true, it would be the greatest and most decisive of the overthrows.

GLAUCON: By far the greatest. But what exactly do you mean?

SOCRATES: I will find out, if you answer the ques- *c* tions while I ask them.

GLAUCON: Start asking, then.

SOCRATES: Tell me, then, don't we say that pain is the opposite of pleasure?

GLAUCON: Yes.

SOCRATES: Isn't there also a state of feeling neither enjoyment nor pain?

GLAUCON: There is.

SOCRATES: Isn't it in the middle between these two, a sort of quiet state of the soul where they are concerned? Or wouldn't you describe it that way?

GLAUCON: I would.

SOCRATES: So then do you recall the sorts of things ill people say when they are ill?

GLAUCON: Which ones?

SOCRATES: That nothing is more pleasant than being healthy, but they had not realized it was most *d* pleasant until they fell ill.

GLAUCON: I do remember that.

SOCRATES: Don't you also hear people who are in great pain saying that nothing is more pleasant than the cessation of one's suffering?

GLAUCON: I do.

SOCRATES: And there are many similar circumstances, I presume, in which you see people in pain praising not enjoyment, but freedom from pain, and respite from that sort of thing, as most pleasant.

GLAUCON: Yes. For at such times, the respite presumably becomes pleasant enough to content them.

SOCRATES: And when someone ceases to enjoy something, this respite from pleasure will be painful. *e*

GLAUCON: Presumably.

SOCRATES: So, the quiet state we just now described as being in between the two will sometimes be both pain and pleasure.

GLAUCON: Apparently.

SOCRATES: And is it possible for what is neither to become both?

GLAUCON: Not in my view.

SOCRATES: Furthermore, when what is pleasant and what is painful arise in the soul, they are both a sort of motion, aren't they?

GLAUCON: Yes.

SOCRATES: And didn't we see just now that what is neither painful nor pleasant is a respite and in the *584a* middle between the two?

GLAUCON: Yes, we did.

SOCRATES: How can it be right, then, to think that the absence of pain is pleasant or the absence of enjoyment painful?

GLAUCON: There's no way it can be.

SOCRATES: So, it is not right. But when the quiet state is next to what is painful, it appears pleasant; and when it is next to what is pleasant, it appears painful. And there is nothing sound in these illusions as far as the truth about pleasure is concerned. On the contrary, they are a sort of sorcery.

GLAUCON: That's what the argument suggests, at any rate.

SOCRATES: Well, then, take a look at pleasures that do not derive from pains, so that you won't be *b* likely to think that, *in their case*, it is the nature of pleasure to be just the cessation of pain or of pain to be just the cessation of pleasure.

GLAUCON: Where am I to look? What pleasures do you mean?

8. [The first toast at a banquet was to the Olympian Zeus, the third to our savior, Zeus. By combining both in a single form of address, Plato seems to be emphasizing the importance of this final proof.]

SOCRATES: There are lots of others, but you might especially want to think about the pleasures of smell. You see, without being preceded by pain, they suddenly become incredibly intense. And when they cease, they leave no pain behind.

GLAUCON: That's absolutely true.

SOCRATES: So, let's not be persuaded that pure
c pleasure is relief from pain, or pure pain relief from pleasure.

GLAUCON: No, let's not.

SOCRATES: However, of the so-called pleasures that reach the soul through the body, pretty much the greatest number—and the most intense ones, too—are of that kind: they are some sort of relief from pains.

GLAUCON: Yes, they are.

SOCRATES: And aren't those pleasures and pains of anticipation, which arise from the expectation of future pleasures or pains, of the same kind?

GLAUCON: They are.

SOCRATES: Do you know what they are like and
d what they most resemble?

GLAUCON: What?

SOCRATES: Do you think there is such a thing in the natural world as an up, a down, and a middle?

GLAUCON: I do.

SOCRATES: Don't you imagine, then, that if someone were brought from down below to the middle, he would think anything other than that he was moving upward? And if he stood at the middle and saw where he had come from, could he possibly think he was anywhere other than the upper region, since he hadn't seen the one that is truly up above?

GLAUCON: By Zeus, I do not see how he could think anything else.

SOCRATES: But if he were brought back again,
e wouldn't he think he was being brought down? And wouldn't he be thinking the truth?

GLAUCON: Of course.

SOCRATES: And wouldn't all this happen to him because he is inexperienced in what is truly and really up, middle, and down?

GLAUCON: Clearly.

SOCRATES: Would it surprise you, then, if those who are inexperienced in the truth have unsound beliefs about lots of other things as well—that they are so disposed toward pleasure, pain, and the middle state that, whenever they descend to the painful, they think the truth and really are in pain; but that, when 585a
they ascend from the painful to the middle state, they firmly think they have reached fulfillment and pleasure? Like people who compare black to gray without having experienced white, don't they compare pain to painlessness while being inexperienced in pleasure, and so get deceived?

GLAUCON: No, by Zeus, it would not surprise me! In fact, I would be very surprised if it were not like that.

SOCRATES: Think of it this way, then: Aren't hunger, thirst, and the like some sort of emptiness related to the state of the body? b

GLAUCON: They are.

SOCRATES: And isn't foolishness and lack of knowledge, in turn, some sort of emptiness related to the state of the soul?

GLAUCON: It certainly is.

SOCRATES: Aren't people filled when they take in nourishment or gain understanding?

GLAUCON: Of course.

SOCRATES: Does the truer filling belong to what *is* less or to what *is* more?

GLAUCON: Clearly, it belongs to what is more.

SOCRATES: Which of the two types, then, partakes more of pure being? The sorts belonging to bread, drink, relishes, and nourishment in general? Or the kind belonging to true belief, knowledge, understanding, and, in sum, to all of virtue? Judge it this way: c
what belongs to what is always the same, immortal, and true, is itself of that sort, and comes to be in something of that sort—it *is* more, don't you think, than what belongs to what is never the same and mortal, is itself of that kind, and comes to be in something of that kind?

GLAUCON: Far more. What belongs to what is always the same is far superior.

SOCRATES: And does the being of what is always the same partake any more of being than of knowledge?

GLAUCON: Not at all.

SOCRATES: What about of truth?

GLAUCON: Not of it, either.

SOCRATES: And if less of truth, less of being, too?

GLAUCON: Necessarily.

SOCRATES: Isn't it generally true that the types concerned with the care of the body partake less in d

truth and being than do those concerned with the care of the soul?

GLAUCON: Yes, much less.

SOCRATES: Don't you think the same holds of the body in comparison to the soul?

GLAUCON: I do.

SOCRATES: Then isn't what is filled with things that are more, and is itself more, more really filled than what is filled with things that are less, and is itself less?

GLAUCON: Of course.

SOCRATES: So, then, if being filled with what is appropriate to our nature is pleasant, what is more filled with things that *are* more is more really and truly caused to enjoy a more true pleasure; whereas what partakes of things that *are* less is less truly and surely filled and partakes of a less trustworthy and less true pleasure.

GLAUCON: That's absolutely inevitable.

SOCRATES: So, those who lack experience of knowledge or virtue, but are always occupied with feasts and the like, are brought down, apparently, and then back up to the middle state; and wander in this way throughout their lives, never reaching beyond this to what is truly higher up, never looking up at it or brought up to it, never filled with what really is, and never tasting any stable or pure pleasure. On the contrary, they are always looking downward like cattle and, with their heads bent over the earth or the dinner table, they feed, fatten, and fornicate. And, in order to do better than others in these things, they kick and butt with iron horns and hooves, killing each other, because their desires are insatiable. For they aren't using things that *are* to fill the part of themselves that *is* a thing that is, and a leak-proof vessel.[9]

GLAUCON: You have described the life of "the many," Socrates, just like an oracle!

SOCRATES: So, isn't it necessary, then, for these people to live with pleasures that are mixed with pains, mere phantoms and illusionist paintings of true pleasures? And aren't they so colored by their juxtaposition with one another that they appear intense, beget mad passions for themselves in the foolish, and are fought over—as Stesichorus tells us the phantom of Helen was fought over at Troy—through ignorance of the truth?[10]

GLAUCON: Something like that must be what happens.

SOCRATES: Mustn't similar things happen to someone who succeeds in satisfying the spirited element? Mustn't his love of honor be so colored by envy, his love of victory by violence, and his spiritedness by peevishness,[11] that he pursues the satisfactions of honor, victory, and spiritedness without rational calculation or understanding?

GLAUCON: The same sorts of things must happen with regard to that element, too.

SOCRATES: Can't we confidently assert, then, that, even where the desires of the profit-loving and honor-loving parts are concerned, those that follow knowledge and argument, and pursue with their help the pleasures that wisdom prescribes, will attain—to the degree that they can attain true pleasure at all—the truest pleasures, because they follow truth, and those that are most their own; if, indeed, what is the best for each thing is also what is most its own?

GLAUCON: But that, of course, is what is most its own.

SOCRATES: So, when the entire soul follows the philosophic element and does not engage in faction, the result is that each element does its own work and is just; and, in particular, each enjoys its own pleasures, the best pleasures and—to the degree possible—the truest.

GLAUCON: Absolutely.

SOCRATES: So, when one of the other parts gains mastery, the result is that it cannot discover its own pleasure and compels the other parts to pursue an alien, and not a true pleasure.

GLAUCON: Yes.

9. [*Stegnon:* contrasted in the *Gorgias* (493a1–b3) with the "leaking jar" in which the appetites are located.]

10. [According to the story, Stesichorus wrote a poem defaming Helen and was punished by being struck with blindness. His sight was restored when he added a verse to the poem in which he claimed that it was a phantom of Helen and not Helen herself who was at Troy.]

11. [Envy, violence, and peevishness are all painful conditions that enhance the honor-lover's pleasures through contrast.]

SOCRATES: And wouldn't what is most distant from philosophy and reason be most likely to produce that result?

GLAUCON: By far.

SOCRATES: And isn't what is most distant from reason the very thing that is most distant from law and order?

GLAUCON: Clearly.

SOCRATES: And wasn't it made evident that the
b passionate and tyrannical appetites are most distant?

GLAUCON: By far the most.

SOCRATES: And the kingly and orderly ones least distant?

GLAUCON: Yes.

SOCRATES: Then the tyrant, I suppose, will be most distant from a true pleasure that is his own, while the king will be least distant.

GLAUCON: It is inevitable.

SOCRATES: And so, the tyrant will live most unpleasantly and the king most pleasantly.

GLAUCON: It is absolutely inevitable.

SOCRATES: Do you know, then, how much more unpleasant the tyrant's life is than the king's?

GLAUCON: Not unless you tell me.

SOCRATES: There are, it seems, three pleasures: one genuine and two illegitimate. The tyrant is at
c the extreme end of the illegitimate ones, since he flees both law and reason and lives with a bodyguard of slavish pleasures. But it is not at all easy to say just how inferior he is—except perhaps as follows.

GLAUCON: How?

SOCRATES: The tyrant is somehow at a third remove from the oligarch, since the democrat was in the middle between them.[12]

GLAUCON: Yes.

SOCRATES: Won't he also live with a phantom of pleasure, then, that, as regards truth, is at a third remove from that other—if what we said before is true?

GLAUCON: He will.

SOCRATES: But the oligarch, in turn, is at a third remove from the king,[13] if we assume king and aristo-
d crat to be the same.

12. [Third because the Greeks always counted the first as well as the last member of a series. The day after tomorrow was the third day.]

13. [Because the timocrat is between them.]

GLAUCON: Yes, third.

SOCRATES: So a tyrant is removed from true pleasure by a numerical value of three times three.

GLAUCON: Apparently.

SOCRATES: So, on the basis of the size of this numerical value, it seems the phantom of the tyrant's pleasure is a plane figure.

GLAUCON: Exactly.

SOCRATES: On the basis of its square and cube, in that case, it becomes clear how far removed it is.

GLAUCON: Clear to someone skilled in calculation, anyway!

SOCRATES: Turning it the other way around, then, if someone wants to say how far the king is removed from the tyrant in terms of true pleasure, *e*
he will find, if he completes the calculation, that he lives 729 times more pleasantly, while the tyrant lives the same number of times more painfully.[14]

GLAUCON: That's an extraordinary calculation of the difference between the two men—the just one and the unjust one—in terms of their pleasure and 588*a*
pain!

SOCRATES: And yet it is a number that is both true and appropriate to human lives—if indeed days, nights, months, and years are appropriate to them.

14. [Socrates' mathematics is difficult to follow. He seems to have something like this in mind: the tyrant's pleasure is a two-dimensional image (a plane figure) of the true, three-dimensional pleasure of the philosopher. Hence, if a one-unit square represents the degree of closeness to true pleasure of an image nine times removed from it, true pleasure should be represented by a nine-unit cube. It follows that the king lives 729 times more pleasantly than the tyrant. However, in order to reach the significant number 729—there are 729 days and nights in a year of 364 twenty-four–hour days and 729 months in the "great year" recognized by the Pythagorean philosopher Philolaus—Socrates has had to make two rather fast moves. First, he illegitimately capitalizes on the Greek manner of counting series in order to count the oligarch twice, once as the last term in his first series (tyrant, democrat, oligarch) and again as the first term in his second series (oligarch, timocrat, king). Second, he multiplies the number of times the tyrant is removed from the oligarch by the number of times the oligarch is removed from the king, when he should have added them. In fact, the tyrant is only five times removed from the king, and so lives only 125 times less pleasantly!]

GLAUCON: And of course they are appropriate.

SOCRATES: If the victory of the good and just person over the bad and unjust one in terms of pleasure is as great as that, won't his victory in terms of its grace, beauty, and virtue be extraordinarily greater?

GLAUCON: Extraordinarily greater, indeed, by Zeus!

SOCRATES: All right, then. Since we have reached this point in the argument, let's return to the first things we mentioned that led us here. I think someone said that doing injustice profits a completely unjust person who is believed to be just. Wasn't that the claim?

GLAUCON: Yes, it was.

SOCRATES: Let's discuss it with its proponent, then, since we have now agreed on the respective effects of doing unjust and doing just things.

GLAUCON: How?

SOCRATES: By fashioning an image of the soul in words, so that the one who said that will know what he was saying.

GLAUCON: What sort of image?

SOCRATES: One of those creatures that ancient legends say used to exist. The Chimera, Scylla, Cerberus, and the numerous other cases where many different kinds are said to have grown together into one.

GLAUCON: Yes, they do describe such things.

SOCRATES: Well, then, fashion a single species of complex, many-headed beast, with a ring of tame and savage animal heads that it can grow and change at will.

GLAUCON: That's a task for a clever fashioner of images! Still, since language is easier to fashion than wax and the like, consider the fashioning done.

SOCRATES: Now, fashion another single species—of lion—and a single one of human being. But make the first much the largest and the second, second in size.

GLAUCON: That's easier—the fashioning is done.

SOCRATES: Now, join the three in one, so that they somehow grow together naturally.

GLAUCON: They are joined.

SOCRATES: Then fashion around the outside the image of one of them, that of the human being, so that to anyone who cannot see what is inside, but sees only the outer shell, it will look like a single creature, a human being.

GLAUCON: The surrounding shell has been fashioned.

SOCRATES: When someone claims, then, that it profits this human being to do injustice, but that doing what is just brings no advantage, let's tell him that he is saying nothing other than that it profits him to feed well and strengthen the multifarious beast, as well as the lion and everything that pertains to the lion; to starve and weaken the human being, so that he is dragged along wherever either of the other two leads; and not to accustom the two to one another or make them friends, but leave them to bite and fight and devour one another.

GLAUCON: Yes, that's exactly what someone who praises doing injustice is saying.

SOCRATES: On the other hand, wouldn't someone who claims that what is just is profitable be saying we should do and say what will give the inner human being the greatest mastery over the human being, to get him to take care of the many-headed beast like a farmer, feeding and domesticating the gentle heads and preventing the savage ones from growing; to make the lion's nature his ally; and to care for all in common, bringing them up in such a way that they will be friends with each other and with himself?

GLAUCON: Yes, that's exactly what someone who praises justice is saying.

SOCRATES: From every point of view, then, the one who praises what is just speaks truly while the one who praises what is unjust speaks falsely. For whether we consider pleasure or good reputation or advantage, the one who praises the just tells the truth while the one who condemns it has nothing sound to say and condemns with no knowledge of what he is condemning.

GLAUCON: None at all, in my opinion.

SOCRATES: Then let's persuade him gently—after all, he is not getting it wrong intentionally—by questioning him as follows: "Bless you, but shouldn't we claim that this is also the basis of the conventional views about what is fine and what is shameful: what is fine is what subordinates the beastlike elements in our nature to the human one—or better, perhaps, to the divine, whereas what is shameful is what enslaves the tame element to the savage?" Will he agree, or what?

GLAUCON: He will if he takes my advice.

SOCRATES: Is there anyone, then, in light of this argument, who profits by acquiring gold unjustly, if the result is something like this: in taking the gold, he simultaneously enslaves the best element in himself to the most wicked? If he got the gold by enslaving his
e son or daughter to savage and evil men, it would not profit him, no matter how much he got for doing it. So, if he ruthlessly enslaves the most divine element in himself to the most godless and polluted, how could he fail to be wretched, when he accepts golden gifts in return for a far more terrible destruction than
590a that of Eriphyle, who took the necklace in return for her husband's soul?[15]

GLAUCON: A much more terrible one. I will answer for him.

SOCRATES: And don't you think intemperance has long been condemned for reasons of this sort; that it is because of vices like it that that terrible creature, the large and multiform beast, is given more freedom than it should be?

GLAUCON: Clearly.

SOCRATES: And aren't stubbornness and peevishness condemned because they inharmoniously increase and stretch the lionlike and snakelike[16]
b element?

GLAUCON: Certainly.

SOCRATES: And aren't luxury and softness condemned for slackening and loosening this same part, because that produces cowardice in it?

GLAUCON: Of course.

SOCRATES: And aren't flattery and illiberality condemned because they subject this same spirited element to the moblike beast, allow it to be showered with abuse for the sake of money and the latter's insatiability, and habituate it from youth to be an ape instead of a lion?

GLAUCON: Yes, indeed. c

SOCRATES: Why do you think someone is reproached for menial work or handicraft? Or shall we say that it is for no other reason than because the best element is naturally weak in him, so that it cannot rule the beasts within him, but can only serve them and learn what flatters them?

GLAUCON: Apparently.

SOCRATES: In order to ensure, then, that someone like that is also ruled by something similar to what rules the best person, we say that he should be the slave of that best person who has the divine ruler within himself. It is not to harm the slave that we say he should be ruled, as Thrasymachus supposed was d
true of all subjects, but because it is better for everyone to be ruled by a divine and wise ruler—preferably one that is his own and that he has inside himself; otherwise one imposed on him from outside, so that we may all be as alike and as friendly as possible, because we are all captained by the same thing.

GLAUCON: Yes, that's right.

SOCRATES: This is clearly the aim of the law as well, which is the ally of everyone in the city. It is e
also our aim in ruling our children. We do not allow them to be free until we establish a constitution in them as in a city. That is to say, we take care of their best part with the similar one in ourselves and equip them with a guardian and ruler similar to our own 591a
to take our place. Only then do we set them free.

GLAUCON: Yes, that's clearly so.

SOCRATES: How, then, will we claim, Glaucon, and on the basis of what argument, that it profits someone to do injustice, or what is intemperate, or some shameful thing that will make him worse, even if it brings more money or power of some other sort?

GLAUCON: There's no way we can.

SOCRATES: Or how can we claim that it profits him to be undetected in his injustice and not pay the penalty? I mean, doesn't the one who remains undetected become even worse, while in the one who b
is discovered and punished, the bestial element is calmed and tamed and the gentle one freed? Doesn't his entire soul, when it returns to its best nature and acquires temperance and justice along with wisdom,

15. [Eriphyle was bribed by Polynices to persuade her husband, Amphiaraus, to take part in an attack on Thebes. He was killed, and she was murdered by her son in revenge. See *Odyssey* 11.326–7.]

16. [The snakelike element hasn't been previously mentioned, although it may be included in "all that pertains to" the lion (588e6). It symbolizes some of the meaner components of the spirited part, such as peevishness, which it would be unnatural to attribute to the noble lion. Snakes were thought to guard shrines and other sacred places. Including a snakelike element in the part of the soul dominant in guardians is, therefore, somewhat natural.]

achieve a condition that is as more honorable than that of a body when it acquires strength and beauty along with health, as a soul is more honorable than a body?

GLAUCON: Absolutely.

SOCRATES: Won't anyone with any sense, then, give everything he has to achieve it as long as he
c lives? First, won't he honor the studies that produce it and not honor the others?

GLAUCON: Clearly.

SOCRATES: Second, as regards the condition and nurture of his body, not only will he not give himself over to bestial and irrational pleasure, and live turned in that direction; but he won't make health his aim nor give precedence to the ways of becoming strong or healthy or beautiful, unless he is also going to become temperate as a result of them. On the con-
d trary, it is clear that he will always be tuning the harmony of his body for the sake of the concord of his soul.

GLAUCON: He certainly will, if indeed he is going to be truly musical.

SOCRATES: Won't he also keep order and concord in his acquisition of money? He won't be dazzled, will he, by what the masses regard as blessed happiness, and—by increasing the size of his wealth without limit—acquire an unlimited number of evils?

GLAUCON: Not in my view.

SOCRATES: On the contrary, he will keep his eye
e fixed on the constitution within him and guard against disturbing anything there either with too much money or with too little. Captaining himself in that way, he will increase and spend his wealth, as far as possible by reference to it.

GLAUCON: That's exactly what he will do.

SOCRATES: Where honors are concerned, too, he
592a will keep his eye on the same thing. He will willingly share in and taste those he believes will make him better. But those that might overthrow the established condition of his soul, he will avoid, both in private and in public.

GLAUCON: So, he won't be willing to take part in politics, then, if that is what he cares about.

SOCRATES: Yes, by the dog, in his own city, he certainly will. But he may not be willing to do so in his fatherland, unless some divine good luck chances to be his.

GLAUCON: I understand. You mean in the city we have just been founding and describing; the one that exists in words, since I do not think it exists anywhere on earth. b

SOCRATES: But there may perhaps be a model of it in the heavens for anyone who wishes to look at it and to found himself on the basis of what he sees. It makes no difference at all whether it exists anywhere or ever will. You see, he would take part in the politics of it alone, and of no other.

GLAUCON: That's probably right.

BOOK X

SOCRATES' NARRATION CONTINUES:

SOCRATES: You know that there are many other things about our city that make me think we were 595a entirely right in founding it as we did, but I am particularly thinking of poetry when I say that.

GLAUCON: What about it?

SOCRATES: Our refusal to admit any of it that is imitative. Indeed, the need not to admit it seems even more evident, in my view, now that we have distinguished the elements in the soul from one another. b

GLAUCON: How do you mean?

SOCRATES: Between ourselves—for *you* won't denounce me to the tragic poets or any of the other imitative ones—I think all such poetry is likely to corrupt the mind of those of its hearers who do not have the knowledge of what it is really like as a drug to counteract it.

GLAUCON: What do you have in mind in saying that?

SOCRATES: I will have to tell you, even though a sort of reverential love I have had for Homer since childhood makes me hesitate to speak. You see, he seems to have been the first teacher and leader of all c these fine tragedians. All the same, a man should not be honored more than the truth. So, as I say, I will have to tell you.

GLAUCON: Of course.

SOCRATES: Listen, then—or rather, answer my questions.

GLAUCON: Ask away.

SOCRATES: Could you tell me what imitation in general is? You see, I do not entirely understand what it is supposed to be.

GLAUCON: So is it likely that *I* will?

SOCRATES: There would be nothing strange in that, since there are many things the shortsighted see
596a before the sharp-eyed!

GLAUCON: That's right. But with you present, I could not possibly be very eager to speak out even if there were something I saw. So, you will have to do the looking yourself.

SOCRATES: Do you want us to begin our investigation with the following point, then, in accordance with our usual procedure? I mean, as you know, we usually posit some one particular form in connection with each set of many things to which we apply the same name. Or don't you understand?

GLAUCON: I do.

SOCRATES: Then in the present case, too, let's take any set of many things you like. For example,
b there are, if you like, many couches and tables.

GLAUCON: Of course.

SOCRATES: But the forms connected to these manufactured items are surely just two, one of a couch and one of a table.

GLAUCON: Yes.

SOCRATES: Don't we usually say, too, that the craftsman who makes each manufactured item looks toward the form when he makes the couches or the tables we use, and similarly with other things? For surely no craftsman makes the form itself—

GLAUCON: How could he?

SOCRATES: Well, now, see what you would call *this* craftsman?

c GLAUCON: Which?

SOCRATES: The one who makes everything each individual handicraftsman makes.

GLAUCON: That's an amazingly clever man you are talking about!

SOCRATES: Wait a minute and you will have even more reason to say that! You see, this same handicraftsman is able to make not only every manufactured item, but he also makes all the plants that grow from the earth, and produces all the animals, including himself; and, in addition, he produces earth and sky and gods and everything in the sky, and everything in Hades beneath the earth.

GLAUCON: You are talking about a wholly amazing sophist! d

SOCRATES: You do not believe me? Tell me, do you think such a craftsman is completely impossible? Or do you think there is a way in which a maker of all these things could exist, and a way in which he could not? Don't you see there is a certain way in which even you yourself could make all of them?

GLAUCON: What way is that?

SOCRATES: It is not difficult. On the contrary, it is a sort of craftsmanship that is widely available and quick—and quickest of all, I suppose, if you are willing to take a mirror and turn it around in all directions. That way you will quickly make the sun and the things in the sky; you will quickly make the earth, e
yourself and the other animals, manufactured items, plants, and everything else that was mentioned just now.

GLAUCON: Yes, their appearances, but certainly not the things themselves as they truly are.

SOCRATES: Right! You attack the argument at just the right place. For I think the painter is also one of these craftsmen, isn't he?

GLAUCON: Of course.

SOCRATES: But you will say, I think, that he does not make the things he makes as they truly are—even though there is a certain way in which the painter also makes a couch. Isn't that right?

GLAUCON: Yes, he also makes the appearance of one.

SOCRATES: What about the couch-maker? Didn't you just say that he does not make the form—which 597a
we say is what a couch is—but only a particular couch?

GLAUCON: Yes, I did say that.

SOCRATES: Now, if he does not make what it is, he is not making what is, but something that is like what is, but is not. So, if someone were to say that the product of a couch-maker or any other handicraftsman completely is, he probably would not be speaking the truth?

GLAUCON: That, at any rate, is what those who occupy themselves with such arguments would think.

SOCRATES: So we should not be surprised if it also turns out to be somewhat dim in comparison to the truth.

GLAUCON: No, we should not. b

SOCRATES: Would you like us, then, to use these same examples to search for that imitator of ours and what he really is?

GLAUCON: I would, if you would.

SOCRATES: Well, then, we have these three sorts of couches. One, that is in nature, which I think we would say a god makes. Or is it someone else?

GLAUCON: No one, I suppose.

SOCRATES: One the carpenter makes.

GLAUCON: Yes.

SOCRATES: And one the painter makes. Isn't that so?

GLAUCON: It is.

SOCRATES: So painter, carpenter, and god—these three oversee three kinds of couches?

GLAUCON: Yes, three.

SOCRATES: Now, the god, either because he did
c not want to, or because it was somehow necessary for him not to make more than one that is in its nature a couch, made only the one that is what a couch itself is. Two or more of these have not been naturally developed by the god and never will be naturally developed.

GLAUCON: Why is that?

SOCRATES: Because, if he were to make only two, one would again come to light whose form they in turn would both possess, and *it* would be what a couch itself is, not the two.

GLAUCON: That's right.

SOCRATES: The god knew this, I suppose, and,
d wishing to be the real maker of the real couch and not just some particular maker of some particular couch, naturally developed the one that is in its nature unique.

GLAUCON: Probably so.

SOCRATES: Would you like us to call him its natural maker, then, or something like that?

GLAUCON: It would be right to do so, at any rate, since it is by nature that he has made it and all the others.

SOCRATES: What about the carpenter? Shouldn't we call him the craftsman who makes a couch?

GLAUCON: Yes.

SOCRATES: And should we call a painter, too, a craftsman and maker of such a thing?

GLAUCON: Certainly not.

SOCRATES: In that case, what is it you say he is, of a couch?

GLAUCON: In my view, the most reasonable thing to call him is this: he is an imitator of what the others e
are craftsmen of.

SOCRATES: All right. So the one whose product is three removed from the natural one, you call an imitator?

GLAUCON: Certainly.

SOCRATES: So the tragedian too, if indeed he is an imitator, will be someone who is by his nature third from king and truth,[1] and so will all the other imitators.

GLAUCON: It looks that way.

SOCRATES: We are agreed about the imitator, then. Now, tell me this about the painter: in each case, do you think it is what each thing itself is in its nature that he is trying to imitate, or the products of 598a
the craftsmen?

GLAUCON: Those of the craftsmen.

SOCRATES: As they are, or as they appear to be? You have still to make that distinction.

GLAUCON: How do you mean?

SOCRATES: This: if you look at a couch from the side or the front or from anywhere else, does it differ in any way from itself? Or, while not differing at all, does it appear different? And similarly with the others?

GLAUCON: The latter. It appears different, but is not different at all.

SOCRATES: Then consider this very point: at what does painting aim in each case? To imitate what is b
as it is? Or what appears as it appears? Is it an imitation of an illusion, or of truth?

GLAUCON: Of an illusion.

SOCRATES: So, imitation is surely far removed from the truth. And the reason that it produces everything, it seems, is that it grasps only a small part of each thing—and that is an illusion. For example, the painter, we say, can paint us a cobbler, a carpenter, or any other craftsman, even though he knows nothing about these crafts. All the same, if he is a good painter, c
by painting a carpenter and displaying him at a distance, he might deceive children and foolish adults into thinking it truly is a carpenter.

GLAUCON: Of course.

SOCRATES: In fact, my friend, I imagine that what we must bear in mind in all these cases is this: when

1. [God is called king at *Laws* 10.904a6.]

someone tells us he has met a human being who knows every craft as well as everything else anyone knows, and that there is nothing of which he does not have a more exact knowledge than anyone else, *d* we should assume we are talking to a naïve fellow. He has been deceived, it seems, by an encounter with some sort of sorcerer or imitator, whom he therefore considers to be all-wise. But that is because of his own inability to distinguish between knowledge, lack of knowledge, and imitation.

GLAUCON: That's absolutely true.

SOCRATES: Well, then, we must next consider tragedy and its leader, Homer, since we hear from *e* some that these men know every craft, everything relevant to human virtue and vice, and even all about divine matters. They claim, you see, that if a good poet is to write beautiful poetry about the things he writes about, he must have knowledge of them when he writes, or else he would be unable to. We should consider, then, whether those who tell us this have been deceived by their encounters with these imitators and do not realize, when they see their works, that they are three removes from what is, and are easy *599a* to produce without knowledge of the truth. For they produce illusions, not things that are. Or whether there is something in what they say, and good poets really do have knowledge of the things about which the masses think they speak so well.

GLAUCON: We certainly must consider that.

SOCRATES: Do you think, then, that if someone could make both what is imitated and its image, he would allow himself to take making images seriously, and put it at the forefront of his life as the best ability *b* he had?

GLAUCON: No, I do not.

SOCRATES: But if he truly had knowledge of what he imitates, I suppose he would take deeds much more seriously than their imitations, would try to leave behind many beautiful deeds as his own memorials, and would be much more eager to be the subject of a eulogy than the author of one.

GLAUCON: I suppose so. I mean, these things certainly are not equal either in honor or in benefit.

SOCRATES: Let's not demand an account, then, of the other things from Homer or any other poet. *c* Let's not ask if any of them is a doctor or only an imitator of what doctors say; or which people any of the poets, old or new, has reportedly made healthy, as Asclepius did; or which students of medicine he left behind, as Asclepius did his sons. And let's not ask them about the other crafts either, but leave them aside. When it comes, however, to the most important and most beautiful things of which Homer undertakes to speak—warfare, generalship, city government, and a person's education—surely, it *is* fair to question him as follows: "My dear Homer, if you are not third removed from the truth about virtue, and are not the *d* sort of craftsman of an image, which is what we defined an imitator to be, but if you are even in second place and capable of knowing what practices make people better or worse in private or in public life, tell us which cities are better governed because of you, as the Lacedaemonians are because of Lycurgus, and as many others—big and small—are because of many other men. What city gives you credit for having *e* proved to be a good lawgiver who benefited it? Italy and Sicily give it to Charondas, and we give it to Solon. Who gives it to you?" Will he be able to name one?

GLAUCON: I suppose not. At any rate, none is mentioned even by the Homeridae themselves.[2]

SOCRATES: Then is any war in Homer's time remembered that was well fought because of his leadership or advice? *600a*

GLAUCON: None at all.

SOCRATES: Then as you would expect in the case of a man wise in deeds, are we told of his many ingenious inventions in the crafts or other activities, as we are about Thales of Miletus and Anacharsis the Scythian?

GLAUCON: There's nothing of that sort.

SOCRATES: Then if there is nothing of a public nature, is Homer said to have been a leader, during his own lifetime, in the education of people who loved associating with him and passed on a Homeric way of life to those who came later? Is he like Pythago- *b* ras, who was himself particularly loved for this reason, and whose followers even today still seem to be conspicuous for a way of life they call Pythagorean?

GLAUCON: Again, we are told nothing of this kind. Indeed, Socrates, Creophylus, the companion of

2. [The rhapsodes and poets who recited and expounded Homer throughout the Greek world.]

Homer, would presumably seem even more ridiculous than his name[3] suggests as an example of such education, if the story told about Homer is true. You see, we are told that while he was alive, Creophylus
c completely neglected him.

SOCRATES: Yes, we are told that. But, Glaucon, if Homer had really been able to educate people and make them better, if he had been able, not to imitate such matters but to know about them, wouldn't he have had many companions who honored and loved him? Protagoras of Abdera, Prodicus of Ceos, and a great many others are able to convince anyone who associates with them in private that he wouldn't be
d able to manage his household or city unless they themselves supervised his education, and they are so intensely loved because of this wisdom of theirs that their disciples do everything except carry them around on their shoulders. Are we to believe, then, that if Homer had been able to help people become virtuous, his companions would have allowed either him or Hesiod to wander around as rhapsodes, and wouldn't have clung far tighter to them than to gold and compelled them to come home and live with
e them? And if persuasion failed, wouldn't they have followed them wherever they went until they had received sufficient education?

GLAUCON: I think what you say is entirely true, Socrates.

SOCRATES: Are we to conclude, then, that all poets, beginning with Homer, imitate images of virtue and of all the other things they write about, and have no grasp of the truth? Although, as we were saying just now, a painter will make what seems to be a shoemaker to those who know as little about shoemak-
601a ing as he does himself, but who look at things in terms of their colors and shapes.

GLAUCON: That's right.

SOCRATES: Similarly, I suppose, we will say that the poet uses words and phrases to paint colored pictures of each of the crafts, even though he knows only how to imitate them; so that others like himself, who look at things in terms of words, will think he speaks extremely well about shoemaking or generalship or anything else, provided he speaks with meter, rhythm, and harmony. That is how great a natural spell these things cast. For if a poet's works are stripped
b of their musical colorings and spoken just by themselves, I think you know what they look like. You have surely seen them.

GLAUCON: I certainly have.

SOCRATES: Don't they resemble the faces of those who are young but not really beautiful, after the bloom of youth has left them?

GLAUCON: Absolutely.

SOCRATES: Come on, then, consider this: the maker of an image—the imitator—knows nothing, we say, about what is, but only about what appears. Isn't that so?
c

GLAUCON: Yes.

SOCRATES: Then let's not leave the story half-told. Let's look at the whole thing.

GLAUCON: Go on.

SOCRATES: A painter, we say, will paint reins and a bit?

GLAUCON: Yes.

SOCRATES: But it is the saddler and the blacksmith who make them?

GLAUCON: Of course.

SOCRATES: Does the painter know what the reins and bit should be like, then? Or do not even their makers—the saddler and the blacksmith—know this, but only the one who knows how to use them, the horseman?

GLAUCON: That's absolutely true.

SOCRATES: So, won't we say that the same holds for everything?

GLAUCON: What?

SOCRATES: That for each thing there are these three crafts: one that will use, one that will make,
d one that will imitate?

GLAUCON: Yes.

SOCRATES: Then aren't the virtue, goodness, and correctness of each manufactured item, living creature, and activity related to nothing but the use for which each is made or naturally developed?

GLAUCON: They are.

SOCRATES: So it is entirely necessary, then, that the user of each thing has the most experience of it, and that he inform the maker about what the good and bad points are in the actual use of the thing he

3. [It derives from two words, *kreas* (meat) and *phylon* (race or kind). A modern equivalent might be "meathead."]

uses. For example, it is the flute player, I take it, who informs the flute-maker about which flutes respond
e well in actual playing, and prescribes how they should be made, while the maker obeys him.

GLAUCON: Of course.

SOCRATES: Doesn't the one who knows give information, then, about good and bad flutes, whereas the other, by relying on him, makes them?

GLAUCON: Yes.

SOCRATES: So, as regards the same manufactured item, its maker—through associating with the one who knows and having to listen to the one who knows—has correct belief about its good and bad
602a qualities, while its user has knowledge.

GLAUCON: Exactly.

SOCRATES: What about the imitator? Will he, on the basis of using the things he paints, have knowledge of whether they are good and correct or not? Or will he have correct belief through having to associate with the one who knows and being told how he should paint them?

GLAUCON: Neither.

SOCRATES: So an imitator has neither knowledge nor correct belief about whether the things he makes are good or bad.

GLAUCON: Apparently not.

SOCRATES: How well situated the poetic imitator is, then, in relation to wisdom about the subjects of his poems!

GLAUCON: He isn't really.

SOCRATES: And yet he will go on imitating all the same, even though he does not know in what
b way each thing is good or bad. On the contrary, whatever appears good to the masses who know nothing—that, it seems, is what he will imitate.

GLAUCON: What else?

SOCRATES: Apparently, then, we are fairly well agreed on the following: that the imitator knows nothing worth mentioning about the things he imitates, but that imitation is a kind of game, not something to be taken seriously; and that tragic poets, whether in iambic or epic verse, are as imitative as they could possibly be.

GLAUCON: Absolutely.

SOCRATES: In the name of Zeus, then, this busi-
c ness of imitation is concerned with what is third removed from the truth. Isn't that right?

GLAUCON: Yes.

SOCRATES: Now, then, on which of the elements in a human being does it have its effect?

GLAUCON: What sort of element do you mean?

SOCRATES: This sort: the same object, viewed from nearby, does not appear the same size, I presume, as when viewed from a distance.

GLAUCON: No, it does not.

SOCRATES: And the same things appear bent and straight when seen in water or out of it, or concave and convex because sight is misled by colors; and every other similar sort of confusion is clearly present in our soul. It is because it exploits this weakness in *d* our nature that illusionist painting is nothing short of sorcery, and neither are jugglery or many other similar sorts of trickery.

GLAUCON: True.

SOCRATES: And haven't measuring, counting, and weighing proved to be most welcome assistants in these cases, ensuring that what appears bigger or smaller or more numerous or heavier does not rule within us, but rather what has calculated or measured or even weighed?

GLAUCON: Of course.

SOCRATES: And that is the task of the soul's rational element? *e*

GLAUCON: Yes, of it.

SOCRATES: But quite often, when it has measured and indicates that some things are larger or smaller than others, or the same size, the opposite simultaneously appears to hold of these same things.

GLAUCON: Yes.

SOCRATES: And didn't we say that it is impossible for the same thing to believe opposites about the same thing at the same time?[4]

GLAUCON: Yes, and we were right to say it.

SOCRATES: So, the element in the soul that believes contrary to the measurements and the one that believes in accord with the measurements could not be the same. *603a*

GLAUCON: No, they could not.

SOCRATES: But the one that puts its trust in measurement and calculation would be the best element in the soul.

4. [436b8–c1.]

GLAUCON: Of course.

SOCRATES: So the one that opposes it would be one of the inferior parts in us.

GLAUCON: Necessarily.

SOCRATES: That, then, was what I wanted to get agreement about when I said that painting—and imitation as a whole—are far from the truth when they produce their work; and moreover that imitation really consorts with an element in us that is far from wisdom, and that nothing healthy or true can come
b from their relationship or friendship.

GLAUCON: That's absolutely right.

SOCRATES: So, imitation is an inferior thing that consorts with another inferior thing to produce inferior offspring.

GLAUCON: So it seems.

SOCRATES: Does this apply only to the imitation that is visible, or also to the one that is audible—the one we call poetry?

GLAUCON: It probably applies to that as well.

SOCRATES: Well, let's not rely solely on a probable analogy with painting. Instead, let's also go directly again to the very element in our mind with which
c poetic imitation consorts and see whether it is inferior or excellent.

GLAUCON: Yes, we should.

SOCRATES: Then let's put it as follows. Imitative poetry, we say, imitates human beings acting under compulsion or voluntarily, who, as a result of these actions, believe they are doing either well or badly, and so experience either pain or enjoyment in all these situations. Does it imitate anything apart from these?

GLAUCON: Not a thing.

SOCRATES: So, is a human being of one mind in all these circumstances then? Or, just as in the case of visible representation, where he was split into factions
d and had opposite beliefs in him about the same things at the same time, is he also split into factions and at war with himself in matters of action? But I am reminded that there is really no need now for us to reach agreement on this question. You see, in our earlier arguments, we were sufficiently agreed about all that when we said that our soul is filled with myriad opposites of that sort at the same time.[5]

GLAUCON: And rightly so.

SOCRATES: Yes, it *was* right. But we omitted something then that I now think we must discuss. *e*

GLAUCON: What's that?

SOCRATES: When a good man suffers some stroke of bad luck, such as the loss of a son or something else he values very highly, we also said in our earlier arguments, as you know, that he will bear it more easily than others.[6]

GLAUCON: We certainly did.

SOCRATES: Now, let's consider this: will he not grieve at all? Or, since that is impossible, will he be somehow measured in the face of pain?

GLAUCON: The latter is probably closer to the truth.

SOCRATES: Now, tell me this about him: do you think he will be more likely to fight and resist pain *604a*
when he is seen by his equals, or when he is just by himself in a solitary place?

GLAUCON: He's sure to fight it far more when he is being seen.

SOCRATES: But when he is alone, I imagine, he will venture to say many things he would be ashamed if someone else heard, and to do many things he would not want anyone else to see him doing.

GLAUCON: That's right.

SOCRATES: And isn't it reason and law that tell him to resist, while what urges him to give in to the pains is the feeling itself? *b*

GLAUCON: True.

SOCRATES: And when there are opposite impulses in a human being in relation to the same thing at the same time, we say that there must be two elements in him.

GLAUCON: Of course.

SOCRATES: Isn't one part ready to be persuaded to follow the law, wherever the law leads?

GLAUCON: Can you explain how?

SOCRATES: The law says, as you know, that it is best to keep as quiet as possible in misfortunes and not get irritated, since what is really good or bad in such things is not clear. There is nothing to be gained by taking them hard, nor is any aspect of human affairs worth getting very serious about. And the very

5. [439c2–441c7.]

6. [387d4–e4.]

thing whose aid we need as quickly as possible in
c such circumstances is the one our grieving hinders.

GLAUCON: Which do you mean?

SOCRATES: The capacity to deliberate about what has happened and, as with the fall of the dice, to arrange our affairs, given what has befallen us, in whatever way reason determines would be best. Instead of acting like children who have fallen over, and who hold on to the hurt part and spend their time wailing, we should always accustom our souls to turn as quickly as possible to curing and raising
d up the part that has suffered a fall and is sick, so as to banish lamentation by means of medicine.

GLAUCON: That would be the most correct way to deal with bad luck, anyway.

SOCRATES: So it is the best element, we say, that is willing to follow this rational calculation.

GLAUCON: Clearly.

SOCRATES: As for the part that leads us to recollections of our suffering and to lamentations, and is insatiable for these things, won't we say that it is the element that lacks reason, is idle, and is a friend of cowardice?

GLAUCON: We certainly will.

SOCRATES: Now, this element—the one that gets irritated—admits of much complex imitation;
e whereas the wise and quiet character, which always remains pretty much selfsame, is neither easy to imitate nor easy to understand when imitated—especially not at a festival where multifarious people are gathered together in theaters. For the experience being imitated is alien to them.

605a GLAUCON: Absolutely.

SOCRATES: The imitative poet, then, clearly does not naturally relate to this best element in the soul, and his wisdom is not directed to pleasing it—not if he is going to attain a good reputation with the masses—but to the irritable and complex character, because it is easy to imitate.

GLAUCON: Clearly.

SOCRATES: So, it would at last be right to take him and place him beside the painter as his counterpart. For he is like the latter in producing things that are inferior as regards truth, and is also similar to him in associating with the other element in souls, not
b with the best one. So, we would also at last be justified in not admitting him into a city that is to be well governed. You see, he arouses and nourishes this element in the soul and, by making it strong, destroys the rational one—just as someone in a city who makes wicked people strong, by handing the city over to them, ruins the better ones. Similarly, we will say an imitative poet produces a bad constitution in the soul of each individual by making images that are very far removed from the truth and by gratifying the element c in it that lacks understanding and cannot distinguish bigger from smaller, but believes the same things to be now large, now small.

GLAUCON: He does, indeed.

SOCRATES: But we haven't yet brought our chief charge against imitation. For its power to corrupt all but a very few *good* people is surely an altogether terrible one.

GLAUCON: It certainly is, if it really can do that.

SOCRATES: Listen and consider. When even the best of us hear Homer, or some other tragic poet, imitating one of the heroes in a state of grief and making a long speech of lamentation, or even chant- d ing and beating his breast, you know we enjoy it and give ourselves over to it. We suffer along with the hero and take his sufferings seriously. And we praise the one who affects us most in this way as a good poet.

GLAUCON: Of course I know.

SOCRATES: But when one of us suffers a personal loss, you also realize we do the opposite: we pride ourselves if we are able to keep quiet and endure it, in the belief that that is what a *man* does, whereas what we praised before is what a woman does. e

GLAUCON: I do realize that.

SOCRATES: Is praise of that sort rightly bestowed, then? Is it right to look at the sort of man we would be, not honored, but rather ashamed to resemble, and instead of being disgusted by what we see to enjoy and praise it?

GLAUCON: No, by Zeus, that does not seem reasonable.

SOCRATES: Yes, it does. At least, it does if you look at it in the following way. 606a

GLAUCON: How?

SOCRATES: If you reflect as follows: what is forcibly kept in check in our personal misfortunes and has an insatiable hunger for weeping and lamenting—since that is what it has a natural appetite for—is the very factor that gets satisfaction and enjoyment from

the poets. Second, our naturally best element, since it has not been adequately educated by reason or habit, relaxes its guard over the lamenting one, since
b it is watching the sufferings of somebody else and thinks there is no shame involved for it in praising and pitying another purportedly good man who grieves excessively. On the contrary, it thinks that to be a clear profit—I mean the pleasure it gets. And it would not want to be deprived of it by despising the whole poem. You see, I think only a few people are able to calculate that the enjoyment of other people's sufferings is inevitably transferred to one's own, since, when pity is nourished and strengthened by the former, it is not easily suppressed in the case of one's own sufferings.

c GLAUCON: That's absolutely true.

SOCRATES: Doesn't the same argument also apply to humor? You see, if there are jokes you would be ashamed to tell yourself, but that you very much enjoy when you hear them imitated in a comedy or even in private, and that you don't hate as something bad, aren't you doing the same as with the things you pity? For the element in you that wanted to tell the jokes, but which you held back by means of reason because you were afraid of being reputed a buffoon, you now release; and having made it strong in that way, you have been led unawares into becoming a comedian in your own life.

GLAUCON: Exactly.

SOCRATES: And in the case of sexual desires,
d anger, and all the appetites, pains, and pleasures in the soul, which we say accompany every action of ours, the effect of poetic imitation on us is the same. I mean, it nurtures and waters them when they should be dried up, and establishes them as rulers in us when—if we are to be become better and happier rather than worse and more wretched—they should be ruled.

GLAUCON: I cannot disagree with you.

SOCRATES: In that case, Glaucon, when you meet
e admirers of Homer—who tell us that this is the poet who educated Greece, and that for the management of human affairs and education in them, one should take up his works and learn them and live guided by this poet in the arrangement of one's whole life—you should befriend and welcome them, since they
607a are the best they are capable of being. And you should agree that Homer is the most poetic of the tragedians and the first among them. Nonetheless, be aware that hymns to the gods and eulogies of good people are the only poetry we can admit into our city. For if you admit the honeyed Muse, whether in lyric or epic poetry, pleasure and pain will be kings in your city instead of law and the thing that has always been generally believed to be best—reason.

GLAUCON: That's absolutely true.

SOCRATES: Let that, then, be our defense for our return to the topic of poetry, which shows that, b given her nature, we were right to banish her from the city earlier, since our argument compelled us. But let's also tell her—in case we are charged with some harshness and boorishness—that there is an ancient quarrel between poetry and philosophy. For such expressions as "the bitch yelping at its master" and "howling," and "great in the empty eloquence of fools," and "control by a mob of the omni-wise," and "the subtle thinkers who are beggars all," and c countless others are signs of this old opposition.[7] All the same, let it be said that, if the imitative poetry that aims at pleasure has any argument to show it should have a place in a well-governed city, we would gladly welcome it back, since we are well aware of being charmed by it ourselves. Still, it is not pious to betray what one believes to be the truth. What about you, my friend; aren't you also charmed by it, especially when it is through Homer that you look at it? d

GLAUCON: Very.

SOCRATES: Isn't it just, then, for her to reenter in that way, when she has defended herself in lyric or some other meter?

GLAUCON: Yes, indeed.

SOCRATES: Then we will surely allow her defenders—the ones who are not poets themselves, but lovers of poetry—to argue without meter on her behalf, showing that she gives not only pleasure but also benefit both to constitutions and to human life.

7. [Philosophers, such as Xenophanes and Heraclitus, attacked Homer and Hesiod for their immoral tales about the gods. Poets, such as Aristophanes in his *Clouds*, attacked philosophers for subverting traditional ethical and religious values. The sources of these particular quotations, however, are unknown.]

Indeed, we will listen to them graciously, since we would certainly profit if poetry were shown to be not
e only pleasant but also beneficial.

GLAUCON: How could we fail to profit?

SOCRATES: But if it is not, my dear comrade, we will behave like men who have fallen in love. If they do not believe their passion is beneficial, hard though it is, they nonetheless stay away. And we too, because of the passion for this sort of poetry implanted in us by our upbringing in those fine constitutions, are well
608a disposed to have her appear in the best and truest light. But as long as she is not able to produce such a defense, then whenever we listen to her, we will chant to ourselves the argument we just now put forward as a counter-charm to prevent us from slipping back into the childish passion that the masses have. For we have come to see that such poetry is not to be taken seriously, as a serious undertaking that grasps truth; but that anyone who listens to it should be careful, if he is concerned about the consti-
b tution within him, and should believe what we have said about poetry.

GLAUCON: I completely agree.

SOCRATES: It is a great struggle, my dear Glaucon, greater than people think, to become good rather than bad. So, we must not be tempted by honor, money, or any sort of office whatever—not even by poetry!—into thinking that it is worthwhile to neglect justice and the rest of virtue.

GLAUCON: I agree with you on the basis of what we have said. And so, I think, would anyone else.

SOCRATES: And yet the greatest rewards of virtue,
c and the prizes proposed for it, have not been discussed.

GLAUCON: You must have something incredibly great in mind, if it is greater than those already mentioned!

SOCRATES: In a short period of time, could anything really great come to pass? I mean, the entire period from childhood to old age is surely short when compared to the whole of time.

GLAUCON: It's a mere nothing.

SOCRATES: Well, then, do you think an immortal thing should be seriously concerned with that period
d rather than the whole of time?

GLAUCON: I suppose not, but what exactly do you have in mind by that?

SOCRATES: Haven't you realized that our souls are immortal and never destroyed?

He looked at me and said in amazement:

No, by Zeus, I have not. But are you really in a position to assert that?

SOCRATES: I certainly ought to be, and I think you are, too. There is nothing difficult about it.

GLAUCON: There is for me. So I would be glad to hear from you about this non-difficult topic!

SOCRATES: Listen then.

GLAUCON: All you have to do is speak!

SOCRATES: Do you think there is a good and a bad?

GLAUCON: I do.

SOCRATES: And do you think about them the same way I do? e

GLAUCON: What way?

SOCRATES: What destroys and corrupts coincides entirely with the bad, while what preserves and benefits coincides entirely with the good.

GLAUCON: I do.

SOCRATES: And do you think there is a good and a bad for each thing, such as ophthalmia for the eyes, sickness for the whole body, blight for grain, rot for wood, rust for iron and bronze, and, as I say, a natural 609a badness and sickness for nearly everything?

GLAUCON: I certainly do.

SOCRATES: And when one of them attaches itself to something, doesn't it make the thing to which it attaches itself deficient? And in the end, doesn't it break it down completely and destroy it?

GLAUCON: Of course.

SOCRATES: So the badness natural to each thing—the deficiency peculiar to each—destroys it, but if that does not destroy it, there is nothing else left to destroy it. For obviously the good will never destroy anything, and again what is neither good nor b bad won't either.

GLAUCON: How could it?

SOCRATES: So if we discover something, the badness of which causes it to deteriorate but cannot break it down and destroy it, won't we immediately know that something with such a nature cannot be destroyed after all?

GLAUCON: That seems reasonable.

SOCRATES: Well, then, what about the soul? Isn't there something that makes it bad?

GLAUCON: Certainly. All the things we were discussing earlier: injustice, intemperance, cowardice, *c* and ignorance.

SOCRATES: Do any of these break it down and destroy it? Think about it, so we are not deceived into believing that when an unjust and foolish person is caught, he is destroyed by injustice, which is a deficiency in a soul. Instead, let's proceed this way: just as the body's deficiency, which is disease, wastes and destroys a body, and brings it to the point of not being a body at all, so all the things we mentioned just now reach the point of not being when their own *d* peculiar badness attaches itself to them, is present in them, and destroys them. Isn't that so?

GLAUCON: Yes.

SOCRATES: Come on, then, and look at the soul in the same way. When injustice and the rest of vices are present in it, does their presence in it and attachment to it corrupt and wither it until they bring it to the point of death and separate it from the body?

GLAUCON: No, they never do that.

SOCRATES: But surely it is unreasonable to suppose that a thing is destroyed by something else's deficiency and not by its own?

GLAUCON: It is unreasonable.

SOCRATES: Think about it, Glaucon. We do not *e* even believe that a body would be destroyed by the deficiency belonging to foods, whether it is staleness, rottenness, or anything else. But if the foods' own deficiency induces bodily deterioration, we will say the body was destroyed *through* them *by* its own badness, which is disease. But we will never admit that the body is destroyed *by* the deficiency belonging to *610a* foods—since they and the body are different things—except when external badness induces the natural badness.

GLAUCON: That's absolutely right.

SOCRATES: By the same argument, then, if the body's deficiency does not induce a soul's own deficiency in a soul, we will never admit that a soul is destroyed by external badness in the absence of its own peculiar deficiency—one thing by another's badness.

GLAUCON: Yes, that's reasonable.

SOCRATES: Well, then, let's refute these arguments and show that what we said was not right. Or, so long as they remain unrefuted, let's never say that the soul even comes close to being destroyed by a fever *b* or any other disease, or by killing for that matter—not even if one were to cut the entire body up into the very smallest pieces—until someone demonstrates to us that these conditions of the body make the soul itself more unjust and more impious. But when an external badness is present, while its own particular badness is absent, let's not allow anyone to say that a soul or anything else whatever is destroyed. *c*

GLAUCON: But you may be sure no one will ever prove that the souls of the dying are made more unjust by death!

SOCRATES: But suppose someone dares to come to grips with our argument and—simply in order to avoid having to agree that our souls are immortal—dares to say that a dying man does become worse and more unjust. We are sure to reply that if what he says is true, injustice must be as deadly as a disease to those who have it, and that those who catch it must die because of its own deadly nature—with the worst *d* cases dying quickly and the less serious ones more slowly—and not as now in fact happens, where the unjust are put to death because of their injustice by others who inflict the penalty.

GLAUCON: By Zeus, injustice won't seem so altogether terrible if it will be deadly to the person who contracts it, since then it would be an *escape* from evils! But I am more inclined to think that it will be shown to be entirely the opposite—something that kills others if it can, but makes its possessor very lively *e* indeed—and not just lively, but positively sleepless! That's how far it is, in my view, from being deadly.

SOCRATES: You are right. After all, if its own deficiency—its own badness—is not enough to kill and destroy the soul, an evil designed for the destruction of something else will hardly destroy the soul, or anything else except what it is designed to destroy.

GLAUCON: "Hardly" is right, it seems.

SOCRATES: Then when something is not destroyed by a single bad thing—whether its own or an external one—clearly it must always exist. And if it *611a* always exists, it is immortal.

GLAUCON: It must be.

SOCRATES: Well, then, let's assume it to be so. And if it is so, you realize that the same ones will always exist. I mean, they surely could not become

fewer in number if none is destroyed, or more numerous either. For if anything immortal is increased, you know that the increase would have to come from the mortal, and then everything would end up being immortal.

GLAUCON: True.

SOCRATES: Then we must not think such a thing—for our argument does not allow it. And we must not think, either, that the soul in its truest nature *b* is full of multicolored variety and dissimilarity and conflict with itself.

GLAUCON: How do you mean?

SOCRATES: It is not easy for something to be immortal when it is composed of many elements and is not composed in the most beautiful way—which is how the soul now seemed to us.

GLAUCON: It probably isn't.

SOCRATES: Yet both our recent argument and others as well require us to accept that the soul *is* immortal. But what it is like in truth, seen as it should be, not maimed by its partnership with the body and *c* other bad things, which is how we see it now, what it is like when it has become pure—*that* we can adequately see only by means of rational calculation. And you will find it to be a much more beautiful thing than we thought and get a much clearer view of all the cases of justice and injustice and of all the other things that we have so far discussed. So far, what we have said about the soul is true of it as it appears at present. But the condition we have seen *d* it in is like that of all the sea god Glaucus,[8] whose original nature cannot easily be made out by those who catch glimpses of him, because some of the original parts of his body have been broken off, others have been worn away and altogether mutilated by the waves, and other things—shells, seaweeds, and rocks—have grown into him, so that he looks more like any wild beast than what he naturally was. Such, too, is the condition of the soul when we see it beset by myriad bad things. But, Glaucon, we should be looking in another direction.

GLAUCON: Where?

SOCRATES: To its love of wisdom.[9] We must keep in mind what it grasps and the kinds of things with which it longs to associate, because it is akin to what *e* is divine and immortal and what always exists, and what it would become if it followed this longing with its whole being and if that impulse lifted it out of the sea in which it now is, and struck off the rocks and *612a* shells that, because it now feasts on earth, have grown around it in a wild, earthy, and stony profusion as a result of those so-called happy feastings. And then you would see its true nature, whether multiform or uniform,[10] or somehow some other way. But we have given a pretty good account now, I think, of what its condition is and what form it takes in human life.

GLAUCON: We certainly have.

SOCRATES: In the course of our discussion, then, did we respond to the other points, without having to invoke the rewards and reputations of justice, as you all said Homer and Hesiod did?[11] Instead, haven't *b* we found that justice itself is the best thing for the soul itself, and that the soul should do what is just, whether it has Gyges' ring or not, or even the cap of Hades as well.[12]

GLAUCON: That's absolutely true. We have.

SOCRATES: So, Glaucon, isn't it now at last unobjectionable, in addition, also to give back to justice and the rest of virtue both the kind and quantity of wages they bring to the soul, both from human beings *c* and from gods, both during life and after death?

GLAUCON: Certainly.

SOCRATES: Then will you give *me* back what you borrowed from me in the course of the discussion?

GLAUCON: What in particular?

SOCRATES: I granted you that the just man should seem unjust and the unjust one just. For you thought that even if it would be impossible for these things to remain hidden from both gods and human beings,

8. [Ancient paintings may have represented Glaucus in the way Plato describes him here. His name appears in the accusative (*Glaukon*), suggesting a play on Glaucon (*Glaukôn*).]

9. [*Philosophia.*]

10. [*Eite polueidês eite monoeidês:* having many elements or only one.]

11. [The reference is to the challenge posed by Glaucon and Adeimantus at 357a1–367e5. But they, of course, are renewing the challenge posed by Thrasymachus in Book I (see 358b1–c1).]

12. [The ring of Gyges is discussed at 359c6–360c5. The cap of Hades also made its wearer invisible.]

all the same, it had to be granted for the sake of argument, so that justice itself could be judged in
d relation to injustice itself. Don't you remember?

GLAUCON: *I* would be unjust if I didn't!

SOCRATES: Well, then, since they have now been judged, I ask on behalf of justice for a return of the reputation it in fact has among gods and human beings; and that we agree that it does indeed have such a reputation, and so may carry off the prizes it gains for someone by making him seem just; since we have already seen that it does give the good things that come from being just, and does not deceive those who really possess it.

e GLAUCON: That's a just request.

SOCRATES: Then won't you first give this back, that it certainly does not remain hidden from the gods what each of the two is like?

GLAUCON: We will.

SOCRATES: But if it does not remain hidden, one would be loved by the gods and one hated, as we agreed at the beginning.[13]

GLAUCON: That's right.

SOCRATES: And won't we also agree that everything that comes to the one who is loved by gods—insofar as it comes from the gods themselves—is the
613a best possible, unless it is some unavoidable bad thing due to him for an earlier mistake?[14]

GLAUCON: Certainly.

SOCRATES: Similarly, we must suppose that if a just man falls into poverty or disease or some of the other things that seem bad, it will end well for him during his lifetime or even in death. For surely the gods at least will never neglect anyone who eagerly wishes to become just and, by practicing virtue, to make himself as much like a god as a human be-
b ing can.

GLAUCON: It is certainly reasonable to think that a man of that sort won't be neglected by one who is like him.

SOCRATES: And mustn't we think the opposite of the unjust one?

GLAUCON: Definitely.

SOCRATES: Those, then, are the sorts of prizes that come from the gods to the just man.

GLAUCON: That's certainly what I believe.

SOCRATES: What about from human beings? What does a just man get from them? If we are to assert what is really the case, isn't it this? Aren't clever but unjust men precisely like runners who run well on the first leg but not on the return one?[15] They leap away sharply at first, but in the end they become ridiculous and, heads drooping, run off the field uncrowned. True runners, on the other hand, make it c to the end, collect the prizes, and are crowned as victors. And isn't it also generally what happens to just people? Toward the end of each course of action and association and of life as a whole, don't they enjoy a good reputation and collect the prizes that come from human beings?

GLAUCON: Of course.

SOCRATES: Will you then allow me to say about them what *you* said about the unjust?[16] For I will claim that it is the just who, when they are old enough, d hold the ruling offices in their city if they choose, marry from whatever family they choose, and give their children in marriage to whomever they please. Indeed, all the things that you said about the others, I now say about these. As for the unjust, the majority of them, even if they remain hidden when they are young, are caught by the end of the race and ridiculed, and, by the time they get old, have become wretched and are showered with abuse by foreigners and citizens, beaten with whips, and made to suffer those punishments you rightly described as crude, such as e racking and burning. Imagine I have claimed that they suffer all such things. Well, as I say, see if you will stand for it.

GLAUCON: Of course I will. What you say is right.

SOCRATES: Well, then, while the just man is alive, these are the sorts of prizes, wages, and gifts he receives from gods and human beings, in addition to 614a those good things that justice itself provides.

GLAUCON: Fine and secure ones they are, too!

SOCRATES: Well, they are nothing in number or size compared to those that await each man after

16. [361d7–362c8.]

death. We must hear about them, too, so that, by hearing them, each of these men may get back in full what he is owed by the argument.

GLAUCON: Please describe them, then, since there are not many things it would be more pleasant
b to hear.

SOCRATES: Well, it is not an Alcinous-story I am going to tell you, but that of a brave man called Er, the son of Armenias, by race a Pamphylian.[17] Once upon a time, he was killed in battle. On the tenth day, when the rest of the dead were picked up, they were already putrefying, but he was picked up still quite sound. When he had been taken home and was lying on the pyre before his funeral on the twelfth day, he revived and, after reviving, told what he had seen in the other world.

He said that when his soul had departed, it traveled together with many others and came to a daimonic
c place, where there were two adjacent openings in the earth and two in the heavens above and opposite them. Judges were seated between these. And, when they had made their judgments, they told the just to go to the right up through the heavens, with signs of the judgments attached to their fronts. But the unjust they told to travel to the left and down. And they too had on their backs signs of all their deeds. When he
d himself came forward, they said that he was to be a messenger to human beings to tell them about the things happening there, and they told him to listen to and look at everything in the place.

Through one of the openings in the heavens and one in the earth, he saw souls departing after judgment had been passed on them. Through the other two, they were arriving. From the one in the earth they came up parched and dusty, while from the one in the heavens they came down pure. And the ones that had just arrived seemed to have come from a e long journey, and went off gladly to the meadow, like a crowd going to a festival, and set up camp there. Those that knew one another exchanged greetings and those coming up from the earth asked the others about the things up there, while those from the heavens asked about the others' experiences. They told their stories to one another, the former weeping and lamenting as they recollected all they had suffered 615a and seen on their journey below the earth—which lasted a thousand years—and the ones from the heavens telling, in turn, about their happy experiences and the inconceivably beautiful sights they had seen.

To tell it all, Glaucon, would take a long time. But the gist, he said, was this: for all the unjust things they had done and for all the people they had wronged, they had paid the penalty for every one in turn, ten times over for each. That is to say, they paid for each injustice once in every hundred years of their journey, so that, on the assumption that a hundred years is roughly the length of a human life, they b paid a tenfold penalty for each injustice. For example, if some of them had caused many deaths or had betrayed cities or armies and reduced them to slavery, or had taken part in other evildoing, they would receive ten times the pain for each of them. On the other hand, if they had done good deeds and become just and pious, they received commensurate awards.

He said some other things about the stillborn and those who lived for only a short time, but they are c not worth recounting. And he told of even greater wages for impiety or piety toward gods or parents, and for murder. He said he was there, you see, when someone asked where the great Ardiaius was. This Ardiaius had been a tyrant in a city in Pamphylia just a thousand years before that, and was said to have killed his aged father and older brother and committed many other impious deeds as well. He said the d one who was asked responded: "He has not come here and never will. For in fact this, too, was one of the terrible sights we saw. When we were near the mouth, about to come up after all our sufferings were over, we suddenly saw Ardiaius together with some others, almost all of whom were tyrants—although

17. [Books 9–11 of the *Odyssey* were traditionally referred to as *Alkinou apologoi*, the tales of Alcinous. Included among them is the story in Book 11 of Odysseus' descent into Hades. Since the word translated by "brave" is *alkimou*, which is very similar to *Alkinou*, some sort of pun seems to be involved. The following is one attractive way to interpret it. *Alkinou* might be taken as a compound of *alkê* (strength) + *nous* (understanding) and *alkimou* as a compound of *alkê* + *Mousa* (a Muse). Socrates would then be saying something like: it isn't a tale that shows strength of understanding that I'm going to tell but one that shows the strength of the Muse of storytelling.]

there were also some private individuals among them who had committed great crimes. They thought that
e they were about to go up, but the mouth would not let them through. Instead, it roared whenever one of these incurably bad people, or anyone else who had not paid a sufficient penalty, tried to go up. At that location, there were savage men, all fiery to look at, standing by, paying attention to the sound, who grabbed some of these people and led them away. But in the case of Ardiaius and others, they bound
616a their feet, hands, and neck and threw them down and flayed them. They dragged them along the road outside, lacerating them on thorn bushes. They explained to those who were passing by at the time why they were being dragged away, and said that they were to be thrown into Tartarus. He said that of the many and multifarious fears they experienced there, the greatest each of them had was that the sound would be heard as he came up, and that each was very pleased when it was silent as he went up. Such then were the penalties and punishments, and the
b rewards that were their counterparts.

When each group had spent seven days in the meadow, on the eighth they had to move on from there and continue their journey. In four days, they came to a place where they could see stretching from above, through the whole heavens and earth, a straight beam of light, like a column, very closely resembling a rainbow, but brighter and more pure. They reached the beam after traveling another day's journey. And there, in the middle of the light, they saw stretching
c from the heavens the ends of its bonds—for this light is what binds the heavens, like the cables underneath a trireme, thus holding the entire revolving thing together. From those ends hangs the spindle of Necessity, by means of which all the revolving things are turned. Its shaft and hook were adamant, while its whorl[18] was adamant mixed with materials of other kinds. The nature of the whorl was as follows. Its
d shape was like the ones here on Earth, but from Er's description, we must think of it as being like this: in one large whorl, hollow and scooped out, lay another just like it, only smaller, that fitted into it exactly, the way nested bowls fit together; and similarly a third and a fourth, and four others. For there were eight whorls altogether, lying inside one another, with their rims appearing as circles from above, while from the back they formed one continuous whorl around the
e shaft, which is driven right through the center of the eighth.

Now, the first or outermost whorl had the broadest circular rim, that of the sixth was second, third was that of the fourth, fourth that of the eighth, fifth that of the seventh, sixth that of the fifth, seventh that of the third, and eighth that of the second. That of the largest was spangled; that of the seventh was brightest; that of the eighth took its color from the seventh's shining on it; that of the second and fifth were very
617a similar to one another, being yellower than the rest; the third was the whitest in color; the fourth was reddish; and the sixth was second in whiteness.

The spindle as a whole revolved at the same speed, but within the revolving whole the seven inner circles gently revolved in the opposite direction to the whole. Of these, the eighth moved fastest; second, and at the same speed as one another, were the seventh, sixth, and fifth; third, it seemed to them, in the speed
b of its counter-revolution, was the fourth; fourth was the third; and fifth the second.[19]

18. [*Sphondulon:* the circular weight that twirls a spindle in weaving.]

19. [Plato's description of the beam of light and the spindle is difficult. He compares the light to *hypozomata*, or the ropes that bind a trireme together. These ropes seem to have girded the trireme from stem to stern and to have entered it at both places. Within the trireme, they were connected to some sort of twisting device that allowed them to be tightened when the water caused them to stretch and become slack. The spindle of Necessity seems to be just such a twisting device. Hence, the extremities of the light's bonds must enter into the universe just as the *hypozomata* enter the trireme, and the spindle must be attached to these extremities, so that its spinning tightens the light and holds the universe together. The light is thus like two rainbows around the universe (or the whorl of the spindle), whose ends enter the universe and are attached to the spindle. The upper half of the whorl of the spindle consists of concentric hemispheres that fit into one another, with their lips or rims fitting together in a single plane. The outer hemisphere is that of the fixed stars; the second is the orbit of Saturn; the third of Jupiter; the fourth of Mars; the fifth of Mercury; the sixth of Venus; the seventh of the sun; and the eighth of the moon. The earth is in

The spindle revolved on the lap of Necessity. On top of each of its circles stood a Siren, who was carried around by its rotation, emitting a single sound, one single note. And from all eight in concord, a single harmony was produced. And there were three other women seated around it equidistant from one another, each on a throne. They were the daughters of Necessity, the Fates, dressed in white with garlands on their heads—Lachesis, Clotho, and Atropos—and they sang to the accompaniment of the Sirens' harmony, Lachesis singing of the past, Clotho of the present, and Atropos of the future. Clotho, using her right hand, touched the outer circumference of the spindle and helped it turn, pausing from time to time; Atropos, with her left, did the same to the inner ones; and Lachesis used each hand in turn to touch both.

When the souls arrived, they had to go straight to Lachesis. A sort of spokesman[20] first arranged them in ranks; then, taking lots and models of lives from the lap of Lachesis, he mounted a high platform, and said:

"The word of Lachesis, maiden daughter of Necessity! Ephemeral souls. The beginning of another death-bringing cycle for mortal-kind! Your daimon will not be assigned to you by lot; you will choose him. The one who has the first lot will be the first to choose a life to which he will be bound by necessity. Virtue has no master: as he honors or dishonors it, so shall each of you have more or less of it. Responsibility lies with the chooser; the god is blameless."

After saying that, the spokesman threw the lots out among them all, and each picked up the one that fell next to him—except for Er, who was not allowed. And to the one who picked it up, it was clear what number he had drawn. After that again the spokesman placed the models of lives on the ground before them—many more of them than those who were present. They were multifarious: all animal lives were there, as well as all human lives. There were tyrannies among them, some life-long, others ending halfway through in poverty, exile, and beggary. There were lives of famous men—some famous for the beauty of their appearance or for their other strengths or athletic prowess, others for their nobility and the virtues of their ancestors, and also some infamous in these respects—and similarly for women. But the structure of the soul was not included, because with the choice of a different life it would inevitably become different. But all the other qualities were mixed with each other and with wealth or poverty, sickness or health, or the states in between.

Here, it seems, my dear Glaucon, a human being faces the greatest danger of all, and because of that each must, to the neglect of all other subjects, take care above all else to be a seeker and student of that subject which will enable him to learn and discover who will give him the ability and the knowledge to distinguish a good life from a bad, so that he will always and in any circumstances choose the better one from among those that are possible. He must calculate the effect of all the things we have mentioned just now, both jointly and severally, on the virtue of a life, so as to know what the good and bad effects of beauty are when it is mixed with wealth or poverty and this or that state of the soul; what the effects are of high and low birth, private lives and ruling offices, physical strength and weaknesses, ease and difficulties in learning, and all the things that are either naturally part of the soul or can be acquired by it, when they are mixed with one another. On the basis of all that he will be able, by considering the nature of the soul, to reason out which life is better and which worse and choose accordingly, calling worse the one that will lead the soul to become more unjust, and better the one that leads it to become more just. Everything else he will ignore. For we have seen that this is the best way to choose, whether in life or death.

Holding this belief with adamantine determination, he must go down to Hades, so that even there he won't be dazzled by wealth and other such evils, and won't rush into tyrannies or other similar practices and so commit irreparable evils, and suffer even greater ones; but instead will know to choose the middle life in such circumstances, and avoid either of the extremes, both in this life, so far as is possible, and in the whole of the life to come. For this is how a human being becomes happiest.

---

the center. The hemispheres are transparent and the width of their rims is the distance of the heavenly bodies from one another.]

20. [*Prophêtês:* a prophet. Here in the sense of someone who speaks on behalf of a god.]

At that point our messenger from the other world also reported that the spokesman said this: "Even for the one who comes last, if he chooses wisely and lives earnestly, there is a satisfactory life available, not a bad one. Let not the first to choose be careless, nor the last discouraged."

When the spokesman had told them that, Er said, the one who drew the first lot came up and immediately chose the greatest tyranny. In his foolishness and greed, you see, he chose it without adequately examining everything, and did not notice
c that it involved being fated to eat his own children, among other evils. When he examined the life at leisure, however, he beat his breast and bemoaned his choice, ignoring the warning of the spokesman. For he did not blame himself for these evils, but chance, daimons, and everything except himself. He was one of those who had come down from the heavens, having lived his previous life in an orderly constitution, sharing in virtue through habit but without philosophy.

d Generally speaking, not the least number of the people caught out in this way were souls who came from the heavens, and so were untrained in sufferings. The majority of those from the earth, on the other hand, because they had suffered themselves and had seen others doing so, were in no rush to make their choices. Because of that, and also because of the chance of the lottery, there was an exchange of evils and goods for most of the souls. Yet, if a person, whenever he came to the life that is here, always practiced philosophy in a sound manner, and if the fall of the lot did not
e put his choice of life among the last, it is likely, from what was reported by Er about the next world, that not only will he be happy here, but also that his journey from here to there and back again will not be underground and rough, but smooth and through the heavens.

He said it was a sight worth seeing how the
620a various souls chose their lives, since seeing it caused pity, ridicule, and surprise. For the most part, their choice reflected the character of their former life. He saw the soul that had once belonged to Orpheus, he said, choosing a swan's life: he hated the female sex because of his death at their hands, and so was unwilling to be conceived in a woman and born.[21] He saw the soul of Thamyris choosing a nightingale's life, a swan changing to the choice of a human life, and other musical animals doing the same. The twentieth soul chose the life of a lion. It was that of Ajax, son of Telamon, who b avoided human life because he remembered the judgment about the armor.[22] The next was that of Agamemnon, which also hated the human race on account of what it suffered, and so changed to the life of an eagle. Allotted a place in the middle, the soul of Atalanta, when it saw the great honors of a male athlete, unable to pass them by, chose his life. After her, he saw the soul of Epeius, son of Panopeus, taking on the nature of a craftswoman. c Further on, among the last, he saw the soul of the ridiculous Thersites clothing itself as an ape.

Now it chanced that Odysseus' soul drew the last lot of all, and came to make its choice. Remembering its former sufferings, it rejected love of honor, and went around for a long time looking for the life of a private individual who did his own work, and with difficulty it found one lying off somewhere neglected by the others. When it saw it, it said that it would have done the same even if it had drawn the first- d place lot, and chose it gladly. Similarly, souls went from the other animals into human beings, or into one another; the unjust changing into savage animals, the just into tame ones; and every sort of mixture occurred.

When all the souls had chosen lives, in the same allotted order they went forward to Lachesis. She assigned to each the daimon it had chosen, as guardian of its life and fulfiller of its choices. This daimon e first led the soul under the hand of Clotho as it turned the revolving spindle, thus ratifying the allotted fate it had chosen. After receiving her touch, he led the soul to the spinning of Atropos, to make the spun fate irreversible. Then, without turning around, it

21. [According to one myth, Orpheus was killed and dismembered by Thracian women, or Maenads.]

22. [Ajax thought that he deserved to be awarded the armor of the dead Achilles, but instead it was awarded to Odysseus. Ajax was maddened by this injustice and later killed himself because of the terrible things he had done while mad.]

went under the throne of Necessity. When it had
621a passed through that, and when the others had also passed through, they all traveled to the plain of Lethe, through burning and choking and terrible heat, for it was empty of trees and earthly vegetation. They camped, since evening was coming on, beside the river of forgetfulness, whose water no vessel can hold. All of them had to drink a certain measure of this water. But those not saved by wisdom drank more than the measure. And as each of them drank, he forgot everything. When they were asleep and midnight came, there was a clap of thunder and an earth-
b quake, and they were suddenly carried away from there, this way and that, up to their births, like shooting stars. But Er himself was prevented from drinking the water. Yet how or where he had come back to his body, he did not know, but suddenly recovering his sight he now saw himself lying on the pyre at dawn.

And so, Glaucon, his story was saved and not lost; and it would save us, too, if we were persuaded by it, since we would safely cross the river Lethe with c our souls undefiled. But if we are persuaded by me, we will believe that the soul is immortal and able to endure every evil and also every good, and always hold to the upward path, practicing justice with wisdom every way we can, so that we will be friends to ourselves and to the gods, both while we remain here on Earth and when we receive the rewards of justice, and go around like victors in the games collecting prizes; and so both in this life and on the thousand-year journey we have described, we will fare well.

ARISTOTLE

Augustine tells us that, in reading Cicero's dialogue *Hortensius*, he was led to turn to a life of philosophy and ultimately to faith and a sense of utter dependence upon divine grace. For Augustine, then, philosophy was the vehicle to a recognition of human finitude and the unrestricted character of God's power. But the *Hortensius* was itself inspired by Cicero's reading of Aristotle's dialogue, the *Protrepticus or Exhortation to Philosophy*. In this work, of which only fragments remain, the young Aristotle (384–322 B.C.E.) calls the reader to a life of searching for knowledge, a life of inquiry, research, and the investigation of all things.

Aristotle himself lived such a life, as one commentator puts it, "driven throughout his life by a single overmastering desire—the desire for knowledge." Later, in the famous first sentence of his *Metaphysics*, Aristotle would acknowledge that he shared this desire with all people: "all men by nature desire to know." Ultimately, it is a desire that would result in Aristotle's remarkable achievements in the study of biology, psychology, logic, physics, ethics, politics, and much else. It would also find its place at the core of his ethics and politics. The relation between virtuous conduct and intellectual activity is a controversial feature of Aristotle's moral thinking, but one interpretation is that he conceived of the good life, which we all desire above all else, as a self-sufficient life devoted to inquiry and contemplation. For Aristotle, then, philosophy or the search for knowledge and understanding will enable man to become as divine as he can ever be; it involves the human recognition of all that human beings can attain and of the way in which divinity is within human grasp. Ironically, the roots of Augustine's life of grace and dependence upon God lie in Aristotle's humanistic and naturalistic conception of the self-sufficient philosophical quest for divine knowledge and thereby for the good life.

Aristotle was born in 384 B.C.E., in Stagira, a small town in Chalcidice in northern Greece. His father, Nicomachus, was a physician in the court of Amyntas, king of Macedon, and a member of a guild devoted to Asclepius, the god of medicine. Although Nicomachus died when Aristotle was still very young, he had probably begun to teach his son something of Greek medicine and biology. These interests had a long-lasting impact on Aristotle.

In 367, at the age of seventeen, Aristotle made the most important move of his life. He left Stagira for Athens, where he became a member of Plato's intellectual and religious fellowship, the Academy. Plato was probably the most dominant intellectual influence on Aristotle throughout his life. He remained in the Academy—studying, teaching, lecturing, and writing—for twenty years, until Plato's death. It was during these years that Aristotle wrote a number of literary dialogues, in the Platonic style, among them the *Protrepticus* and the *Eudemus or On the Soul*, which deals with the separate existence and immortality of the soul. Only fragments of some of these dialogues exist today. It was in this period too that Aristotle tried out radically anti-Platonic views and strategies in works such as the *Categories*.

In 347 Aristotle left the Academy and Athens. Plato had died; his nephew Speusippus had been appointed to replace him, perhaps to keep the property in the family or perhaps for ideological reasons; and in 348 Philip of Macedon sacked the town of Olynthus, provoking a wave of anti-Macedonian feeling, spurred on by the oratory of Demosthenes and his supporters. Aristotle, with a few fellow philosophers, fled Athens, sailing east to the coast of Asia Minor and arriving at Atarneus, at the invitation of its ruler, Hermeias, who settled them in the town of Assos. After two or three years, Aristotle moved to Mytilene, near Lesbos, where he met Theophrastus, who was to become his most important companion and pupil. Aristotle also married Hermeias' niece, Pythias, who bore him two children, a daughter, Pythia, and a son, Nicomachus, after whom the *Nicomachean Ethics* is named.

Two years later, in 342, Aristotle accepted Philip's invitation to settle in Pella, capital of Macedonia, and later in the royal castle at Mieza, to tutor the king's thirteen-year-old son, Alexander. We know little concerning their relationship or about the content of Alexander's education. Subsequent events make it hard to believe that Aristotle taught Alexander anything about ethics or politics. Alexander was strongly committed to a blending of Greek and foreign cultures and conceived of a vast, disparate empire without the centrality of the *polis* (city-state); Aristotle would have differed on both matters. Aristotle is thought to have composed for Alexander a work on monarchy and one on colonies, but we know nothing of their content or influence on Alexander.

In 340 Alexander was made regent, and Aristotle probably settled in Stagira until Philip's death, in 335, when he returned to Athens. The next dozen years were the richest and most productive of Aristotle's life. First, he sought to establish his own school or fellowship (*thiasos*), the Lyceum, renting some buildings in a grove northeast of the city, a site sacred to Apollo Lyceius and, as tradition has it, a favorite spot of Socrates. Second, Aristotle engaged in a vast array of investigations. These were based on prior and ongoing research and the collection of data, views, and positions, conducted by himself and his associates. He lectured, taught, and cultivated an environment of study that yielded writings on biology, logic, rhetoric, physics, metaphysics, ethics, politics, the arts, and more. Only twenty percent of this output remains, but it is sufficient to establish Aristotle as a giant of Western intellectual culture.

In 323 Alexander died. Once again anti-Macedonian feeling erupted in Athens, and Aristotle saw charges of impiety fabricated against him. He fled to Chalcis, in Euboea, "to save the Athenians," as he put it, "from sinning twice against philosophy." There he died a year later, at the age of sixty-two. Diogenes Laertius, the third-century doxographer, preserves his will, in which he arranges his affairs and those of his family with sensitivity, kindness, and generosity. It is a rare opportunity to glimpse the humanity that existed so delicately alongside an incomparable, unrelenting intellect and an all-consuming desire for knowledge.

It is hard to understand with any depth the concrete person whose life spanned these turbulent years. This much, however, is clear, that Aristotle's life and his thinking were joined in an attempt to live the best life possible for a human being. This is the life that he examines, defends, and endorses in his great ethical and political works, especially the *Nicomachean Ethics* and the *Politics*. There he locates the core of human life in the enrichment of our character; there he associates this goal of *eudaimonia* (human flourishing or well-being) with the functioning of soul at its highest level, the level of reason; and there he explores how reason functions, together with desire, pleasure, deliberation, and decision, in everyday life and in the life of inquiry and contemplation. Moreover, the good life is the object of our most important and strongest desire, and the political is the context of associations and structures best suited to enable its achievement.

Aristotle's account rises out of a tradition of natural philosophy in the fifth and fourth centuries; it attempts to unite religious, scientific, and moral aspiration in such a way that human life in fourth-century Greece is seen to take on meaning and purpose. Later, in the Middle Ages and in the modern world, Aristotle's theory loosed itself from the ancient *polis* and found new adherents who agreed with Aristotle that moral character is a complex interplay of rational judgement, deliberation, desire, decision, community, law, and much else. Whether this conception of moral character and the good life could be freed from Aristotelian science and its teleological order was and is a difficult question. But it does nothing to discredit Aristotle's own attempt to practice philosophy and thereby to articulate and to live the best life possible for human beings.

Nicomachean Ethics

BOOK I

1

1094a Every craft and every line of inquiry, and likewise every action and decision, seems to seek some good; that is why some people were right to describe the good as what everything seeks. But the ends [that are 5 sought] appear to differ; some are activities, and others are products apart from the activities. Wherever there are ends apart from the actions, the products are by nature better than the activities.

Since there are many actions, crafts, and sciences, the ends turn out to be many as well; for health is the end of medicine, a boat of boat building, victory of generalship, and wealth of household manage- 10 ment. But some of these pursuits are subordinate to some one capacity; for instance, bridle making and every other science producing equipment for horses are subordinate to horsemanship, while this and every action in warfare are, in turn, subordinate to generalship, and in the same way other pursuits are subordinate to further ones. In all such cases, then, the ends 15 of the ruling sciences are more choiceworthy than all the ends subordinate to them, since the lower ends are also pursued for the sake of the higher. Here it does not matter whether the ends of the actions are the activities themselves, or something apart from them, as in the sciences we have mentioned.

2

Suppose, then, that the things achievable by action have some end that we wish for because of itself, and because of which we wish for the other things, and that we do not choose everything because of some- 20 thing else—for if we do, it will go on without limit, so that desire will prove to be empty and futile. Clearly, this end will be the good, that is to say, the best good.

Then surely knowledge of this good also carries great weight for [determining the best] way of life; if we know it, we are more likely, like archers who have a target to aim at, to hit the right mark. If so, we 25 should try to grasp, in outline at any rate, what the good is, and which is its proper science or capacity.

It seems proper to the most controlling science—the highest ruling science. And this appears characteristic of political science. For it is the one that prescribes which of the sciences ought to be studied in cities, and which ones each class in the city should 1094b learn, and how far; indeed we see that even the most honored capacities—generalship, household management, and rhetoric, for instance—are subordinate to it. And since it uses the other sciences concerned 5 with action, and moreover legislates what must be done and what avoided, its end will include the ends of the other sciences, and so this will be the human good. For even if the good is the same for a city as for an individual, still the good of the city is apparently a greater and more complete good to acquire and preserve. For while it is satisfactory to acquire and preserve the good even for an individual, it is finer 10 and more divine to acquire and preserve it for a people and for cities. And so, since our line of inquiry seeks these [goods, for an individual and for a community], it is a sort of political science.

3

Our discussion will be adequate if we make things perspicuous enough to accord with the subject matter; for we would not seek the same degree of exactness in all sorts of arguments alike, any more than in the products of different crafts. Now, fine and just things, 15

which political science examines, differ and vary so much as to seem to rest on convention only, not on nature. But [this is not a good reason, since] goods also vary in the same way, because they result in harm to many people—for some have been destroyed because of their wealth, others because of their bravery. And so, since this is our subject and these are our premises, we shall be satisfied to indicate the truth roughly and in outline; since our subject and our premises are things that hold good usually [but not universally], we shall be satisfied to draw conclusions of the same sort.

Each of our claims, then, ought to be accepted in the same way [as claiming to hold good usually]. For the educated person seeks exactness in each area to the extent that the nature of the subject allows; for apparently it is just as mistaken to demand demonstrations from a rhetorician as to accept [merely] persuasive arguments from a mathematician. Further, each person judges rightly what he knows, and is a good judge about that; hence the good judge in a given area is the person educated in that area, and the unqualifiedly good judge is the person educated in every area.

This is why a youth is not a suitable student of political science; for he lacks experience of the actions in life, which are the subject and premises of our arguments. Moreover, since he tends to follow his feelings, his study will be futile and useless; for the end [of political science] is action, not knowledge. It does not matter whether he is young in years or immature in character, since the deficiency does not depend on age, but results from following his feelings in his life and in a given pursuit; for an immature person, like an incontinent person, gets no benefit from his knowledge. But for those who accord with reason in forming their desires and in their actions, knowledge of political science will be of great benefit.

These are the preliminary points about the student, about the way our claims are to be accepted, and about what we propose to do.

4

Let us, then, begin again. Since every sort of knowledge and decision pursues some good, what is the good that we say political science seeks? What, [in other words,] is the highest of all the goods achievable in action?

As far as its name goes, most people virtually agree; for both the many and the cultivated call it happiness, and they suppose that living well and doing well are the same as being happy. But they disagree about what happiness is, and the many do not give the same answer as the wise.

For the many think it is something obvious and evident—for instance, pleasure, wealth, or honor. Some take it to be one thing, others another. Indeed, the same person often changes his mind; for when he has fallen ill, he thinks happiness is health, and when he has fallen into poverty, he thinks it is wealth. And when they are conscious of their own ignorance, they admire anyone who speaks of something grand and above their heads. [Among the wise,] however, some used to think that besides these many goods there is some other good that exists in its own right and that causes all these goods to be goods.

Presumably, then, it is rather futile to examine all these beliefs, and it is enough to examine those that are most current or seem to have some argument for them.

We must notice, however, the difference between arguments from principles and arguments toward principles. For indeed Plato was right to be puzzled about this, when he used to ask if [the argument] set out from the principles or led toward them—just as on a race course the path may go from the starting line to the far end, or back again. For we should certainly begin from things known, but things are known in two ways; for some are known to us, some known without qualification. Presumably, then, *we* ought to begin from things known to *us*.

That is why we need to have been brought up in fine habits if we are to be adequate students of fine and just things, and of political questions generally. For we begin from the [belief] that [something is true]; if this is apparent enough to us, we can begin without also [knowing] why [it is true]. Someone who is well brought up has the beginnings, or can easily acquire them. Someone who neither has them nor can acquire them should listen to Hesiod:[1] 'He who

1. [Aristotle frequently quotes ancient sources, from Hesiod and Homer to Sophocles, Euripides, Epi-

grasps everything himself is best of all; he is noble also who listens to one who has spoken well; but he who neither grasps it himself nor takes to heart what he hears from another is a useless man.'

5

But let us begin again from the point from which we digressed. For, it would seem, people quite reasonably reach their conception of the good, i.e., of happiness, from the lives [they lead]; for there are roughly three most favored lives: the lives of gratification, of political activity, and, third, of study.

The many, the most vulgar, would seem to conceive the good and happiness as pleasure, and hence they also like the life of gratification. In this they appear completely slavish, since the life they decide on is a life for grazing animals. Still, they have some argument in their defense, since many in positions of power feel as Sardanapallus[2] felt, [and also choose this life].

The cultivated people, those active [in politics], conceive the good as honor, since this is more or less the end [normally pursued] in the political life. This, however, appears to be too superficial to be what we are seeking; for it seems to depend more on those who honor than on the one honored, whereas we intuitively believe that the good is something of our own and hard to take from us. Further, it would seem, they pursue honor to convince themselves that they are good; at any rate, they seek to be honored by prudent people, among people who know them, and for virtue. It is clear, then, that—in their view at any rate—virtue is superior [to honor].

Perhaps, indeed, one might conceive virtue more than honor to be the end of the political life. However, this also is apparently too incomplete [to be the good]. For it seems possible for someone to possess virtue but be asleep or inactive throughout his life, and, moreover, to suffer the worst evils and misfortunes. If this is the sort of life he leads, no one would count him happy, except to defend a philosopher's paradox. Enough about this, since it has been adequately discussed in the popular works as well.

The third life is the life of study, which we shall examine in what follows.

The moneymaker's life is in a way forced on him [not chosen for itself]; and clearly wealth is not the good we are seeking, since it is [merely] useful, [choiceworthy only] for some other end. Hence one would be more inclined to suppose that [any of] the goods mentioned earlier is the end, since they are liked for themselves. But apparently they are not [the end] either; and many arguments have been presented against them. Let us, then, dismiss them.

6

Presumably, though, we had better examine the universal good, and puzzle out what is meant in speaking of it. This sort of inquiry is, to be sure, unwelcome to us, because those who introduced the Forms were friends of ours; still, it presumably seems better, indeed only right, to destroy even what is close to us if that is the way to preserve truth. We must especially do this as philosophers, [lovers of wisdom]; for though we love both the truth and our friends, reverence is due to the truth first.

Those who introduced this view did not mean to produce an Idea for any [series] in which they spoke of prior and posterior [members]; that was why they did not mean to establish an Idea [of number] for [the series of] numbers. But the good is spoken of both in what-it-is [that is, substance], and in quality and relative; and what exists in its own right, that is, substance, is by nature prior to the relative, since a relative would seem to be an appendage and coincident of being. And so there is no common Idea over these.

Further, good is spoken of in as many ways as being [is spoken of]: in what-it-is, as god and mind; in quality, as the virtues; in quantity, as the measured amount; in relative, as the useful; in time, as the opportune moment; in place, as the [right] situation; and so on. Hence it is clear that the good cannot be some common and single universal; for if it were, it

charmus, and Simonides. For a comprehensive list of Aristotle's literary references see Terence Irwin, *Aristotle, Nicomachean Ethics*, first edition (Hackett Publishing Company, 1985), 433–36.—M.L.M.]

2. [An Assyrian king (669–626) who lived in legendary luxury.—T.I.]

would be spoken of in only one [of the types of] predication, not in them all.

Further, if a number of things have a single Idea, there is also a single science of them; hence [if there were an Idea of good] there would also be some single science of all goods. But, in fact, there are many sciences even of the goods under one [type of] predication; for the science of the opportune moment, for instance, in war is generalship, in disease medicine. And similarly the science of the measured amount in food is medicine, in exertion gymnastics. [Hence there is no single science of the good, and so no Idea.]

One might be puzzled about what [the believers in Ideas] really mean in speaking of the So-and-So Itself, since Man Itself and man have one and the same account of man; for insofar as each is man, they will not differ at all. If that is so, then [Good Itself and good have the same account of good]; hence they also will not differ at all insofar as each is good, [hence there is no point in appealing to Good Itself].

Moreover, Good Itself will be no more of a good by being eternal; for a white thing is no whiter if it lasts a long time than if it lasts a day.

The Pythagoreans would seem to have a more plausible view about the good, since they place the One in the column of goods. Indeed, Speusippus[3] seems to have followed them. But let us leave this for another discussion.

A dispute emerges, however, about what we have said, because the arguments [in favor of the Idea] are not concerned with every sort of good. Goods pursued and liked in their own right are spoken of as one species of goods, whereas those that in some way tend to produce or preserve these goods, or to prevent their contraries, are spoken of as goods because of these and in a different way. Clearly, then, goods are spoken of in two ways, and some are goods in their own right, and others goods because of these. Let us, then, separate the goods in their own right from the [merely] useful goods, and consider whether goods in their own right correspond to a single Idea.

But what sorts of goods may we take to be goods in their own right? Are they the goods that are pursued even on their own—for instance, prudence, seeing, some types of pleasures, and honors? For even if we also pursue these because of something else, we may nonetheless take them to be goods in their own right. Alternatively, is nothing except the Idea good in its own right, so that the Form will be futile? But if these other things are also goods in their own right, then, [if there is an Idea of good,] the same account of good will have to turn up in all of them, just as the same account of whiteness turns up in snow and in chalk. In fact, however, honor, prudence, and pleasure have different and dissimilar accounts, precisely insofar as they are goods. Hence the good is not something common corresponding to a single Idea.

But how, then, is good spoken of? For it is not like homonyms resulting from chance. Is it spoken of from the fact that goods derive from one thing or all contribute to one thing? Or is it spoken of more by analogy? For as sight is to body, so understanding is to soul, and so on for other cases.

Presumably, though, we should leave these questions for now, since their exact treatment is more appropriate for another [branch of] philosophy. And the same is true about the Idea. For even if there is some one good predicated in common, or some separable good, itself in its own right, clearly that is not the sort of good a human being can achieve in action or possess; but that is the sort we are looking for now.

Perhaps, however, someone might think it is better to get to know the Idea with a view to the goods that we can possess and achieve in action; for [one might suppose that] if we have this as a sort of pattern, we shall also know better about the goods that are goods for us, and if we know about them, we shall hit on them. This argument certainly has some plausibility, but it would seem to clash with the sciences. For each of these, though it aims at some good and seeks to supply what is lacking, leaves out knowledge of the Idea; but if the Idea were such an important aid, surely it would not be reasonable for all craftsmen to know nothing about it and not even to look for it.

Moreover, it is a puzzle to know what the weaver or carpenter will gain for his own craft from knowing this Good Itself, or how anyone will be better at medicine or generalship from having gazed on the Idea Itself. For what the doctor appears to consider is not even health [universally, let alone good univer-

3. [Plato's nephew; succeeded Plato in 347 as head of the Academy.—M.L.M.]

sally], but human health, and presumably the health of this human being even more, since he treats one particular patient at a time.

So much, then, for these questions.

7

But let us return once again to the good we are looking for, and consider just what it could be. For it is apparently one thing in one action or craft, and another thing in another; for it is one thing in medicine, another in generalship, and so on for the rest. What, then, is the good of each action or craft? Surely it is that for the sake of which the other things are done; in medicine this is health, in generalship victory, in house-building a house, in another case something else, but in every action and decision it is the end, since it is for the sake of the end that everyone does the other actions. And so, if there is some end of everything achievable in action, the good achievable in action will be this end; if there are more ends than one, [the good achievable in action] will be these ends.

Our argument, then, has followed a different route to reach the same conclusion. But we must try to make this still more perspicuous. Since there are apparently many ends, and we choose some of them (for instance, wealth, flutes, and, in general, instruments) because of something else, it is clear that not all ends are complete. But the best good is apparently something complete. And so, if only one end is complete, the good we are looking for will be this end; if more ends than one are complete, it will be the most complete end of these.

We say that an end pursued in its own right is more complete than an end pursued because of something else, and that an end that is never choiceworthy because of something else is more complete than ends that are choiceworthy both in their own right and because of this end. Hence an end that is always choiceworthy in its own right, never because of something else, is complete without qualification.

Now happiness, more than anything else, seems complete without qualification. For we always choose it because of itself, never because of something else. Honor, pleasure, understanding, and every virtue we certainly choose because of themselves, since we would choose each of them even if it had no further result; but we also choose them for the sake of happiness, supposing that through them we shall be happy. Happiness, by contrast, no one ever chooses for their sake, or for the sake of anything else at all.

The same conclusion [that happiness is complete] also appears to follow from self-sufficiency. For the complete good seems to be self-sufficient. What we count as self-sufficient is not what suffices for a solitary person by himself, living an isolated life, but what suffices also for parents, children, wife, and, in general, for friends and fellow citizens, since a human being is a naturally political [animal]. Here, however, we must impose some limit; for if we extend the good to parents' parents and children's children and to friends of friends, we shall go on without limit; but we must examine this another time. Anyhow, we regard something as self-sufficient when all by itself it makes a life choiceworthy and lacking nothing; and that is what we think happiness does.

Moreover, we think happiness is most choiceworthy of all goods, [since] it is not counted as one good among many. [If it were] counted as one among many, then, clearly, we think it would be more choiceworthy if the smallest of goods were added; for the good that is added becomes an extra quantity of goods, and the larger of two goods is always more choiceworthy. Happiness, then, is apparently something complete and self-sufficient, since it is the end of the things achievable in action.

But presumably the remark that the best good is happiness is apparently something [generally] agreed, and we still need a clearer statement of what the best good is. Perhaps, then, we shall find this if we first grasp the function of a human being. For just as the good, i.e., [doing] well, for a flautist, a sculptor, and every craftsman, and, in general, for whatever has a function and [characteristic] action, seems to depend on its function, the same seems to be true for a human being, if a human being has some function.

Then do the carpenter and the leather worker have their functions and actions, but has a human being no function? Is he by nature idle, without any function? Or, just as eye, hand, foot, and, in general, every [bodily] part apparently has its function, may we likewise ascribe to a human being some function apart from all of these?

What, then, could this be? For living is apparently
1098a shared with plants, but what we are looking for is the special function of a human being; hence we should set aside the life of nutrition and growth. The life next in order is some sort of life of sense perception; but this too is apparently shared with horse, ox, and every animal.

The remaining possibility, then, is some sort of life of action of the [part of the soul] that has reason. One [part] of it has reason as obeying reason; the
5 other has it as itself having reason and thinking. Moreover, life is also spoken of in two ways [as capacity and as activity], and we must take [a human being's special function to be] life as activity, since this seems to be called life more fully. We have found, then, that the human function is activity of the soul in accord with reason or requiring reason.

Now we say that the function of a [kind of thing]—of a harpist, for instance—is the same in kind as the function of an excellent individual of the kind—of an
10 excellent harpist, for instance. And the same is true without qualification in every case, if we add to the function the superior achievement in accord with the virtue; for the function of a harpist is to play the harp, and the function of a good harpist is to play it well. Moreover, we take the human function to be a certain kind of life, and take this life to be activity and actions of the soul that involve reason; hence the function of
15 the excellent man is to do this well and finely.

Now each function is completed well by being completed in accord with the virtue proper [to that kind of thing]. And so the human good proves to be activity of the soul in accord with virtue, and indeed with the best and most complete virtue, if there are more virtues than one. Moreover, it must be in a complete life. For one swallow does not make a
20 spring, nor does one day; nor, similarly, does one day or a short time make us blessed and happy.

This, then, is a sketch of the good; for, presumably, we must draw the outline first, and fill it in later. If the sketch is good, anyone, it seems, can advance and articulate it, and in such cases time discovers more, or is a good partner in discovery. That is also how
25 the crafts have improved, since anyone can add what is lacking [in the outline].

We must also remember our previous remarks, so that we do not look for the same degree of exactness in all areas, but the degree that accords with a given subject matter and is proper to a given line of inquiry. For the carpenter's and the geometer's inquiries about 30 the right angle are different also; the carpenter restricts himself to what helps his work, but the geometer inquires into what, or what sort of thing, the right angle is, since he studies the truth. We must do the same, then, in other areas too, [seeking the proper degree of exactness], so that digressions do not overwhelm our main task.

Nor should we make the same demand for an 1098b explanation in all cases. On the contrary, in some cases it is enough to prove rightly that [something is true, without also explaining why it is true]. This is so, for instance, with principles, where the fact that [something is true] is the first thing, that is to say, the principle.

Some principles are studied by means of induction, some by means of perception, some by means of some sort of habituation, and others by other means. In each case we should try to find them out by means 5 suited to their nature, and work hard to define them rightly. For they carry great weight for what follows; for the principle seems to be more than half the whole, and makes evident the answer to many of our questions.

8

We should examine the principle, however, not only from the conclusion and premises [of a deduction], but also from what is said about it; for all the facts 10 harmonize with a true account, whereas the truth soon clashes with a false one.

Goods are divided, then, into three types, some called external, some goods of the soul, others goods of the body. We say that the goods of the soul are 15 goods most fully, and more than the others, and we take actions and activities of the soul to be [goods] of the soul. And so our account [of the good] is right, to judge by this belief anyhow—and it is an ancient belief, and accepted by philosophers.

Our account is also correct in saying that some sort of actions and activities are the end; for in that way the end turns out to be a good of the soul, not an external good. 20

The belief that the happy person lives well and does well also agrees with our account, since we have virtually said that the end is a sort of living well and doing well.

Further, all the features that people look for in happiness appear to be true of the end described in our account. For to some people happiness seems to be virtue; to others prudence; to others some sort of wisdom; to others again it seems to be these, or one of these, involving pleasure or requiring it to be added; others add in external prosperity as well. Some of these views are traditional, held by many, while others are held by a few men who are widely esteemed. It is reasonable for each group not to be completely wrong, but to be correct on one point at least, or even on most points.

First, our account agrees with those who say happiness is virtue [in general] or some [particular] virtue; for activity in accord with virtue is proper to virtue. Presumably, though, it matters quite a bit whether we suppose that the best good consists in possessing or in using—that is to say, in a state or in an activity [that actualizes the state]. For someone may be in a state that achieves no good—if, for instance, he is asleep or inactive in some other way—but this cannot be true of the activity; for it will necessarily act and act well. And just as Olympic prizes are not for the finest and strongest, but for the contestants—since it is only these who win—the same is true in life; among the fine and good people, only those who act correctly win the prize.

Moreover, the life of these active people is also pleasant in itself. For being pleased is a condition of the soul, [and hence is included in the activity of the soul]. Further, each type of person finds pleasure in whatever he is called a lover of; a horse, for instance, pleases the horse-lover, a spectacle the lover of spectacles. Similarly, what is just pleases the lover of justice, and in general what accords with virtue pleases the lover of virtue.

Now the things that please most people conflict, because they are not pleasant by nature, whereas the things that please lovers of the fine are things pleasant by nature. Actions in accord with virtue are pleasant by nature, so that they both please lovers of the fine and are pleasant in their own right.

Hence these people's life does not need pleasure to be added [to virtuous activity] as some sort of extra decoration; rather, it has its pleasure within itself. For besides the reasons already given, someone who does not enjoy fine actions is not good; for no one would call a person just, for instance, if he did not enjoy doing just actions, or generous if he did not enjoy generous actions, and similarly for the other virtues.

If this is so, actions in accord with the virtues are pleasant in their own right. Moreover, these actions are good and fine as well as pleasant; indeed, they are good, fine, and pleasant more than anything else is, since on this question the excellent person judges rightly, and his judgment agrees with what we have said.

Happiness, then, is best, finest, and most pleasant, and the Delian inscription is wrong to distinguish these things: 'What is most just is finest; being healthy is most beneficial; but it is most pleasant to win our heart's desire.' For all three features are found in the best activities, and we say happiness is these activities, or [rather] one of them, the best one.

Nonetheless, happiness evidently also needs external goods to be added, as we said, since we cannot, or cannot easily, do fine actions if we lack the resources. For, first of all, in many actions we use friends, wealth, and political power just as we use instruments. Further, deprivation of certain [externals]—for instance, good birth, good children, beauty—mars our blessedness. For we do not altogether have the character of happiness if we look utterly repulsive or are ill-born, solitary, or childless; and we have it even less, presumably, if our children or friends are totally bad, or were good but have died.

And so, as we have said, happiness would seem to need this sort of prosperity added also. That is why some people identify happiness with good fortune, and others identify it with virtue.

9

This also leads to a puzzle: Is happiness acquired by learning, or habituation, or by some other form of cultivation? Or is it the result of some divine fate, or even of fortune?

First, then, if the gods give any gift at all to human beings, it is reasonable for them to give us happiness

more than any other human good, insofar as it is the best of human goods. Presumably, however, this question is more suitable for a different inquiry.

But even if it is not sent by the gods, but instead results from virtue and some sort of learning or cultivation, happiness appears to be one of the most divine things, since the prize and goal of virtue appears to be the best good, something divine and blessed. Moreover [if happiness comes in this way] it will be widely shared; for anyone who is not deformed [in his capacity] for virtue will be able to achieve happiness through some sort of learning and attention.

And since it is better to be happy in this way than because of fortune, it is reasonable for this to be the way [we become] happy. For whatever is natural is naturally in the finest state possible. The same is true of the products of crafts and of every other cause, especially the best cause; and it would be seriously inappropriate to entrust what is greatest and finest to fortune.

The answer to our question is also evident from our account. For we have said that happiness is a certain sort of activity of the soul in accord with virtue, [and hence not a result of fortune]. Of the other goods, some are necessary conditions of happiness, while others are naturally useful and cooperative as instruments [but are not parts of it].

Further, this conclusion agrees with our opening remarks. For we took the goal of political science to be the best good; and most of its attention is devoted to the character of the citizens, to make them good people who do fine actions.

It is not surprising, then, that we regard neither ox, nor horse, nor any other kind of animal as happy; for none of them can share in this sort of activity. For the same reason a child is not happy either, since his age prevents him from doing these sorts of actions. If he is called happy, he is being congratulated [simply] because of anticipated blessedness; for, as we have said, happiness requires both complete virtue and a complete life.

It needs a complete life because life includes many reversals of fortune, good and bad, and the most prosperous person may fall into a terrible disaster in old age, as the Trojan stories tell us about Priam. If someone has suffered these sorts of misfortunes and comes to a miserable end, no one counts him happy.

10

Then should we count no human being happy during his lifetime, but follow Solon's[4] advice to wait to see the end? But if we agree with Solon, can someone really be happy during the time after he has died? Surely that is completely absurd, especially when we say happiness is an activity.

We do not say, then, that someone is happy during the time he is dead, and Solon's point is not this [absurd one], but rather that when a human being has died, we can safely pronounce [that he was] blessed [before he died], on the assumption that he is now finally beyond evils and misfortunes. But this claim is also disputable. For if a living person has good or evil of which he is not aware, a dead person also, it seems, has good or evil, if, for instance, he receives honors or dishonors, and his children, and descendants in general, do well or suffer misfortune.

However, this conclusion also raises a puzzle. For even if someone has lived in blessedness until old age, and has died appropriately, many fluctuations of his descendants' fortunes may still happen to him; for some may be good people and get the life they deserve, while the contrary may be true of others, and clearly they may be as distantly related to their ancestor as you please. Surely, then, it would be an absurd result if the dead person's condition changed along with the fortunes of his descendants, so that at one time he would turn out to have been happy [in his lifetime] and at another time he would turn out to have been miserable. But it would also be absurd if the condition of descendants did not affect their ancestors at all or for any length of time.

But we must return to the previous puzzle, since that will perhaps also show us the answer to our present question. Let us grant that we must wait to see the end, and must then count someone blessed, not as now being blessed [during the time he is dead] but because he previously was blessed. Would it not be absurd, then, if, at the very time when he is happy, we refused to ascribe truly to him the happiness he

4. [Important Athenian statesman and sage about 600; when he saw the vast wealth of Croesus, king of Lydia, Solon refused to call him the happiest man until he saw how his life ended.—M.L.M.]

1100b has? Such refusal results from reluctance to call him happy during his lifetime, because of its ups and downs; for we suppose happiness is enduring and definitely not prone to fluctuate, but the same person's 5 fortunes often turn to and fro. For clearly, if we take our cue from his fortunes, we shall often call him happy and then miserable again, thereby representing the happy person as a kind of chameleon, insecurely based.

But surely it is quite wrong to take our cue from someone's fortunes. For his doing well or badly does not rest on them. A human life, as we said, needs these 10 added, but activities in accord with virtue control happiness, and the contrary activities control its contrary. Indeed, the present puzzle is further evidence for our account [of happiness]. For no human achievement has the stability of activities in accord with virtue, since these seem to be more enduring even than our knowledge of the sciences. Indeed, the 15 most honorable among the virtues themselves are more enduring than the other virtues, because blessed people devote their lives to them more fully and more continually than to anything else—for this continual activity would seem to be the reason we do not forget them.

It follows, then, that the happy person has the [stability] we are looking for and keeps the character he has throughout his life. For always, or more than 20 anything else, he will do and study the actions in accord with virtue, and will bear fortunes most finely, in every way and in all conditions appropriately, since he is truly 'good, foursquare, and blameless.'

Many events, however, are subject to fortune; some are minor, some major. Hence, minor strokes of good or ill fortune clearly will not carry any weight for his 25 life. But many major strokes of good fortune will make it more blessed; for in themselves they naturally add adornment to it, and his use of them proves to be fine and excellent. Conversely, if he suffers many major misfortunes, they oppress and spoil his blessed- 30 ness, since they involve pain and impede many activities. And yet, even here what is fine shines through, whenever someone bears many severe misfortunes with good temper, not because he feels no distress, but because he is noble and magnanimous.

And since it is activities that control life, as we said, 35 no blessed person could ever become miserable, since he will never do hateful and base actions. For a truly good and prudent person, we suppose, will bear 1101a strokes of fortune suitably, and from his resources at any time will do the finest actions, just as a good general will make the best use of his forces in war, and a good shoemaker will make the finest shoe from 5 the hides given to him, and similarly for all other craftsmen.

If this is so, the happy person could never become miserable, but neither will he be blessed if he falls into misfortunes as bad as Priam's. Nor, however, will he be inconstant and prone to fluctuate, since he will neither be easily shaken from his happiness nor 10 shaken by just any misfortunes. He will be shaken from it, though, by many serious misfortunes, and from these a return to happiness will take no short time. At best, it will take a long and complete length of time that includes great and fine successes.

Then why not say that the happy person is the one 15 whose activities accord with complete virtue, with an adequate supply of external goods, not for just any time but for a complete life? Or should we add that he will also go on living this way and will come to an appropriate end, since the future is not apparent to us, and we take happiness to be the end, and altogether complete in every way? Given these facts [about the future and about happiness], we shall say 20 that a living person who has, and will keep, the goods we mentioned is blessed, but blessed as a human being is. So much for a determination of this question.

11

Still, it is apparently rather unfriendly and contrary to the [common] beliefs to claim that the fortunes of our descendants and all our friends contribute nothing. But since they can find themselves in many and various circumstances, some of which affect us 25 more, some less, it is apparently a long—indeed endless—task to differentiate all the particular cases. Perhaps a general outline will be enough of an answer.

Misfortunes, then, even to the person himself, differ, and some have a certain gravity and weight for his life, whereas others would seem to be lighter. The 30 same is true for the misfortunes of his friends; and it matters whether they happen to living or to dead people—much more than it matters whether lawless

and terrible crimes are committed before a tragic drama begins or in the course of it.

In our reasoning, then, we should also take account of this difference, but even more account, presumably, of the puzzle about whether the dead share in any good or evil. For if we consider this, anything good or evil penetrating to the dead would seem to be weak and unimportant, either without qualification or for them. Even if the good or evil is not so weak and unimportant, still its importance and character are not enough to make people happy who are not already happy, or to take away the blessedness of those who are happy. And so, when friends do well, and likewise when they do badly, it appears to contribute something to the dead, but of a character and size that neither makes happy people not happy nor anything of this sort.

12

Now that we have determined these points, let us consider whether happiness is something praiseworthy, or instead something honorable; for clearly it is not a capacity [which is neither praiseworthy nor honorable].

Whatever is praiseworthy appears to be praised for its character and its state in relation to something. We praise the just and the brave person, for instance, and in general the good person and virtue, because of their actions and achievements; and we praise the strong person, the good runner, and each of the others because he naturally has a certain character and is in a certain state in relation to something good and excellent. This is clear also from praises of the gods; for these praises appear ridiculous because they are referred to us, but they are referred to us because, as we said, praise depends on such a reference.

If praise is for these sorts of things, then clearly for the best things there is no praise, but something greater and better. And indeed this is how it appears. For the gods and the most godlike of men are [not praised, but] congratulated for their blessedness and happiness. The same is true of goods; for we never praise happiness, as we praise justice, but we count it blessed, as something better and more godlike [than anything that is praised].

Indeed, Eudoxus[5] seems to have used the right sort of argument in defending the supremacy of pleasure. By not praising pleasure, though it is a good, we indicate—so he thought—that it is superior to everything praiseworthy; [only] the god and the good have this superiority since the other goods are [praised] by reference to them.

[Here he seems to have argued correctly.] For praise is given to virtue, since it makes us do fine actions; but celebrations are for achievements, either of body or of soul. But an exact treatment of this is presumably more proper for specialists in celebrations. For us, anyhow, it is clear from what has been said that happiness is something honorable and complete.

A further reason why this would seem to be correct is that happiness is a principle; for [the principle] is what we all aim at in all our other actions; and we take the principle and cause of goods to be something honorable and divine.

13

Since happiness is a certain sort of activity of the soul in accord with complete virtue, we must examine virtue; for that will perhaps also be a way to study happiness better. Moreover, the true politician seems to have put more effort into virtue than into anything else, since he wants to make the citizens good and law-abiding. We find an example of this in the Spartan and Cretan legislators and in any others who share their concerns. Since, then, the examination of virtue is proper for political science, the inquiry clearly suits our decision at the beginning.

It is clear that the virtue we must examine is human virtue, since we are also seeking the human good and human happiness. By human virtue we mean virtue of the soul, not of the body, since we also say that happiness is an activity of the soul. If this is so, it is clear that the politician must in some way know about the soul, just as someone setting out to heal the eyes must know about the whole body as well. This is all the more true to the extent that political science is better and more honorable than medicine; even among doctors, the cultivated ones devote a lot of

5. [Famous mathematician and member of Plato's academy.—M.L.M.]

effort to finding out about the body. Hence the politician as well [as the student of nature] must study the soul. But he must study it for his specific purpose, far enough for his inquiry [into virtue]; for a more exact treatment would presumably take more effort than his purpose requires.

[We] have discussed the soul sufficiently [for our purposes] in [our] popular works as well [as our less popular], and we should use this discussion. We have said, for instance, that one [part] of the soul is nonrational, while one has reason. Are these distinguished as parts of a body and everything divisible into parts are? Or are they two [only] in definition, and inseparable by nature, as the convex and the concave are in a surface? It does not matter for present purposes.

Consider the nonrational [part]. One [part] of it, i.e., the cause of nutrition and growth, would seem to be plantlike and shared [with all living things]; for we can ascribe this capacity of the soul to everything that is nourished, including embryos, and the same capacity to full-grown living things, since this is more reasonable than to ascribe another capacity to them.

Hence the virtue of this capacity is apparently shared, not [specifically] human. For this part and this capacity more than others seem to be active in sleep, and here the good and the bad person are least distinct; hence happy people are said to be no better off than miserable people for half their lives. This lack of distinction is not surprising, since sleep is inactivity of the soul insofar as it is called excellent or base, unless to some small extent some movements penetrate [to our awareness], and in this way the decent person comes to have better images [in dreams] than just any random person has. Enough about this, however, and let us leave aside the nutritive part, since by nature it has no share in human virtue.

Another nature in the soul would also seem to be nonrational, though in a way it shares in reason. For in the continent and the incontinent person we praise their reason, that is to say, the [part] of the soul that has reason, because it exhorts them correctly and toward what is best; but they evidently also have in them some other [part] that is by nature something apart from reason, clashing and struggling with reason. For just as paralyzed parts of a body, when we decide to move them to the right, do the contrary and move off to the left, the same is true of the soul; for incontinent people have impulses in contrary directions. In bodies, admittedly, we see the part go astray, whereas we do not see it in the soul; nonetheless, presumably, we should suppose that the soul also has something apart from reason, countering and opposing reason. The [precise] way it is different does not matter.

However, this [part] as well [as the rational part] appears, as we said, to share in reason. At any rate, in the continent person it obeys reason; and in the temperate and the brave person it presumably listens still better to reason, since there it agrees with reason in everything.

The nonrational [part], then, as well [as the whole soul] apparently has two parts. For while the plantlike [part] shares in reason not at all, the [part] with appetites and in general desires shares in reason in a way, insofar as it both listens to reason and obeys it. This is the way in which we are said to 'listen to reason' from father or friends, as opposed to the way in which [we 'give the reason'] in mathematics. The nonrational part also [obeys and] is persuaded in some way by reason, as is shown by correction, and by every sort of reproof and exhortation.

If, then, we ought to say that this [part] also has reason, then the [part] that has reason, as well [as the nonrational part], will have two parts. One will have reason fully, by having it within itself; the other will have reason by listening to reason as to a father.

The division between virtues accords with this difference. For some virtues are called virtues of thought, others virtues of character; wisdom, comprehension, and prudence are called virtues of thought, generosity and temperance virtues of character. For when we speak of someone's character we do not say that he is wise or has good comprehension, but that he is gentle or temperate. And yet, we also praise the wise person for his state, and the states that are praiseworthy are the ones we call virtues.

BOOK II

1

Virtue, then, is of two sorts, virtue of thought and virtue of character. Virtue of thought arises and grows mostly from teaching; that is why it needs experience

and time. Virtue of character [i.e., of *ēthos*] results from habit [*ethos*]; hence its name 'ethical,' slightly varied from 'ethos.'

Hence it is also clear that none of the virtues of character arises in us naturally. For if something is by nature in one condition, habituation cannot bring it into another condition. A stone, for instance, by nature moves downwards, and habituation could not make it move upwards, not even if you threw it up ten thousand times to habituate it; nor could habituation make fire move downwards, or bring anything that is by nature in one condition into another condition. And so the virtues arise in us neither by nature nor against nature. Rather, we are by nature able to acquire them, and we are completed through habit.

Further, if something arises in us by nature, we first have the capacity for it, and later perform the activity. This is clear in the case of the senses; for we did not acquire them by frequent seeing or hearing, but we already had them when we exercised them, and did not get them by exercising them. Virtues, by contrast, we acquire, just as we acquire crafts, by having first activated them. For we learn a craft by producing the same product that we must produce when we have learned it; we become builders, for instance, by building, and we become harpists by playing the harp. Similarly, then, we become just by doing just actions, temperate by doing temperate actions, brave by doing brave actions.

What goes on in cities is also evidence for this. For the legislator makes the citizens good by habituating them, and this is the wish of every legislator; if he fails to do it well he misses his goal. Correct habituation distinguishes a good political system from a bad one.

Further, the sources and means that develop each virtue also ruin it, just as they do in a craft. For playing the harp makes both good and bad harpists, and it is analogous in the case of builders and all the rest; for building well makes good builders, and building badly makes bad ones. Otherwise no teacher would be needed, but everyone would be born a good or a bad craftsman.

It is the same, then, with the virtues. For what we do in our dealings with other people makes some of us just, some unjust; what we do in terrifying situations, and the habits of fear or confidence that we acquire, make some of us brave and others cowardly. The same is true of situations involving appetites and anger; for one or another sort of conduct in these situations makes some temperate and mild, others intemperate and irascible. To sum it up in a single account: a state [of character] results from [the repetition of] similar activities.

That is why we must perform the right activities, since differences in these imply corresponding differences in the states. It is not unimportant, then, to acquire one sort of habit or another, right from our youth. On the contrary, it is very important, indeed all-important.

2

Our present discussion does not aim, as our others do, at study; for the purpose of our examination is not to know what virtue is, but to become good, since otherwise the inquiry would be of no benefit to us. And so we must examine the right ways of acting; for, as we have said, the actions also control the sorts of states we acquire.

First, then, actions should accord with the correct reason. That is a common [belief], and let us assume it. We shall discuss it later, and say what the correct reason is and how it is related to the other virtues.

But let us take it as agreed in advance that every account of the actions we must do has to be stated in outline, not exactly. As we also said at the beginning, the type of accounts we demand should accord with the subject matter; and questions about actions and expediency, like questions about health, have no fixed answers.

While this is the character of our general account, the account of particular cases is still more inexact. For these fall under no craft or profession; the agents themselves must consider in each case what the opportune action is, as doctors and navigators do. The account we offer, then, in our present inquiry is of this inexact sort; still, we must try to offer help.

First, then, we should observe that these sorts of states naturally tend to be ruined by excess and deficiency. We see this happen with strength and health—for we must use evident cases [such as these] as witnesses to things that are not evident. For both excessive and deficient exercise ruin bodily strength,

and, similarly, too much or too little eating or drinking ruins health, whereas the proportionate amount produces, increases, and preserves it.

The same is true, then, of temperance, bravery, and the other virtues. For if, for instance, someone avoids and is afraid of everything, standing firm against nothing, he becomes cowardly; if he is afraid of nothing at all and goes to face everything, he becomes rash. Similarly, if he gratifies himself with every pleasure and abstains from none, he becomes intemperate; if he avoids them all, as boors do, he becomes some sort of insensible person. Temperance and bravery, then, are ruined by excess and deficiency, but preserved by the mean.

But these actions are not only the sources and causes both of the emergence and growth of virtues and of their ruin; the activities of the virtues [once we have acquired them] also consist in these same actions. For this is also true of more evident cases; strength, for instance, arises from eating a lot and from withstanding much hard labor, and it is the strong person who is most capable of these very actions. It is the same with the virtues. For abstaining from pleasures makes us become temperate, and once we have become temperate we are most capable of abstaining from pleasures. It is similar with bravery; habituation in disdain for frightening situations and in standing firm against them makes us become brave, and once we have become brave we shall be most capable of standing firm.

3

But we must take someone's pleasure or pain following on his actions to be a sign of his state. For if someone who abstains from bodily pleasures enjoys the abstinence itself, he is temperate; if he is grieved by it, he is intemperate. Again, if he stands firm against terrifying situations and enjoys it, or at least does not find it painful, he is brave; if he finds it painful, he is cowardly. For virtue of character is about pleasures and pains.

For pleasure causes us to do base actions, and pain causes us to abstain from fine ones. That is why we need to have had the appropriate upbringing—right from early youth, as Plato says—to make us find enjoyment or pain in the right things; for this is the correct education.

Further, virtues are concerned with actions and feelings; but every feeling and every action implies pleasure or pain; hence, for this reason too, virtue is about pleasures and pains. Corrective treatments also indicate this, since they use pleasures and pains; for correction is a form of medical treatment, and medical treatment naturally operates through contraries.

Further, as we said earlier, every state of soul is naturally related to and about whatever naturally makes it better or worse; and pleasures and pains make people base, from pursuing and avoiding the wrong ones, at the wrong time, in the wrong ways, or whatever other distinctions of that sort are needed in an account. These [bad effects of pleasure and pain] are the reason why people actually define the virtues as ways of being unaffected and undisturbed [by pleasures and pains]. They are wrong, however, because they speak of being unaffected without qualification, not of being unaffected in the right or wrong way, at the right or wrong time, and the added qualifications.

We assume, then, that virtue is the sort of state that does the best actions concerning pleasures and pains, and that vice is the contrary state.

The following will also make it evident that virtue and vice are about the same things. For there are three objects of choice—fine, expedient, and pleasant—and three objects of avoidance—their contraries, shameful, harmful, and painful. About all these, then, the good person is correct and the bad person is in error, and especially about pleasure. For pleasure is shared with animals, and implied by every object of choice, since what is fine and what is expedient appear pleasant as well.

Further, pleasure grows up with all of us from infancy on. That is why it is hard to rub out this feeling that is dyed into our lives. We also estimate actions [as well as feelings]—some of us more, some less—by pleasure and pain. For this reason, our whole discussion must be about these; for good or bad enjoyment or pain is very important for our actions.

Further, it is more difficult to fight pleasure than to fight spirit—and Heracleitus tells us [how difficult it is to fight spirit]. Now both craft and virtue are in every case about what is more difficult, since a good

result is even better when it is more difficult. Hence, for this reason also, the whole discussion, for virtue and political science alike, must consider pleasures and pains; for if we use these well, we shall be good, and if badly, bad.

To sum up: Virtue is about pleasures and pains; the actions that are its sources also increase it or, if they are done badly, ruin it; and its activity is about the same actions as those that are its sources.

4

Someone might be puzzled, however, about what we mean by saying that we become just by doing just actions and become temperate by doing temperate actions. For [one might suppose that] if we do grammatical or musical actions, we are grammarians or musicians, and, similarly, if we do just or temperate actions, we are thereby just or temperate.

But surely actions are not enough, even in the case of crafts; for it is possible to produce a grammatical result by chance, or by following someone else's instructions. To be grammarians, then, we must both produce a grammatical result and produce it grammatically—that is to say, produce it in accord with the grammatical knowledge in us.

Moreover, in any case, what is true of crafts is not true of virtues. For the products of a craft determine by their own qualities whether they have been produced well; and so it suffices that they have the right qualities when they have been produced. But for actions in accord with the virtues to be done temperately or justly it does not suffice that they themselves have the right qualities. Rather, the agent must also be in the right state when he does them. First, he must know [that he is doing virtuous actions]; second, he must decide on them, and decide on them for themselves; and, third, he must also do them from a firm and unchanging state.

1105b As conditions for having a craft, these three do not count, except for the bare knowing. As a condition for having a virtue, however, the knowing counts for nothing, or [rather] for only a little, whereas the other two conditions are very important, indeed all-important. And we achieve these other two conditions by the frequent doing of just and temperate actions.

Hence actions are called just or temperate when they are the sort that a just or temperate person would do. But the just and temperate person is not the one who [merely] does these actions, but the one who also does them in the way in which just or temperate people do them.

It is right, then, to say that a person comes to be just from doing just actions and temperate from doing temperate actions; for no one has the least prospect of becoming good from failing to do them.

The many, however, do not do these actions. They take refuge in arguments, thinking that they are doing philosophy, and that this is the way to become excellent people. They are like a sick person who listens attentively to the doctor, but acts on none of his instructions. Such a course of treatment will not improve the state of the sick person's body; nor will the many improve the state of their souls by this attitude to philosophy.

5

Next we must examine what virtue is. Since there are three conditions arising in the soul—feelings, capacities, and states—virtue must be one of these.

By feelings I mean appetite, anger, fear, confidence, envy, joy, love, hate, longing, jealousy, pity, and in general whatever implies pleasure or pain. By capacities I mean what we have when we are said to be capable of these feelings—capable of being angry, for instance, or of being afraid or of feeling pity. By states I mean what we have when we are well or badly off in relation to feelings. If, for instance, our feeling is too intense or slack, we are badly off in relation to anger, but if it is intermediate, we are well off; the same is true in the other cases.

First, then, neither virtues nor vices are feelings. For we are called excellent or base insofar as we have virtues or vices, not insofar as we have feelings. Further, we are neither praised nor blamed insofar as we have feelings; for we do not praise the angry or the frightened person, and do not blame the person who is simply angry, but only the person who is angry *1106a* in a particular way. We are praised or blamed, however, insofar as we have virtues or vices. Further, we are angry and afraid without decision; but the virtues are decisions of some kind, or [rather] require decision. Besides, insofar as we have feelings, we are said

to be moved; but insofar as we have virtues or vices, we are said to be in some condition rather than moved.

For these reasons the virtues are not capacities either; for we are neither called good nor called bad, nor are we praised or blamed, insofar as we are simply capable of feelings. Further, while we have capacities by nature, we do not become good or bad by nature; we have discussed this before.

If, then, the virtues are neither feelings nor capacities, the remaining possibility is that they are states. And so we have said what the genus of virtue is.

6

But we must say not only, as we already have, that it is a state, but also what sort of state it is.

It should be said, then, that every virtue causes its possessors to be in a good state and to perform their functions well. The virtue of eyes, for instance, makes the eyes and their functioning excellent, because it makes us see well; and similarly, the virtue of a horse makes the horse excellent, and thereby good at galloping, at carrying its rider, and at standing steady in the face of the enemy. If this is true in every case, the virtue of a human being will likewise be the state that makes a human being good and makes him perform his function well.

We have already said how this will be true, and it will also be evident from our next remarks, if we consider the sort of nature that virtue has.

In everything continuous and divisible we can take more, less, and equal, and each of them either in the object itself or relative to us; and the equal is some intermediate between excess and deficiency. By the intermediate in the object I mean what is equidistant from each extremity; this is one and the same for all. But relative to us the intermediate is what is neither superfluous nor deficient; this is not one, and is not the same for all.

If, for instance, ten are many and two are few, we take six as intermediate in the object, since it exceeds [two] and is exceeded [by ten] by an equal amount, [four]. This is what is intermediate by numerical proportion. But that is not how we must take the intermediate that is relative to us. For if ten pounds [of food], for instance, are a lot for someone to eat, and two pounds a little, it does not follow that the trainer will prescribe six, since this might also be either a little or a lot for the person who is to take it—for Milo [the athlete] a little, but for the beginner in gymnastics a lot; and the same is true for running and wrestling. In this way every scientific expert avoids excess and deficiency and seeks and chooses what is intermediate—but intermediate relative to us, not in the object.

This, then, is how each science produces its product well, by focusing on what is intermediate and making the product conform to that. This, indeed, is why people regularly comment on well-made products that nothing could be added or subtracted; they assume that excess or deficiency ruins a good [result], whereas the mean preserves it. Good craftsmen also, we say, focus on what is intermediate when they produce their product. And since virtue, like nature, is better and more exact than any craft, it will also aim at what is intermediate.

By virtue I mean virtue of character; for this is about feelings and actions, and these admit of excess, deficiency, and an intermediate condition. We can be afraid, for instance, or be confident, or have appetites, or get angry, or feel pity, and in general have pleasure or pain, both too much and too little, and in both ways not well. But having these feelings at the right times, about the right things, toward the right people, for the right end, and in the right way, is the intermediate and best condition, and this is proper to virtue. Similarly, actions also admit of excess, deficiency, and an intermediate condition.

Now virtue is about feelings and actions, in which excess and deficiency are in error and incur blame, whereas the intermediate condition is correct and wins praise, which are both proper to virtue. Virtue, then, is a mean, insofar as it aims at what is intermediate.

Moreover, there are many ways to be in error—for badness is proper to the indeterminate, as the Pythagoreans pictured it, and good to the determinate. But there is only one way to be correct. That is why error is easy and correctness is difficult, since it is easy to miss the target and difficult to hit it. And so for this reason also excess and deficiency are proper to vice, the mean to virtue; 'for we are noble in only one way, but bad in all sorts of ways.'

Virtue, then, is a state that decides, consisting in a mean, the mean relative to us, which is defined by

reference to reason, that is to say, to the reason by reference to which the prudent person would define it. It is a mean between two vices, one of excess and one of deficiency.

It is a mean for this reason also: Some vices miss what is right because they are deficient, others because they are excessive, in feelings or in actions, whereas virtue finds and chooses what is intermediate.

That is why virtue, as far as its essence and the account stating what it is are concerned, is a mean, but, as far as the best [condition] and the good [result] are concerned, it is an extremity.

Now not every action or feeling admits of the mean. For the names of some automatically include baseness—for instance, spite, shamelessness, envy [among feelings], and adultery, theft, murder, among actions. For all of these and similar things are called by these names because they themselves, not their excesses or deficiencies, are base. Hence in doing these things we can never be correct, but must invariably be in error. We cannot do them well or not well—by committing adultery, for instance, with the right woman at the right time in the right way. On the contrary, it is true without qualification that to do any of them is to be in error.

[To think these admit of a mean], therefore, is like thinking that unjust or cowardly or intemperate action also admits of a mean, an excess and a deficiency. If it did, there would be a mean of excess, a mean of deficiency, an excess of excess and a deficiency of deficiency. On the contrary, just as there is no excess or deficiency of temperance or of bravery (since the intermediate is a sort of extreme), so also there is no mean of these vicious actions either, but whatever way anyone does them, he is in error. For in general there is no mean of excess or of deficiency, and no excess or deficiency of a mean.

7

However, we must not only state this general account but also apply it to the particular cases. For among accounts concerning actions, though the general ones are common to more cases, the specific ones are truer, since actions are about particular cases, and our account must accord with these. Let us, then, find these from the chart.

First, then, in feelings of fear and confidence the mean is bravery. The excessively fearless person is nameless (indeed many cases are nameless), and the one who is excessively confident is rash. The one who is excessive in fear and deficient in confidence is cowardly. *1107b*

In pleasures and pains—though not in all types, and in pains less than in pleasures—the mean is temperance and the excess intemperance. People deficient in pleasure are not often found, which is why they also lack even a name; let us call them insensible.

In giving and taking money the mean is generosity, the excess wastefulness and the deficiency ungenerosity. Here the vicious people have contrary excesses and defects; for the wasteful person is excessive in spending and deficient in taking, whereas the ungenerous person is excessive in taking and deficient in spending. At the moment we are speaking in outline and summary, and that is enough; later we shall define these things more exactly.

In questions of money there are also other conditions. Another mean is magnificence; for the magnificent person differs from the generous by being concerned with large matters, while the generous person is concerned with small. The excess is ostentation and vulgarity, and the deficiency is stinginess. These differ from the vices related to generosity in ways we shall describe later.

In honor and dishonor the mean is magnanimity, the excess something called a sort of vanity, and the deficiency pusillanimity. And just as we said that generosity differs from magnificence in its concern with small matters, similarly there is a virtue concerned with small honors, differing in the same way from magnanimity, which is concerned with great honors. For honor can be desired either in the right way or more or less than is right. If someone desires it to excess, he is called an honor-lover, and if his desire is deficient he is called indifferent to honor, but if he is intermediate he has no name. The corresponding conditions have no name either, except the condition of the honor-lover, which is called honor-loving.

This is why people at the extremes lay claim to the intermediate area. Moreover, we also sometimes call the intermediate person an honor-lover, and sometimes call him indifferent to honor; and some-

1108a times we praise the honor-lover, sometimes the person indifferent to honor. We will mention later the reason we do this; for the moment, let us speak of the other cases in the way we have laid down.

5 Anger also admits of an excess, deficiency, and mean. These are all practically nameless; but since we call the intermediate person mild, let us call the mean mildness. Among the extreme people, let the excessive person be irascible, and his vice irascibility, and let the deficient person be a sort of inirascible person, and his deficiency inirascibility.

10 There are also three other means, somewhat similar to one another, but different. For they are all concerned with common dealings in conversations and actions, but differ insofar as one is concerned with truth telling in these areas, the other two with sources of pleasure, some of which are found in amusement, and the others in daily life in general. Hence we 15 should also discuss these states, so that we can better observe that in every case the mean is praiseworthy, whereas the extremes are neither praiseworthy nor correct, but blameworthy. Most of these cases are also nameless, and we must try, as in the other cases also, to supply names ourselves, to make things clear and easy to follow.

20 In truth-telling, then, let us call the intermediate person truthful, and the mean truthfulness; pretense that overstates will be boastfulness, and the person who has it boastful; pretense that understates will be self-deprecation, and the person who has it self-deprecating.

In sources of pleasure in amusements let us call the intermediate person witty, and the condition wit; 25 the excess buffoonery and the person who has it a buffoon; and the deficient person a sort of boor and the state boorishness.

In the other sources of pleasure, those in daily life, let us call the person who is pleasant in the right way friendly, and the mean state friendliness. If someone goes to excess with no [ulterior] aim, he will be ingrati- 30 ating; if he does it for his own advantage, a flatterer. The deficient person, unpleasant in everything, will be a sort of quarrelsome and ill-tempered person.

There are also means in feelings and about feelings. Shame, for instance, is not a virtue, but the person prone to shame as well as [the virtuous people we have described] receives praise. For here also one person is called intermediate, and another—the person excessively prone to shame, who is ashamed about everything—is called excessive; the person who is 35 deficient in shame or never feels shame at all is said to have no sense of disgrace; and the intermediate 1108b one is called prone to shame.

Proper indignation is the mean between envy and spite; these conditions are concerned with pleasure and pain at what happens to our neighbors. For the properly indignant person feels pain when someone does well undeservedly; the envious person exceeds 5 him by feeling pain when anyone does well, while the spiteful person is so deficient in feeling pain that he actually enjoys [other people's misfortunes].

There will also be an opportunity elsewhere to speak of these. We must consider justice after these. Since it is spoken of in more than one way, we shall distinguish its two types and say how each of them is a mean. Similarly, we must also consider the virtues 10 that belong to reason.

8

Among these three conditions, then, two are vices—one of excess, one of deficiency—and one, the mean, is virtue. In a way, each of them is opposed to each of the others, since each extreme is contrary both to the intermediate condition and to the other extreme, while the intermediate is contrary to the extremes. 15

For, just as the equal is greater in comparison to the smaller, and smaller in comparison to the greater, so also the intermediate states are excessive in comparison to the deficiencies and deficient in comparison to the excesses—both in feelings and in actions. For 20 the brave person, for instance, appears rash in comparison to the coward, and cowardly in comparison to the rash person; the temperate person appears intemperate in comparison to the insensible person, and insensible in comparison with the intemperate person; and the generous person appears wasteful in comparison to the ungenerous, and ungenerous in comparison to the wasteful person. That is why each of the extreme people tries to push the intermediate person to the other extreme, so that the coward, for 25 instance, calls the brave person rash, and the rash person calls him a coward, and similarly in the other cases.

Since these conditions of soul are opposed to each other in these ways, the extremes are more contrary to each other than to the intermediate. For they are further from each other than from the intermediate, just as the large is further from the small, and the small from the large, than either is from the equal.

Further, sometimes one extreme—rashness or wastefulness, for instance—appears somewhat like the intermediate state, bravery or generosity. But the extremes are most unlike one another; and the things that are furthest apart from each other are defined as contraries. And so the things that are further apart are more contrary.

In some cases the deficiency, in others the excess, is more opposed to the intermediate condition. For instance, cowardice, the deficiency, not rashness, the excess, is more opposed to bravery, whereas intemperance, the excess, not insensibility, the deficiency, is more opposed to temperance.

This happens for two reasons: One reason is derived from the object itself. Since sometimes one extreme is closer and more similar to the intermediate condition, we oppose the contrary extreme, more than this closer one, to the intermediate condition. Since rashness, for instance, seems to be closer and more similar to bravery, and cowardice less similar, we oppose cowardice, more than rashness, to bravery; for what is further from the intermediate condition seems to be more contrary to it. This, then, is one reason, derived from the object itself.

The other reason is derived from ourselves. For when we ourselves have some natural tendency to one extreme more than to the other, this extreme appears more opposed to the intermediate condition. Since, for instance, we have more of a natural tendency to pleasure, we drift more easily toward intemperance than toward orderliness. Hence we say that an extreme is more contrary if we naturally develop more in that direction; and this is why intemperance is more contrary to temperance, since it is the excess [of pleasure].

9

We have said enough, then, to show that virtue of character is a mean and what sort of mean it is; that it is a mean between two vices, one of excess and one of deficiency; and that it is a mean because it aims at the intermediate condition in feelings and actions.

That is why it is also hard work to be excellent. For in each case it is hard work to find the intermediate; for instance, not everyone, but only one who knows, finds the midpoint in a circle. So also getting angry, or giving and spending money, is easy and everyone can do it; but doing it to the right person, in the right amount, at the right time, for the right end, and in the right way is no longer easy, nor can everyone do it. Hence doing these things well is rare, praiseworthy, and fine.

That is why anyone who aims at the intermediate condition must first of all steer clear of the more contrary extreme, following the advice that Calypso also gives: 'Hold the ship outside the spray and surge.' For one extreme is more in error, the other less. Since, therefore, it is hard to hit the intermediate extremely accurately, the second-best tack, as they say, is to take the lesser of the evils. We shall succeed best in this by the method we describe.

We must also examine what we ourselves drift into easily. For different people have different natural tendencies toward different goals, and we shall come to know our own tendencies from the pleasure or pain that arises in us. We must drag ourselves off in the contrary direction; for if we pull far away from error, as they do in straightening bent wood, we shall reach the intermediate condition.

And in everything we must beware above all of pleasure and its sources; for we are already biased in its favor when we come to judge it. Hence we must react to it as the elders reacted to Helen, and on each occasion repeat what they said; for if we do this, and send it off, we shall be less in error.

In summary, then, if we do these things we shall best be able to reach the intermediate condition. But presumably this is difficult, especially in particular cases, since it is not easy to define the way we should be angry, with whom, about what, for how long. For sometimes, indeed, we ourselves praise deficient people and call them mild, and sometimes praise quarrelsome people and call them manly.

Still, we are not blamed if we deviate a little in excess or deficiency from doing well, but only if we deviate a long way, since then we are easily noticed. But how great and how serious a deviation receives

blame is not easy to define in an account; for nothing else perceptible is easily defined either. Such things are among particulars, and the judgment depends on perception.

This is enough, then, to make it clear that in every case the intermediate state is praised, but we must sometimes incline toward the excess, sometimes toward the deficiency; for that is the easiest way to hit the intermediate and good condition.

BOOK III

1

Virtue, then, is about feelings and actions. These receive praise or blame if they are voluntary, but pardon, sometimes even pity, if they are involuntary. Hence, presumably, in examining virtue we must define the voluntary and the involuntary. This is also useful to legislators, both for honors and for corrective treatments.

1110a Now it seems that things coming about by force or because of ignorance are involuntary.

What is forced has an external principle, the sort of principle in which the agent, or [rather] the victim, contributes nothing—if, for instance, a wind or people who have him in their control were to carry him off.

But what about actions done because of fear of greater evils, or because of something fine? Suppose, for instance, a tyrant tells you to do something shameful, when he has control over your parents and children, and if you do it, they will live, but if not, they will die. These cases raise dispute about whether they are voluntary or involuntary.

However, the same sort [of unwelcome choice] is found in throwing cargo overboard in storms. For no one willingly throws cargo overboard, without qualification, but anyone with any sense throws it overboard to save himself and the others.

These sorts of actions, then, are mixed, but they are more like voluntary actions. For at the time they are done they are choiceworthy, and the goal of an action accords with the specific occasion; hence we should also call the action voluntary or involuntary on the occasion when he does it. Now in fact he does it willingly. For in such actions he has within him the principle of moving the limbs that are the instruments [of the action]; but if the principle of the actions is in him, it is also up to him to do them or not to do them. Hence actions of this sort are voluntary, though presumably the actions without [the appropriate] qualification are involuntary, since no one would choose any such action in its own right.

For such [mixed] actions people are sometimes actually praised, whenever they endure something shameful or painful as the price of great and fine results. If they do the reverse, they are blamed; for it is a base person who endures what is most shameful for nothing fine or for only some moderately fine result. In some cases there is no praise, but there is pardon, whenever someone does a wrong action because of conditions of a sort that overstrain human nature, and that no one would endure.

But presumably there are some things we cannot be compelled to do. Rather than do them we should suffer the most terrible consequences and accept death; for the things that [allegedly] compelled Euripides' Alcmaeon to kill his mother appear ridiculous.

It is sometimes difficult, however, to judge what [goods] should be chosen at the price of what [evils], and what [evils] should be endured as the price of what [goods]. It is even more difficult to abide by our judgment, since the results we expect [when we endure] are usually painful, and the actions we are compelled [to endure, when we choose] are usually shameful. That is why those who have been compelled or not compelled receive praise or blame.

1110b

What sorts of things, then, should we say are forced? Perhaps we should say that something is forced without qualification whenever its cause is external and the agent contributes nothing. Other things are involuntary in their own right, but choiceworthy on this occasion and as the price of these [goods], and their principle is in the agent. These are involuntary in their own right, but, on this occasion and as the price of these [goods], voluntary. But they are more like voluntary actions, since the actions are particulars, and [in the case of mixed actions] these particulars are voluntary. But what sort of thing should be chosen as the price of what [good] is not easy to answer, since there are many differences in particular [conditions].

But what if someone says that pleasant things and fine things force us, on the ground that they are

outside us and compel us? For him, then, everything must be forced, since everyone in every action aims at something fine or pleasant. Moreover, if we are forced and unwilling to act, we find it painful; but if something pleasant or fine is its cause, we do it with pleasure. It is ridiculous, then, for him to ascribe responsibility to external causes, not to himself as being easily snared by such things; and ridiculous to hold himself responsible for his fine actions, but pleasant things responsible for his shameful actions.

What is forced, then, would seem to be what has its principle outside the person forced, who contributes nothing.

Everything caused by ignorance is nonvoluntary, but what is involuntary also involves pain and regret. For if someone's action was caused by ignorance, but he now has no objection to the action, he has done it neither willingly, since he did not know what it was, nor unwillingly, since he now feels no pain. Hence, among those who act because of ignorance, the agent who now regrets his action seems to be unwilling, but the agent with no regrets may be called nonwilling, since he is another case—for, since he is different, it is better if he has his own special name.

Further, action caused by ignorance would seem to be different from action done in ignorance. For if the agent is drunk or angry, his action seems to be caused by drunkenness or anger, not by ignorance, though it is done in ignorance, not in knowledge. Certainly every vicious person is ignorant of the actions he must do or avoid, and this sort of error makes people unjust, and in general bad.

[This] ignorance of what is beneficial is not taken to make action involuntary. For the cause of involuntary action is not [this] ignorance in the decision, which causes vice; it is not [in other words] ignorance of the universal, since that is a cause for blame. Rather, the cause is ignorance of the particulars which the action consists in and is concerned with, since these allow both pity and pardon. For an agent acts involuntarily if he is ignorant of one of these particulars.

Presumably, then, it is not a bad idea to define these particulars, and say what they are, and how many. They are: who is doing it; what he is doing; about what or to what he is doing it; sometimes also what he is doing it with—with what instrument, for example; for what result, for example, safety; in what way, for example, gently or hard.

Now certainly someone could not be ignorant of *all* of these unless he were mad. Nor, clearly, could he be ignorant of who is doing it, since he could hardly be ignorant of himself. But he might be ignorant of what he is doing, as when someone says that [the secret] slipped out while he was speaking, or, as Aeschylus said about the mysteries, that he did not know it was forbidden to reveal it; or, like the person with the catapult, that he let it go when he [only] wanted to demonstrate it. Again, he might think that his son is an enemy, as Merope did; or that the barbed spear has a button on it, or that the stone is pumice stone. By giving someone a drink to save his life we might kill him; and wanting to touch someone, as they do in sparring, we might wound him.

Since an agent may be ignorant of any of these particular constituents of his action, someone who was ignorant of one of these seems to have acted unwillingly, especially if he was ignorant of the most important; these seem to be what he is doing, and the result for which he does it.

Hence the agent who acts involuntarily is the one who acts in accord with this specific sort of ignorance, who must also feel pain and regret for his action.

Since involuntary action is either forced or caused by ignorance, voluntary action seems to be what has its principle in the agent himself, knowing the particulars that constitute the action.

For, presumably, it is not right to say that action caused by spirit or appetite is involuntary. For, first of all, on this view none of the other animals will ever act voluntarily; nor will children. Next, among all the actions caused by appetite or spirit do we do none of them voluntarily? Or do we do the fine actions voluntarily and the shameful involuntarily? Surely [the second answer] is ridiculous, given that one and the same thing [i.e., appetite or spirit] causes [both fine and shameful actions]. And presumably it is also absurd to say [as the first answer implies] that things we ought to desire are involuntary. Indeed, we ought both to be angry at some things and to have appetite for some things—for health and learning, for instance. Again, what is involuntary seems to be painful, whereas what accords with appetite seems to be pleasant.

Moreover, how are errors in accord with spirit any less voluntary than those in accord with rational calculation? For both sorts of errors are to be avoided. Besides, nonrational feelings seem to be no less human than rational calculation; and so actions resulting from spirit or appetite are also proper to a human being. It is absurd, then, to regard them as involuntary.

2

Now that we have defined the voluntary and the involuntary, the next task is to discuss decision; for decision seems to be most proper to virtue, and to distinguish characters from one another better than actions do.

Decision, then, is apparently voluntary, but not the same as the voluntary, which extends more widely. For children and the other animals share in voluntary action, but not in decision; and the actions we do on the spur of the moment are said to be voluntary, but not to accord with decision.

Those who say decision is appetite or spirit or wish or some sort of belief would seem to be wrong. For decision is not shared with nonrational animals, but appetite and spirit are shared with them. Again, the incontinent person acts on appetite, not on decision, but the continent person does the reverse, by acting on decision, not on appetite. Again, appetite is contrary to decision, but not to appetite. Besides, the object of appetite is what is pleasant or painful, whereas neither of these is the object of decision. And still less is spirit decision; for actions caused by spirit seem least of all to accord with decision.

But further, it is not wish either, though it is apparently close to it. For we do not decide on impossible things—anyone claiming to decide on them would seem a fool; but we do wish for impossible things—for immortality, for instance—as well as possible things. Further, we wish [not only for results we can achieve], but also for results that are [possible, but] not achievable through our own agency—victory for some actor or athlete, for instance. But what we decide on is never anything of that sort, but what we think would come about through our own agency. Again, we wish for the end more [than for the things that promote it], but we decide on things that promote the end. We wish, for instance, to be healthy, but we decide to do things that will make us healthy; and we wish to be happy, and say so, but we could not appropriately say we decide to be happy, since in general the things we decide on would seem to be things that are up to us.

Nor is it belief. For belief seems to be about everything, no less about things that are eternal and things that are impossible [for us] than about things that are up to us. Moreover, beliefs are divided into true and false, not into good and bad, but decisions are divided into good and bad more than into true and false.

Now presumably no one even claims that decision is the same as belief in general. But it is not the same as any kind of belief either. For our decisions to do good or bad actions, not our beliefs, form the characters we have. Again, we decide to take or avoid something good or bad. We believe what it is, whom it benefits or how; but we do not exactly believe to take or avoid. Further, decision is praised more for deciding on what is right, whereas belief is praised for believing rightly. Moreover, we decide on something [even] when we know most completely that it is good; but [what] we believe [is] what we do not quite know. Again, those who make the best decisions do not seem to be the same as those with the best beliefs; on the contrary, some seem to have better beliefs, but to make the wrong decisions because of vice. We may grant that decision follows or implies belief. But that is irrelevant, since it is not the question we are asking; our question is whether decision is the same as some sort of belief.

Then what, or what sort of thing, is decision, since it is none of the things mentioned? Well, apparently it is voluntary, but not everything voluntary is decided. Then perhaps what is decided is what has been previously deliberated. For decision involves reason and thought, and even the name itself would seem to indicate that [what is decided, *prohaireton*] is chosen [*haireton*] before [*pro*] other things.

3

Do we deliberate about everything, and is everything open to deliberation? Or is there no deliberation about some things? By 'open to deliberation,' presumably, we should mean that someone with some sense, not some fool or madman, might deliberate about it.

Now no one deliberates about eternal things—about the universe, for instance, or about the incommensurability of the sides and the diagonal; nor about things that are in movement but always come about the same way, either from necessity or by nature or by some other cause—the solstices, for instance, or the rising of the stars; nor about what happens in different ways at different times—droughts and rains, for instance; nor about what results from fortune—the finding of a treasure, for instance. For none of these results could be achieved through our agency.

We deliberate about what is up to us, that is to say, about the actions we can do; and this is what is left [besides the previous cases]. For causes seem to include nature, necessity, and fortune, but besides them mind and everything [operating] through human agency. But we do not deliberate about all human affairs; no Spartan, for instance, deliberates about how the Scythians might have the best political system. Rather, each group of human beings deliberates about the actions that they themselves can do.

There is no deliberation about the sciences that are exact and self-sufficient, as, for instance, about letters, since we are in no doubt about how to write them [in spelling a word]. Rather, we deliberate about what results through our agency, but in different ways on different occasions—about, for instance, medicine and money making. We deliberate about navigation more than about gymnastics, to the extent that it is less exactly worked out, and similarly with other [crafts]. And we deliberate about beliefs more than about sciences, since we are more in doubt about them.

Deliberation concerns what is usually [one way rather than another], where the outcome is unclear and the right way to act is undefined. And we enlist partners in deliberation on large issues when we distrust our own ability to discern [the right answer].

We deliberate not about ends, but about what promotes ends. A doctor, for instance, does not deliberate about whether he will cure, or an orator about whether he will persuade, or a politician about whether he will produce good order, or any other [expert] about the end [that his science aims at]. Rather, we lay down the end, and then examine the ways and means to achieve it.

If it appears that any of several [possible] means will reach it, we examine which of them will reach it most easily and most finely; and if only one [possible] means reaches it, we examine how that means will reach it, and how the means itself is reached, until we come to the first cause, the last thing to be discovered. For a deliberator would seem to inquire and analyze in the way described, as though analyzing a diagram. [The comparison is apt, since], apparently, all deliberation is inquiry, though not all inquiry—in mathematics, for instance—is deliberation. And the last thing [found] in the analysis would seem to be the first that comes into being.

If we encounter an impossible step—for instance, we need money but cannot raise it—we desist; but if the action appears possible, we undertake it. What is possible is what we could achieve through our agency [including what our friends could achieve for us]; for what our friends achieve is, in a way, achieved through our agency, since the principle is in us. [In crafts] we sometimes look for instruments, sometimes [for the way] to use them; so also in other cases we sometimes look for the means to the end, sometimes for the proper use of the means, or for the means to that proper use.

As we have said, then, a human being would seem to be a principle of action. Deliberation is about the actions he can do, and actions are for the sake of other things; hence we deliberate about things that promote an end, not about the end. Nor do we deliberate about particulars, about whether this is a loaf, for instance, or is cooked the right amount; for these are questions for perception, and if we keep on deliberating at each stage we shall go on without end.

What we deliberate about is the same as what we decide to do, except that by the time we decide to do it, it is definite; for what we decide to do is what we have judged [to be right] as a result of deliberation. For each of us stops inquiring how to act as soon as he traces the principle to himself, and within himself to the guiding part; for this is the part that decides. This is also clear from the ancient political systems described by Homer; there the kings would first decide and then announce their decision to the people.

We have found, then, that what we decide to do is whatever action, among those up to us, we deliberate about and [consequently] desire to do. Hence also decision will be deliberative desire to do an action

that is up to us; for when we have judged [that it is right] as a result of deliberation, we desire to do it in accord with our wish.

We have said in outline, then, what sorts of things decision is about, and [specifically] that we decide on things that promote the end.

4

Wish, we have said, is for the end. But some think that wish is for the good, others that it is for the apparent good.

For those who say the good is wished, it follows that what someone wishes if he chooses incorrectly is not wished at all. For if it is wished, then [on this view] it is good; but what he wishes is in fact bad, if it turns out that way. [Hence what he wishes is not wished, which is self-contradictory.]

But for those who say the apparent good is wished, it follows that nothing is wished by nature. Rather, for each person what is wished is what seems [good to him]; but different things, and indeed contrary things, if it turns out that way, appear good to different people. [Hence contrary things will be wished and nothing will be wished by nature.]

If, then, these views do not satisfy us, should we say that, without qualification and in reality, what is wished is the good, but for each person what is wished is the apparent good? For the excellent person, then, what is wished will be what is [wished] in reality, while for the base person what is wished is whatever it turns out to be [that appears good to him]. Similarly in the case of bodies, really healthy things are healthy to people in good condition, while other things are healthy to sickly people; and the same is true of what is bitter, sweet, hot, heavy, and so on. For the excellent person judges each sort of thing correctly, and in each case what is true appears to him.

For each state [of character] has its own distinctive [view of] what is fine and pleasant. Presumably, then, the excellent person is far superior because he sees what is true in each case, being himself a sort of standard and measure. In the many, however, pleasure would seem to cause deception, since it appears good when it is not. Certainly, they choose what is pleasant because they assume it is good, and avoid pain because they assume it is evil.

5

We have found, then, that we wish for the end, and deliberate and decide about things that promote it; hence the actions concerned with things that promote the end are in accord with decision and are voluntary. The activities of the virtues are concerned with these things [that promote the end].

Hence virtue is also up to us, and so also, in the same way, is vice. For when acting is up to us, so is not acting, and when no is up to us, so is yes. And so if acting, when it is fine, is up to us, not acting, when it is shameful, is also up to us; and if not acting, when it is fine, is up to us, then acting, when it is shameful, is also up to us. But if doing, and likewise not doing, fine or shameful actions is up to us, and if, as we saw, [doing or not doing them] is [what it is] to be a good or bad person, being decent or base is up to us.

The claim that 'no one is willingly bad or unwillingly blessed' would seem to be partly true but partly false. For while certainly no one is unwillingly blessed, vice is voluntary.

If this is not so, we must dispute what has been said, and we must deny that a human being is a principle, begetting actions as he begets children. But if what we have said appears true, and we cannot refer back to other principles apart from those that are up to us, those things that have their principle in us are themselves up to us and voluntary.

There would seem to be evidence in favor of our view not only in what each of us does as a private citizen, but also in what legislators themselves do. For they impose corrective treatments and penalties on anyone who does vicious actions, unless his action is forced or is caused by ignorance that he is not responsible for; and they honor anyone who does fine actions. In all this they assume that they will encourage the second sort of person, and restrain the first. But no one encourages us to do anything that is not up to us and voluntary; people assume it is pointless to persuade us not to get hot or distressed or hungry or anything else of that sort, since persuasion will not stop it happening to us.

Indeed, legislators also impose corrective treatments for the ignorance itself, if the agent seems to be responsible for the ignorance. A drunk, for

instance, pays a double penalty; for the principle is in him, since he controls whether he gets drunk, and his getting drunk causes his ignorance. They also impose corrective treatment on someone who [does a vicious action] in ignorance of some provision of law that he is required to know and that is not hard
1114a [to know]. And they impose it in other cases likewise for any other ignorance that seems to be caused by the agent's inattention; they assume it is up to him not to be ignorant, since he controls whether he pays attention.

But presumably he is the sort of person who is inattentive. Still, he is himself responsible for becoming this sort of person, because he has lived carelessly.
5 Similarly, an individual is responsible for being unjust, because he has cheated, and for being intemperate, because he has passed his time in drinking and the like; for each type of activity produces the corresponding sort of person. This is clear from those who train for any contest or action, since they continually
10 practice the appropriate activities. [Only] a totally insensible person would not know that a given type of activity is the source of the corresponding state;
12 [Hence] if someone does what he knows will make
13 him unjust, he is willingly unjust.
11, 12 Further, it is unreasonable for someone doing injustice not to wish to be unjust, or for someone doing
13 intemperate action not to wish to be intemperate. This does not mean, however, that if he is unjust and
15 wishes to stop, he will thereby stop and be just. For neither does a sick person recover his health [simply by wishing]; nonetheless, he is sick willingly, by living incontinently and disobeying the doctors, if that was how it happened. At that time, then, he was free not to be sick, though no longer free once he has let himself go, just as it was up to someone to throw a stone, since the principle was up to him, though he
20 can no longer take it back once he has thrown it. Similarly, then, the person who is [now] unjust or intemperate was originally free not to acquire this character, so that he has it willingly, though once he has acquired the character, he is no longer free not to have it [now].

It is not only vices of the soul that are voluntary; vices of the body are also voluntary for some people, and we actually censure them. For we never censure someone if nature causes his ugliness; but if his lack of training or attention causes it, we do censure him. 25
The same is true for weakness or maiming; for everyone would pity someone, not reproach him, if he were blind by nature or because of a disease or a wound, but would censure him if his heavy drinking or some other form of intemperance made him blind. Hence bodily vices that are up to us are censured, while those not up to us are not censured. If so, then 30
in the other cases also the vices that are censured will be up to us.

But someone may say that everyone aims at the 1114b
apparent good, and does not control how it appears, but, on the contrary, his character controls how the end appears to him. [We reply that] if each person is in some way responsible for his own state [of character], he is also himself in some way responsible for how [the end] appears.

Suppose, on the other hand, that no one is responsible for acting badly, but one does so because one is ignorant of the end, and thinks this is the way to gain 5
what is best for oneself. In that case, one's aiming at the end is not one's own choice; one needs a sort of natural, inborn sense of sight, to judge finely and to choose what is really good. Whoever by nature has this sense in a fine condition has a good nature; for [, according to this view,] this sense is the greatest and finest thing, given that one cannot acquire it or learn it from another, but its natural character 10
determines [his] later condition, and when it is naturally good and fine, that is true and complete good nature. If all this is true, then, surely virtue will be no more voluntary than vice.

For how the end appears is laid down, by nature 15
or in whatever way, for the good and the bad person alike; they trace all the other things back to the end in doing whatever actions they do. Let us suppose, then, that nature does not make the end appear however it appears to each person, but something also depends on him. Alternatively, let us suppose that [how] the end [appears] is natural, but virtue is voluntary because the virtuous person does the other things voluntarily. In either case, vice will be no less voluntary than virtue; for the bad person, no less than the 20
good, is responsible for his own actions, even if not for [how] the end [appears].

Now the virtues, as we say, are voluntary. For in fact we are ourselves in a way jointly responsible for our

states of character, and the sort of character we have determines the sort of end we lay down. Hence the vices will also be voluntary, since the same is true of them.

We have now discussed the virtues in common. We have described their genus in outline; they are means, and they are states. Certain actions produce them, and they cause us to do these same actions in accord with the virtues themselves, in the way that correct reason prescribes. They are up to us and voluntary.

Actions and states, however, are not voluntary in the same way. For we are in control of actions from the beginning to the end, when we know the particulars. With states, however, we are in control of the beginning, but do not know, any more than with sicknesses, what the cumulative effect of particular actions will be. Nonetheless, since it was up to us to exercise a capacity either this way or another way, states are voluntary.

Let us now take up the virtues again, and discuss them one by one. Let us say what they are, what sorts of thing they are concerned with, and how they are concerned with them. It will also be clear at the same time how many of them there are.

6

First let us discuss bravery. We have already made it apparent that there is a mean about feelings of fear and confidence. What we fear, clearly, is what is frightening, and such things are, speaking without qualification, bad things; hence people define fear as expectation of something bad.

Certainly we fear all bad things—for instance, bad reputation, poverty, sickness, friendlessness, death—but they do not all seem to concern the brave person. For fear of some bad things, such as bad reputation, is actually right and fine, and lack of fear is shameful; for if someone fears bad reputation, he is decent and properly prone to shame, and if he has no fear of it, he has no feeling of disgrace. Some, however, call this fearless person brave, by a transference of the name; for he has some similarity to the brave person, since the brave person is also a type of fearless person.

Presumably it is wrong to fear poverty or sickness or, in general, [bad things] that are not the results of vice or caused by ourselves; still, someone who is fearless about these is not thereby brave. He is also called brave by similarity; for some people who are cowardly in the dangers of war are nonetheless generous, and face with confidence the [danger of] losing money.

Again, if someone is afraid of committing wanton aggression on children or women, or of being envious or anything of that sort, that does not make him cowardly. And if someone is confident when he is going to be whipped for his crimes, that does not make him brave.

Then what sorts of frightening conditions concern the brave person? Surely the most frightening; for no one stands firmer against terrifying conditions. Now death is most frightening of all, since it is a boundary, and when someone is dead nothing beyond it seems either good or bad for him any more. Still, not even death in all conditions—on the sea, for instance, or in sickness—seems to be the brave person's concern.

In what conditions, then, is death his concern? Surely in the finest conditions. Now such deaths are those in war, since they occur in the greatest and finest danger. This judgment is endorsed by the honors given in cities and by monarchs. Hence someone is called fully brave if he is intrepid in facing a fine death and the immediate dangers that bring death. And this is above all true of the dangers of war.

Certainly the brave person is also intrepid on the sea and in sickness, but not in the same way as seafarers are. For he has given up hope of safety, and objects to this sort of death [with nothing fine in it], but seafarers' experience makes them hopeful. Moreover, we act like brave men on occasions when we can use our strength, or when it is fine to be killed; and neither of these is true when we perish on the sea.

7

Now what is frightening is not the same for everyone. We say, however, that some things are too frightening for a human being to resist; these, then, are frightening for everyone, at least for everyone with any sense. What is frightening, but not irresistible for a human being, varies in its seriousness and degree; and the same is true of what inspires confidence.

The brave person is unperturbed, as far as a human being can be. Hence, though he will fear even the

sorts of things that are not irresistible, he will stand firm against them, in the right way, as reason prescribes, for the sake of the fine, since this is the end aimed at by virtue.

It is possible to be more or less afraid of these frightening things, and also possible to be afraid of what is not frightening as though it were frightening. The cause of error may be fear of the wrong thing, or in the wrong way, or at the wrong time, or something of that sort; and the same is true for things that inspire confidence.

Hence whoever stands firm against the right things and fears the right things, for the right end, in the right way, at the right time, and is correspondingly confident, is the brave person; for the brave person's actions and feelings accord with what something is worth, and follow what reason prescribes.

Every activity aims at actions in accord with the state of character. Now to the brave person bravery is fine; hence the end it aims at is also fine, since each thing is defined by its end. The brave person, then, aims at the fine when he stands firm and acts in accord with bravery.

Among those who go to excess the excessively fearless person has no name—we said earlier that many cases have no names. He would be some sort of madman, or incapable of feeling distress, if he feared nothing, neither earthquake nor waves, as they say about the Celts.

The person who is excessively confident about frightening things is rash. The rash person also seems to be a boaster, and a pretender to bravery. At any rate, the attitude to frightening things that the brave person really has is the attitude that the rash person wants to appear to have; hence he imitates the brave person where he can. That is why most of them are rash cowards; for, rash though they are on these [occasions for imitation], they do not stand firm against anything frightening. Moreover, rash people are impetuous, wishing for dangers before they arrive, but they shrink from them when they come. Brave people, on the contrary, are eager when in action, but keep quiet until then.

The person who is excessively afraid is the coward, since he fears the wrong things, and in the wrong way, and so on. Certainly, he is also deficient in confidence, but his excessive pain distinguishes him more clearly. Hence, since he is afraid of everything, he is a despairing sort. The brave person, on the contrary, is hopeful, since [he is confident and] confidence is proper to a hopeful person.

Hence the coward, the rash person, and the brave person are all concerned with the same things, but have different states related to them; the others are excessive or defective, but the brave person has the intermediate and right state.

As we have said, then, bravery is a mean about what inspires confidence and about what is frightening in the conditions we have described; it chooses and stands firm because that is fine or because anything else is shameful. Dying to avoid poverty or erotic passion or something painful is proper to a coward, not to a brave person. For shirking burdens is softness, and such a person stands firm [in the face of death] to avoid an evil, not because standing firm is fine.

8

Bravery, then, is something of this sort. But five other sorts of things are also called bravery.

The bravery of citizens comes first, since it looks most like bravery. For citizens seem to stand firm against dangers with the aim of avoiding reproaches and legal penalties and of winning honors; that is why the bravest seem to be those who hold cowards in dishonor and do honor to brave people. That is how Homer also describes them when he speaks of Diomede and Hector: 'Polydamas will be the first to heap disgrace on me,' and 'For some time Hector speaking among the Trojans will say, "The son of Tydeus fled from me." ' This is most like the [genuine] bravery described above, because it results from a virtue; for it is caused by shame and by desire for something fine, namely honor, and by aversion from reproach, which is shameful.

In this class we might also place those who are compelled by their superiors. However, they are worse to the extent that they act because of fear, not because of shame, and to avoid pain, not disgrace. For their commanders compel them, as Hector does; 'If I notice anyone shrinking back from the battle, nothing will save him from being eaten by the dogs.' Commanders who strike any troops who give ground, or who post

them in front of ditches and suchlike, do the same thing, since they all compel them. The brave person, however, must be moved by the fine, not by compulsion.

Experience about a given situation also seems to be bravery; that is why Socrates actually thought that bravery is scientific knowledge. Different people have this sort [of apparent courage] in different conditions. In wartime professional soldiers have it; for there seem to be many groundless alarms in war, and the professionals are the most familiar with these. Hence they appear brave, since others do not know that the alarms are groundless. Moreover, their experience makes them most capable in attack and defense, since they are skilled in the use of their weapons, and have the best weapons for attack and defense. The result is that in fighting nonprofessionals they are like armed troops against unarmed, or trained athletes against ordinary people; for in these contests also the best fighters are the strongest and physically fittest, not the bravest.

Professional soldiers, however, turn out to be cowards whenever the danger overstrains them and they are inferior in numbers and equipment. For they are the first to run, whereas the citizen troops stand firm and get killed; this was what happened at the temple of Hermes.[6] For the citizens find it shameful to run, and find death more choiceworthy than safety at this cost. But the professionals from the start were facing the danger on the assumption of their superiority; once they learn their mistake, they run, since they are more afraid of being killed than of doing something shameful. That is not the brave person's character.

Spirit is also counted as bravery; for those who act on spirit also seem to be brave—as beasts seem to be when they attack those who have wounded them—because brave people are also full of spirit. For spirit is most eager to run and face dangers; hence Homer's words, 'put strength in his spirit,' 'aroused strength and spirit,' and 'his blood boiled'. All these would seem to signify the arousal and the impulse of spirit.

Now brave people act because of the fine, and their spirit cooperates with them. But beasts act because of pain; for they attack only because they have been wounded or frightened, (since they keep away from us in a forest). They are not brave, then, since distress and spirit drives them in an impulsive rush to meet danger, foreseeing none of the terrifying prospects. For if they were brave, hungry asses would also be brave, since they keep on feeding even if they are beaten; and adulterers also do many daring actions because of lust.

Human beings as well as beasts find it painful to be angered, and pleasant to exact a penalty. But those who fight for these reasons are not brave, though they are good fighters; for they fight because of their feelings, not because of the fine nor as reason prescribes. Still, they have something similar [to bravery]. The [bravery] caused by spirit would seem to be the most natural sort, and to be [genuine] bravery once it has also acquired decision and the goal.

Hopeful people are not brave either; for their many victories over many opponents make them confident in dangers. They are somewhat similar to brave people, since both are confident. But whereas brave people are confident for the reason given earlier, the hopeful are confident because they think they are stronger and nothing could happen to them; drunks do the same sort of thing, since they become hopeful. When things turn out differently from how they expected, they run away. The brave person, on the contrary, stands firm against what is and appears frightening to a human being; he does this because it is fine to stand firm and shameful to fail.

Indeed, that is why someone who is unafraid and unperturbed in emergencies seems braver than [someone who is unafraid only] when he is warned in advance; for his action proceeds more from his state of character, because it proceeds less from preparation. For if we are warned in advance, we might decide what to do [not only because of our state of character, but] also by reason and rational calculation; but in emergencies [we must decide] in accord with our state of character.

Those who act in ignorance also appear brave, and indeed they are close to hopeful people, though inferior to them insofar as they lack the self-esteem of hopeful people. That is why the hopeful stand firm for some time, whereas if ignorant people have been deceived and then realize or suspect that things are different, they run. That was what happened to the

6. [When, in 353, mercenary soldiers were engaged to help the citizens in Coronea, they ran away.—M.L.M.]

Argives when they stumbled on the Spartans and took them for Sicyonians.[7]

We have described, then, the character of brave people and of those who seem to be brave.

9

Bravery is about feelings of confidence and fear—not, however, about both in the same way, but more about frightening things. For someone is brave if he is undisturbed and in the right state about these, more than if he is in this state about things inspiring confidence.

As we said, then, standing firm against what is painful makes us call people brave; that is why bravery is both painful and justly praised, since it is harder to stand firm against something painful than to refrain from something pleasant. Nonetheless, the end that bravery aims at seems to be pleasant, though obscured by its surroundings. This is what happens in athletic contests. For boxers find that the end they aim at, the crown and the honors, is pleasant, but, being made of flesh and blood, they find it distressing and painful to take the punches and to bear all the hard work; and because there are so many of these painful things, the end, being small, appears to have nothing pleasant in it.

And so, if the same is true for bravery, the brave person will find death and wounds painful, and suffer them unwillingly, but he will endure them because that is fine or because failure is shameful. Indeed, the truer it is that he has every virtue and the happier he is, the more pain he will feel at the prospect of death. For this sort of person, more than anyone, finds it worthwhile to be alive, and knows he is being deprived of the greatest goods, and this is painful. But he is no less brave for all that; presumably, indeed, he is all the braver, because he chooses what is fine in war at the cost of all these goods. It is not true, then, in the case of every virtue that its active exercise is pleasant; it is pleasant only insofar as we attain the end.

But presumably it is quite possible for brave people, given the character we have described, not to be the best soldiers. Perhaps the best will be those who are less brave, but possess no other good; for they are ready to face dangers, and they sell their lives for small gains.

So much for bravery. It is easy to grasp what it is, in outline at least, from what we have said.

10

Let us discuss temperance next; for bravery and temperance seem to be the virtues of the nonrational parts. Temperance, then, is a mean concerned with pleasures, as we have already said; for it is concerned less, and in a different way, with pains. Intemperance appears in this same area too. Let us, then, now distinguish the specific pleasures that concern them.

First, let us distinguish pleasures of the soul from those of the body. Love of honor and of learning, for instance, are among the pleasures of the soul; for though a lover of one of these enjoys it, only his thought, not his body, is at all affected. Those concerned with such pleasures are called neither temperate nor intemperate. The same applies to those concerned with any of the other nonbodily pleasures; for lovers of tales, storytellers, those who waste their days on trivialities, are called babblers, but not intemperate. Nor do we call people intemperate if they feel pain over money or friends.

Temperance, then, will be about bodily pleasures, but not even about all of these. For those who find enjoyment in objects of sight, such as colors, shapes, a painting, are called neither temperate nor intemperate, even though it would also seem possible to enjoy these either rightly or excessively and deficiently. The same is true for hearing; no one is ever called intemperate for excessive enjoyment of songs or playacting, or temperate for the right enjoyment of them.

Nor is this said about someone enjoying smells, except coincidentally. For someone is called intemperate not for enjoying the smell of apples or roses or incense, but rather for enjoying the smell of perfumes or cooked delicacies. For these are the smells an intemperate person enjoys because they remind him of the objects of his appetite. And we can see that others also enjoy the smells of food if they are hungry. It is the enjoyment of the things [that he is reminded of by these smells] that is proper to an

7. [In 392, during battle in Corinth, Spartan cavalry took up Sicyonian shields and were confused for them.—M.L.M.]

intemperate person, since these are the objects of his appetite.

Nor do other animals find pleasures from these senses, except coincidentally. What a hound enjoys, for instance, is not the smell of a hare, but eating it; but the hare's smell made the hound perceive it. And what a lion enjoys is not the sound of the ox, but eating it; but since the ox's sound made the lion perceive that it was near, the lion appears to enjoy the sound. Similarly, what pleases him is not the sight of 'a deer or a wild goat,' but the prospect of food.

The pleasures that concern temperance and intemperance are those that are shared with the other animals, and so appear slavish and bestial. These pleasures are touch and taste.

However, they seem to deal even with taste very little or not at all. For taste discriminates flavors—the sort of thing that wine tasters and cooks savoring food do; but people, or intemperate people at any rate, do not much enjoy this. Rather, they enjoy the gratification that comes entirely through touch, in eating and drinking and in what are called the pleasures of sex. That is why a glutton actually prayed for his throat to become longer than a crane's, showing that he took pleasure in the touching. And so the sense that concerns intemperance is the most widely shared, and seems justifiably open to reproach, since we have it insofar as we are animals, not insofar as we are human beings.

To enjoy these things, then, and to like them most of all, is bestial. For indeed the most civilized of the pleasures coming through touch, such as those produced by rubbing and warming in gymnasia, are excluded from intemperance, since the touching that is proper to the intemperate person concerns only some parts of the body, not all of it.

11

Some appetites seem to be shared [by everyone], while others seem to be additions that are distinctive [of different people]. The appetite for nourishment, for instance, is natural, since everyone who lacks nourishment, dry or liquid, has an appetite for it, sometimes for both; and, as Homer says, the young in their prime [all] have an appetite for sex. Not everyone, however, has an appetite for a specific sort of food or drink or sex, or for the same things. That is why an appetite of this type seems to be distinctive of [each of] us. Still, this also includes a natural element, since different sorts of people find different sorts of things more pleasant, and there are some things that are more pleasant for everyone than things chosen at random would be.

In natural appetites few people are in error, and only in one direction, toward excess. Eating indiscriminately or drinking until we are too full is exceeding the quantity that accords with nature; for [the object of] natural appetite is the filling of a lack. That is why these people are called 'gluttons,' showing that they glut their bellies past what is right; that is how especially slavish people turn out.

With the pleasures that are distinctive of different people, many make errors and in many ways; for people are called lovers of something if they enjoy the wrong things, or if they enjoy something in the wrong way. And in all these ways intemperate people go to excess. For some of the things they enjoy are hateful, and hence wrong; distinctive pleasures that it is right to enjoy they enjoy more than is right, and more than most people enjoy them.

Clearly, then, with pleasures excess is intemperance, and is blameworthy. With pains, however, we are not called temperate, as we are called brave, for standing firm against them, or intemperate for not standing firm. Rather, someone is intemperate because he feels more pain than is right at failing to get pleasant things; and even this pain is produced by the pleasure [he takes in them]. And someone is temperate because he does not feel pain at the absence of what is pleasant, or at refraining from it.

The intemperate person, then, has an appetite for all pleasant things, or rather for the most pleasant of them, and his appetite leads him to choose these at the cost of the other things. That is why he also feels pain both when he fails to get something and when he has an appetite for it, since appetite involves pain. It would seem absurd, however, to suffer pain because of pleasure.

People who are deficient in pleasures and enjoy them less than is right are not found very much. For that sort of insensibility is not human; indeed, even the other animals discriminate among foods, enjoying

some but not others. If someone finds nothing pleasant, or preferable to anything else, he is far from being human. The reason he has no name is that he is not found much.

The temperate person has an intermediate state in relation to these [bodily pleasures]. For he finds no pleasure in what most pleases the intemperate person, but finds it disagreeable; he finds no pleasure at all in the wrong things. He finds no intense pleasure in any [bodily pleasures], suffers no pain at their absence, and has no appetite for them, or only a moderate appetite, not to the wrong degree or at the wrong time or anything else at all of that sort. If something is pleasant and conducive to health or fitness, he will desire this moderately and in the right way; and he will desire in the same way anything else that is pleasant, if it is no obstacle to health and fitness, does not deviate from the fine, and does not exceed his means. For the opposite sort of person likes these pleasures more than they are worth; that is not the temperate person's character, but he likes them as correct reason prescribes.

12

Intemperance is more like a voluntary condition than cowardice; for it is caused by pleasure, which is choiceworthy, whereas cowardice is caused by pain, which is to be avoided. Moreover, pain disturbs and ruins the nature of the sufferer, while pleasure does nothing of the sort; intemperance, then, is more voluntary. That is why it is also more open to reproach. For it is also easier to acquire the habit of facing pleasant things, since our life includes many of them and we can acquire the habit with no danger; but with frightening things the reverse is true.

However, cowardice seems to be more voluntary than particular cowardly actions. For cowardice itself involves no pain, but the particular actions disturb us because of the pain [that causes them], so that people actually throw away their weapons and do all the other disgraceful actions. That is why these actions even seem to be forced [and hence involuntary].

For the intemperate person the reverse is true. The particular actions are the result of his appetite and desire, and so they are voluntary; but the whole condition is less voluntary [than the actions], since no one has an appetite to be intemperate.

We also apply the name of intemperance to the errors of children, since they have some similarity. Which gets its name from which does not matter for our present purposes, but clearly the posterior is called after the prior. *1119b*

The name would seem to be quite appropriately transferred. For the things that need to be tempered are those that desire shameful things and tend to grow large. Appetites and children are most like this; for children also live by appetite, and desire for the pleasant is found more in them than in anyone else.

If, then, [the child or the appetitive part] is not obedient and subordinate to its rulers, it will go far astray. For when someone lacks understanding, his desire for the pleasant is insatiable and seeks indiscriminate satisfaction. The [repeated] active exercise of appetite increases the appetite he already had from birth, and if the appetites are large and intense, they actually expel rational calculation. That is why appetites must be moderate and few, and never contrary to reason. This is the condition we call obedient and temperate. And just as the child's life must follow the instructions of his guide, so too the appetitive part must follow reason.

Hence the temperate person's appetitive part must agree with reason; for both [his appetitive part and his reason] aim at the fine, and the temperate person's appetites are for the right things, in the right ways, at the right times, which is just what reason also prescribes.

So much, then, for temperance.

BOOK IV

1

Next let us discuss generosity. It seems, then, to be the mean about wealth; for the generous person is praised not in conditions of war, nor in those in which the temperate person is praised, nor in judicial verdicts, but in the giving and taking of wealth, and more especially in the giving. By wealth we mean anything whose worth is measured by money.

Both wastefulness and ungenerosity are excesses and deficiencies about wealth. Ungenerosity is always ascribed to those who take wealth more seriously

than is right. But when wastefulness is attributed to someone, several vices are sometimes combined. For incontinent people and those who spend money on intemperance are called wasteful. Since these have many vices at the same time, they make wasteful people seem the basest.

These people, however, are not properly called wasteful. For the wasteful person is meant to have
1120a the single vicious feature of ruining his property; for someone who causes his own destruction ['lays waste' to himself, and so] is wasteful, and ruining one's own property seems to be a sort of self-destruction, on the assumption that our living depends on our property. This, then, is how we understand wastefulness.

5 Whatever has a use can be used either well or badly; riches are something useful; and the best user of something is the person who has the virtue concerned with it. Hence the best user of riches will be the person who has the virtue concerned with wealth; and this is the generous person.

Using wealth seems to consist in spending and
10 giving, whereas taking and keeping seem to be possessing rather than using. That is why it is more proper to the generous person to give to the right people than to take from the right sources and not from the wrong sources.

For it is more proper to virtue to do good than to receive good, and more proper to do fine actions than not to do shameful ones; and clearly [the right sort of] giving implies doing good and doing fine actions, while
15 [the right sort of] taking implies receiving well or not doing something shameful. Moreover, thanks go to the one who gives, not to the one who fails to take, and praise goes more [to the giver]. Besides, not taking is easier than giving, since people part with what is their
20 own less readily than they avoid taking what is another's. Further, those who are called generous are those who give [rightly]. Those who avoid taking [wrongly] are not praised for generosity, though they are praised nonetheless for justice, while those who take [rightly] are not much praised at all. Besides, generous people are loved more than practically any others who are loved because of their virtue; that is because they are beneficial; and they are beneficial in their giving.

Actions in accord with virtue are fine, and aim at the fine. Hence the generous person will also aim at the fine in his giving, and will give correctly; for he 25
will give to the right people, the right amounts, at the right time, and all the other things that are implied by correct giving. Moreover, he will do this with pleasure, or at any rate without pain; for action in accord with virtue is pleasant or at any rate painless, and least of all is it painful.

If someone gives to the wrong people, or does not aim at the fine, but gives for some other reason, he will not be called generous, but some other sort of person. Nor will he be called generous if he finds it 30
painful to give; for such a person would choose wealth over fine action, and that is not how the generous person chooses.

Nor will the virtuous person take wealth from the wrong sources; since he does not honor wealth, this way of taking it is not for him. Nor will he be ready to ask for favors; since he is the one who benefits others, receiving benefits readily is not for him.

He will, however, acquire wealth from the right 1120b
sources—from his own possessions, for instance—regarding taking not as fine, but as necessary to provide something to give. Nor will he neglect his own possessions, since he wants to use them to assist people. And he will avoid giving to just anyone, so that he will have something to give to the right people, at the right time, and where it is fine.

It is also very definitely proper to the generous 5
person to exceed so much in giving that he leaves less for himself, since it is proper to a generous person not to look out for himself. However, ['exceed' must be explained;] in speaking of generosity we refer to what accords with one's means. For what is generous does not depend on the quantity of what is given, but on the state [of character] of the giver, and the generous state gives in accord with one's means. Hence one who gives less than another may still be more generous, if he has less to give. 10

Those who have not acquired their means by their own efforts, but have inherited it, seem to be more generous; for they have had no experience of shortage, and, besides, everyone likes his own work more than [other people's], as parents and poets do.

It is not easy for a generous person to grow rich, 15
since he is ready to spend, not to take or keep, and honors wealth for the sake of giving, not for itself. Indeed, that is why fortune is denounced, because

those who most deserve to grow rich actually do so least. This is only to be expected, however, since someone cannot possess wealth, any more than other things, if he pays no attention to possessing it.

Still, he does not give to the wrong people, at the wrong time, and so on. For if he did, he would no longer be acting in accord with generosity, and if he spent his resources on the wrong sort of giving, he would have nothing left to spend for the right purposes. For, as we have said, the generous person is the one who spends in accord with his means, and for the right purposes, whereas the one who exceeds his means is wasteful. That is why tyrants are not called wasteful, since it seems they will have difficulty exceeding their possessions in giving and spending.

Since generosity, then, is a mean concerned with the giving and the taking of wealth, the generous person will both give and spend the right amounts for the right purposes, in small and large matters alike, and do this with pleasure. He will also take the right amounts from the right sources. For since the virtue is a mean about both giving and taking, he will do both in the right way; for decent giving implies decent taking, and the other sort of taking is contrary to the decent sort. Hence the states that imply each other are present at the same time in the same subject, whereas the contrary states clearly are not.

If the generous person finds that his spending deviates from what is fine and right, he will feel pain, but moderately and in the right way; for it is proper to virtue to feel both pleasure and pain in the right things and in the right way.

The generous person is also an easy partner to have common dealings with matters of money; for he can easily be treated unjustly, since he does not honor money, and is more grieved if he has failed to spend what it was right to spend than if he has spent what it was wrong to spend—here he does not please Simonides.

The wasteful person is in error here too, since he feels neither pleasure nor pain at the right things or in the right way; this will be more evident as we go on.

We have said, then, that wastefulness and ungenerosity are excesses and deficiencies in two things, in giving and taking—for we also count spending as giving. Now wastefulness is excessive in giving and not taking, but deficient in taking. Ungenerosity is deficient in giving and excessive in taking, but in small matters.

Now the different aspects of wastefulness are not very often combined; for it is not easy to take from nowhere and give to everyone, since private citizens soon outrun their resources in giving, and private citizens are the ones who seem to be wasteful. However, such a person seems to be quite a lot better than the ungenerous person, since he is easily cured, both by growing older and by poverty, and is capable of reaching the intermediate condition. For he has the features proper to the generous person, since he gives and does not take, though he does neither rightly or well. If, then, he is changed, by habituation or some other means, so that he does them rightly and well, he will be generous; for then he will give to the right people and will not take from the wrong sources. This is why the wasteful person seems not to be base in his character; for excess in giving without taking is proper to a foolish person, not to a vicious or ignoble one. Someone who is wasteful in this way seems to be much better than the ungenerous person, both for the reasons just given and because he benefits many, whereas the ungenerous person benefits no one, not even himself.

Most wasteful people, however, as we have said, [not only give wrongly, but] also take from the wrong sources, and to this extent are ungenerous. They become acquisitive because they wish to spend, but cannot do this readily, since they soon exhaust all they have; hence they are compelled to provide from elsewhere. At the same time they care nothing for the fine, and so take from any source without scruple; for they have an urge to give, and the way or source does not matter to them.

This is why their ways of giving are not generous either, since they are not fine, do not aim at the fine, and are not done in the right way. Rather, these people sometimes enrich people who ought to be poor, and would give nothing to people with sound characters, but would give much to flatterers or to those providing some other pleasure. That is why most of these people are also intemperate. For since they part with money readily, they also spend it lavishly on intemperance; and because their lives do not aim at the fine, they decline toward pleasures.

If, then, the wasteful person has been left without

a guide, he changes into this; but if he receives attention, he might reach the intermediate and the right state.

Ungenerosity, however, is incurable, since old age and every incapacity seem to make people ungenerous. And it comes more naturally to human beings than wastefulness; for the many are money-lovers rather than givers. Moreover, it extends widely and has many species, since there seem to be many ways of being ungenerous. For it consists in two conditions, deficiency in giving and excess in taking; but it is not found as a whole in all cases. Sometimes the two conditions are separated, and some people go to excess in taking, whereas others are deficient in giving.

For the people called misers, tightfisted, skinflints and so on, are all deficient in giving, but they do not go after other people's goods and do not wish to take them. With some people the reason for this is some sort of decency in them, and a concern to avoid what is shameful. For some people seem—at least, this is what they say—to hold on to their money so that they will never be compelled to do anything shameful. These include the cheeseparer, and everyone like that; he is so called from his excessive refusal to give anything. Others keep their hands off other people's property because they are afraid, supposing that it is not easy for them to take other people's property without other people taking theirs too; hence, they say, they are content if they neither take from others nor give to them.

Other people, by contrast, go to excess in taking, by taking anything from any source—those, for instance, who work at degrading occupations, pimps and all such people, and usurers who lend small amounts at high interest; for all of these take the wrong amounts from the wrong sources.

Shameful love of gain is apparently their common feature, since they all put up with reproaches for some gain—more precisely, for a small gain. For those who take the wrong things from the wrong sources on a large scale—such as tyrants who sack cities and plunder temples—are called wicked, impious, and unjust, but not ungenerous. The ungenerous, however, include the gambler and the robber, since these are shameful lovers of gain. For in pursuit of gain both go to great efforts and put up with reproaches; the robber faces the greatest dangers to get his haul, while the gambler takes his gains from his friends, the very people he ought to be giving to. Both of them, then, are shameful lovers of gain, because they wish to acquire gains from the wrong sources; and all these methods of acquisition are ungenerous.

It is plausibly said that ungenerosity is contrary to generosity. For it is a greater evil than wastefulness; and error in this direction is more common than the error of wastefulness, as we have described it. So much, then, for generosity and the vices opposed to it.

2

Next, it seems appropriate to discuss magnificence also. For it seems to be, like generosity, a virtue concerned with wealth, but it does not extend, as generosity does, to all the actions involving wealth, but only to those involving heavy expenses, and in them it exceeds generosity in its large scale. For, just as the name [*megaloprepeia*] itself suggests, magnificence is expenditure that is fitting [*prepousa*] in its large scale [*megethos*]. But large scale is large relative to something; for the expenses of the captain of a warship and of the leader of a delegation are not the same. Hence what is fitting is also relative to oneself, the circumstances, and the purpose.

Someone is called magnificent only if he spends the worthy amount on a large purpose, not on a trivial or an ordinary purpose like the one who 'gave to many a wanderer'; for the magnificent person is generous, but generosity does not imply magnificence.

The deficiency falling short of this state is called stinginess. The excess is called vulgarity, poor taste, and such things. These are excesses not because they spend an excessively great amount on the right things, but because they show off in the wrong circumstances and in the wrong way. We shall discuss these vices later.

The magnificent person, in contrast to these, is like a scientific expert, since he is able to observe what will be the fitting amount, and to spend large amounts in an appropriate way. For, as we said at the start, a state is defined by its activities and its objects; now the magnificent person's expenditures are large and fitting; so also, then, must the results be, since that is what makes the expense large and fitting to the result. Hence the result must be worthy of the

expense, and the expense worthy of, or even in excess of, the result.

In this sort of spending the magnificent person will aim at the fine; for that is a common feature of the virtues. Moreover, he will spend gladly and readily, since it is stingy to count every penny. He will think more about the finest and most fitting way to spend than about the cost or about the cheapest way to do it.

Hence the magnificent person must also be generous; for the generous person will also spend what is right in the right way. But it is in this spending that the large scale of the magnificent person, his greatness, is found, since his magnificence is a sort of large scale of generosity in these things; and from an expense that is equal [to a nonmagnificent person's] he will make the result more magnificent. For a possession and a result have different sorts of excellence; the most honored [and hence most excellent] possession is the one worth most—for example, gold—but the most honored result is the one that is great and fine, since that is what is admirable to behold. Now what is magnificent is admirable, and the excellence of the result consists in its large scale.

This sort of excellence is found in the sorts of expenses called honorable, such as expenses for the gods—dedications, temples, sacrifices, and so on, for everything divine—and in expenses that provoke a good competition for honor, for the common good, if, for instance, some city thinks a splendid chorus or warship or a feast for the city must be provided.

But in all cases, as we have said, we fix the right amount by reference to the agent [as well as the task]—by who he is and what resources he has; for the amounts must be worthy of these, fitting the producer as well as the result.

That is why a poor person could not be magnificent; he lacks the means for large and fitting expenditures. If he tries to be magnificent, he is foolish; for he spends more than what is worthy and right for him, whereas correct spending accords with virtue. Large spending befits those who have the means, acquired through their own efforts or their ancestors or connections, or are well born or reputable, and so on; for each of these conditions includes greatness and reputation for worth.

This, then, above all is the character of the magnificent person, and magnificence is found in these sorts of expenses, as we have said, since these are the largest and most honored.

It is found also in those private expenses that arise only once, such as a wedding and the like, and in those that concern the whole city, or the people in it with a reputation for worth—the receiving of foreign guests and sending them off, gifts and exchanges of gifts. For the magnificent person spends money on the common good, not on himself, and the gifts have some similarity to dedications.

It is also proper to the magnificent person to build a house befitting his riches, since this is also a suitable adornment. He spends more readily on long-lasting results, since these are the finest. In each case he spends on what is fitting. For what suits gods does not suit human beings, and what suits a temple does not suit a tomb.

And since each great expense is great in relation to a particular kind of object, the most magnificent will be a great expense on a great object, and the [magnificent] in a particular area will be what is great in relation to the particular kind of object. Moreover, greatness in the results is not the same as greatness in an expense, since the finest ball or oil bottle has the magnificence proper to a gift for a child, but its value is small and paltry. That is why it is proper to the magnificent person, whatever kind of thing he produces, to produce it magnificently, since this is not easily exceeded, and to produce something worthy of the expense.

This, then, is the character of the magnificent person.

The vulgar person who exceeds [the mean] exceeds by spending more than is right, as has been said. For in small expenses he spends a lot, and puts on an inappropriate display. He gives his club a dinner party in the style of a wedding banquet, and when he supplies a chorus for a comedy, he brings them onstage dressed in purple, as they do at Megara. In all this he aims not at the fine, but at the display of his wealth and at the admiration he thinks he wins in this way. Where a large expense is right, he spends a little, and he spends a lot where a small expense is right.

The stingy person will be deficient in everything. After spending the largest amounts, he will refuse a small amount, and so destroy a fine result. Whatever

he does, while he is doing it he will hesitate and consider how he can spend the smallest possible amount; he will even moan about spending this, and will always think he is doing something on a larger scale than is right.

These states, vulgarity and stinginess, are vices. But they do not bring reproaches, since they do no harm to one's neighbors and are not too disgraceful.

3

Magnanimity seems, even if we go simply by the name, to be concerned with great things. Let us see first the sorts of things it is concerned with. It does not matter whether we consider the state itself or the person who acts in accord with it.

The magnanimous person, then, seems to be the one who thinks himself worthy of great things and is really worthy of them. For if someone is not worthy of them but thinks he is, he is foolish, and no virtuous person is foolish or senseless; hence the magnanimous person is the one we have mentioned. For if someone is worthy of little and thinks so, he is temperate, but not magnanimous; for magnanimity is found in greatness, just as beauty is found in a large body, and small people can be attractive and well proportioned, but not beautiful.

Someone who thinks he is worthy of great things, but is not worthy of them, is vain; but not everyone who thinks he is worthy of greater things than he is worthy of is vain.

Someone who thinks he is worthy of less than he is worthy of is pusillanimous, whether he is worthy of great or of moderate things, or of little and thinks himself worthy of still less. The one who seems most pusillanimous is the one who is worthy of great things; for consider how little he would think of himself if he were worthy of less.

The magnanimous person, then, is at the extreme insofar as he makes great claims. But insofar as he makes them rightly, he is intermediate; for what he thinks he is worthy of accords with his real worth, whereas the others are excessive or deficient. The pusillanimous person is deficient both in relation to himself [i.e., his worth] and in relation to the magnanimous person's estimate of his own worth. The vain person makes claims that are excessive for himself, but not for the magnanimous person.

If, then, he thinks he is worthy of great things, and is worthy of them, especially of the greatest things, he has one concern above all. Worth is said to [make one worthy of] external goods; and we would suppose that the greatest of these is the one we award to the gods, the one above all that is the aim of people with a reputation for worth, the prize for the finest [achievements]. All this is true of honor, since it is the greatest of external goods. Hence the magnanimous person has the right concern with honors and dishonors. And even without argument it appears that magnanimous people are concerned with honor; for the great think themselves worthy of honor most of all, but in accord with their worth.

Since the magnanimous person is worthy of the greatest things, he is the best person. For in every case the better person is worthy of something greater, and the best person is worthy of the greatest things; and hence the truly magnanimous person must be good.

Greatness in each virtue also seems proper to the magnanimous person. Surely it would not at all fit a magnanimous person to run away [from danger when a coward would], swinging his arms [to get away faster], or to do injustice. For what goal will make him do shameful actions, given that none [of their goals] is great to him? And if we examine particular cases, we can see that the magnanimous person appears altogether ridiculous if he is not good. Nor would he be worthy of honor if he were base; for honor is the prize of virtue, and is awarded to good people.

Magnanimity, then, would seem to be a sort of adornment of the virtues; for it makes them greater, and it does not arise without them. That is why it is difficult to be truly magnanimous, since it is not possible without being fine and good.

The magnanimous person, then, is concerned especially with honors and dishonors. When he receives great honors from excellent people, he will be moderately pleased, thinking he is getting what is proper to him, or even less. For there can be no honor worthy of complete virtue; but still he will accept honors [from excellent people], since they have nothing greater to award him. But if he is honored by just anyone, or for something small, he will altogether

disdain it; for that is not what he is worthy of. And similarly he will disdain dishonor; for it will not be justly attached to him.

As we have said, then, the magnanimous person is concerned especially with honors. Still, he will also have a moderate attitude to riches and power and every sort of good and bad fortune, however it turns out. He will be neither excessively pleased by good fortune nor excessively distressed by ill fortune, since he does not even regard honor as the greatest good. For positions of power and riches are choiceworthy for their honor; at any rate their possessors wish to be honored on account of them. Hence the magnanimous person, given that he counts honor for little, will also count these other goods for little; that is why he seems arrogant.

The results of good fortune, however, also seem to contribute to magnanimity. For the wellborn and the powerful or rich are thought worthy of honor, since they are in a superior position, and everything superior in some good is more honored. That is why these things also make people more magnanimous, since some people honor their possessors for these goods. In reality, however, it is only the good person who is honorable. Still, anyone who has both virtue and these goods is more readily thought worthy of honor.

Those who lack virtue but have these other goods are not justified in thinking themselves worthy of great things, and are not correctly called magnanimous; that is impossible without complete virtue. They become arrogant and wantonly aggressive when they have these other goods. For without virtue it is hard to bear the results of good fortune suitably, and when these people cannot do it, but suppose they are superior to other people, they think less of everyone else, and do whatever they please. They do this because they are imitating the magnanimous person though they are not really like him. They imitate him where they can; hence they do not act in accord with virtue, but they think less of other people. For the magnanimous person is justified when he thinks less of others, since his beliefs are true; but the many think less of others with no good reason.

He does not face dangers in a small cause; he does not face them frequently, since he honors few things; and he is no lover of danger. But he faces dangers in a great cause, and whenever he faces them he is unsparing of his life, since he does not think life at all costs is worth living.

He is the sort of person who does good but is ashamed when he receives it; for doing good is proper to the superior person, but receiving it is proper to the inferior. He returns more good than he has received; for in this way the original giver will be repaid, and will also have incurred a new debt to him, and will be the beneficiary.

Magnanimous people seem to remember the good they do, but not what they receive, since the recipient is inferior to the giver, and the magnanimous person wishes to be superior. And they seem to find pleasure in hearing of the good they do, and none in hearing of what they receive—that also seems to be why Thetis[8] does not tell Zeus of the good she has done him, and the Spartans do not tell of the good they have done the Athenians, but only of the good received from them.

Again, it is proper to the magnanimous person to ask for nothing, or hardly anything, but to help eagerly.

When he meets people with good fortune or a reputation for worth, he displays his greatness, since superiority over them is difficult and impressive, and there is nothing ignoble in trying to be impressive with them. But when he meets ordinary people he is moderate, since superiority over them is easy, and an attempt to be impressive among inferiors is as vulgar as a display of strength against the weak.

He stays away from what is commonly honored, and from areas where others lead; he is inactive and a delayer, except for some great honor or achievement. His actions are few, but great and renowned.

Moreover, he must be open in his hatreds and his friendships, since concealment is proper to a frightened person. He is concerned for the truth more than for people's opinion. He is open in his speech and actions, since his thinking less of other people makes him speak freely. And he speaks the truth, except [when he speaks less than the truth] to the many, [because he is moderate], not because he is self-deprecating.

8. [Thetis, Zeus' daughter, does not remind him that she intervened when the other gods wanted to put him in chains.—M.L.M.]

1125a He cannot let anyone else, except a friend, determine his life. For that would be slavish; and this is why all flatterers are servile and inferior people are flatterers.

He is not prone to marvel, since he finds nothing great, or to remember evils, since it is proper to a magnanimous person not to nurse memories, especially not of evils, but to overlook them.

He is no gossip. For he will not talk about himself or about another, since he is not concerned to have himself praised or other people blamed. Nor is he given to praising people. Hence he does not speak evil even of his enemies, except [when he responds to their] wanton aggression.

He especially avoids laments or entreaties about necessities or small matters, since these attitudes are proper to someone who takes these things seriously.

He is the sort of person whose possessions are fine and unproductive rather than productive and advantageous, since that is more proper to a self-sufficient person.

The magnanimous person seems to have slow movements, a deep voice, and calm speech. For since he takes few things seriously, he is in no hurry, and since he counts nothing great, he is not strident; and these [attitudes he avoids] are the causes of a shrill voice and hasty movements.

This, then, is the character of the magnanimous person. The deficient person is pusillanimous, and the person who goes to excess is vain. [Like the vulgar and the stingy person] these also seem not to be evil people, since they are not evildoers, but to be in error.

For the pusillanimous person is worthy of goods, but deprives himself of the goods he is worthy of, and would seem to have something bad in him because he does not think he is worthy of the goods. Indeed he would seem not to know himself; for if he did, he would aim at the things he is worthy of, since they are goods. For all that, such people seem hesitant rather than foolish. But this belief of theirs actually seems to make them worse. For each sort of person seeks what [he thinks] he is worth; and these people hold back from fine actions and practices, and equally from external goods, because they think they are unworthy of them.

Vain people, by contrast, are foolish and do not know themselves, and they make this obvious. For they undertake commonly honored exploits, but are not worthy of them, and then they are found out. They adorn themselves with clothes and ostentatious style and that sort of thing; and since they want everyone to know how fortunate they are, they talk about it, thinking it will bring them honor.

Pusillanimity is more opposed than vanity to magnanimity; for it arises more often, and is worse.

Magnanimity, then, as has been said, is the virtue concerned with honor, and [specifically] with great honor.

4

But, as we said in the first discussion, [just as there 1125b is a virtue for small-scale giving], there would also seem to be a virtue concerned with honor that seems to be related to magnanimity in the way that generosity is related to magnificence. For it abstains, just as generosity does, from anything great, but forms the right attitude in us on medium and small matters.

Just as the taking and giving of money admits of a mean, an excess and a deficiency, so also we can desire honor more or less than is right, and we can desire it from the right sources and in the right way. For we blame the honor-lover for aiming at honor more than is right, and from the wrong sources; and we blame someone indifferent to honor for deciding not to be honored even for fine things. Sometimes, however, we praise the honor-lover for being manly and a lover of the fine; and again we praise the indifferent person for being moderate and temperate, as we said in the first discussion.

Clearly, since we speak in several ways of loving something, what we refer to as love of honor is not the same attitude in every case. When we praise it, we refer to loving honor more than the many do. When we blame it, we refer to loving honor more than is right. Since the mean has no name, the extremes look like the only contestants, as though they had the field to themselves. Still, if there is excess and deficiency, there is also an intermediate condition.

Since people desire honor both more and less than is right, it is also possible to desire it in the right way. This state, therefore, a nameless mean concerned with honor, is praised. In relation to love of honor, it appears as indifference to honor; in relation to

indifference, it appears as love of honor; in relation to both, it appears in a way as both. The same would seem to be true of the other virtues too; but in this particular case the extreme people appear to be opposed [only to each other] because the intermediate person has no name.

5

Mildness is the mean concerned with anger. Since the mean is nameless, and the extremes are practically nameless too, we call the intermediate condition mildness, inclining toward the deficiency, which is also nameless. The excess might be called a kind of irascibility; for the relevant feeling is anger, though its sources are many and varied.

The person who is angry at the right things and toward the right people, and also in the right way, at the right time, and for the right length of time, is praised. This, then, will be the mild person, if mildness is praised. For [if mildness is something to be praised,] being a mild person means being undisturbed, not led by feeling, but irritated wherever reason prescribes, and for the length of time it prescribes. And he seems to err more in the direction of deficiency, since the mild person is ready to pardon, not eager to exact a penalty.

The deficiency—a sort of inirascibility or whatever it is—is blamed. For people who are not angered by the right things, or in the right way, or at the right times, or toward the right people, all seem to be foolish. For such a person seems to be insensible and to feel no pain, and since he is not angered, he does not seem to be the sort to defend himself. Such willingness to accept insults to oneself and to overlook insults to one's family and friends is slavish.

The excess arises in all these ways—in anger toward the wrong people, at the wrong times, more than is right, more hastily than is right, and for a longer time—but they are not all found in the same person. For they could not all exist together; for evil destroys itself as well as other things, and if it is present as a whole it becomes unbearable.

Irascible people get angry quickly, toward the wrong people, at the wrong times, and more than is right; but they stop soon, and this is their best feature. They do all this because they do not contain their anger, but their quick temper makes them pay back the offense without concealment, and then they stop.

Choleric people are quick-tempered to extreme, and irascible about everything and at everything; that is how they get their name.

Bitter people are hard to reconcile, and stay angry for a long time, since they contain their [angry] spirit. It stops when they pay back the offense; for the exaction of the penalty produces pleasure in place of pain, and so puts a stop to the anger. But if this does not happen, they hold their grudge. For no one else persuades them to get over it, since it is not obvious; and digesting anger in oneself takes time. This sort of person is most troublesome to himself and to his closest friends.

The people we call irritable are those who are irritated by the wrong things, more severely and for longer than is right, and are not reconciled until [the offender has suffered] a penalty and corrective treatment.

We regard the excess as more opposed than the deficiency to mildness. For it is more widespread, since it comes more naturally to human beings to exact a penalty from the offender [than to overlook an offense]; and, moreover, irritable people are harder to live with.

These remarks also make clear a previous point of ours. For it is hard to define how, against whom, about what, and how long we should be angry, and up to what point someone is acting correctly or in error. For someone who deviates a little toward either excess or deficiency is not blamed; for sometimes we praise deficient people and say they are mild, but sometimes we say that people who get irritated are manly because we think they are capable of ruling others. How far, then, and in what way must someone deviate to be open to blame? It is not easy to answer in a [general] account; for the judgment depends on particular cases, and [we make it] by perception.

However, this much at least is clear: The intermediate state is praiseworthy, and in accord with it we are angry toward the right people, about the right things, in the right way, and so on. The excesses and deficiencies are blameworthy, lightly if they go a little way, more if they go further, and strongly if they go far. Clearly, then, we must keep to the intermediate state. So much, then, for the states concerned with anger.

6

In meeting people, living together, and common dealings in conversations and actions, some people seem to be ingratiating; these are the ones who praise everything to please us and never cross us, but think they must cause no pain to those they meet. In contrast to these, people who oppose us on every point and do not care in the least about causing pain are called cantankerous and quarrelsome.

Clearly, the states we have mentioned are blameworthy, and the state intermediate between them is praiseworthy; in accord with it one accepts or objects to things when it is right and in the right way. This state has no name, but it would seem to be most like friendship; for the character of the person in the intermediate state is just what we mean in speaking of a decent friend, except that the friend is also fond of us.

It differs from friendship in not requiring any special feeling or any fondness for the people we meet. For this person takes each thing in the right way because that is his character, not because he is a friend or an enemy. For he will behave this way to new and old acquaintances, to familiar companions and strangers without distinction, except that he will also do what is suitable for each; for the proper ways to spare or to hurt the feelings of familiar companions are not the proper ways to treat strangers.

We have said, then, that in general he will treat people in the right way when he meets them. [More exactly], he will aim to avoid causing pain or to share pleasure, but will always refer to the fine and the beneficial. For he would seem to be concerned with the pleasures and pains that arise in meeting people; and if it is not fine, or it is harmful, for him to share one of these pleasures, he will object and will decide to cause pain instead. Further, if the other person will suffer no slight disgrace or harm from doing an action, and only slight pain if he is crossed, the virtuous person will object to the action and not accept it.

When he meets people with a reputation for worth, his attitude will be different from his attitude to just anyone; he will take different attitudes to those he knows better and those he knows less well; and similarly with the other differences, according what is suitable to each sort of person. What he will choose in itself is to share pleasure and avoid causing pain. But he will be guided by consequences, if they are greater—that is to say, by the fine and the expedient; and to secure great pleasure in the future he will cause slight pain.

This, then, is the character of the intermediate person, though he has no name.

Among those who share pleasure the person who aims to be pleasant with no ulterior purpose is ingratiating; the one who does it for some advantage in money and what money can buy is the flatterer. The one who objects to everything is, as we have said, the cantankerous and quarrelsome person. However, the extremes appear to be opposite [only] to each other, because the intermediate condition has no name.

7

The mean that corresponds to boastfulness is also concerned with practically these same [conditions of social life]; and it too is nameless. It is a good idea to examine the nameless virtues as well as the others. For if we discuss particular aspects of character one at a time, we will acquire a better knowledge of them; and if we survey the virtues and see that in each case the virtue is a mean, we will have more confidence in our belief that the virtues are means. As concerns social life, then, having discussed those who aim at giving pleasure or pain when they meet people, let us now discuss those who are truthful and false, both in words and in actions—that is to say, in their claims [about themselves].

The boaster seems to claim qualities that win reputation, though he either lacks them altogether or has less than he claims. The self-deprecator, by contrast, seems to disavow or to belittle his actual qualities. The intermediate person is straightforward, and therefore truthful in what he says and does, acknowledging the qualities he has without exaggerating or belittling.

Each of these things may be done with or without an ulterior purpose; and someone's character determines what he says and does and the way he lives, if he is not acting for an ulterior purpose. Now in itself [when no ulterior purpose is involved], falsehood is base and blameworthy, and truth is fine and praiseworthy; in this way the truthful person, like other

intermediate people, is praiseworthy, and both the tellers of falsehoods are blameworthy, the boaster to a higher degree. Let us discuss each type of blameworthy person; but first let us discuss the truthful person.

For we do not mean someone who is truthful in agreements in matters of justice and injustice, since these concern a different virtue, but someone who is truthful both in what he says and in how he lives, when nothing about justice is at stake, simply because that is his state of character. Someone with this character seems to be a decent person. For a lover of the truth who is truthful even when nothing is at stake will be still keener to tell the truth when something is at stake, since he will avoid falsehood as shameful [when something is at stake], having already avoided it in itself [when nothing was at stake]. This sort of person is praiseworthy. He inclines to tell less, rather than more, than the truth; for this appears more suitable, since excesses are oppressive.

If someone claims to have more than he has, with no ulterior purpose, he certainly looks as though he is a base person, since otherwise he would not enjoy telling falsehoods; but apparently he is pointlessly foolish rather than bad. Among those who do it with an ulterior purpose, the one who does it for the reputation or honor is not to be blamed too much as a boaster. But the one who does it for money or for means to making money is more disgraceful.

It is not a person's capacity, but his decision, that makes him a boaster; for his state of character makes a person a boaster, just as it makes a person a liar. And [boasters differ in their states of character]; one is a boaster because he enjoys telling falsehoods in itself, another because he pursues reputation or gain.

Boasters who aim at reputation, then, claim the qualities that win praise or win congratulation for happiness. Boasters who aim at profit claim the qualities that gratify other people and that allow someone to avoid detection when he claims to be what he is not—a wise diviner or doctor, for instance. That is why most [boasters] claim these sorts of things and boast about them; for they have the features just mentioned.

Self-deprecators underestimate themselves in what they say, and so appear to have more cultivated characters. For they seem to be avoiding bombast, not looking for profit, in what they say. The qualities that win reputation are the ones that these people especially disavow, as Socrates also used to do.

Those who disavow small qualities that they obviously have are called humbugs, and people more readily think less of them. Sometimes, indeed, this even appears a form of boastfulness, as the Spartans' [austere] dress does; for the extreme deficiency, as well as the excess, is boastful. But those who are moderate in their self-deprecation and confine themselves to qualities that are not too commonplace or obvious appear sophisticated.

It is the boaster [rather than the self-deprecator] who appears to be opposite to the truthful person, since he is the worse [of the two extremes].

8

Since life also includes relaxation, and in this we pass our time with some form of amusement, here also it seems possible to behave appropriately in meeting people, and to say and listen to the right things and in the right way. The company we are in when we speak or listen also makes a difference. And, clearly, in this case also it is possible to exceed the intermediate condition or to be deficient.

Those who go to excess in raising laughs seem to be vulgar buffoons. They stop at nothing to raise a laugh, and care more about that than about saying what is seemly and avoiding pain to the victims of the joke. Those who would never say anything themselves to raise a laugh, and even object when other people do it, seem to be boorish and stiff. Those who joke in appropriate ways are called witty, or, in other words, agile-witted. For these sorts of jokes seem to be movements of someone's character, and characters are judged, as bodies are, by their movements.

Since there are always opportunities at hand for raising a laugh, and most people enjoy amusements and jokes more than they should, buffoons are also called witty because they are thought cultivated; nonetheless, they differ, and differ considerably, from witty people, as our account has made clear.

Dexterity is also proper to the intermediate state. It is proper to the dexterous person to say and listen to what suits the decent and civilized person. For some things are suitable for this sort of person to say and listen to by way of amusement; and the civilized

person's amusement differs from the slavish person's. This can also be seen from old and new comedies; for what people used to find funny was shameful abuse, but what they now find funny instead is innuendo, which is considerably more seemly.

Then should the person who jokes well be defined by his making remarks not unsuitable for a civilized person, or by his avoiding pain and even giving pleasure to the hearer? Perhaps, though, this [avoiding pain and giving pleasure] is indefinable, since different people find different things hateful or pleasant. The remarks he is willing to hear made are of the same sort, since those he is prepared to hear made seem to be those he is prepared to make himself.

Hence he will not be indiscriminate in his remarks. For since a joke is a type of abuse, and legislators prohibit some types of abuse, they would presumably be right to prohibit some types of jokes too. Hence the cultivated and civilized person, as a sort of law to himself, will take this [discriminating] attitude. This, then, is the character of the intermediate person, whether he is called dexterous or witty.

The buffoon cannot resist raising a laugh, and spares neither himself nor anyone else if he can cause laughter, even by making remarks that the sophisticated person would never make, and some that the sophisticated person would not even be willing to hear made.

The boor is useless when he meets people in these circumstances. For he contributes nothing himself, and objects to everything; but relaxation and amusement seem to be necessary in life.

We have spoken, then, of three means in life, all concerned with common dealings in certain conversations and actions. They differ insofar as one is concerned with truth, the others with what is pleasant. One of those concerned with pleasure is found in amusements, and the other in our behavior in the other aspects of life when we meet people.

9

It is not appropriate to treat shame as a virtue; for it would seem to be more like a feeling than like a state [of character]. It is defined, at any rate, as a sort of fear of disrepute. Its expression is similar to that of fear of something terrifying; for a feeling of disgrace makes people blush, and fear of death makes them turn pale. Hence both [types of fear] appear to be in some way bodily [reactions], which seem to be more characteristic of feelings than of states.

Further, the feeling of shame is suitable for youth, not for every time of life. For we think it right for young people to be prone to shame, since they live by their feelings, and hence often go astray, but are restrained by shame; and hence we praise young people who are prone to shame. No one, by contrast, would praise an older person for readiness to feel disgrace, since we think it wrong for him to do any action that causes a feeling of disgrace.

For a feeling of disgrace is not proper to the decent person either, if it is caused by base actions; for these should not be done. If some actions are really disgraceful and others are base [only] in [his] belief, that does not matter, since neither should be done, and so he should not feel disgrace. On the contrary; being the sort of person who does any disgraceful action is proper to a vicious person.

If someone's state [of character] would make him feel disgrace if he were to do a disgraceful action, and because of this he thinks he is decent, that is absurd. For shame is concerned with what is voluntary, and the decent person will never willingly do base actions.

Shame might, however, be decent on an assumption; if one were to do [disgraceful actions], one would feel disgrace; but this does not apply to the virtues. If we grant that it is base to feel no disgrace or shame at disgraceful actions, it still does not follow that to do such actions and then to feel disgrace at them is decent.

Continence is not a virtue either. It is a sort of mixed state. We will explain about it in what we say later. Now let us discuss justice.

BOOK V

1

The questions we must examine about justice and injustice are these: What sorts of actions are they concerned with? What sort of mean is justice? What are the extremes between which justice is intermediate? Let us investigate them by the same line of inquiry as we used in the topics discussed before.

We see that the state everyone means in speaking of justice is the state that makes us just agents—[that is to say], the state that makes us do justice and wish what is just. In the same way they mean by injustice the state that makes us do injustice and wish what is unjust. That is why we also should first assume these things as an outline.

For what is true of sciences and capacities is not true of states. For while one and the same capacity or science seems to have contrary activities, a state that is a contrary has no contrary activities. Health, for instance, only makes us do healthy actions, not their contraries; for we say we are walking in a healthy way if [and only if] we are walking in the way a healthy person would.

Often one of a pair of contrary states is recognized from the other contrary; and often the states are recognized from their subjects. For if, for instance, the good state is evident, the bad state becomes evident too; and moreover the good state becomes evident from the things that have it, and the things from the state. For if, for instance, the good state is thickness of flesh, the bad state must be thinness of flesh, and the thing that produces the good state must be what produces thickness of flesh.

If one of a pair of contraries is spoken of in more ways than one, it follows, usually, that the other is too. If, for instance, the just is spoken of in more ways than one, so is the unjust.

Now it would seem that justice and injustice are both spoken of in more ways than one, but since their homonymy is close, the difference is unnoticed, and is less clear than it is with distant homonyms where the distance in appearance is wide (for instance, the bone below an animal's neck and what we lock doors with are called keys homonymously).

Let us, then, find the number of ways an unjust person is spoken of. Both the lawless person and the overreaching and unfair person seem to be unjust; and so, clearly, both the lawful and the fair person will be just. Hence the just will be both the lawful and what is fair, and the unjust will be both the lawless and the unfair.

Since the unjust person is an overreacher, he will be concerned with goods—not with all goods, but only with those involved in good and bad fortune, goods which are, [considered] without qualification, always good, but for this or that person not always good. Though human beings pray for these and pursue them, they are wrong; the right thing is to pray that what is good without qualification will also be good for us, but to choose [only] what is good for us.

Now the unjust person [who chooses these goods] does not choose more in every case; in the case of what is bad without qualification he actually chooses less. But since what is less bad also seems to be good in a way, and overreaching aims at more of what is good, he seems to be an overreacher. In fact he is unfair; for unfairness includes [all these actions], and is a common feature [of his choice of the greater good and of the lesser evil].

Since, as we saw, the lawless person is unjust and the lawful person is just, it clearly follows that whatever is lawful is in some way just; for the provisions of legislative science are lawful, and we say that each of them is just. In every matter that they deal with, the laws aim either at the common benefit of all, or at the benefit of those in control, whose control rests on virtue or on some other such basis. And so in one way what we call just is whatever produces and maintains happiness and its parts for a political community.

Now the law instructs us to do the actions of a brave person—for instance, not to leave the battle-line, or to flee, or to throw away our weapons; of a temperate person—not to commit adultery or wanton aggression; of a mild person—not to strike or revile another; and similarly requires actions in accord with the other virtues, and prohibits actions in accord with the vices. The correctly established law does this correctly, and the less carefully framed one does this worse.

This type of justice, then, is complete virtue, not complete virtue without qualification, but complete virtue in relation to another. And that is why justice often seems to be supreme among the virtues, and 'neither the evening star nor the morning star is so marvellous,' and the proverb says, 'And in justice all virtue is summed up.'

Moreover, justice is complete virtue to the highest degree because it is the complete exercise of complete virtue. And it is the complete exercise because the person who has justice is able to exercise virtue in relation to another, not only in what concerns himself;

for many are able to exercise virtue in their own concerns, but unable in what relates to another.

1130a That is why Bias seems to have been correct in saying that ruling will reveal the man; for a ruler is automatically related to another, and in a community. That is also why justice is the only virtue that seems 5 to be another person's good, because it is related to another; for it does what benefits another, either the ruler or the fellow member of the community.

The worst person, therefore, is the one who exercises his vice toward himself and his friends as well [as toward others]. And the best person is not the one who exercises virtue [only] toward himself, but the one who [also] exercises it in relation to another, since this is a difficult task.

10 This type of justice, then, is the whole, not a part, of virtue, and the injustice contrary to it is the whole, not a part, of vice.

Our discussion makes clear the difference between virtue and this type of justice. For virtue is the same as justice, but what it is to be virtue is not the same as what it is to be justice. Rather, insofar as virtue is related to another, it is justice, and insofar as it is a certain sort of state without qualification, it is virtue.

2

15 But we are looking for the type of justice, since we say there is one, that consists in a part of virtue, and correspondingly for the type of injustice that is a part of vice.

A sign that there is this type of justice and injustice is this: If someone's activities accord with the other vices—if, for instance, cowardice made him throw away his shield, or irritability made him revile someone, or ungenerosity made him fail to help someone with money—what he does is unjust, but not over-20 reaching. But when someone acts from overreaching, in many cases his action accords with none of these vices—certainly not all of them; but it still accords with some type of wickedness, since we blame him, and [in particular] it accords with injustice. Hence there is another type of injustice that is a part of the whole, and a way of being unjust that is a part of the whole that is contrary to law.

25 Further, if A commits adultery for profit and makes a profit, but B commits adultery because of his appetite, and spends money on it to his own loss, B seems intemperate rather than overreaching, but A seems unjust, not intemperate. Clearly, then, this is because A acts to make a profit.

Further, we can refer every other unjust action to 30 some vice—to intemperance if someone committed adultery, to cowardice if he deserted his comrade in the battle-line, to anger if he struck someone. But if he made an [unjust] profit, we can refer it to no other vice except injustice.

It is evident, then, that there is another type of injustice, special injustice, apart from injustice as a whole, and that it is synonymous with injustice as a whole, since the definition is in the same genus. For 1130b both have their area of competence in relation to another, but special injustice is concerned with honor or wealth or safety (or whatever single name will include all these), and aims at the pleasure that results from making a profit, whereas the concern of injustice as a whole is whatever concerns the excellent person. 5

Clearly, then, there is more than one type of justice, and there is another type besides [the type that is] the whole of virtue; but we must still grasp what it is, and what sort of thing it is.

The unjust is divided into the lawless and the unfair, and the just into the lawful and the fair. The injustice previously described, then, is concerned 10 with the lawless. But the unfair is not the same as the lawless; it is related to it as part to whole, since whatever is unfair is lawless, but not everything lawless is unfair. Hence also the unfair type of injustice and the unfair way of being unjust are not the same as the lawless type, but differ as parts from wholes. For 15 unfair injustice is a part of the whole of injustice, and, similarly, fair justice is a part of the whole of justice. Hence we must describe special as well as general justice and injustice, and equally this way of being just or unjust.

Let us, then, set aside the type of justice and injus- 20 tice that accords with the whole of virtue, justice being the exercise of the whole of virtue, and injustice of the whole of vice, in relation to another. And it is evident how we must distinguish the way of being just or unjust that accords with this type of justice and injustice. For most lawful actions, we might say, are those produced by virtue as a whole; for the law prescribes living in accord with each virtue, and

forbids living in accord with each vice. Moreover, the actions producing the whole of virtue are the lawful actions that the laws prescribe for education promoting the common good. We must wait till later, however, to determine whether the education that makes an individual an unqualifiedly good man is a task for political science or for another science; for, presumably, being a good man is not the same as being every sort of good citizen.

Special justice, however, and the corresponding way of being just have one species that is found in the distribution of honors or wealth or anything else that can be divided among members of a community who share in a political system; for here it is possible for one member to have a share equal or unequal to another's. A second species concerns rectification in transactions.

This second species has two parts, since one sort of transaction is voluntary, and one involuntary. Voluntary transactions (for instance, selling, buying, lending, pledging, renting, depositing, hiring out) are so called because their principle is voluntary. Among involuntary transactions some are secret (for instance, theft, adultery, poisoning, pimping, slave-deception, murder by treachery, false witness), whereas others involve force (for instance, imprisonment, murder, plunder, mutilation, slander, insult).

3

Since the unjust person is unfair, and what is unjust is unfair, there is clearly an intermediate between the unfair [extremes]. This is the fair; for in any action where too much and too little are possible, the fair [amount] is also possible. And so, if the unjust is unfair, the just is fair (*ison*), as seems true to everyone even without argument. And since the equal (*ison*) [and fair] is intermediate, the just is some sort of intermediate.

Since the equal involves at least two things [equal to each other], it follows that the just must be intermediate and equal, and related to something, and for some people. Insofar as it is intermediate, it must be between too much and too little; insofar as it is equal, it involves two things; and insofar as it is just, it is just for some people. Hence the just requires four things at least; the people for whom it is just are two, and the [equal] things involved are two.

Equality for the people involved will be the same as for the things involved, since [in a just arrangement] the relation between the people will be the same as the relation between the things involved. For if the people involved are not equal, they will not [justly] receive equal shares; indeed, whenever equals receive unequal shares, or unequals equal shares, in a distribution, that is the source of quarrels and accusations.

This is also clear from considering what accords with worth. For all agree that the just in distributions must accord with some sort of worth, but what they call worth is not the same; supporters of democracy say it is free citizenship, some supporters of oligarchy say it is wealth, others good birth, while supporters of aristocracy say it is virtue.

Hence the just [since it requires equal shares for equal people] is in some way proportionate. For proportion is special to number as a whole, not only to numbers consisting of [abstract] units, since it is equality of ratios and requires at least four terms. Now divided proportion clearly requires four terms. But so does continuous proportion, since here we use one term as two, and mention it twice. If, for instance, line A is to line B as B is to C, B is mentioned twice; and so if B is introduced twice, the terms in the proportion will be four.

The just also requires at least four terms, with the same ratio [between the pairs], since the people [A and B] and the items [C and D] involved are divided in the same way. Term C, then, is to term D as A is to B, and, taking them alternately, B is to D as A is to C. Hence there will also be the same relation of whole [A and C] to whole [B and D]; this is the relation in which the distribution pairs them, and it pairs them justly if this is how they are combined.

Hence the combination of term A with C and of B with D is the just in distribution, and this way of being just is intermediate, whereas the unjust is contrary to the proportionate. For the proportionate is intermediate, and the just is proportionate.

This is the sort of proportion that mathematicians call geometrical, since in geometrical proportion the relation of whole to whole is the same as the relation of each [part] to each [part]. But this proportion [in-

volved in justice] is not continuous, since there is no single term for both the person and the item. The just, then, is the proportionate, and the unjust is the counterproportionate. Hence [in an unjust action] one term becomes more and the other less; and this is indeed how it turns out in practice, since the one doing injustice has more of the good, and the victim has less.

With an evil the ratio is reversed, since the lesser evil, compared to the greater, counts as a good; for the lesser evil is more choiceworthy than the greater, what is choiceworthy is good, and what is more choiceworthy is a greater good.

This, then, is the first species of the just.

4

The other species is rectificatory, found in transactions both voluntary and involuntary. This way of being just belongs to a different species from the first.

For the just in distribution of common assets will always accord with the proportion mentioned above; for [just] distribution from common funds will also accord with the ratio to one another of different people's deposits. Similarly, the way of being unjust that is opposed to this way of being just is what is counterproportionate.

1132a The just in transactions, by contrast, though it is a sort of equality (and the unjust a sort of inequality), accords with numerical proportion, not with the [geometrical] proportion of the other species. For here it does not matter if a decent person has taken from a base person, or a base person from a decent person, or if a decent or a base person has committed adultery. Rather, the law looks only at differences in the harm [inflicted], and treats the people involved as equals, if one does injustice while the other suffers it, and one has done the harm while the other has suffered it.

And so the judge tries to restore this unjust situation to equality, since it is unequal. For [not only when one steals from another but] also when one is wounded and the other wounds him, or one kills and the other is killed, the action and the suffering are unequally divided [with profit for the offender and loss for the victim]; and the judge tries to restore the [profit and] loss to a position of equality, by subtraction from [the offender's] profit.

For in such cases, stating it without qualification, we speak of profit for the attacker who wounded his victim, for instance, even if that is not the proper word for some cases; and we speak of loss for the victim who suffers the wound. At any rate, when what was suffered has been measured, one part is called the [victim's] loss, and the other the [offender's] profit. Hence the equal is intermediate between more and less. Profit and loss are more and less in contrary ways, since more good and less evil is profit, and the contrary is loss. The intermediate area between [profit and loss], we have found, is the equal, which we say is just. Hence the just in rectification is the intermediate between loss and profit.

That is why parties to a dispute resort to a judge, and an appeal to a judge is an appeal to the just; for the judge is intended to be a sort of living embodiment of the just. Moreover, they seek the judge as an intermediary, and in some cities they actually call a judge a 'mediator,' assuming that if they are awarded an intermediate amount, the award will be just. If, then, the judge is an intermediary, the just is in some way intermediate.

The judge restores equality, as though a line [AB] had been cut into unequal parts [AC and CB], and he removed from the larger part [AC] the amount [DC] by which it exceeds the half [AD] of the line [AB], and added this amount [DC] to the smaller part [CB]. And when the whole [AB] has been halved [into AD and DB], then they say that each person has what is properly his own, when he has got an equal share.

The equal [in this case] is intermediate, by numerical proportion, between the larger [AC] and the smaller line [CB]. This is also why it is called just (*dikaion*), because it is a bisection (*dicha*), as though we said bisected (*dichaion*), and the judge (*dikastes*) is a bisector (*dichastes*). For when [the same amount] is subtracted from one of two equal things and added to the other, then the one part exceeds the other by the two parts; for if a part had been subtracted from the one, but not added to the other, the larger part *1132b* would have exceeded the smaller by just one part. Hence the larger part exceeds the intermediate by one part, and the intermediate from which [a part] was subtracted [exceeds the smaller] by one part.

In this way, then, we will recognize what we must

subtract from the one who has more and add to the one who has less [to restore equality]; for to the one who has less we must add the amount by which the intermediate exceeds what he has, and from the greatest amount [held by the one who has more] we must subtract the amount by which it exceeds the intermediate. Let lines AA′, BB′, and CC′ be equal; let AE be subtracted from AA′ and CD be added to CC′, so that the whole line DCC′ will exceed the line EA′ by the parts CD and CF [where CF equals AE]; it follows that DCC′ exceeds BB′ by CD.

These names 'loss' and 'profit' are derived from voluntary exchange. For having more than one's own share is called making a profit, and having less than what one had at the beginning is called suffering a loss, in buying and selling, for instance, and in other transactions permitted by law. And when people get neither more nor less, but precisely what belongs to them, they say they have their own share and make neither a loss nor a profit. Hence the just is intermediate between a certain kind of loss and profit, since it is having the equal amount both before and after [the transaction].

5

Some people, however, think reciprocity is also just without qualification. This was the Pythagoreans' view, since their definition stated without qualification that what is just is reciprocity with another.

The truth is that reciprocity suits neither distributive nor rectificatory justice, though people take even Rhadamanthys' [primitive] conception of justice to describe rectificatory justice: 'If he suffered what he did, upright justice would be done.'[9] For in many cases reciprocity conflicts [with rectificatory justice]. If, for instance, a ruling official [exercising his office] wounded someone else, he must not be wounded in retaliation, but if someone wounded a ruling official, he must not only be wounded but also receive corrective treatment. Moreover, the voluntary or involuntary character of the action makes a great difference.

In communities for exchange, however, this way of being just, reciprocity that is proportionate rather than equal, holds people together; for a city is maintained by proportionate reciprocity. For people seek to return either evil for evil, since otherwise [their condition] seems to be slavery, or good for good, since otherwise there is no exchange; and they are maintained [in a community] by exchange. Indeed, that is why they make a temple of the Graces prominent, so that there will be a return of benefits received. For this is what is special to grace; when someone has been gracious to us, we must do a service for him in return, and also ourselves take the lead in being gracious again.

It is diagonal combination that produces proportionate exchange. Let A be a builder, B a shoemaker, C a house, D a shoe. The builder must receive the shoemaker's product from him, and give him the builder's own product in return. If, then, first of all, proportionate equality is found, and, next, reciprocity is also achieved, the proportionate return will be reached. Otherwise it is not equal, and the exchange will not be maintained, since the product of one may well be superior to the product of the other. These products, then, must be equalized.

This is true of the other crafts also; for they would have been destroyed unless the producer produced the same thing, of the same quantity and quality as the thing affected underwent. For no community [for exchange] is formed from two doctors. It is formed from a doctor and a farmer, and, in general, from people who are different and unequal and who must be equalized.

This is why all items for exchange must be comparable in some way. Currency came along to do exactly this, and in a way it becomes an intermediate, since it measures everything, and so measures excess and deficiency—[for instance,] how many shoes are equal to a house. Hence, as builder is to shoemaker, so must the number of shoes be to a house; for if this does not happen, there will be no exchange and no community. But proportionate equality will not be reached unless they are equal in some way. Everything, then, must be measured by some one measure, as we said before.

In reality, this measure is need, which holds everything together; for if people needed nothing, or needed things to different extents, there would be either no exchange or not the same exchange. And

9. [In mythology a judge in the underworld.—T.I.]

currency has become a sort of pledge of need, by convention; in fact it has its name (*nomisma*) because it is not by nature, but by the current law (*nomos*), and it is within our power to alter it and to make it useless.

Reciprocity will be secured, then, when things are equalized, so that the shoemaker's product is to the
1133b farmer's as the farmer is to the shoemaker. However, they must be introduced into the figure of proportion not when they have already exchanged and one extreme has both excesses, but when they still have their own; in that way they will be equals and members of a community, because this sort of equality can be
5 produced in them. Let A be a farmer, C food, B a shoemaker, and D his product that has been equalized; if this sort of reciprocity were not possible, there would be no community.

Now clearly need holds [a community] together as a single unit, since people with no need of each other, both of them or either one, do not exchange, as they exchange whenever another requires what one has oneself, such as wine, when they allow the
10 export of corn. This, then, must be equalized.

If an item is not required at the moment, currency serves to guarantee us a future exchange, guaranteeing that the item will be there for us if we need it; for it must be there for us to take if we pay. Now the same thing happens to currency [as other goods], and it does not always count for the same; still, it tends
15 to be more stable. Hence everything must have a price; for in that way there will always be exchange, and then there will be community.

Currency, then, by making things commensurate as a measure does, equalizes them; for there would be no community without exchange, no exchange without equality, no equality without commensuration. And so, though things so different cannot become commensurate in reality, they can become
20 commensurate enough in relation to our needs.

Hence there must be some single unit fixed [as current] by a stipulation. This is why it is called currency; for this makes everything commensurate, since everything is measured by currency. Let A, for instance, be a house, B ten minae, C a bed. A is half of B if a house is worth five minae or equal to them;
25 and C, the bed, is a tenth of B. It is clear, then, how many beds are equal to one house—five. This is clearly how exchange was before there was currency; for it does not matter whether a house is exchanged for five beds or for the currency for which five beds are exchanged.

We have now said what it is that is unjust and just. 30
And now that we have defined them, it is clear that doing justice is intermediate between doing injustice and suffering injustice, since doing injustice is having too much and suffering injustice is having too little.

Justice is a mean, not as the other virtues are, 1134a
but because it is about an intermediate condition, whereas injustice is about the extremes. Justice is the virtue in accord with which the just person is said to do what is just in accord with his decision, distributing good things and bad, both between himself and others and between others. He does not award too much of what is choiceworthy to himself and too little to his 5
neighbor (and the reverse with what is harmful), but awards what is proportionately equal; and he does the same in distributing between others.

Injustice, on the other hand, is related [in the same way] to the unjust. What is unjust is disproportionate excess and deficiency in what is beneficial or harmful; hence injustice is excess and deficiency because it concerns excess and deficiency. The unjust person 10
awards himself an excess of what is beneficial, [considered] without qualification, and a deficiency of what is harmful, and, speaking as a whole, he acts similarly [in distributions between] others, but deviates from proportion in either direction. In an unjust action getting too little good is suffering injustice, and getting too much is doing injustice.

So much, then, for the nature of justice and the 15
nature of injustice, and similarly for just and unjust in general.

6

Since it is possible to do injustice without thereby being unjust, what sort of injustice must someone do to be unjust by having one of the different types of injustice, by being a thief or adulterer or brigand, for instance?

Perhaps it is not the type of action that makes the difference [between merely doing injustice and being unjust]. For someone might lie with a woman and 20
know who she is, but the principle might be feelings

rather than decision. In that case he is not unjust, though he does injustice—not a thief, for instance, though he stole, not an adulterer though he committed adultery, and so on in the other cases.

Now we have previously described the relation of reciprocity to the just. But we must recognize that we are inquiring not only into the just without qualification, but also into the politically just. This belongs to those who share in common a life aiming at self-sufficiency, who are free and either proportionately or numerically equal. Hence those who lack these features have nothing politically just in their relations, though they have something just insofar as it is similar to the politically just.

For the just belongs to those who have law in their relations. Law belongs to those among whom injustice is [possible]; for the judicial process is judgment that distinguishes the just from the unjust. Where there is injustice there is also doing injustice, though where there is doing injustice there need not also be injustice. And doing injustice is awarding to oneself too many of the things that, [considered] without qualification, are good, and too few of the things that, [considered] without qualification, are bad.

That is why we allow only reason, not a human being, to be ruler. For a human being awards himself too many goods and becomes a tyrant; a ruler, however, is a guardian of the just, and hence of the equal [and so must not award himself too many goods].

If a ruler is just, he seems to profit nothing by it. For since he does not award himself more of what, [considered] without qualification, is good if it is not proportionate to him, he seems to labor for another's benefit. That is why justice is said, as we also remarked before, to be another person's good. Hence some payment [for ruling] should be given; this is honor and privilege. The people who are not satisfied with these rewards are the ones who become tyrants.

The just for a master and a father is similar to this, not the same. For there is no unqualified injustice in relation to what is one's own; one's own possession, or one's child until it is old enough and separated, is as though it were a part of oneself. Now no one decides to harm himself. Hence there is no injustice in relation to them, and so nothing politically unjust or just either. For we found that the politically just must accord with law, and belong to those who are naturally suited for law, and hence to those who have equality in ruling and being ruled. [Approximation to this equality] explains why relations with a wife more than with children or possessions allow something to count as just; for that is the just in households. Still, this too is different from the politically just.

7

One part of the politically just is natural, and the other part legal. The natural has the same validity everywhere alike, independent of its seeming so or not. The legal originally makes no difference [whether it is done] one way or another, but makes a difference whenever people have laid down the rule—that a mina is the price of a ransom, for instance, or that a goat rather than two sheep should be sacrificed. The legal also includes laws passed for particular cases (for instance, that sacrifices should be offered to Brasidas)[10] and enactments by decree.

Now some people think everything just is merely legal. For the natural is unchangeable and equally valid everywhere—fire, for instance, burns both here and in Persia—whereas they see that the just changes [from city to city].

This is not so, though in a way it is so. With us, though presumably not at all with the gods, there is such a thing as the natural, but still all is changeable; despite the change there is such a thing as what is natural and what is not.

Then what sort of thing, among those that [are changeable and hence] admit of being otherwise, is natural, and what sort is not natural, but legal and conventional, if both natural and legal are changeable? It is clear in other cases also, and the same distinction [between the natural and the unchangeable] will apply; for the right hand, for instance, is naturally superior, even though it is possible for everyone to become ambidextrous.

The sorts of things that are just by convention and expediency are like measures. For measures for wine and for corn are not of equal size everywhere, but in

10. [Brasidas was a Spartan general who after his death received sacrifices in Amphipolis as a liberator; his cult is introduced as an example of a strictly local observance initiated by decree.—T.I.]

wholesale markets they are bigger, and in retail smaller. Similarly, the things that are just by human [enactment] and not by nature differ from place to place, since political systems also differ. Still, only one system is by nature the best everywhere.

Each [type of] just and lawful [action] is related as a universal to the corresponding particulars; for the [particular] actions that are done are many, but each [type] is one, since it is universal.

An act of injustice is different from the unjust, and an act of justice from the just. For the unjust is unjust by nature or enactment; when this has been done, it is an act of injustice, but before it is done it is only unjust. The same applies to an act of justice [in contrast to the just]. Here, however, the general [type of action contrary to an act of injustice] is more usually called a just act, and what is called an act of justice is the [specific type of just act] that rectifies an act of injustice.

Later we must examine each of these actions, to see what sorts of species, and how many, they have, and what they are concerned with.

8

Given this account of just and unjust actions, one does injustice or does justice whenever one does them willingly. Whenever one does them unwillingly, one neither does justice nor does injustice, except coincidentally, since the actions one does are coincidentally just or unjust.

An act of injustice and a just act are defined by the voluntary and the involuntary. For when the action is voluntary, the agent is blamed, and thereby also it is an act of injustice. And so something will be unjust without thereby being an act of injustice, if it is not also voluntary.

As I said before, I say that an action is voluntary just in case it is up to the agent, who does it in knowledge, and [hence] not in ignorance of the person, instrument, and goal (for instance, whom he is striking, with what, and for what goal), and [does] each of these neither coincidentally nor by force (if, for instance, someone seized your hand and struck another [with it], you would not have done it willingly, since it was not up to you). But [a further distinction must be drawn about knowledge. For] it is possible that the victim is your father, and you know he is a human being or a bystander, but do not know he is your father. The same distinction must be made for the goal and for the action as a whole.

Actions are involuntary, then, if they are done in ignorance; or they are not done in ignorance, but they are not up to the agent; or they are done by force. For we also do or undergo many of our natural [actions and processes], such as growing old and dying, in knowledge, but none of them is either voluntary or involuntary.

Both unjust and just actions may also be coincidental in the same way. For if someone returned a deposit unwillingly and because of fear, we ought to say that he neither does anything just nor does justice, except coincidentally. Similarly, if someone is under compulsion and unwilling when he fails to return the deposit, we should say that he coincidentally does injustice and does something unjust.

In some of our voluntary actions we act on a previous decision, and in some we act without previous decision. We act on a previous decision when we act on previous deliberation, and we act without previous decision when we act without previous deliberation.

Among the three ways of inflicting harms in a community, actions done with ignorance are errors if someone does neither the action he supposed, nor to the person, nor with the instrument, nor for the result he supposed. For he thought, for instance, that he was not hitting, or not hitting this person, or not for this result; but coincidentally the result that was achieved was not what he thought (for instance, [he hit him] to graze, not to wound), or the victim or the instrument was not the one he thought.

If, then, the infliction of harm violates reasonable expectation, the action is a misfortune. If it does not violate reasonable expectation, but is done without vice, it is an error. For someone is in error if the principle of the cause is in him, and unfortunate when it is outside.

If he does it in knowledge, but without previous deliberation, it is an act of injustice; this is true, for instance, of actions caused by spirit and other feelings that are natural or necessary for human beings. For when someone inflicts these harms and commits these errors, he does injustice and these are acts of injustice; but he is not thereby unjust or wicked, since

it is not vice that causes him to inflict the harm. But whenever his decision is the cause, he is unjust and vicious.

That is why it is right to judge that actions caused by spirit do not result from forethought [and hence do not result from decision], since the principle is not the agent who acted on spirit, but the person who provoked him to anger. Moreover the dispute is not about whether [the action caused by anger] happened or not, but about whether it was just, since anger is a response to apparent injustice. For they do not dispute about whether it happened or not, as they do in commercial transactions, where one party or the other must be vicious, unless forgetfulness is the cause of the dispute. Rather [in cases of anger] they agree about the fact and dispute about which action was just; but [in commercial transactions] the [cheater] who has plotted against his victim knows very well [that what he is doing is unjust]. Hence [in cases of anger the agent] thinks he is suffering injustice, while [in transactions the cheater] does not think so.

If [the cheater's] decision causes him to inflict the harm, he does injustice, and this is the sort of act of injustice that makes an agent unjust, if it violates proportion or equality. In the same way, a person is just if his decision causes him to do justice; one [merely] does justice if one merely does it voluntarily.

Some involuntary actions are to be pardoned, and some are not. For if someone's error is not only committed in ignorance, but also caused by ignorance, it is to be pardoned. But if, though committed in ignorance, it is caused not by ignorance but by some feeling that is neither natural nor human, it is not to be pardoned.

9

If we have adequately defined suffering injustice and doing injustice, some puzzles might be raised.

First of all, are those bizarre words of Euripides correct, where he says: ' "I killed my mother—a short tale to tell." "Were both of you willing or both unwilling?" '? Is it really possible to suffer injustice willingly, or is it always involuntary, as doing injustice is always voluntary? And is it always one way or the other, or is it sometimes voluntary and sometimes involuntary?

The same question arises about receiving justice. Since doing justice is always voluntary [as doing injustice is], it is reasonable for the same opposition to apply in both cases, so that both receiving justice and suffering injustice will be either alike voluntary or alike involuntary. But it seems absurd in the case of receiving justice as well [as in the case of suffering injustice] for it to be always voluntary, since some people receive justice, but not willingly.

We might also raise the following puzzle: Does everyone who has received something unjust suffer injustice, or is it the same with receiving as it is with doing? For certainly it is possible, in the case both of doing and of receiving, to have a share in just things coincidentally; and clearly the same is true of unjust things, since doing something unjust is not the same as doing injustice, and suffering something unjust is not the same as suffering injustice. The same is true of doing justice and receiving it; for it is impossible to suffer injustice if no one does injustice and impossible to receive justice if no one does justice.

Now if doing injustice is simply harming someone willingly (and doing something willingly is doing it with knowledge of the victim, the instrument, and the way), and the incontinent person harms himself willingly, he suffers injustice willingly. Hence someone can do injustice to himself; and one of our puzzles was just this, whether someone can do injustice to himself. Further, someone's incontinence might cause him to be willingly harmed by another who is willing, so that it would be possible to suffer injustice willingly.

Perhaps, however, our definition [of doing injustice] was incorrect, and we should add to 'harming with knowledge of the victim, the instrument, and the way,' the further condition 'against the wish of the victim.' If so, someone is harmed and suffers something unjust willingly, but no one suffers injustice willingly. For no one wishes it, not even the incontinent, but he acts against his wish; for no one wishes for what he does not think is excellent, and what the incontinent does is not what he thinks it is right [and hence excellent] to do.

And if someone gives away what is his own, as Homer says Glaucus gave to Diomede 'gold for bronze, a hundred cows' worth for nine cows'

worth,' he does not suffer injustice. For it is up to him to give them, whereas suffering injustice is not up to him, but requires someone to do him injustice.

Clearly, then, suffering injustice is not voluntary.

Two further questions that we decided to discuss still remain: If A distributes to B more than B deserves, is it A, the distributor, or B, who has more, who does injustice? And is it possible to do injustice to oneself?

For if the first alternative is possible, and A rather than B does injustice, it follows that if A knowingly and willingly distributes more to B than to himself, A does injustice to himself. And indeed this is what a moderate person seems to do; for the decent person tends to take less than his share.

Perhaps, however, it is not true without qualification that he takes less. For perhaps he overreaches for some other good, such as reputation or the unqualifiedly fine. Moreover, our definition of doing injustice allows us to solve the puzzle. For since he suffers nothing against his own wish, he does not suffer injustice, at least not from his distribution, but, at most, is merely harmed.

But it is evidently the distributor who does injustice, and the one who has more does not always do it. For the one who does injustice is not the one who has an unjust share, but the one who willingly does what is unjust, that is to say, the one who has the principle of the action; this is the distributor, not the recipient. Besides, doing is spoken of in many ways, and there is a way in which inanimate things, or hands, or servants at someone else's order, kill; the recipient, then, does not do injustice, but does something that is unjust.

Further, if the distributor judged in ignorance, he does not do injustice in violation of what is legally just, and his judgment is not unjust; in a way, though, it is unjust, since what is legally just is different from what is primarily just. If, however, he judged unjustly, and did it knowingly, he himself as well [as the recipient] is overreaching—for gratitude or to exact a penalty.

And so someone who has judged unjustly for these reasons has also got more, exactly as though he got a share of the [profits of] the act of injustice. For he gave judgment about some land, for instance, on this condition [that he would share the profits], and what he got was not land, but money.

People think doing injustice is up to them; that is why they think that being just is also easy. But it is not. For lying with a neighbor's wife, wounding a neighbor, bribing, are all easy and up to us, but being in a certain state when we do them is not easy, and not up to us.

Similarly, people think it takes no wisdom to know the things that are just and unjust, because it is not difficult to comprehend what the laws speak of. But these are not the things that are just, except coincidentally. Knowing how actions must be done, and how distributions must be made, if they are to be just, takes more work than it takes to know about healthy things. And even in the case of healthy things, knowing about honey, wine, hellebore, burning, and cutting is easy, but knowing how these must be distributed to produce health, and to whom and when, takes all the work that it takes to be a doctor.

For the same reason they think doing injustice is no less proper to the just than to the unjust person, because the just person is no less, and even more, able to do each of the actions. For he is able to lie with a woman, and to wound someone; and the brave person, similarly, is able to throw away his shield, and to turn and run this way or that. But doing acts of cowardice or injustice is not doing these actions, except coincidentally; it is being in a certain state when we do them. Similarly, practicing medicine or healing is not cutting or not cutting, giving drugs or not giving them, but doing all these things in a certain way.

Just things belong to those who have a share in things that, [considered] without qualification, are good, who can have an excess or a deficiency of them. Some (as, presumably, the gods) can have no excess of them; others, the incurably evil, benefit from none of them, but are harmed by them all; others again benefit from these goods up to a point; and this is why the just is something human.

10

The next task is to discuss how decency is related to justice and how the decent is related to the just. For on examination they appear as neither the same

without qualification nor as states of different kinds. Sometimes we praise what is decent and the decent person, so that even when we praise someone for other things we transfer the term 'decent' and use it instead of 'good,' making it clear that what is more decent is better. But sometimes, when we reason about the matter, it appears absurd for what is decent to be something apart from what is just, and still praiseworthy. For [apparently] either what is just is not excellent or what is decent is not excellent, if it is something other than what is just; or else, if they are both excellent, they are the same.

These, then, are roughly the claims that raise the puzzle about the decent; but they are all correct in a way, and none is contrary to any other. For the decent is better than one way of being just, but it is still just, and not better than the just by being a different kind of thing. Hence the same thing is just and decent; while both are excellent, what is decent is superior.

The puzzle arises because the decent is just, but is not the legally just, but a rectification of it. This is because all law is universal, but in some areas no universal rule can be correct; and so where a universal rule has to be made, but cannot be correct, the law chooses the [universal rule] that is usually [correct], well aware of the error being made. And the law is no less correct on this account; for the source of the error is not the law or the legislator, but the nature of the object itself, since that is what the subject matter of actions is bound to be like.

And so, whenever the law makes a universal rule, but in this particular case what happens violates the [intended scope of] the universal rule, on this point the legislator falls short, and has made an error by making an unqualified rule. Then it is correct to rectify the deficiency; this is what the legislator would have said himself if he had been present there, and what he would have prescribed, had he known, in his legislation.

That is why the decent is just, and better than a certain way of being just—not better than the unqualifiedly just, but better than the error that results from the omission of any qualification [in the rule]. And this is the nature of the decent—rectification of law insofar as the universality of law makes it deficient.

This is also the reason why not everything is guided by law. For on some matters legislation is impossible, and so a decree is needed. For the standard applied to the indefinite is itself indefinite, as the lead standard is in Lesbian building, where it is not fixed, but adapts itself to the shape of the stone; similarly, a decree is adapted to fit its objects.

It is clear from this what is decent, and clear that it is just, and better than a certain way of being just. It is also evident from this who the decent person is; for he is the one who decides on and does such actions, not an exact stickler for justice in the bad way, but taking less than he might even though he has the law on his side. This is the decent person, and his state is decency; it is a sort of justice, and not some state different from it.

11

Is it possible to do injustice to oneself or not? The answer is evident from what has been said.

First of all, some just actions are the legal prescriptions in accord with each virtue; we are legally forbidden, for instance, to kill ourselves. Moreover, if someone illegally and willingly inflicts harm on another, not returning harm for harm, he does injustice (a person acting willingly is one who knows the victim and the instrument). Now if someone murders himself because of anger, he does this willingly, in violation of correct reason, when the law forbids it; hence he does injustice. But injustice to whom? Surely to the city, not to himself, since he suffers it willingly, and no one willingly suffers injustice. That is why the city both penalizes him and inflicts further dishonor on him for destroying himself, on the ground that he does injustice to the city.

Now consider the type of injustice that belongs to an agent who is only unjust, not base generally. Clearly the corresponding type of unjust action is different from the first type. For this second type of unjust person is wicked in the same [special] way as the coward is, not by having total wickedness; hence his acts of injustice do not accord with total wickedness either. In this case also one cannot do injustice to oneself. For if one could, the same person could lose and get the same thing at the same time. But this is impossible; on the contrary,

what is just or unjust must always involve more than one person.

Moreover, doing injustice is voluntary, and results from a decision, and strikes first; for a victim who retaliates does not seem to do injustice. But if someone does injustice to himself, he does and suffers the same thing at the same time. Further, on this view, it would be possible to suffer injustice willingly.

Besides, no one does injustice without doing one of the particular acts of injustice. But no one commits adultery with his own wife, or burgles his own house, or steals his own possessions.

And in general the puzzle about doing injustice to oneself is also solved by the distinction about voluntarily suffering injustice.

It is also evident that both doing and suffering injustice are bad, since one is having more, one having less, than the intermediate amount, just as in the case of health in medicine and fitness in gymnastics [both more and less than the intermediate amount are bad]. But doing injustice is worse; for it is blameworthy, involving vice that is either complete and unqualified or close to it (since not all voluntary doing of injustice is combined with [the state of] injustice). Suffering injustice, however, involves no vice or injustice.

1138b In its own right, then, suffering injustice is less bad; and though it might still be coincidentally a greater evil, that is no concern of a craft. Rather, the craft says that pleurisy is a worse illness than a stumble, even though a stumble might sometimes coincidentally turn out worse—if, for instance, someone stumbled and by coincidence was captured by the enemy or killed because he fell.

It is possible for there to be a sort of justice, by similarity and transference, not of a person to himself, but of certain parts of a person—not every kind of justice, but the kind that belongs to masters or households. For in these discussions the part of the soul that has reason is distinguished from the nonrational part. People look at these and it seems to them that there is injustice to oneself, because in these parts it is possible to suffer something against one's own desires. Hence it is possible for those parts to be just to each other, as it is for ruler and ruled.

So much, then, for our definitions of justice and the other virtues of character.

BOOK VI

1

Since we have said previously that we must choose the intermediate condition, not the excess or the deficiency, and that the intermediate condition is as the correct reason says, let us now determine what it says. For in all the states of character we have mentioned, as well as in the others, there is a target that the person who has reason focuses on and so tightens or relaxes; and there is a definition of the means, which we say are between excess and deficiency because they accord with the correct reason.

To say this is admittedly true, but it is not at all clear. For in other pursuits directed by a science, it is equally true that we must labor and be idle neither too much nor too little, but the intermediate amount prescribed by correct reason. But knowing only this, we would be none the wiser about, for instance, the medicines to be applied to the body, if we were told we must apply the ones that medical science prescribes and in the way that the medical scientist applies them.

That is why our account of the states of the soul, in the same way, must not only be true as far as it has gone, but we must also determine what the correct reason is, that is to say, what its definition is.

After we divided the virtues of the soul, we said that some are virtues of character and some of thought. And so, having finished our discussion of *1139a* the virtues of character, let us now discuss the others as follows, after speaking first about the soul.

Previously, then, we said there are two parts of the soul, one that has reason, and one nonrational. Now we should divide in the same way the part that has reason. Let us assume there are two parts that have reason: with one we study beings whose principles do not admit of being otherwise than they are, and with the other we study beings whose principles admit of being otherwise. For when the beings are of different kinds, the parts of the soul naturally suited to each of them are also of different kinds, since the parts possess knowledge by being somehow similar and appropriate [to their objects].

Let us call one of these the scientific part, and the other the rationally calculating part; for deliberating

is the same as rationally calculating, and no one deliberates about what cannot be otherwise. Hence the rationally calculating part is one part of the part of the soul that has reason.

Hence we should find the best state of the scientific part and the best state of the rationally calculating part; for this state is the virtue of each of them. Now a thing's virtue is relative to its own proper function, [and so we must consider the function of each part].

2

There are three [capacities] in the soul—sense perception, understanding, desire—that control action and truth. Of these three, sense perception is clearly not the principle of any action, since beasts have perception, but no share in action.

As assertion and denial are to thought, so pursuit and avoidance are to desire. Now virtue of character is a state that decides; and decision is a deliberative desire. If, then, the decision is excellent, the reason must be true and the desire correct, so that what reason asserts is what desire pursues. This, then, is thought and truth concerned with action. The thought concerned with study, not with action or production, has its good or bad state in being true or false; for truth is the function of whatever thinks. But the function of what thinks about action is truth agreeing with correct desire.

The principle of an action—the source of motion, not the goal—is decision; the principle of decision is desire and goal-directed reason. That is why decision requires understanding and thought, and also a state of character; for acting well or badly requires both thought and character.

Thought by itself moves nothing; what moves us is goal-directed thought concerned with action. For this thought is also the principle of productive thought; for every producer in his production aims at some [further] goal, and the unqualified goal is not the product, which is only the [qualified] goal of some [production], and aims at some [further] goal. [An unqualified goal is] what we achieve in *action*, since acting well is the goal, and desire is for the goal. That is why decision is either understanding combined with desire or desire combined with thought; and this is the sort of principle that a human being is.

We do not decide to do what is already past; no one decides, for instance, to have sacked Troy. For neither do we deliberate about what is past, but only about what will be and admits of being or not being; and what is past does not admit of not having happened. That is why Agathon[11] is correct to say 'Of this alone even a god is deprived—to make what is all done to have never happened.'

The function of each of the understanding parts, then, is truth. And so the virtues of each part will be the states that best direct it toward the truth.

3

Then let us begin again, and discuss these states of the soul. Let us say, then, that there are five states in which the soul grasps the truth in its affirmation or denials. These are craft, scientific knowledge, prudence, wisdom, and understanding; for belief and supposition admit of being false.

What science is, is evident from the following, if we must speak exactly and not be guided by [mere] similarities. For we all suppose that what we know scientifically does not even admit of being otherwise; and whenever what admits of being otherwise escapes observation, we do not notice whether it is or is not, [and hence we do not know about it]. Hence what is known scientifically is by necessity. Hence it is everlasting; for the things that are by unqualified necessity are all everlasting, and everlasting things are ingenerable and indestructible.

Further, every science seems to be teachable, and what is scientifically knowable is learnable. But all teaching is from what is already known, as we also say in the *Analytics*; for some teaching is through induction, some by deduction, [which both require previous knowledge]. Induction [leads to] the principle, i.e., the universal, whereas deduction proceeds from the universal. Hence deduction has principles from which it proceeds and which are not themselves [reached] by deduction. Hence they are [reached] by induction.

11. [A fifth-century dramatist; his victory is being celebrated in Plato's *Symposium*.—M.L.M.]

Scientific knowledge, then, is a demonstrative state, and has all the other features that in the *Analytics* we add to the definition. For one has scientific knowledge whenever one has the appropriate sort of confidence, and knows the principles; for if one does not know them better than the conclusion, one will have scientific knowledge [only] coincidentally.

So much for a definition of scientific knowledge.

4

1140a What admits of being otherwise includes what is produced and what is achieved in action. Production and action are different; about them we rely also on [our] popular discussions. And so the state involving reason and concerned with action is different from the state involving reason and concerned with production. Nor is one included in the other; for action is not production, and production is not action.

Now building, for instance, is a craft, and is essentially a certain state involving reason concerned with production; there is no craft that is not a state involving reason concerned with production, and no such state that is not a craft. Hence a craft is the same as a state involving true reason concerned with production.

Every craft is concerned with coming to be, and the exercise of the craft is the study of how something that admits of being and not being comes to be, something whose principle is in the producer and not in the product. For a craft is not concerned with things that are or come to be by necessity; nor with things that are by nature, since these have their principle in themselves.

Since production and action are different, craft must be concerned with production, not with action.

In a way craft and fortune are concerned with the same things, as Agathon says: 'Craft was fond of fortune, and fortune of craft.'

A craft, then, as we have said, is a state involving true reason concerned with production. Lack of craft is the contrary state involving false reason and concerned with production. Both are concerned with what admits of being otherwise.

5

To grasp what prudence is, we should first study the sort of people we call prudent. It seems proper to a prudent person to be able to deliberate finely about things that are good and beneficial for himself, not about some restricted area—about what sorts of things promote health or strength, for instance—but about what sorts of things promote living well in general.

A sign of this is the fact that we call people prudent about some [restricted area] whenever they calculate well to promote some excellent end, in an area where there is no craft. Hence where [living well] as a whole is concerned, the deliberative person will also be prudent.

Now no one deliberates about things that cannot be otherwise or about things that cannot be achieved in his action. Hence, if science involves demonstration, but there is no demonstration of anything whose principles admit of being otherwise (since every such thing itself admits of being otherwise); and if we cannot deliberate about things that are by necessity; *1140b* it follows that prudence is not science nor yet craft knowledge. It is not science, because what is achievable in action admits of being otherwise; and it is not craft knowledge, because action and production belong to different kinds.

The remaining possibility, then, is that prudence is a state grasping the truth, involving reason, concerned with action about things that are good or bad for a human being. For production has its end in something other than itself, but action does not, since its end is acting well itself.

That is why Pericles and such people are the ones whom we regard as prudent, because they are able to study what is good for themselves and for human beings; we think that household managers and politicians are such people.

This is also how we come to give temperance (*sōphrosunē*) its name, because we think that it preserves prudence, (*sōzousan tēn phronēsin*). It preserves the [right] sort of supposition. For the sort of supposition that is corrupted and perverted by the pleasant or painful is not every sort—not, for instance, the supposition that the triangle does or does not have two right angles—but suppositions about what is achievable in action. For the principles of things achievable in action are their goal, but if someone is corrupted because of pleasure or pain, no [appropriate] principle can appear to him, and it cannot appear that this is the right goal and cause of all his choice and action;

for vice corrupts the principle. And so prudence must be a state grasping the truth, involving reason, and concerned with action about human goods.

Moreover, there is virtue [or vice in the use] of craft, but not [in the use] of prudence. Further, in a craft, someone who makes errors voluntarily is more choiceworthy; but with prudence, as with the virtues, the reverse is true. Clearly, then, prudence is a virtue, not craft knowledge.

There are two parts of the soul that have reason. Prudence is a virtue of one of them, of the part that has belief; for belief is concerned, as prudence is, with what admits of being otherwise.

Moreover, it is not only a state involving reason. A sign of this is the fact that such a state can be forgotten, but prudence cannot.

6

Scientific knowledge is supposition about universals, things that are by necessity. Further, everything demonstrable and every science have principles, since scientific knowledge involves reason. Hence there can be neither scientific knowledge nor craft knowledge nor prudence about the principles of what is scientifically known. For what is scientifically known is demonstrable, [but the principles are not]; and craft and prudence are about what admits of being otherwise. Nor is wisdom [exclusively] about principles; for it is proper to the wise person to have a demonstration of some things.

[The states of the soul] by which we always grasp the truth and never make mistakes, about what can or cannot be otherwise, are scientific knowledge, prudence, wisdom, and understanding. But none of the first three—prudence, scientific knowledge, wisdom—is possible about principles. The remaining possibility, then, is that we have understanding about principles.

7

We ascribe wisdom in crafts to the people who have the most exact expertise in the crafts. For instance, we call Pheidias a wise stoneworker and Polycleitus a wise bronze worker; and by wisdom we signify precisely virtue in a craft. But we also think some people are wise in general, not wise in some [restricted] area, or in some other [specific] way (as Homer says in the *Margites*: 'The gods did not make him a digger or a ploughman or wise in anything else'). Clearly, then, wisdom is the most exact [form] of scientific knowledge.

Hence the wise person must not only know what is derived from the principles of a science, but also grasp the truth about the principles. Therefore wisdom is understanding plus scientific knowledge; it is scientific knowledge of the most honorable things that has received [understanding as] its coping stone.

For it would be absurd for someone to think that political science or prudence is the most excellent science; for the best thing in the universe is not a human being [and the most excellent science must be of the best things].

Moreover, if what is good and healthy for human beings and for fish is not the same, whereas what is white or straight is always the same, everyone would also say that the content of wisdom is the same in every case, but the content of prudence is not. For the agent they would call prudent is the one who studies well each question about his own [good], and he is the one to whom they would entrust such questions. That is why prudence is also ascribed to some of the beasts, the ones that are evidently capable of forethought about their own life.

It is also evident that wisdom is not the same as political science. For if people are to say that science about what is beneficial to themselves [as human beings] counts as wisdom, there will be many types of wisdom [corresponding to the different species of animals]. For if there is no one medical science about all beings, there is no one science about the good of all animals, but a different science about each specific good. [Hence there will be many types of wisdom, contrary to our assumption that it has always the same content]. It does not matter if human beings are the best among the animals; for there are other beings of a far more divine nature than human beings—most evidently, for instance, the beings composing the universe.

What we have said makes it clear that wisdom is both scientific knowledge and understanding about the things that are by nature most honorable. That is why people say that Anaxagoras or Thales or that sort of person is wise, but not prudent, whenever they

see that he is ignorant of what benefits himself. And so they say that what he knows is extraordinary, amazing, difficult, and divine, but useless, because it is not human goods that he looks for.

Prudence, by contrast, is about human concerns, about things open to deliberation. For we say that deliberating well is the function of the prudent person more than anyone else; but no one deliberates about things that cannot be otherwise, or about things lacking any goal that is a good achievable in action. The unqualifiedly good deliberator is the one whose aim accords with rational calculation in pursuit of the best good for a human being that is achievable in action.

Nor is prudence about universals only. It must also acquire knowledge of particulars, since it is concerned with action and action is about particulars. That is why in other areas also some people who lack knowledge but have experience are better in action than others who have knowledge. For someone who knows that light meats are digestible and [hence] healthy, but not which sorts of meats are light, will not produce health; the one who knows that bird meats are light and healthy will be better at producing health. And since prudence is concerned with action, it must possess both [the universal and the particular knowledge] or the [particular] more [than the universal]. Here too, however, [as in medicine] there is a ruling [science].

8

Political science and prudence are the same state, but their being is not the same.

One type of prudence about the city is the ruling part; this is legislative science. The type concerned with particulars [often] monopolizes the name 'political science' that [properly] applies to both types in common. This type is concerned with action and deliberation, since [it is concerned with decrees and] the decree is to be acted on as the last thing [reached in deliberation]. Hence these people are the only ones who are said to be politically active; for these are the only ones who put [political science] into practice, as hand-craftsmen put [a craft] into practice.

Similarly, prudence concerned with the individual himself seems most of all to be counted as prudence; and this [type of prudence often] monopolizes the name 'prudence' that [properly] applies [to all types] in common. Of the other types, one is household science, another legislative, another political, one type of which is deliberative and another judicial.

In fact knowledge of what is [good] for oneself is one species [of prudence]. But there is much difference [in opinions] about it. The one who knows about himself, and spends his time on his own concerns, seems to be prudent, while politicians seem to be too active. Hence Euripides says, 'Surely I cannot be prudent, since I could have been inactive, numbered among all the many in the army, and have had an equal share . . . For those who go too far and are too active. . . . ' For people seek what is good for themselves, and suppose that this [inactivity] is the right action [to achieve their good]. Hence this belief has led to the view that these are the prudent people. Presumably, however, one's own welfare requires household management and a political system. Further, [another reason for the difference of opinion is that] it is unclear, and should be examined, how one must manage one's own affairs. *1142a*

A sign of what has been said [about the unclarity of what prudence requires] is the fact that whereas young people become accomplished in geometry and mathematics, and wise within these limits, prudent young people do not seem to be found. The reason is that prudence is concerned with particulars as well as universals, and particulars become known from experience, but a young person lacks experience, since some length of time is needed to produce it.

Indeed [to understand the difficulty and importance of experience] we might consider why a child can become accomplished in mathematics, but not in wisdom or natural science. Surely it is because mathematical objects are reached through abstraction, whereas in these other cases the principles are reached from experience. Young people, then, [lacking experience], have no real conviction in these other sciences, but only say the words, whereas the nature of mathematical objects is clear to them.

Further, [prudence is difficult because it is deliberative and] deliberation may be in error about either the universal or the particular. For [we may wrongly suppose] either that all sorts of heavy water are bad or that this water is heavy.

It is apparent that prudence is not scientific knowledge; for, as we said, it concerns the last thing [i.e., the particular], since this is what is achievable in action. Hence it is opposite to understanding. For understanding is about the [first] terms, [those] that have no account of them; but prudence is about the last thing, an object of perception, not of scientific knowledge. This is not the perception of special objects, but the sort by which we perceive that the last among mathematical objects is a triangle; for it will stop there too. This is another species [of perception than perception of special objects]; but it is still perception more than prudence is.

9

Inquiry and deliberation are different, since deliberation is a type of inquiry. We must also grasp what good deliberation is, and see whether it is some sort of scientific knowledge, or belief, or good guessing, or some other kind of thing.

First of all, then, it is not scientific knowledge. For we do not inquire for what we already know; but good deliberation is a type of deliberation, and a deliberator inquires and rationally calculates.

Moreover, it is not good guessing either. For good guessing involves no reasoning, and is done quickly; but we deliberate a long time, and it is said that we must act quickly on the result of our deliberation, but deliberate slowly. Further, quick thinking is different from good deliberation, and quick thinking is a kind of good guessing.

Nor is good deliberation just any sort of belief. Rather, since the bad deliberator is in error, and the good deliberator deliberates correctly, good deliberation is clearly some sort of correctness.

But it is not correctness in scientific knowledge or in belief. For there is no correctness in scientific knowledge, since there is no error in it either; and correctness in belief consists in truth, [but correctness in deliberation does not]. Further, everything about which one has belief is already determined, [but what is deliberated about is not yet determined].

However, good deliberation requires reason; hence the remaining possibility is that it belongs to thought. For thought is not yet assertion; [and this is why it is not belief]. For belief is not inquiry, but already an assertion; but in deliberating, either well or badly, we inquire for something and rationally calculate about it.

But good deliberation is a certain sort of correctness in deliberation. That is why we must first inquire what [this correctness] is and what it is [correctness] about. Since there are several types of correctness, clearly good deliberation will not be every type. For the incontinent or base person will use rational calculation to reach what he proposes to see, and so will have deliberated correctly [if that is all it takes], but will have got himself a great evil. Having deliberated well seems, on the contrary, to be some sort of good; for the sort of correctness in deliberation that makes it good deliberation is the sort that reaches a good.

However, we can reach a good by a false inference, as well [as by correct deliberation], so that we reach the right thing to do, but by the wrong steps, when the middle term is false. Hence this type of deliberation, leading us by the wrong steps to the right thing to do, is not enough for good deliberation either.

Further, one person may deliberate a long time before reaching the right thing to do, while another reaches it quickly. Nor, then, is the first condition enough for good deliberation; good deliberation is correctness that accords with what is beneficial, about the right thing, in the right way, and at the right time.

Further, our deliberation may be either good without qualification or good only to the extent that it promotes some [limited] end. Hence unqualifiedly good deliberation is the sort that correctly promotes the unqualified end [i.e., the highest good], while the [limited] sort is the sort that correctly promotes some [limited] end. If, then, having deliberated well is proper to a prudent person, good deliberation will be the type of correctness that accords with what is expedient for promoting the end about which prudence is true supposition.

10

Comprehension, i.e. good comprehension, makes people, as we say, comprehend and comprehend well. It is not the same as scientific knowledge in general. Nor is it the same as belief, since, if it were, everyone would have comprehension. Nor is it any one of the specific sciences [with its own specific area], in the

way that medicine is about what is healthy or geometry is about magnitudes. For comprehension is neither about what always is and is unchanging nor about just anything that comes to be. It is about what we might be puzzled about and might deliberate about. That is why it is about the same things as prudence, but not the same as prudence.

For prudence is prescriptive, since its end is what action we must or must not do, whereas comprehension only judges. (For comprehension and good comprehension are the same; and so are people with comprehension and with good comprehension.) Comprehension is neither having prudence nor acquiring it.

Rather, it is similar to the way learning is called comprehending when someone applies scientific knowledge. In the same way comprehension consists in the application of belief to judge someone else's remarks on a question that concerns prudence, and moreover it must judge them finely since judging well is the same as judging finely. That is how the name 'comprehension' was attached to the comprehension that makes people have good comprehension. It is derived from the comprehension found in learning; for we often call learning comprehending.

11

The [state] called consideration makes people, as we say, considerate and makes them have consideration; it is the correct judgment of the decent person. A sign of this is our saying that the decent person more than others is considerate, and that it is decent to be considerate about some things. Considerateness is the correct consideration that judges what is decent; and correct consideration judges what is true.

It is reasonable that all these states tend in the same direction. For we ascribe consideration, comprehension, prudence, and understanding to the same people, and say that these have consideration, and thereby understanding, and that they are prudent and comprehending. For all these capacities are about the last things, i.e., particulars. Moreover, someone has comprehension and good consideration, or has considerateness, in being able to judge about the matters that concern the prudent person; for the decent is the common concern of all good people in relations with other people.

[These states are all concerned with particulars because] all the things achievable in action are particular and last things. For the prudent person also must recognize [things achievable in action], while comprehension and consideration are concerned with things achievable in action, and these are last things.

Understanding is also concerned with the last things, and in both directions. For there is understanding, not a rational account, both about the first terms and about the last. In demonstrations understanding is about the unchanging terms that are first. In [premises] about action understanding is about the last term, the one that admits of being otherwise, and [hence] about the minor premise. For these last terms are beginnings of the [end] to be aimed at, since universals are reached from particulars.

We must, therefore, have perception of these particulars, and this perception is understanding. That is why understanding is both beginning and end; for demonstrations [begin] from these things and are about them.

That is why these states actually seem to grow naturally, so that, whereas no one seems to have natural wisdom, people seem to have natural consideration, comprehension, and judgment. A sign [of their apparent natural character] is our thinking that they also correspond to someone's age, and the fact that understanding and consideration belong to a certain age, as though nature were the cause. And so we must attend to the undemonstrated remarks and beliefs of experienced and older people or of prudent people, no less than to demonstrations. For these people see correctly because experience has given them their eye.

We have said, then, what prudence and wisdom are; what each is about; and that each is the virtue of a different part of the soul.

12

One might, however, go through some puzzles about what use they are. For wisdom is not concerned with any sort of coming into being, and hence will not study any source of human happiness. Admittedly, prudence will study this; but what do we need it for? For

knowledge of what is healthy or fit (i.e., of what results from the state of health, not of what produces it) makes us no readier to act appropriately if we are already healthy; for having the science of medicine or gymnastics makes us no readier to act appropriately. Similarly, prudence is the science of what is just and what is fine, and what is good for a human being; but this is how the good man acts; and if we are already good, knowledge of them makes us no readier to act appropriately, since virtues are states [activated in actions].

If we concede that prudence is not useful for this, should we say it is useful for becoming good? In that case it will be no use to those who are already excellent. Nor, however, will it be any use to those who are not. For it will not matter to them whether they have it themselves or take the advice of others who have it. The advice of others will be quite adequate for us, just as it is with health: we wish to be healthy, but still do not learn medical science.

Besides, it would seem absurd for prudence, inferior as it is to wisdom, to control it [as a superior. But this will be the result], since the science that produces also rules and prescribes about its product.

We must discuss these questions; for so far we have only raised the puzzles about them.

1144a First of all, let us state that both prudence and wisdom must be choiceworthy in themselves, even if neither produces anything at all; for each is the virtue of one of the two [rational] parts [of the soul].

Secondly, they do produce something. Wisdom produces happiness, not in the way that medical science produces health, but in the way that health produces [health]. For since wisdom is a part of virtue as a whole, it makes us happy because it is a state that we possess and activate.

Further, we fulfill our function insofar as we have prudence and virtue of character; for virtue makes the goal correct, and prudence makes the things promoting the goal [correct]. The fourth part of the soul, the nutritive part, has no such virtue [related to our function], since no action is up to it to do or not to do.

To answer the claim that prudence will make us no better at achieving fine and just actions, we must begin from a little further back [in our discussion]. We begin here: we say that some people who do just actions are not yet thereby just, if, for instance, they do the actions prescribed by the laws either unwillingly or because of ignorance or because of some other end, not because of the actions themselves, even though they do the right actions, those that the excellent person ought to do. Equally, however, it would seem to be possible for someone to do each type of action in the state that makes him a good person, that is to say, because of decision and for the sake of the actions themselves.

Now virtue makes the decision correct; but the actions that are naturally to be done to fulfill the decision are the concern not of virtue, but of another capacity. We must grasp them more perspicuously before continuing our discussion.

There is a capacity, called cleverness, which is such as to be able to do the actions that tend to promote whatever goal is assumed and to attain them. If, then, the goal is fine, cleverness is praiseworthy, and if the goal is base, cleverness is unscrupulousness. That is why both prudent and unscrupulous people are called clever.

Prudence is not cleverness, though it requires this capacity. [Prudence,] this eye of the soul, requires virtue in order to reach its fully developed state, as we have said and as is clear. For inferences about actions have a principle, 'Since the end and the best good is this sort of thing' (whatever it actually is—let it be any old thing for the sake of argument). And this [best good] is apparent only to the good person; for vice perverts us and produces false views about the principles of actions. Evidently, then, we cannot be prudent without being good. *1144b*

13

We must, then, also examine virtue over again. For virtue is similar [in this way] to prudence; as prudence is related to cleverness, not the same but similar, so natural virtue is related to full virtue. For each of us seems to possess his type of character to some extent by nature; for in fact we are just, brave, prone to temperance, or have another feature, immediately from birth. But still we look for some further condition to be full goodness, and we expect to possess these features in another way. For these natural states belong to children and to beasts as well [as to adults], but without understanding they are evidently harmful. At any rate, this much would seem to be clear: Just as

a heavy body moving around unable to see suffers a heavy fall because it has no sight, so it is with virtue. [A naturally well-endowed person without understanding will harm himself.]

But if someone acquires understanding, he improves in his actions; and the state he now has, though still similar [to the natural one], will be fully virtue. And so, just as there are two sorts of conditions, cleverness and prudence, in the part of the soul that has belief, so also there are two in the part that has character, natural virtue and full virtue. And of these full virtue cannot be acquired without prudence.

That is why some say that all the virtues are [instances of] prudence, and why the inquiries Socrates used to undertake were in one way correct, and in another way in error. For insofar as he thought all the virtues are [instances of] prudence, he was in error; but insofar as he thought they all require prudence, what he used to say was right.

Here is a sign of this: Whenever people now define virtue, they all say what state it is and what it is related to, and then add that it is the state in accord with the correct reason. Now the correct reason is the reason in accord with prudence; it would seem, then, that they all in a way intuitively believe that the state in accord with prudence is virtue.

But we must make a slight change. For it is not merely the state in accord with the correct reason, but the state involving the correct reason, that is virtue. And it is prudence that is the correct reason in this area. Socrates, then, used to think the virtues are [instances of] reason because he thought they are all [instances of] knowledge, whereas we think they involve reason.

What we have said, then, makes it clear that we cannot be fully good without prudence, or prudent without virtue of character. And in this way we can also solve the dialectical argument that someone might use to show that the virtues are separated from one another. For, [it is argued], since the same person is not naturally best suited for all the virtues, someone will already have one virtue before he gets another. This is indeed possible in the case of the natural virtues. It is not possible, however, in the case of the [full] virtues that someone must have to be called good without qualification; for one has all the virtues if and only if one has prudence, which is a single state.

And it is clear that, even if prudence were useless in action, we would need it because it is the virtue of this part of the soul, and because the decision will not be correct without prudence or without virtue— for [virtue] makes us achieve the end, whereas [prudence] makes us achieve the things that promote the end.

Moreover, prudence does not control wisdom or the better part of the soul, just as medical science does not control health. For medical science does not use health, but only aims to bring health into being; hence it prescribes for the sake of health, but does not prescribe to health. Besides, [saying that prudence controls wisdom] would be like saying that political science rules the gods because it prescribes about everything in the city.

BOOK VII

1

Let us now make a new start, and say that there are three conditions of character to be avoided—vice, incontinence, and bestiality. The contraries of two of these are clear; we call one virtue and the other continence.

The contrary to bestiality is most suitably called virtue superior to us, a heroic, indeed divine, sort of virtue. Thus Homer made Priam say that Hector was remarkably good; 'nor did he look as though he were the child of a mortal man, but of a god.' And so, if, as they say, human beings become gods because of exceedingly great virtue, this is clearly the sort of state that would be opposite to the bestial state. For indeed, just as a beast has neither virtue nor vice, so neither does a god, but the god's state is more honorable than virtue, and the beast's belongs to some kind different from vice.

Now it is rare that a divine man exists. (This is what the Spartans habitually call him; whenever they very much admire someone, they say he is a divine man.) Similarly, the bestial person is also rare among human beings. He is most often found in foreigners; but some bestial features also result from diseases and deformities. We also use 'bestial' as a term of reproach for people whose vice exceeds the human level.

We must make some remarks about this condition later. We have discussed vice earlier. We must now discuss incontinence, softness, and self-indulgence, and also continence and resistance; for we must not suppose that continence and incontinence are concerned with the same states as virtue and vice, or that they belong to a different kind.

As in the other cases, we must set out the appearances, and first of all go through the puzzles. In this way we must prove the common beliefs about these ways of being affected—ideally, all the common beliefs, but if not all, most of them, and the most important. For if the objections are solved, and the common beliefs are left, it will be an adequate proof.

Continence and resistance seem to be good and praiseworthy conditions, whereas incontinence and softness seem to be base and blameworthy conditions. The continent person seems to be the same as one who abides by his rational calculation; and the incontinent person seems to be the same as one who abandons it. The incontinent person knows that his actions are base, but does them because of his feelings, whereas the continent person knows that his appetites are base, but because of reason does not follow them.

People think the temperate person is continent and resistant. Some think that every continent and resistant person is temperate, while others do not. Some people say the incontinent person is intemperate and the intemperate incontinent, with no distinction; others say they are different.

Sometimes it is said that a prudent person cannot be incontinent; but sometimes it is said that some people are prudent and clever, but still incontinent.

Further, people are called incontinent about spirit, honor, and gain.

These, then, are the things that are said.

2

We might be puzzled about what sort of correct supposition someone has when he acts incontinently.

First of all, some say he cannot have knowledge [at the time he acts]. For it would be terrible, Socrates used to think, for knowledge to be in someone, but mastered by something else, and dragged around like a slave. For Socrates used to oppose the account [of incontinence] in general, in the belief that there is no incontinence; for no one, in Socrates' view, supposes while he acts that his action conflicts with what is best; our action conflicts with what is best only because we are ignorant [of the conflict].

This argument, then, contradicts things that appear manifestly. If ignorance causes the incontinent person to be affected as he is, we must look for the type of ignorance that it turns out to be; for it is evident, at any rate, that before he is affected the person who acts incontinently does not think [he should do the action he eventually does].

Some people concede some of [Socrates' points], but reject some of them. For they agree that nothing is superior to knowledge, but they deny the claim that no one's action conflicts with what has seemed better to him. That is why they say that when the incontinent person is overcome by pleasure he has only belief, not knowledge.

If, however, he has belief, not knowledge, and the supposition that resists is not strong, but only a weak one, such as people have when they are in doubt, we will pardon failure to abide by these beliefs against strong appetites. In fact, however, we do not pardon vice, or any other blameworthy condition [and incontinence is one of these].

Then is it prudence that resists, since it is the strongest? This is absurd. For on this view the same person will be both prudent and incontinent; but no one would say that the prudent person is the sort to do the worst actions willingly. Besides, we have shown earlier that the prudent person acts [on his knowledge], since he is concerned with the last things, [i.e., particulars] and that he has the other virtues.

Further, if the continent person must have strong and base appetites, the temperate person will not be continent nor the continent person temperate. For the temperate person is not the sort to have either excessive or base appetites; but [the continent person] must have both. For if his appetites are good, the state that prevents him from following them must be base, so that not all continence is excellent. If, however, the appetites are weak and not base, continence is nothing impressive; and if they are base and weak, it is nothing great.

Further, if continence makes someone prone to abide by every belief, it is bad, if, for instance, it

makes him abide by a false as well [as true] belief. And if incontinence makes someone prone to abandon every belief, there will be an excellent type of incontinence. Take, for instance, Neoptolemus in Sophocles' *Philoctetes*. For he is praiseworthy for his failure to abide by [his promise to tell the lies] that Odysseus had persuaded him [to tell]; [he breaks his promise] because he feels pain at lying.

Further, the sophistical argument is a puzzle. For [the sophists] wish to refute an [opponent, by showing] that his views have paradoxical results, so that they will be clever in encounters. Hence the inference that results is a puzzle; for thought is tied up, whenever it does not want to stand still, because the conclusion is displeasing, but it cannot advance, because it cannot solve the argument. A certain argument, then, concludes that foolishness combined with incontinence is virtue. For incontinence makes someone act contrary to what he supposes [is right]; but since he supposes that good things are bad and that it is wrong to do them, he will do the good actions, not the bad.

Further, someone who acts to pursue what is pleasant because this is what he is persuaded and decides to do seems to be better than someone who acts not because of rational calculation, but because of incontinence. For the first person is the easier to cure, because he might be persuaded to act otherwise; but the incontinent person illustrates the proverb 'If water chokes us, what must we drink to wash it down?' For if he had been persuaded to do the action he does, he would have stopped when he was persuaded to act otherwise; but in fact, though already persuaded to act otherwise, he still acts [wrongly].

Further, is there incontinence and continence about everything? If so, who is simply incontinent? For no one has all the types of incontinence, but we say that some people are simply incontinent.

These, then, are the sorts of puzzles that arise. We must undermine some of these claims, and leave others intact; for the solution of the puzzle is the discovery [of what we are seeking].

3

First, then, we must examine whether the incontinent has knowledge or not, and in what way he has it. Second, what should we take to be the range of incontinence and continence—every pleasure and pain, or some definite subclass? Are the continent and the resistant person the same or different? Similarly we must deal with the other questions that are relevant to this study.

We begin by examining whether continence and incontinence differ from other things by their range or by their attitudes. In other words, is the incontinent person incontinent because of a specific range of actions, or because of a specific attitude, or because of both? Next, is there incontinence and continence about everything, or not?

For the simply incontinent person is not incontinent about everything, but he has the same range as the intemperate person. Nor is he incontinent simply by being inclined toward these things—that would make incontinence the same as intemperance. Rather, he is incontinent by being inclined toward them in this way. For the intemperate person acts on decision when he is led on, since he thinks it is right in every case to pursue the pleasant thing at hand; the incontinent person, however, thinks it is wrong to pursue this pleasant thing, yet still pursues it.

It is claimed that the incontinent person's action conflicts with the true belief, not with knowledge. But whether it is knowledge or belief that he has does not matter for this argument. For some people with belief are in no doubt, but think they have exact knowledge.

If, then, it is the weakness of their conviction that makes people with belief, not people with knowledge, act in conflict with their supposition, it follows that knowledge will [for these purposes] be no different from belief; for, as Heracleitus makes clear, some people's convictions about what they believe are no weaker than other people's convictions about what they know.

But we speak of knowing in two ways; we ascribe it both to someone who has it without using it and to someone who is using it. Hence it will matter whether someone has the knowledge that his action is wrong, without attending to his knowledge, or he both has it and attends to it. For this second case seems extraordinary, but wrong action when he does not attend to his knowledge does not seem extraordinary.

Further, since there are two types of premises, someone's action may well conflict with his knowl-

edge if he has both types of premises, but uses only the universal premise and not the particular premise. For it is particulars that are achievable in action. There are also different types of universal, one type referring to the agent himself, and the other referring to the object. Perhaps, for instance, someone knows that dry things benefit every human being, and that he himself is a human being, or that this sort of thing is dry; but he either does not have or does not activate the knowledge that this particular thing is of this sort. These ways [of knowing and not knowing], then, make such a remarkable difference that it seems quite intelligible [for someone acting against his knowledge] to have the one sort of knowledge, but astounding if he has the other sort.

Further, human beings may have knowledge in a way different from those we have described. For we see that having without using includes different types of having; hence some people, such as those asleep or mad or drunk, both have knowledge in a way and do not have it. Moreover, this is the condition of those affected by strong feelings. For spirited reactions, sexual appetites, and some conditions of this sort clearly [both disturb knowledge and] disturb the body as well, and even produce fits of madness in some people. Clearly, then [since incontinents are also affected by strong feelings], we should say that they have knowledge in a way similar to these people.

Saying the words that come from knowledge is no sign [of fully having it]. For people affected in these ways even recite demonstrations and verses of Empedocles. And those who have just learned something do not yet know it, though they string the words together; for it must grow into them, and this takes time. And so we must suppose that those who are acting incontinently also say the words in the way that actors do.

Further, we may also look at the cause in the following way, referring to [human] nature. For one belief is universal; the other is about particulars, and because they are particulars, perception controls them. And in the cases where these two beliefs result in one belief, it is necessary, in one case, for the soul to affirm what has been concluded, but, in the case of beliefs about production, to act at once on what has been concluded. If, for instance, everything sweet must be tasted, and this, some one particular thing, is sweet, it is necessary for someone who is able and unhindered also to act on this at the same time.

Suppose, then, that someone has the universal belief hindering him from tasting; he has the second belief, that everything sweet is pleasant and this is sweet, and this belief is active; but it turns out that appetite is present in him. The belief, then, [that is formed from the previous two beliefs] tells him to avoid this, but appetite leads him on, since it is capable of moving each of the [bodily] parts.

The result, then, is that in a way reason and belief make him act incontinently. The [second] belief is contrary to the correct reason, but only coincidentally, not in its own right. For the appetite, not the belief, is contrary [in its own right to the correct reason]. That is also why beasts are not incontinent, because they have no universal supposition, but [only] appearance and memory of particulars.

How is the ignorance resolved, so that the incontinent person recovers his knowledge? The same account that applies to someone drunk or asleep applies here too, and is not special to this way of being affected. We must hear it from the natural scientists.

Since the last premise is a belief about something perceptible, and controls action, this is what the incontinent person does not have when he is being affected. Or [rather] the way he has it is not knowledge of it, but, as we saw, [merely] saying the words, as the drunk says the words of Empedocles.

And since the last term does not seem to be universal, or expressive of knowledge in the same way as the universal term, even the result Socrates was looking for would seem to come about. For the knowledge that is present when someone is affected by incontinence, and that is dragged about because he is affected, is not the sort that seems to be fully knowledge, but it is only perceptual knowledge.

So much, then, for knowing and not knowing, and for how it is possible to know and still to act incontinently.

4

Next we must say whether anyone is simply incontinent, or all incontinents are incontinent in some particular way; and if someone is simply incontinent,

we must say what sorts of things he is incontinent about.

First of all, both continence and resistance and incontinence and softness are evidently about pleasures and pains.

Some sources of pleasure are necessary; others are choiceworthy in their own right, but can be taken to excess. The necessary ones are the bodily conditions, i.e., those that concern food, sexual intercourse, and the sorts of bodily conditions that we took temperance and intemperance to be about. Other sources of pleasure are not necessary, but are choiceworthy in themselves, such as victory, honor, wealth, and similar good and pleasant things.

When people go to excess, against the correct reason in them, in the pursuit of these sources of pleasure, we do not call them simply incontinent, but add the qualification that they are incontinent about wealth, gain, honor, or spirit, and not simply incontinent. For we assume that they are different, and called incontinent [only] because of a similarity, just as the Olympic victor named Human[12] was different, since for him the common account [of human being] was only a little different from his special one, but it was different nonetheless.

A sign in favor of what we say is the fact that incontinence is blamed not only as an error but as a vice, either unqualified or partial, while none of these conditions is blamed as a vice.

Now consider the people concerned with the bodily gratifications, those that we take temperance and intemperance to be about. Some of these people go to excess in pursuing these pleasant things and avoiding painful things—hunger, thirst, heat, cold, and all the objects of touch and taste—not, however, because they have decided on it, but against their decision and thought. These are the people called simply incontinent, not with the added condition that they are incontinent about, for instance, anger.

A sign of this is the fact that people are also called soft about these [bodily] pleasures, but not about any of the non-necessary ones.

This is also why we include the incontinent and the intemperate person, and the continent and the temperate person, in the same class, but do not include any of those who are incontinent in some particular way. It is because incontinence and intemperance are, in a way, about the same pleasures and pains. In fact they are about the same things, but not in the same way; the intemperate person decides on them, but the incontinent person does not. That is why, if someone has no appetites, or slight ones, for excesses, but still pursues them and avoids moderate pains, we will take him to be more intemperate than the person who does it because he has intense appetites. For think of the lengths he would go to if he also acquired vigorous appetites and felt severe pains at the lack of necessities.

Some pleasant things are naturally choiceworthy, some naturally the contrary, some in between, as we divided them earlier. Hence some appetites and pleasures are for fine and excellent kinds of things, such as wealth, profit, victory, and honor. About all these and about the things in between people are blamed not for feeling an appetite and love for them, but for doing so in a particular way, namely to excess.

Some people are overcome by, or pursue, some of these naturally fine and good things to a degree that goes against reason; they take honor, or children, or parents (for instance) more seriously than is right. For though these are certainly good and people are praised for taking them seriously, still excess about them is also possible. It is excessive if one fights, as Niobe[13] did [for her children], even with the gods, or if one regards his father as Satyrus,[14] nicknamed the Fatherlover, did—for he seemed to be excessively silly about it. There is no vice here, for the reason we have given, since each of these things is naturally choiceworthy for itself, though excess about them is bad and to be avoided.

Similarly, there is no incontinence here either, since incontinence is not merely to be avoided, but also blameworthy [and these conditions are not]. But because this way of being affected is similar to incontinence, people call it incontinence, adding the qualification that it is incontinence about this or that. Just

12. [The winning boxer in the Olympics of 456 was called Anthropos.—T.I.]

13. [Claimed that her children were more beautiful than those of Leto.—M.L.M.]

14. [Stories are told of Satyrus that he committed suicide in grief when his father died.—M.L.M.]

so they call someone a bad doctor or a bad actor, though they would never call him simply bad, since each of these conditions is not vice, but only similar to it by analogy. It is clear, likewise, that the only condition we should take to be continence or incontinence is the one concerned with what concerns temperance and intemperance. We speak of incontinence about spirit because of the similarity [to simple incontinence], and hence add the qualification that someone is incontinent about spirit, as we do in the case of honor or gain.

5

Some things are naturally pleasant, and some of these are pleasant without qualification, whereas others correspond to differences between kinds of animals and of human beings. Other things are not naturally pleasant, but deformities or habits or base natures make them pleasant; and we can see states that are about each of these that are similar to [states that are about naturally pleasant things].

By bestial states I mean, for instance, the female human being who is said to tear pregnant women apart and devour the children; or the pleasures of some of the savage people around the Black Sea who are reputed to enjoy raw meat and human flesh, while some trade their children to each other to feast on; or what is said about Phalaris.

These states are bestial. Other states result from attacks of disease, and in some cases from fits of madness—for instance, the person who sacrificed his mother and ate her, and the one who ate the liver of his fellow slave. Others result from diseased conditions or from habit—for instance, plucking hairs, chewing nails, even coal and earth, and besides these sexual intercourse between males. For in some people these result from [a diseased] nature, in others from habit, as, for instance, in those who have suffered wanton [sexual] assault since their childhood.

If nature is the cause, no one would call these people incontinent, any more than women would be called incontinent for being mounted rather than mounting. The same applies to those who are in a diseased state because of habit.

Each of these states, then, is outside the limits of vice, just as bestiality is. If someone who has them overcomes them or is overcome by them, that is not simple [continence or] incontinence, but the type so called from similarity, just as someone who is overcome by spirit should be called incontinent in relation to his feeling, but not [simply] incontinent. For among all the excesses of foolishness, cowardice, intemperance, and irritability some are bestial, some diseased.

If, for instance, someone's natural character makes him afraid of everything, even the noise of a mouse, he is a coward with a bestial sort of cowardice. Another person was afraid of a weasel because of an attack of disease. Among foolish people also, those who naturally lack reason and live only by sense perception, as some races of distant foreigners do, are bestial. Those who are foolish because of attacks of disease, such as epilepsy, or because of fits of madness, are diseased.

Sometimes it is possible to have some of these conditions without being overcome—if, for instance, Phalaris had an appetite to eat a child or for some bizarre sexual pleasure, but restrained it. It is also possible to be overcome by these conditions and not merely to have them.

One sort of vice is human, and this is called simple vice; another sort is called vice with an added condition, and is said to be bestial or diseased vice, but not simple vice. Similarly, then, it is also clear that one sort of incontinence is bestial, another diseased, but only the incontinence corresponding to human intemperance is simple incontinence.

It is clear, then, that incontinence and continence apply only within the range of intemperance and temperance, and that for other things there is another form of incontinence, so called by transference of the name, and not simply.

6

Moreover, let us observe that incontinence about spirit is less shameful than incontinence about appetites. For spirit would seem to hear reason a bit, but to mishear it. It is like overhasty servants who run out before they have heard all their instructions, and then carry them out wrongly, or dogs who bark at any noise at all, before looking to see if it is a friend. In the same way, since spirit is naturally hot and hasty, it

hears, but does not hear the instruction, and rushes off to exact a penalty. For reason or appearance has shown that we are being slighted or wantonly insulted; and spirit, as though it had inferred that it is right to fight this sort of thing, is irritated at once. Appetite, however, only needs reason or perception to say that this is pleasant, and it rushes off for gratification.

1149b And so spirit follows reason in a way, but appetite does not. Therefore [incontinence about appetite] is more shameful. For if someone is incontinent about spirit, he is overcome by reason in a way; but if he is incontinent about appetite, he is overcome by appetite, not by reason.

Further, it is more pardonable to follow natural desires, since it is also more pardonable to follow those natural appetites that are common to everyone and to the extent that they are common. Now spirit and irritability are more natural than the excessive and unnecessary appetites. It is just as the son said in his defense for beating his father: 'Yes, and he beat his father, and his father beat *his* father before that'; and pointing to his young son, he said, 'And he will beat me when he becomes a man; it runs in our family.' Similarly, the father being dragged by his son kept urging him to stop at the front door, since that was as far as he had dragged his own father.

Further, those who plot more are more unjust. Now the spirited person does not plot, and neither does spirit; it is open. Appetite, however, is like what they say about Aphrodite, 'trick weaving Cypris,' and what Homer says about her embroidered girdle: 'Blandishment, which steals the wits even of the very prudent.' If, then, incontinence about appetite is more unjust and more shameful than incontinence about spirit, it is simple incontinence, and vice in a way.

Further, no one feels pain when he commits wanton aggression; but whatever someone does from anger, he feels pain when he does it, whereas the wanton aggressor does what he does with pleasure. Now if whatever more justly provokes anger is more unjust, incontinence caused by appetite is more unjust, since spirit involves no wanton aggression.

It is clear, then, how incontinence about appetites is more shameful than incontinence about spirit, and that continence and incontinence are about bodily appetites and pleasures.

Now we must grasp the varieties of these appetites and pleasures. As we said at the beginning, some appetites are human and natural in kind and degree, some bestial, some caused by deformities and diseases. Temperance and intemperance are concerned only with the first of these. This is also why we do not call beasts either temperate or intemperate, except by transference of the name, if one kind of animal exceeds another altogether in wanton aggression, destructiveness, and ravenousness. For beasts have neither decision nor rational calculation, but are outside [rational] nature, as the madmen among human beings are.

1150a

Bestiality is less grave than vice, but more frightening; for the best part is not corrupted, as it is in a human being, but absent altogether. Hence a comparison between the two is like a comparison between an inanimate and an animate being to see which is worse. For in each case the badness of something that lacks an internal principle of its badness is less destructive than the badness of something that has such an internal principle; and understanding is such an internal principle. It is similar, then, to a comparison between the injustice [of a beast] and an unjust human being; for in a way each [of these] is worse, since a bad human being can do innumerably more bad things than a beast.

7

Let us now consider the pleasures and pains arising through touch and taste, the appetites for these pleasures, and the aversions from these pains. Earlier we defined temperance and intemperance as being about these. Now it is possible for someone to be in the state in which he is overcome, even by [pleasure and pains] which most people overcome; and it is possible to overcome even those that overcome most people. The person who is prone to be overcome by pleasures is incontinent; the one who overcomes is continent; the one overcome by pains is soft; and the one who overcomes them is resistant. The state of most people is in between, though indeed they may lean more toward the worse states.

Now some pleasures are necessary and some are not. [The necessary ones are necessary] to a certain extent, but their excesses and deficiencies are not. The same is true for appetites and pains. One person

pursues excesses of pleasant things because they are excesses and because he decides on it, for themselves and not for some further result. He is intemperate; for he is bound to have no regrets, and so is incurable, since someone without regrets is incurable. The one who is deficient is his opposite, while the intermediate one is temperate. The same is true of the one who avoids bodily pains not because he is overcome, but because he decides on it.

One of those who do not [act on] decision is led on because of pleasure; the other is led on because he is avoiding the pain that comes from appetite; hence these two differ from each other.

Now it would seem to everyone that someone who does a shameful action from no appetite or a weak one is worse than if he does it from an intense appetite; and, similarly, that if he strikes another not from anger, he is worse than if he strikes from anger. For [if he can do such evil when he is unaffected by feeling], what would he have done if he had been strongly affected? That is why the intemperate person is worse than the incontinent.

One of the states mentioned [i.e., the decision to avoid pain] is more a species of softness, whereas the other person is intemperate.

The continent person is opposite to the incontinent, and the resistant to the soft. For resistance consists in holding out, and continence in overcoming, but holding out is different from overcoming, just as not being defeated differs from winning; hence continence is more choiceworthy than resistance.

1150b Someone who is deficient in withstanding what most people withstand, and are capable of withstanding, is soft and self-indulgent; for self-indulgence is a kind of softness. This person trails his cloak to avoid the labor and pain of lifting it, and imitates an invalid, though he does not think he is miserable—he is [merely] similar to a miserable person.

It is similar with continence and incontinence also. For it is not surprising if someone is overcome by strong and excessive pleasures or pains; indeed, this is pardonable, provided he struggles against them—like Theodectes' Philoctetes bitten by the snake, or Carcinus' Cercyon in the *Alope*, and like those who are trying to restrain their laughter and burst out laughing all at once, as happened to Xenophantus. But it is surprising if someone is overcome by what most people can resist, and is incapable of withstanding it, not because of his hereditary nature or because of disease (as, for instance, the Scythian kings' softness is hereditary, and as the female is distinguished [by softness] from the male).

The lover of amusements also seems to be intemperate, but in fact he is soft. For amusement is a relaxation, since it is a release, and the lover of amusement is one of those who go to excess here.

One type of incontinence is impetuosity, while another is weakness. For the weak person deliberates, but then his feeling makes him abandon the result of his deliberation; but the impetuous person is led on by his feelings because he has not deliberated. For some people are like those who do not get tickled themselves if they tickle someone else first; if they see and notice something in advance, and rouse themselves and their rational calculation, they are not overcome by feelings, no matter whether something is pleasant or painful. Quick-tempered and volatile people are most prone to be impetuous incontinents. For in quick-tempered people the appetite is so fast, and in volatile people so intense, that they do not wait for reason, because they tend to follow appearance.

8

The intemperate person, as we said, is not prone to regret, since he abides by his decision [when he acts]. But every incontinent is prone to regret. That is why the truth is not what we said in raising the puzzles, but in fact the intemperate person is incurable, and the incontinent curable. For vice resembles diseases such as dropsy or consumption, while incontinence is more like epilepsy; vice is a continuous bad condition, but incontinence is not. For the incontinent is similar to those who get drunk quickly from a little *1151a3* wine, and from less than it takes for most people. *4, 5* And in general incontinence and vice are of different *1150b35* kinds. For the vicious person does not recognize that he is vicious, whereas the incontinent person recognizes that he is incontinent.

Among the incontinent people themselves, those *1151a* who abandon themselves [to desire, i.e., the impetuous] are better than those [i.e., the weak] who have reason but do not abide by it. For the second type

are overcome by a less strong feeling, and do not act without having deliberated, as the first type do.

Evidently, then, incontinence is not a vice, though presumably it is one in a way. For incontinence is against one's decision, but vice accords with decision. All the same, incontinence is similar to vice in its actions. Thus Demodocus attacks the Milesians: 'The Milesians are not stupid, but they do what stupid people would do'; in the same way incontinents are not unjust, but will do injustice.

Moreover, the incontinent person is the sort to pursue excessive bodily pleasures against correct reason, but not because he is persuaded [it is best]. The intemperate person, however, is persuaded, because he is the sort of person to pursue them. Hence the incontinent person is easily persuaded out of it, while the intemperate person is not.

For virtue preserves the principle, whereas vice corrupts it; and in actions the end we act for is the principle, as the assumptions are the principles in mathematics. Reason does not teach the principles either in mathematics or in actions; [with actions] it is virtue, either natural or habituated, that teaches correct belief about the principle. The sort of person [with this virtue] is temperate, and the contrary sort intemperate.

But there is also someone who because of his feelings abandons himself against correct reason. They overcome him far enough so that his actions do not accord with correct reason, but not so far as to make him the sort of person to be persuaded that it is right to pursue such pleasures without restraint. This, then, is the incontinent person. He is better than the intemperate person, and is not bad without qualification, since the best thing, the principle, is preserved in him. Another sort of person is contrary to him. [This is the continent person,] who abides [by reason] and does not abandon himself, not because of his feelings at least. It is evident from this that the continent person's state is excellent, and the incontinent person's state is base.

9

Then is someone continent if he abides by just any sort of reason and any sort of decision, or must he abide by the correct decision? And is someone incontinent if he fails to abide by just any decision and any reason, or must it be reason that is not false, and the correct decision? This was the puzzle raised earlier.

Perhaps in fact the continent person abides, and the incontinent fails to abide, by just any decision coincidentally, but abides by the true reason and the correct decision in itself. For if someone chooses or pursues one thing because of a second, he pursues and chooses the second in itself and the first coincidentally. Now when we speak of something without qualification, we speak of it in itself. Hence in one way [i.e., coincidentally] the continent person abides by just any belief, and the incontinent abandons it; but, [speaking] without qualification, the continent person abides by the true belief and the incontinent person abandons it.

Now there are some other people who tend to abide by their belief. These are the people called stubborn, who are hard to persuade into something and not easy to persuade out of it. These have some similarity to continent people, just as the wasteful person has to the generous, and the rash to the confident. But they are different on many points. For the continent person is not swayed because of feeling and appetite; [but he is not inflexible about everything] since he will be easily persuaded whenever it is appropriate. But stubborn people are not swayed by reason; for they acquire appetites, and many of them are led on by pleasures.

The stubborn include the opinionated, the ignorant, and the boorish. The opinionated are as they are because of pleasure and pain. For they find enjoyment in winning [the argument] if they are not persuaded to change their views, and they feel pain if their opinions are voided, like decrees [in the Assembly]. Hence they are more like incontinent than like continent people.

There are also some people who do not abide by their resolutions, but not because they are incontinent—Neoptolemus, for instance, in Sophocles' *Philoctetes*. Though certainly it was pleasure that made him abandon his resolution, it was a fine pleasure; for telling the truth was pleasant to him, but Odysseus had persuaded him to lie. [He is not incontinent;] for not everyone who does something because of pleasure is either intemperate or base or incontinent, but

only someone who does it because of a shameful pleasure.

There is also the sort of person who enjoys bodily things less than is right, and does not abide by reason; hence the continent person is intermediate between this person and the incontinent. For the incontinent fails to abide by reason because of too much [enjoyment]; the other person fails because of too little; but the continent person abides and is not swayed because of too much or too little. If continence is excellent, then both of these contrary states must be base, as indeed they appear. However, the other state is evident in only a few people on a few occasions; and hence continence seems to be contrary only to incontinence, just as temperance seems to be contrary only to intemperance.

Now many things are called by some name because of similarity [to genuine cases]; this has happened also to the continence of the temperate person, because of similarity. For the continent and the temperate person are both the sort to do nothing against reason because of bodily pleasures, but the continent person has base appetites, whereas the temperate person lacks them. The temperate person is the sort to find nothing pleasant against reason, but the continent is the sort to find such things pleasant but not to be led by them.

The incontinent and the intemperate person are similar too; though they are different, they both pursue bodily sources of pleasure. But the intemperate person [pursues them because he] also thinks it is right, while the incontinent person does not think so.

10

Nor can the same person be at once both prudent and incontinent. For we have shown that a prudent person must also at the same time be excellent in character, [and the incontinent person is not]. However, a clever person may well be incontinent. Indeed, the reason people sometimes seem to be prudent but incontinent is that [really they are only clever and] cleverness differs from prudence in the way we described in our first discussion; though they are closely related in definition, they differ in [so far as prudence requires the correct] decision.

Moreover, someone is not prudent simply by knowing; he must also act on his knowledge. But the incontinent person does not. He is not in the condition of someone who knows and is attending [to his knowledge, as he would have to be if he were prudent], but in the condition of one asleep or drunk.

He acts willingly; for in a way he acts in knowledge both of what he is doing and of the end he is doing it for. But he is not base, since his decision is decent; hence he is half base. Nor is he unjust, since he is not a plotter. For one type of incontinent person [i.e., the weak] does not abide by the result of his deliberation, while the volatile [i.e., impetuous] person is not even prone to deliberate at all.

In fact the incontinent person is like a city that votes for all the right decrees and has excellent laws, but does not apply them, as in Anaxandrides' taunt, 'The city willed it, that cares nothing for laws.' The base person, by contrast, is like a city that applies its laws, but applies bad ones.

Incontinence and continence are about what exceeds the state of most people; the continent person abides [by reason] more than most people are capable of doing, the incontinent person less.

The [impetuous] type of incontinence found in volatile people is more easily cured than the [weak] type of incontinence found in those who deliberate but do not abide by it. And incontinents through habituation are more easily cured than the natural incontinents; for habit is easier than nature to change. Indeed the reason why habit is also difficult to change is that it is like nature; as Eunenus says, 'Habit, I say, is longtime training, my friend, and in the end training is nature for human beings.'

We have said, then, what continence and incontinence, resistance and softness are, and how these states are related to each other.

11

Pleasure and pain are proper subjects of study for the political philosopher, since he is the ruling craftsman of the end that we refer to in calling something bad or good without qualification. Further, we must also examine them because we have laid it down that virtue and vice of character are about pains and pleasures, and because most people think happiness involves pleasure—that is why they also call the blessed

person by that name (*makarios*) from enjoyment (*chairein*).

Now it seems to some people that no pleasure is a good, either in its own right or coincidentally, on the ground that the good is not the same as pleasure. To others it seems that some pleasures are good, but most are bad. A third view is that even if every pleasure is a good, the best good still cannot be pleasure.

The reasons for thinking it is not a good at all are these: Every pleasure is a perceived becoming toward [the fulfillment of something's] nature; but no becoming is of the same kind as its end—for instance, no [process of] building is of the same kind as a house. Further, the temperate person avoids pleasures. Further, the prudent person pursues what is painless, not what is pleasant. Further, pleasures impede prudent thinking, and impede it more the more we enjoy them; no one, for instance, can think about anything during sexual intercourse. Further, every good is the product of a craft, but there is no craft of pleasure. Further, children and animals pursue pleasure.

To show that not all pleasures are excellent things, people say that some are shameful and reproached, and that some are harmful, since some pleasant things cause disease.

To show that the best good is not pleasure, people say that pleasure is not an end, but a becoming.

These, then, are roughly the things said about it.

12

These arguments, however, do not show that pleasure is not a good, or even that it is not the best good. This will be clear as follows.

First of all, since what is good may be good in either of two ways, as good without qualification or as good for some particular thing or person, this will also be true of natures and states, and hence also of processes and becomings. And so, among the [processes and becomings] that seem bad, some are bad without qualification but for some person not bad, and for this person actually choiceworthy. Some are not choiceworthy for him either, except sometimes and for a short time, not on each occasion. Some are not even pleasures, but appear to be; these are the [processes], for instance, in sick people that involve pain and are means to medical treatment.

Further, since one sort of good is an activity and another sort is a state, the processes that restore us to our natural state are pleasant coincidentally. Here the activity in the appetites belongs to the rest of our state and nature. For there are also pleasures without pain and appetite, such as the pleasures of studying, those in which our nature lacks nothing.

A sign [that supports our distinction between pleasures] is the fact that we do not enjoy the same thing when our nature is being refilled as we enjoy when it is eventually fully restored. When it is fully restored, we enjoy things that are pleasant without qualification, but when it is being refilled, we enjoy even the contrary things. For we even enjoy sharp or bitter things, though none of these is pleasant by nature or pleasant without qualification. Hence [these pleasures] are not pleasures [without qualification] either; for as pleasant things differ from one another, so the pleasures arising from them differ too.

Further, it is not necessary for something else to be better than pleasure, as the end, some say, is better than the becoming. For pleasures are not becomings, nor do they all even involve a becoming. They are activities, and an end [in themselves], and arise when we exercise [a capacity], not when we are coming to be [in some state]. And not all pleasures have something else as their end, but only those in people who are being led toward the completion of their nature.

That is why it is also a mistake to call pleasure a perceived becoming. It should instead be called an activity of the natural state, and should be called not perceived, but unimpeded. The reason it seems to some people to be a becoming is that it is fully good [and hence an activity]; for they think activities are becomings, though in fact these are different things.

To say that pleasures are bad because some pleasant things cause disease is the same as saying that some healthy things are bad for money-making. To this extent both are bad; but that is not enough to make them bad, since even study is sometimes harmful to health.

Neither prudence nor any state is impeded by the pleasures arising from it, but only by alien pleasures. For the pleasures arising from study and learning will make us study and learn all the more.

The fact that pleasure is not the product of a craft is quite reasonable; for a craft does not belong to any

other activity either, but to a capacity. And yet, the crafts of perfumery and cooking do seem to be crafts of pleasure.

The claim that the temperate person avoids pleasure, that the prudent person pursues the painless life, and that children and beasts pursue pleasure—all these are solved by the same reply. For we have explained in what ways pleasures are good, and in what ways not all are good without qualification; and it is these pleasures [that are not good without qualification] that beasts and children pursue, whereas the prudent person pursues painlessness in relation to these. These are the pleasures that involve appetite and pain and the bodily pleasures (since these involve appetite and pain) and their excesses, whose pursuit makes the intemperate person intemperate. That is why the temperate person avoids these pleasures [but not all pleasures], since there are pleasures of the temperate person too.

13

1153b Moreover, it is also agreed that pain is an evil, and is to be avoided; for one kind of pain is bad without qualification, and another is bad in a particular way, by impeding [activities]. But the contrary to what is to be avoided, insofar as it is bad and to be avoided, is a good; hence pleasure must be a good. For Speusippus' solution—[that pleasure is opposite both to pain and to the good] as the greater is contrary both to the lesser and to the equal—does not succeed. For he would not say [as his solution requires] that pleasure is essentially an evil.

Besides, just as one science might well be the best good, even though some sciences are bad, some pleasure might well be the best good, even though most pleasures are bad. Indeed, presumably, if each state has its unimpeded activities, and happiness is the activity—if the activity is unimpeded—of all states or of some one of them, it follows that some unimpeded activity is most choiceworthy. But pleasure is this, [namely, an unimpeded activity]; and so some type of pleasure might be the best good even if most pleasures turn out to be bad without qualification.

That is why all think the happy life is pleasant and weave pleasure into happiness, quite reasonably. For no activity is complete if it is impeded, and happiness is something complete. That is why the happy person needs to have goods of the body and external goods added [to good activities], and needs fortune also, so that he will not be impeded in these ways.

Some maintain, on the contrary, that we are happy when we are broken on the wheel, or fall into terrible misfortunes, provided that we are good. Whether they mean to or not, these people are talking nonsense.

And because happiness needs fortune added, some believe good fortune is the same as happiness. But it is not. For when it is excessive, it actually impedes happiness; and then, presumably, it is no longer rightly called *good* fortune, since the limit [up to which it is good] is defined in relation to happiness.

The fact that all, both beasts and human beings, pursue pleasure is some sign of its being in some way the best good: 'No rumor is altogether lost which many peoples [spread]. . . .' But since the best nature and state neither is nor seems to be the same for all, they also do not all pursue the same pleasure, though they all pursue pleasure. Presumably in fact they do pursue the same pleasure, and not the one they think or would say they pursue; for all things by nature have something divine [in them].

However, the bodily pleasures have taken over the name because people most often aim at them, and all share in them; and so, since these are the only pleasures they know, people suppose that they are *1154a* the only pleasures.

It is also apparent that if pleasure is not a good and an activity, it will not be true that the happy person lives pleasantly. For what will he need pleasure for if it is not a good? Indeed, it will even be possible for him to live painfully; for pain is neither an evil nor a good if pleasure is not, and why then would he avoid it? Nor indeed will the life of the excellent person be more pleasant if his activities are not also more pleasant.

14

Those who maintain that some pleasures, such as the fine ones, are highly choiceworthy, but the bodily pleasures that concern the intemperate person are not, should examine bodily pleasures.

If what they say is true, why are the pains contrary to these pleasures deplorable? For it is a good that

is contrary to an evil. Then are the necessary [bodily pleasures] good only in the way that what is not bad is good? Or are they good up to a point? [Surely they are good up to a point.] For though some states and processes allow no excess of the better, and hence no excess of pleasure [in them] either, others do allow excess of the better, and hence also allow excess of the pleasure in them. Now the bodily goods allow excess. The base person is base because he pursues the excess, but not because he pursues the necessary pleasures; for all enjoy delicacies and wines and sexual relations in some way, though not all in the right way.

The contrary is true of pain. For the base person avoids pain in general, not [only] an excess of it. For not [all] pain is contrary to excess [of pleasure], except to someone who pursues the excess [of pleasure].

We must, however, not only state the true view, but also explain the false view; for an explanation of that promotes confidence. For when we have an apparently reasonable explanation of why a false view appears true, that makes us more confident of the true view. Hence we should say why bodily pleasures appear more choiceworthy.

First, then, it is because bodily pleasure pushes out pain. Excesses of pain make people seek a cure in the pursuit of excessive pleasure and of bodily pleasure in general. And these cures become intense—that is why they are pursued—because they appear next to their contraries.

Indeed these are the two reasons why pleasure seems to be no excellent thing, as we have said. First, some pleasures are the actions of a base nature—either base from birth, as in a beast, or base because of habit, such as the actions of base human beings. Secondly, others are cures of something deficient, and it is better to be in a good state than to be coming into it. In fact these pleasures coincide with our restoration to complete health, and so are excellent coincidentally.

Further, bodily pleasures are pursued because they are intense, by people who are incapable of enjoying other pleasures. Certainly, these people induce some kinds of thirst in themselves. What they do is not a matter for reproach, whenever [the pleasures] are harmless, but it is base whenever they are harmful. These people do this because they enjoy nothing else, and many people's natural constitution makes the neutral condition painful to them.

For an animal is always suffering, as the natural scientists also testify, since they maintain that seeing and hearing are painful. However, we are used [to seeing and hearing] by now, so they say, [and so feel no intense pain]. Indeed, the [process of] growth makes young people's condition similar to an intoxicated person's and [hence] youth is pleasant. Naturally volatile people, by contrast, are always requiring a cure, since their constitution causes their body continual turmoil, and they are always having intense desires. A pain is driven out by its contrary pleasure, indeed by any pleasure at all that is strong enough; and this is why such people become intemperate and base.

Pleasures without pains, however, have no excess. These are pleasant by nature and not coincidentally. By coincidentally pleasant things I mean pleasant things that are curative; for the [process of] being cured coincides with some action of the part of us that remains healthy, and hence undergoing a cure seems to be pleasant. Things are pleasant by nature, however, when they produce action of a healthy nature.

The reason why no one thing is always pleasant is that our nature is not simple, but has more than one constituent, insofar as we are perishable; hence the action of one part is against nature for the other nature in us, and when they are equally balanced, the action seems neither pleasant nor painful. For if something has a simple nature the same action will always be the most pleasant.

That is why the god always enjoys one simple pleasure [without change]. For activity belongs not only to change but also to unchangingness, and indeed there is pleasure in rest more than in change. 'Variation in everything is sweet' (as the poet says) because of some inferiority; for just as it is the inferior human being who is prone to variation, so also the nature that needs variation is inferior, since it is not simple or decent.

So much, then, for continence and incontinence and for pleasure and pain, what each of them is, and in what ways some [aspects] of them are good and others bad. It remains for us to discuss friendship as well.

BOOK VIII

1

1155a After that, the next topic is friendship; for it is a virtue, or involves virtue.

Further, it is most necessary for our life. For no one would choose to live without friends even if he had all the other goods. Indeed rich people and holders of powerful positions, even more than other people, seem to need friends. For how would one benefit from such prosperity if one had no opportunity for beneficence, which is most often displayed, and most highly praised, in relation to friends? And how would one guard and protect prosperity without friends, when it is all the more precarious the greater it is?

But in poverty also, and in the other misfortunes, people think friends are the only refuge. Moreover, the young need friends to keep them from error. The old need friends to care for them and support the actions that fail because of weakness. And those in their prime need friends to do fine actions; for 'when two go together . . . ,' they are more capable of understanding and acting.

Further, a parent would seem to have a natural friendship for a child, and a child for a parent, not only among human beings but also among birds and most kinds of animals. Members of the same species, and human beings most of all, have a natural friendship for each other; that is why we praise friends of humanity. And in our travels we can see how every human being is akin and beloved to a human being.

Moreover, friendship would seem to hold cities together, and legislators would seem to be more concerned about it than about justice. For concord would seem to be similar to friendship, and they aim at concord among all, while they try above all to expel civil conflict, which is enmity. Further, if people are friends, they have no need of justice, but if they are just they need friendship in addition; and the justice that is most just seems to belong to friendship.

But friendship is not only necessary, but also fine. For we praise lovers of friends, and having many friends seems to be a fine thing. Moreover, people think that the same people are good and also friends.

Still, there are quite a few disputed points about friendship.

For some hold it is a sort of similarity and that similar people are friends. Hence the sayings, 'similar to similar,' and 'birds of a feather,' and so on. On the other side, it is said that similar people are all like the proverbial potters, quarreling with each other.

On these questions some people inquire at a higher 1155b level, more proper to natural science. Euripides says that when earth gets dry it longs passionately for rain, and the holy heaven when filled with rain longs passionately to fall into the earth; and Heracleitus says that the opponent cooperates, the finest harmony arises from discordant elements, and all things come to be in struggle. Others, such as Empedocles, oppose this view, and say that similar aims for similar.

Let us, then, leave aside the puzzles proper to natural science, since they are not proper to the present examination, and let us examine the puzzles that concern human [nature], and bear on characters and feelings. For instance, does friendship arise among all sorts of people, or can people not be friends if they are vicious? And is there one species of friendship, or are there more? Some people think there is only one species because friendship allows more and less. But here their confidence rests on an inadequate sign; for things of different species also allow more and less. We have spoken about these earlier.

2

Perhaps these questions will become clear once we find out what it is that is lovable. For, it seems, not everything is loved, but [only] the lovable, and this is either good or pleasant or useful. However, it seems that the useful is the source of some good or some pleasure; hence the good and the pleasant are lovable as ends.

Now do people love the good, or the good for themselves? For sometimes these conflict; and the same is true of the pleasant. Each one, it seems, loves the good for himself; and while the good is lovable without qualification, the lovable for each one is the good for himself. In fact, each one loves not what *is* good for him, but what *appears* good for him; but this will not matter, since [what appears good for him] will be what appears lovable.

There are these three causes, then, of love. Now love for an inanimate thing is not called friendship,

since there is no mutual loving, and no wishing of good to it. For it would presumably be ridiculous to wish good things to wine; the most you wish is its preservation so that you can have it. To a friend, however, it is said, you must wish goods for his own sake. If you wish good things in this way, but the same wish is not returned by the other, you would be said to have [only] goodwill for the other. For friendship is said to be *reciprocated* goodwill.

But perhaps we should add that friends are aware of the reciprocated goodwill. For many a one has goodwill to people whom he has not seen but supposes to be decent or useful, and one of these might have the same goodwill toward him. These people, then, apparently have goodwill to each other, but how could we call them friends, given that they are unaware of their attitude to each other? [If they are to be friends], then, they must have goodwill to each other, wish goods and be aware of it, from one of the causes mentioned above.

3

Since these causes differ in species, so do the types of loving and types of friendship. Hence friendship has three species, corresponding to the three objects of love. For each object of love has a corresponding type of mutual loving, combined with awareness of it.

But those who love each other wish goods to each other [only] insofar as they love each other. Those who love each other for utility love the other not in his own right, but insofar as they gain some good for themselves from him. The same is true of those who love for pleasure; for they like a witty person not because of his character, but because he is pleasant to them.

Those who love for utility or pleasure, then, are fond of a friend because of what is good or pleasant for themselves, not insofar as the beloved is who he is, but insofar as he is useful or pleasant. Hence these friendships as well [as the friends] are coincidental, since the beloved is loved not insofar as he is who he is, but insofar as he provides some good or pleasure.

And so these sorts of friendships are easily dissolved, when the friends do not remain similar [to what they were]; for if someone is no longer pleasant or useful, the other stops loving him.

What is useful does not remain the same, but is different at different times. Hence, when the cause of their being friends is removed, the friendship is dissolved too, on the assumption that the friendship aims at these [useful results]. This sort of friendship seems to arise especially among older people, since at that age they pursue the advantageous, not the pleasant, and also among those in their prime or youth who pursue the expedient.

Nor do such people live together very much. For sometimes they do not even find each other pleasant. Hence they have no further need to meet in this way if they are not advantageous [to each other]; for each finds the other pleasant [only] to the extent that he expects some good from him. The friendship of hosts and guests is taken to be of this type too.

The cause of friendship between young people seems to be pleasure. For their lives are guided by their feelings, and they pursue above all what is pleasant for themselves and what is at hand. But as they grow up [what they find] pleasant changes too. Hence they are quick to become friends, and quick to stop; for their friendship shifts with [what they find] pleasant, and the change in such pleasure is quick. Young people are prone to erotic passion, since this mostly accords with feelings, and is caused by pleasure; that is why they love and quickly stop, often changing in a single day.

These people wish to spend their days together and to live together; for this is how they gain [the good things] corresponding to their friendship.

But complete friendship is the friendship of good people similar in virtue; for they wish goods in the same way to each other insofar as they are good, and they are good in their own right. [Hence they wish goods to each other for each other's own sake.] Now those who wish goods to their friend for the friend's own sake are friends most of all; for they have this attitude because of the friend himself, not coincidentally. Hence these people's friendship lasts as long as they are good; and virtue is enduring.

Each of them is both good without qualification and good for his friend, since good people are both good without qualification and advantageous for each other. They are pleasant in the same ways too, since good people are pleasant both without qualification and for each other. [They are pleasant for each other]

because each person finds his own actions and actions of that kind pleasant, and the actions of good people are the same or similar.

It is reasonable that this sort of friendship is enduring, since it embraces in itself all the features that friends must have. For the cause of every friendship is good or pleasure, either unqualified or for the lover; and every friendship accords with some similarity. And all the features we have mentioned are found in this friendship because of [the nature of] the friends themselves. For they are similar in this way [i.e., in being good]. Moreover, their friendship also has the other things—what is good without qualification and what is pleasant without qualification; and these are lovable most of all. Hence loving and friendship are found most of all and at their best in these friends.

These kinds of friendships are likely to be rare, since such people are few. Further, they need time as well, to grow accustomed to each other; for, as the proverb says, they cannot know each other before they have shared their salt as often as it says, and they cannot accept each other or be friends until each appears lovable to the other and gains the other's confidence. Those who are quick to treat each other in friendly ways wish to be friends, but are not friends, unless they are also lovable, and know this. For though the wish for friendship comes quickly, friendship does not.

4

This sort of friendship, then, is complete both in time and in the other ways. In every way each friend gets the same things and similar things from each, and this is what must be true of friends. Friendship for pleasure bears some resemblance to this complete sort, since good people are also pleasant to each other. And friendship for utility also resembles it, since good people are also useful to each other.

With these [incomplete friends] also, the friendships are most enduring whenever they get the same thing—pleasure, for instance—from each other, and, moreover, get it from the same source, as witty people do, in contrast to the erotic lover and the boy he loves.

For the erotic lover and his beloved do not take pleasure in the same things; the lover takes pleasure in seeing his beloved, but the beloved takes pleasure in being courted by his lover. When the beloved's bloom is fading, sometimes the friendship fades too; for the lover no longer finds pleasure in seeing his beloved, and the beloved is no longer courted by the lover. Many, however, remain friends if they have similar characters and come to be fond of each other's characters from being accustomed to them. Those who exchange utility rather than pleasure in their erotic relations are friends to a lesser extent and less enduring friends.

Those who are friends for utility dissolve the friendship as soon as the advantage is removed; for they were never friends of each other, but of what was expedient for them.

Now it is possible for bad people as well [as good] to be friends to each other for pleasure or utility, for decent people to be friends to base people, and for someone with neither character to be a friend to someone with any character. Clearly, however, only good people can be friends to each other because of the other person himself; for bad people find no enjoyment in one another if they get no benefit.

Moreover, the friendship of good people is the only one that is immune to slander. For it is not easy to trust anyone speaking against someone whom we ourselves have found reliable for a long time; and among good people there is trust, the belief that he would never do injustice, and all the other things expected in a true friendship. But in the other types of friendship [distrust] may easily arise.

[These must be counted as types of friendship.] For people include among friends [not only the best type, but] also those who are friends for utility, as cities are—since alliances between cities seem to aim at expediency—and those who are fond of each other, as children are, for pleasure. Hence we must presumably also say that such people are friends, but say that there are more species of friendship than one.

On this view, the friendship of good people insofar as they are good is friendship primarily and fully, but the other friendships are friendships by similarity. For insofar as there is something good, and [hence] something similar to [what one finds in the best kind], people [in the incomplete friendships] are friends; for what is pleasant is good to lovers of pleasure. But these [incomplete] types of friendship are not very regularly combined, and the same people do not become friends for both utility and pleasure. For

things that [merely] coincide with each other are not very regularly combined.

Friendship has been assigned, then, to these species. Base people will be friends for pleasure or utility, since they are similar in that way. But good people will be friends because of themselves, since they are friends insofar as they are good. These, then, are friends without qualification; the others are friends coincidentally and by being similar to these.

5

Just as, in the case of the virtues, some people are called good in their state of character, others good in their activity, the same is true of friendship. For some people find enjoyment in each other by living together, and provide each other with good things. Others, however, are asleep or separated by distance, and so are not active in these ways, but are in the state that would result in the friendly activities; for distance does not dissolve the friendship without qualification, but only its activity. But if the absence is long, it also seems to cause the friendship to be forgotten; hence the saying, 'Lack of conversation has dissolved many a friendship.'

Older people and sour people do not appear to be prone to friendship. For there is little pleasure to be found in them, and no one can spend his days with what is painful or not pleasant, since nature appears to avoid above all what is painful and to aim at what is pleasant.

Those who welcome each other but do not live together would seem to have goodwill rather than friendship. For nothing is as proper to friends as living together; for while those who are in want desire benefit, blessedly happy people [who want for nothing], no less than the others, desire to spend their days together, since a solitary life fits them least of all. But people cannot spend their time with each other if they are not pleasant and do not enjoy the same things, as they seem to in the friendship of companions.

Now the friendship of good people is friendship most of all, as we have often said. For what is lovable and choiceworthy seems to be what is good or pleasant without qualification, and what is lovable and choiceworthy to each person seems to be what is good or pleasant to himself; and both of these make one good person lovable and choiceworthy to another good person.

Loving would seem to be a feeling, but friendship a state. For loving is directed no less toward inanimate things, but reciprocal loving requires decision, and decision comes from a state; and [good people] wish good to the beloved for his own sake in accord with their state, not their feeling.

Moreover, in loving their friend they love what is good for themselves; for when a good person becomes a friend he becomes a good for his friend. Each of them loves what is good for himself, and repays in equal measure the wish and the pleasantness of his friend; for friendship is said to be equality. And this is true above all in the friendship of good people.

6

Among sour people and older people, friendship is found less often, since they are worse-tempered and find less enjoyment in meeting people, so that they lack the features that seem most typical and most productive of friendship. That is why young people become friends quickly, but older people do not, since they do not become friends with people in whom they find no enjoyment—nor do sour people. These people have goodwill to each other, since they wish goods and give help in time of need; but they scarcely count as friends, since they do not spend their days together or find enjoyment in each other, and these things seem to be above all typical of friendship.

No one can have complete friendship for many people, just as no one can have an erotic passion for many at the same time; for [complete friendship, like erotic passion,] is like an excess, and an excess is naturally directed at a single individual. And just as it is difficult for many people to please the same person intensely at the same time, it is also difficult, presumably, for many to be good. [To find out whether someone is really good], one must both have experience of him and be on familiar terms with him, which is extremely difficult. If, however, the friendship is for utility or pleasure, it is possible for

many people to please; for there are many people of the right sort, and the services take little time.

Of these other two types of friendship, the friendship for pleasure is more like [real] friendship; for they get the same thing from each other, and they find enjoyment in each other, or [rather] in the same things. This is what friendships are like among young people; for a generous [attitude] is found here more [than among older people], whereas it is mercenary people who form friendships for utility.

Moreover, blessedly happy people have no need of anything useful, but do need sources of pleasure. For they want to spend their lives with companions, and though what is painful is borne for a short time, no one could continuously endure even the Good Itself if it were painful to him. That is why they seek friends who are pleasant. But, presumably, they must also seek friends who are good as well [as pleasant], and good for them too; for then they will have everything that friends must have.

Someone in a position of power appears to have separate groups of friends; for some are useful to him, others pleasant, but the same ones are not often both. For he does not seek friends who are both pleasant and virtuous, or useful for fine actions, but seeks one group to be witty, when he pursues pleasure, and the other group to be clever in carrying out instructions; and the same person rarely has both features.

Though admittedly, as we have said, an excellent person is both pleasant and useful, he does not become a friend to a superior [in power and position] unless the superior is also superior in virtue; otherwise he does not reach [proportionate] equality by having a proportionate superior. And this superiority both in power and in virtue is not often found.

1158b The friendships we have mentioned involve equality, since both friends get the same and wish the same to each other, or exchange one thing for another—for instance, pleasure for benefit. But, as we have said, they are friendships to a lesser extent, and less enduring.

They seem both to be and not to be friendships, because of their similarity and dissimilarity to the same thing. For, on the one hand, insofar as they are similar to the friendship of virtue, they are apparently friendships; for that type of friendship includes both utility and pleasure, and one of these types includes utility, the other pleasure. On the other hand, the friendship of virtue is enduring and immune to slander, whereas these change quickly, and differ from it in many other ways as well; to that extent they are apparently not friendships, because of their dissimilarity to that best type.

7

A different species of friendship is the one that rests on superiority—of a father toward his son, for instance, and in general of an older person toward a younger, of a man toward a woman, and of any sort of ruler toward the one he rules. These friendships also differ from each other. For friendship of parents to children is not the same as that of rulers to ruled; nor is friendship of father to son the same as that of son to father, or of man to woman as that of woman to man. For each of these friends has a different virtue and a different function, and there are different causes of love. Hence the ways of loving are different, and so are the friendships.

Now each does not get the same thing from the other, and must not seek it; but whenever children accord to their parents what they must accord to those who gave them birth, and parents accord what they must do to their children, their friendship is enduring and decent.

In all the friendships that rest on superiority, the loving must also be proportional; for instance, the better person, and the more beneficial, and each of the others likewise, must be loved more than he loves; for when the loving accords with the comparative worth of the friends, equality is achieved in a way, and this seems to be proper to friendship.

Equality, however, does not appear to be the same in friendship as in justice. For in justice equality is equality primarily in worth and secondarily in quantity; but in friendship it is equality primarily in quantity and secondarily in worth.

This is clear if friends come to be separated by some wide gap in virtue, vice, wealth, or something else; for then they are friends no more, and do not even expect to be. This is most evident with gods, since they have the greatest superiority in all goods. But it is also clear with kings, since far inferior people *1159a*

do not expect to be their friends; nor do worthless people expect to be friends to the best or wisest.

Now in these cases there is no exact definition of how long people are friends. For even if one of them loses a lot, the friendship still endures; but if one is widely separated [from the other], as a god is [from a human being], it no longer endures.

This raises a puzzle: Do friends really wish their friend to have the greatest good, to be a god, for instance? For [if he becomes a god], *he* will no longer have friends, and hence no longer have goods, since friends are goods. If, then, we have been right to say that one friend wishes good things to the other for the sake of the other *himself*, the other must remain whatever sort of being he is. Hence it is to the other as a human being that a friend will wish the greatest goods—though presumably not all of them, since each person wishes goods most of all to himself.

8

Because the many love honor they seem to prefer being loved to loving. That is why they love flatterers. For the flatterer is a friend in an inferior position, or [rather] pretends to be one, and pretends to love more than he is loved; and being loved seems close to being honored, which the many certainly pursue.

It would seem, however, that they choose honor coincidentally, not in its own right. For the many enjoy being honored by powerful people because they expect to get whatever they need from them, and so enjoy the honor as a sign of this good treatment. Those who want honor from decent people with knowledge are seeking to confirm their own view of themselves, and so they are pleased because the judgment of those who say they are good makes them confident that they are good. Being loved, on the contrary, they enjoy in its own right. That is why it seems to be better than being honored, and friendship seems choiceworthy in its own right.

But friendship seems to consist more in loving than in being loved. A sign of this is the enjoyment a mother finds in loving. For sometimes she gives her child away to be brought up, and loves him as long as she knows about him; but she does not seek the child's love, if she cannot both [love and be loved]. She would seem to be satisfied if she sees the child doing well, and she loves the child even if ignorance prevents him from returning to her what is due to a mother.

Friendship, then, consists more in loving; and people who love their friends are praised; hence, it would seem, loving is the virtue of friends. And so friends whose love accords with the worth of their friends *1159b* are enduring friends and have an enduring friendship. This above all is how unequals as well as equals can be friends, since this is how they can be equalized.

Equality and similarity, and above all the similarity of those who are similar in being virtuous, is friendship. For virtuous people are enduringly [virtuous] in their own right, and enduring [friends] to each other. They neither request nor provide assistance that requires base actions, but, you might even say, prevent this. For it is proper to good people to avoid error themselves and not to permit it in their friends.

Vicious people, by contrast, have no firmness, since they do not even remain similar to what they were. They become friends for a short time, enjoying each other's vice. Useful or pleasant friends, however, last longer, for as long as they supply each other with pleasures or benefits.

The friendship that seems to arise most from contraries is friendship for utility, of poor to rich, for instance, or ignorant to knowledgeable; for we aim at whatever we find we lack, and give something else in return. Here we might also include the erotic lover and his beloved, and the beautiful and the ugly. That is why an erotic lover also sometimes appears ridiculous, when he expects to be loved in the same way as he loves; that would presumably be a proper expectation if he were lovable in the same way, but it is ridiculous when he is not.

Presumably, however, contrary seeks contrary coincidentally, not in its own right, and desire is for the intermediate. For what is good for the dry, for instance, is to reach the intermediate, not to become wet, and the same is true for the hot, and so on. Let us, then, dismiss these questions, since they are rather extraneous to our concern.

9

As we said at the beginning, friendship and justice would seem to be about the same things and to be found in the same people. For in every community

there seems to be some sort of justice, and some type of friendship also. At any rate, fellow voyagers and fellow soldiers are called friends, and so are members of other communities. And the extent of their community is the extent of their friendship, since it is also the extent of the justice found there. The proverb 'What friends have is common' is correct, since friendship involves community.

But, whereas brothers and companions have everything in common, what people have in common in other types of community is limited, more in some communities and less in others, since some friendships are also closer than others, some less close.

What is just is also different, since it is not the same for parents toward children as for one brother toward another, and not the same for companions as for fellow citizens, and similarly with the other types of friendship. Similarly, what is unjust toward each of these is also different, and becomes more unjust as it is practiced on closer friends. It is more shocking, for instance, to rob a companion of money than to rob a fellow citizen, to fail to help a brother than a stranger, and to strike one's father than anyone else. Justice also naturally increases with friendship, since it involves the same people and extends over an equal area.

All the communities [mentioned], however, would seem to be parts of the political community. For people keep company for some advantage and to supply something contributing to their life. And the political community as well [as the others] seems both to have been originally formed and to endure for advantage; for legislators also aim at advantage, and the common advantage is said to be just.

Now the other types of community aim at partial advantage. Sea travellers, for instance, seek the advantage proper to a journey, in making money or something like that, while fellow soldiers seek the advantage proper to war, desiring either money or victory or a city; and the same is true of fellow members of a tribe or deme. Some communities—religious societies and dining clubs—seem to arise for pleasure, since these are, respectively, for religious sacrifices and for companionship.

But all these communities would seem to be subordinate to the political community, since it aims not at some advantage close at hand, but at advantage for the whole of life. . . . [We can see this in the arrangements that cities make for religious festivals. For] in performing sacrifices and arranging gatherings for these, people both accord honors to the gods and provide themselves with pleasant relaxations. For the long-established sacrifices and gatherings appear to take place after the harvesting of the crops, as a sort of first-fruits, since this was the time when people used to be most at leisure [and the time when relaxation would be most advantageous for the whole of life].

All the types of community, then, appear to be parts of the political community, and these sorts of communities imply the appropriate sorts of friendships.

10

There are three species of political system (*politeia*), and an equal number of deviations, which are a sort of corruption of them. The first political system is kingship; the second aristocracy; and since the third rests on property (*timēma*), it appears proper to call it a timocratic system, though most people usually call it a polity. The best of these is kingship and the worst timocracy.

The deviation from kingship is tyranny. For, though both are monarchies, they show the widest difference, since the tyrant considers his own advantage, but the king considers the advantage of his subjects. For someone is a king only if he is self-sufficient and superior in all goods; and since such a person needs nothing more, he will consider the subjects' benefit, not his own. For a king who is not like this would be only some sort of titular king. Tyranny is contrary to this; for the tyrant pursues his own good. It is more evident that [tyranny] is the worst [deviation than that timocracy is the worst political system]; but the worst is contrary to the best; [hence kingship is the best].

The transition from kingship is to tyranny. For tyranny is the degenerate condition of monarchy, and the vicious king becomes a tyrant.

The transition from aristocracy [rule of the best people] is to oligarchy [rule of the few], resulting from the badness of the rulers. They distribute the city's goods contrary to people's worth, so that they

distribute all or most of the goods to themselves, and always assign ruling offices to the same people, counting wealth for most. Hence the rulers are few, and they are vicious people instead of the most decent.

The transition from timocracy is to democracy [rule by the people], since these border on each other. For timocracy is also meant to be rule by the majority, and all those with the property-qualification are equal; [and majority rule and equality are the marks of democracy]. Democracy is the least vicious [of the deviations]; for it deviates only slightly from the form of a [genuine] political system.

These, then, are the most frequent transitions from one political system to another, since they are the smallest and easiest.

Resemblances to these—indeed, a sort of pattern of them—can also be found in households. For the community of a father and his sons has the structure of kingship, since the father is concerned for his children. Indeed that is why Homer also calls Zeus father, since kingship is meant to be paternal rule.

Among the Persians, however, the father's rule is tyrannical, since he treats his sons as slaves. The rule of a master over his slaves is also tyrannical, since it is the master's advantage that is achieved in it. This, then, appears a correct form of rule, whereas the Persian form appears erroneous, since the different types of rule suit different subjects.

The community of man and woman appears aristocratic. For the man's rule in the area where it is right accords with the worth [of each], and he commits to the woman what is fitting for her. If, however, the man controls everything, he changes it into an oligarchy; for then his action does not accord with the worth [of each], or with the respect in which [each] is better. Sometimes, indeed, women rule because they are heiresses; these cases of rule do not accord with virtue, but result from wealth and power, as is true in oligarchies.

The community of brothers is like a timocratic [system], since they are equal except insofar as they differ in age. That is why, if they differ very much in age, the friendship is no longer brotherly.

Democracy is found most of all in dwellings without a master, since everyone there is on equal terms; and also in those where the ruler is weak and everyone is free [to do what he likes].

11

Friendship appears in each of the political systems, to the extent that justice appears also. A king's friendship to his subjects involves superior beneficence. For he benefits his subjects, since he is good and attends to them to ensure that they do well, as a shepherd attends to his sheep; hence Homer also called Agamemnon shepherd of the peoples.

A father's friendship resembles this, but differs in conferring a greater benefit, since the father is the cause of his children's being, which seems to be the greatest benefit, and of their nurture and education. These benefits are also ascribed to ancestors; and by nature a father is ruler over sons, ancestors over descendants, and a king over subjects.

All these are friendships of superiority. That is why parents are also honored. And what is just is not the same in each of these friendships, but it accords with worth; for so does the friendship.

The friendship of man to woman is the same as in an aristocracy. For it accords with virtue, in assigning more good to the better, and assigning what is fitting to each. The same is true of what is just here.

The friendship of brothers is similar to that of companions, since they are equal and of an age, and such people usually have the same feelings and characters. Friendship in a timocracy is similar to this. For there the citizens are meant to be equal and decent, and so rule in turn and on equal terms. The same is true, then, of their friendship.

In the deviations, however, justice is found only to a slight degree; and hence the same is true of friendship. There is least of it in the worst deviation; for in a tyranny there is little or no friendship.

For where ruler and ruled have nothing in common, they have no friendship, since they have no justice either. This is true for a craftsman in relation to his tool, and for the soul in relation to the body. For in all these cases the user benefits what he uses, but there is neither friendship nor justice toward inanimate things. Nor is there any toward a horse or cow, or toward a slave, insofar as he is a slave. For master and slave have nothing in common, since a slave is a tool with a soul, while a tool is a slave without a soul.

Insofar as he is a slave, then, there is no friendship with him. But there is friendship with him insofar as

he is a human being. For every human being seems to have some relation of justice with everyone who is capable of community in law and agreement; hence [every human being seems] also [to have] friendship [with every human being], to the extent that [every human being] is a human being.

Hence there are friendships and justice to only a slight degree in tyrannies also, but to a much larger degree in democracies; for there people are equal, and so have much in common.

12

As we have said, then, every friendship is found in a community. But we should set apart the friendship of families and that of companions. The friendship of citizens, tribesmen, voyagers, and suchlike are more like friendships in a community, since they appear to reflect some sort of agreement; and among these we may include the friendship of host and guest.

Friendship in families also seems to have many species, but they all seem to depend on paternal friendship. For a parent is fond of his children because he regards them as something of himself; and children are fond of a parent because they regard themselves as coming from him.

A parent knows better what has come from him than the children know that they are from the parent; and the parent regards his children as his own more than the product regards the maker as its own. For a person regards what comes from him as his own, as the owner regards his tooth or hair or anything; but what has come from him regards its owner as its own not at all, or to a lesser degree. The length of time also matters. For a parent becomes fond of his children as soon as they are born, but children become fond of the parent when time has passed and they have acquired some comprehension or [at least] perception. And this also makes it clear why mothers love their children more [than fathers do].

A parent, then, loves his children as [he loves] himself. For what has come from him is a sort of other himself; [it is other because] it is separate. Children love a parent because they regard themselves as having come from him. Brothers love each other because they have come from the same [parents]. For the same relation to the parents makes the same thing for both of them; hence we speak of the same blood, the same stock, and so on. Hence they are the same thing in a way, in different [subjects].

Being brought up together and being of an age contributes largely to friendship; for 'two of an age' [get on well], and those with the same character are companions. That is why the friendship of brothers and that of companions are similar. Cousins and other relatives are akin by being related to brothers, since that makes them descendants of the same parents [i.e., the parents of these brothers]. Some are more akin, others less, by the ancestor's being near to or far from them.

The friendship of children to a parent, like the friendship of human beings to a god, is friendship toward what is good and superior. For the parent conferred the greatest benefits on his children, since he is the cause of their being and nurture and of their education once they have been born. This sort of friendship also includes pleasure and utility, more than the friendship of unrelated people does, to the extent that [parents and children] have more of a life in common.

Friendship between brothers has the features of friendship between companions, especially when [the companions] are decent, or in general similar. For brothers are that much more akin to each other [than ordinary companions], and are fond of each other from birth; they are that much more similar in character when they are from the same parents, nurtured together and educated similarly; and the proof of their reliability over time is fullest and firmest. Among other relatives too the features of friendship are proportional [to the relation].

The friendship of man and woman also seems to be natural. For human beings form couples more naturally than they form cities, to the extent that the household is prior to the city, and more necessary, and childbearing is shared more widely among the animals. For the other animals, the community goes only as far as childbearing. Human beings, however, share a household not only for childbearing, but also for the benefits in their life. For the difference between them implies that their functions are divided, with different ones for the man and the woman; hence each supplies the other's needs by contributing a special function to the common good. For this reason

their friendship seems to include both utility and pleasure.

And it may also be friendship for virtue, if they are decent. For each has a proper virtue, and this will be a source of enjoyment for them. Children seem to be another bond, and that is why childless unions are more quickly dissolved; for children are a common good for both, and what is common holds them together.

How should a man conduct his life toward his wife, or, in general, toward a friend? That appears to be the same as asking how they are to conduct their lives justly. For what is just is not the same for a friend toward a friend as toward a stranger, or the same toward a companion as toward a classmate.

13

There are three types of friendship, as we said at the beginning, and within each type some friendships rest on equality, while others are in accord with superiority. For equally good people can be friends, but also a better and a worse person; and the same is true of friends for pleasure or utility, since they may be either equal or unequal in their benefits. Hence equals must equalize in loving and in the other things, because of their equality; and unequals must make the return that is proportionate to the types of superiority.

Accusations and reproaches arise only or most often in friendship for utility. And this is reasonable. For friends for virtue are eager to benefit each other, since this is proper to virtue and to friendship; and if this is what they strain to achieve, there are no accusations or fights. For no one objects if the other loves and benefits him; if he is gracious, he retaliates by benefiting the other. And if the superior gets what he aims at, he will not accuse his friend of anything, since each of them desires what is good.

Nor are there many accusations among friends for pleasure. For both of them get what they want at the same time if they enjoy spending their time together; and someone who accused his friend of not pleasing him would appear ridiculous, since he is free to spend his days without the friend's company.

Friendship for utility, however, is liable to accusations. For these friends deal with each other in the expectation of gaining benefits. Hence they always require more, thinking they have got less than is fitting; and they reproach the other because they get less than they require and deserve. And those who confer benefits cannot supply as much as the recipients require.

There are two ways of being just, one unwritten, and one governed by rules of law. And similarly one type of friendship of utility would seem to depend on character, and the other on rules. Accusations arise most readily if it is not the same sort of friendship when they dissolve it as it was when they formed it.

Friendship dependent on rules is the type that is on explicit conditions. One type of this is entirely mercenary and requires immediate payment. The other is more generous and postpones the time [of repayment], but in accordance with an agreement [requiring] one thing in return for another. In this sort of friendship it is clear and unambiguous what is owed, but the postponement is a friendly aspect of it. That is why some cities do not allow legal actions in these cases, but think that people who have formed an arrangement on the basis of trust must put up with the outcome.

Friendship [for utility] that depends on character is not on explicit conditions. Someone makes a present or whatever it is, as to a friend, but expects to get back as much or more, since he assumes that it is not a free gift, but a loan.

If one party does not dissolve the friendship on the terms on which he formed it, he will accuse the other. This happens because all or most people wish for what is fine, but decide to do what is beneficial; and while it is fine to do someone a good turn without aiming to receive one in return, it is beneficial to receive a good turn.

We should, if we can, make a return worthy of what we have received, [if the other has undertaken the friendship] willingly. For we should never make a friend of someone who is unwilling, but must suppose that we were in error at the beginning, and received a benefit from the wrong person; for since it was not from a friend, and this was not why he was doing it, we must dissolve the arrangement as though we had received a good turn on explicit conditions. And we will agree to repay if we can. If we cannot repay, the giver would not even expect it. Hence we should

repay if we can. We should consider at the beginning who is doing us a good turn, and on what conditions, so that we can put up with it on these conditions, or else decline it.

It is disputable whether we must measure [the return] by the benefit accruing to the recipient, and make the return proportional to that, or instead by the good turn done by the benefactor. For a recipient says that what he got was a small matter for the benefactor, and that he could have gotten it from someone else instead, and so he belittles it. But the benefactor says it was the biggest thing he had, that it could not be gotten from anyone else, and that he gave it when he was in danger or similar need.

Since the friendship is for utility, surely the benefit to the recipient must be the measure [of the return]. For he was the one who required it, and the benefactor supplies him on the assumption that he will get an equal return. Hence the aid has been as great as the benefit received, and the recipient should return as much as he gained, or still more, since that is finer.

But in friendships in accord with virtue, there are no accusations. Rather, the decision of the benefactor would seem to be the measure, since the controlling element in virtue and character lies in decision.

14

There are also disputes in friendships in accord with superiority, since each friend expects to have more than the other, but whenever this happens the friendship is dissolved.

For the better person thinks it is fitting for him to have more, on the ground that more is fittingly allotted to the good person. And the more beneficial person thinks the same. For it is wrong, they say, for someone to have an equal share if he is useless; the result is a public service, not a friendship, if the benefits from the friendship do not accord with the worth of the actions. [The superior party says this] because he notices that in a financial community the larger contributors gain more, and he thinks the same thing is right in a friendship.

But the needy person, the inferior party in the friendship, takes the opposite view, saying it is proper to a virtuous friend to supply his needy [friends]. For what use is it, as they say, to be an excellent or powerful person's friend if you are not going to gain anything by it?

Well, each of them would seem to be correct in what he expects, and it is right for each of them to get more from the friendship—but not more of the same thing. Rather, the superior person should get more honor, and the needy person more profit, since honor is the reward of virtue and beneficence, while profit is what supplies need.

This also appears to be true in political systems. For someone who provides nothing for the community receives no honor, since what is common is given to someone who benefits the community, and honor is something common. For it is impossible both to make money off the community and to receive honor from it at the same time; for no one endures the smaller share of everything. Hence someone who suffers a monetary loss [by holding office] receives honor in return, while someone who accepts gifts [in office] receives money [but not honor]; for distribution that accords with worth equalizes and preserves the friendship, as we have said.

This, then, is how we should treat unequals. If we benefit from them in money or virtue, we should return honor, and thereby make what return we can. For friendship seeks what is possible, not what accords with worth, since that is impossible in some cases, as it is with honor to gods and parents. For no one could ever make a return in accord with their worth, but someone who attends to them as far as he is able seems to be a decent person.

That is why it might seem that a son is not free to disown his father, but a father is free to disown his son. For a debtor should return what he owes, and since, no matter what a son has done, he has not made a worthy return for what his father has done for him, he is always the debtor. But the creditor is free to remit the debt, and hence the father is free to remit.

At the same time, however, it presumably seems that no one would ever withdraw from a son, except from one who was far gone in vice. For, quite apart from their natural friendship, it is human not to repel aid. The son, however, if he is vicious, will want to avoid helping his father, or will not be keen on it. For the many wish to receive benefits, but they avoid doing them because they suppose it is unprofitable. So much, then, for these things.

BOOK IX

1

In all friendships of friends with dissimilar aims, proportion equalizes and preserves the friendship, as we said; in political friendship, for instance, the cobbler receives a worthy exchange for his shoes, and so do the weaver and the others. Here money is supplied as a common measure; everything is related to this and measured by it.

In erotic friendships, however, sometimes the lover charges that he loves the beloved deeply and is not loved in return; and in fact perhaps he has nothing lovable in him. The beloved, however, often charges that previously the lover was promising him everything, and now fulfills none of his promises.

These sorts of charges arise whenever the lover loves his beloved for pleasure while the beloved loves his lover for utility, and they do not both provide these. For if the friendship has these causes, it is dissolved whenever they do not get what they were friends for; for each was not fond of the other himself, but only of what the other had, which was unstable. That is why the friendships are also unstable. Friendship of character, however, is friendship in itself, and endures, as we have said.

Friends quarrel when they get results different from those they want; for when someone does not get what he aims at, it is like getting nothing. It is like the person who promised the lyre player a reward, and a greater reward the better he played; in the morning, when the player asked him to deliver on his promise, the other said he had paid pleasure in return for pleasure. Now if this was what each of them had wished, it would be quite enough. But if one wished for delight and the other for profit, and one has got his delight and the other has not made his profit, things are not right in their common dealings. For each person sets his mind on what he finds he requires, and this will be his aim when he gives what he gives.

Who should fix the worth [of a benefit], the giver or the one who has already received it? [Surely the latter.] For the giver would seem to entrust [the judgment] to the one who has received. This is what Protagoras is said to have done; for whenever he taught anything at all, he used to tell the pupil to estimate how much the knowledge was worth, and that was the amount he used to collect. In such cases, however, some prefer the rule 'Payment to a man. . . .'

But those who take the money first, and then do nothing that they said they would do, because their promises were excessive, are reasonably accused, since they do not carry out what they agreed to. And presumably the sophists are compelled to make excessive promises. For no one would pay them money for the knowledge they really have; hence they take the payment, and then do not do what they were paid to do, and reasonably are accused.

But where no agreement about services is made, friends who give services because of the friend himself are not open to accusation, as we have said, since this is the character of the friendship that accords with virtue. And the return should accord with the decision [of the original giver], since decision is proper to a friend and to virtue.

And it would seem that the same sort of return should also be made to those who have shared philosophy in common with us. For its worth is not measured by money, and no equivalent honor can be paid; but it is enough, presumably, to do what we can, as we do toward gods and parents.

If the giving is not of this sort, but on some specified condition, presumably the repayment must be, ideally, what each of them thinks accords with the worth of the gift. But if they do not agree on this, then it would seem not merely necessary, but also just, for the party who benefits first to fix the repayment. For if the other receives in return as much benefit as the first received, or as much as he would have paid for the pleasure, he will have got the worthy return from him.

Indeed this is also how it appears in buying and selling. And in some cities there are actually laws prohibiting legal actions in voluntary bargains, on the assumption that if we have trusted someone we must dissolve the community with him on the same terms on which we formed it. The law does this because it supposes that it is more just for the recipient to fix repayment than for the giver to fix it. For usually those who have something and those who want it do not put the same price on it, since, to the giver, what he owns and what he is giving appears to be worth a

lot. But nonetheless the return is made in the amount fixed by the initial recipient. Presumably, however, the price must be not what it appears to be worth when he has got it, but the price he put on it before he got it.

2

Here are some other questions that raise a puzzle. Must you accord [authority in] everything to your father, and obey him in everything? Or must you trust the doctor when he is sick, and should you vote for a military expert to be general? Similarly, should you do a service for your friend rather than for an excellent person, and return a favor to a benefactor rather than do a favor for a companion, if you cannot do both?

Surely it is not easy to define all these matters exactly. For they include many differences of all sorts—in importance and unimportance, and in the fine and the necessary. Still, it is clear that not everything should be rendered to the same person, and usually we should return favors rather than do favors for our companions, just as we should return a loan to a creditor rather than lend to a companion.

But presumably this is not always true. If, for instance, someone has ransomed you from pirates, should you ransom him in return, no matter who he is? Or if he does not need to be ransomed, but asks for his money back, should you return it, or should you ransom your father instead? Here it seems that you should ransom your father, rather than even yourself.

As we have said, then, we should, generally speaking, return what we owe. But if making a gift [to B] outweighs [returning the money to A] by being finer or more necessary, we should incline to [making the gift to B] instead. For sometimes even a return of a previous favor is not fair [but an excessive demand], whenever [the original giver] knows he is benefiting an excellent person, but [the recipient] would be returning the benefit to someone he thinks is vicious. For sometimes you should not even lend in return to someone who has lent to you. For he expected repayment when he lent to a decent person, whereas you have no hope of it from a bad person. If that is really so, then, the demand [for reciprocity] is not fair; and even if it is not so, but you think it is so, your refusal of the demand seems not at all absurd.

As we have often said, then, arguments about acting and being affected are no more definite than their subject matter. Clearly, then, we should not render the same things to everyone, and we should not render everything to our fathers, just as we should not make all our sacrifices to Zeus.

And since different things should be rendered to parents, brothers, companions, and benefactors, we should accord to each what is proper and suitable. This is what actually appears to be done; for instance, kinsfolk are the people invited to a wedding, since they share the same family, and hence share in actions that concern it; and for the same reason it is thought that kinsfolk more than anyone must come to funerals.

It seems that we must supply means of support to parents more than anyone. For we suppose that we owe them this, and that it is finer to supply those who are the causes of our being than to supply ourselves in this way. And we should accord honor to our parents, just as we should to the gods, but not every sort of honor; for we should not accord the same honor to a father as to a mother, nor accord to them the honor due to a wise person or a general. We should accord a father's honor to a father, and likewise a mother's to a mother.

We should accord to every older person the honor befitting his age, by standing up, giving up seats, and so on. With companions and brothers we should speak freely, and have everything in common. To kinsfolk, fellow tribesmen, fellow citizens, and all the rest we should always try to accord what is proper, and should compare what belongs to each, as befits closeness of relation, virtue, or usefulness.

Admittedly, this comparison is easier with people of the same kind, and more difficult with people of different kinds. But such difficulty is no reason for giving up the comparison; rather, we should define as far as we can.

3

There is also a puzzle about dissolving or not dissolving friendships with friends who do not remain the same. With friends for utility or pleasure perhaps

there is nothing absurd in dissolving the friendship whenever they are no longer pleasant or useful. For they were friends of pleasure or utility; and if these give out, it is reasonable not to love. We might, however, accuse a friend if he really liked us for utility or pleasure, and pretended to like us for our character. For, as we said at the beginning, friends are most at odds when they are not friends in the way they think they are.

And so, if we mistakenly suppose we are loved for our character, when our friend is doing nothing to suggest this, we must hold ourselves responsible. But if we are deceived by his pretense, we are justified in accusing him—even more justified than in accusing debasers of the currency, to the extent that his evil-doing debases something more precious.

But if we accept a friend as a good person, and then he becomes vicious, and seems so, should we still love him? Surely we cannot, if not everything, but only the good, is lovable. The bad is not lovable, and must not be loved; for we ought neither to love the bad nor to become similar to a base person, and we have said that similar is friend to similar.

Then should the friendship be dissolved at once [as soon as the friend becomes bad]? Surely not with every sort of person, but only with an incurably vicious person. If someone can be set right, we should try harder to rescue his character than his property, insofar as character is both better and more proper to friendship. Still, the friend who dissolves the friendship seems to be doing nothing absurd. For he was not the friend of a person of this sort; hence, if the friend has altered, and he cannot save him, he leaves him.

But if one friend stayed the same and the other became more decent and far excelled his friend in virtue, should the better person still treat the other as a friend? Surely he cannot. This becomes clear in a wide separation, such as we find in friendships beginning in childhood. For if one friend still thinks as a child, while the other becomes a man of the best sort, how could they still be friends, if they neither approve of the same things nor find the same things enjoyable or painful? For they do not even find it so in their life together, and without that they cannot be friends, since they cannot live together—we have discussed this.

Then should the better person regard the other as though he had never become his friend? Surely he must keep some memory of the familiarity they had. Just as we think we must do kindnesses for friends more than for strangers, so also we should accord something to past friends because of the former friendship, whenever it is not excessive vice that causes the dissolution.

4

The defining features of friendship that are found in friendships to one's neighbors would seem to be derived from features of friendship toward oneself. For a friend is taken to be someone who wishes and does goods or apparent goods to his friend for the friend's own sake; or one who wishes the friend to be and to live for the friend's own sake—this is how mothers feel toward their children, and how friends who have been in conflict feel [toward each other]. Others take a friend to be one who spends his time with his friend, and makes the same choices; or one who shares his friend's distress and enjoyment—and this also is especially true of mothers. And people define friendship by one of these features. *1166a*

Each of these features is found in the decent person's relation to himself, and it is found in other people, insofar as they suppose they are decent. As we have said, virtue and the excellent person would seem to be the standard in each case.

For the excellent person is of one mind with himself, and desires the same things in his whole soul. Hence he wishes goods and apparent goods to himself, and achieves them in his actions, since it is proper to the good person to reach the good by his efforts. He wishes and does them for his own sake, since he does them for the sake of his thinking part, and that is what each person seems to be. Moreover, he wishes himself to live and to be preserved. And he wishes this for his rational part more than for any other part.

For being is a good for the good person, and each person wishes for goods for himself. And no one chooses to become another person even if that other will have every good when he has come into being; for, as it is, the god has the good [but no one chooses to be replaced by a god]. Rather [each of us chooses goods] on condition that he remains whatever he is;

and each person would seem to be the understanding part, or that most of all. [Hence the good person wishes for goods for the understanding part.]

Further, such a person finds it pleasant to spend time with himself, and so wishes to do it. For his memories of what he has done are agreeable, and his expectations for the future are good, and hence both are pleasant. And besides, his thought is well supplied with topics for study. Moreover, he shares his own distresses and pleasures, more than other people share theirs. For it is always the same thing that is painful or pleasant, not different things at different times. This is because he practically never regrets [what he has done].

The decent person, then, has each of these features in relation to himself, and is related to his friend as he is to himself, since the friend is another himself. Hence friendship seems to be one of these features, and people with these features seem to be friends.

But is there friendship toward oneself, or not? Let us dismiss that question for the present. However, there seems to be friendship insofar as someone is two or more parts. This seems to be true from what we have said, and because an extreme degree of friendship resembles one's friendship to oneself.

The many, base though they are, also appear to have these features. But perhaps they share in them only insofar as they approve of themselves and suppose they are decent. For no one who is utterly base and unscrupulous either has these features or appears to have them.

Indeed, even base people hardly have them. For they are at odds with themselves, and have an appetite for one thing and a wish for another, as incontinent people do. For they do not choose things that seem to be good for them, but instead choose pleasant things that are actually harmful; and cowardice or laziness causes others to shrink from doing what they think best for themselves. And those who have done many terrible actions hate and shun life because of their vice, and destroy themselves.

Besides, vicious people seek others to pass their days with, and shun themselves. For when they are by themselves they remember many disagreeable actions, and anticipate others in the future; but they manage to forget these in other people's company. These people have nothing lovable about them, and so have no friendly feelings for themselves.

Hence such a person does not share his own enjoyments and distresses. For his soul is in conflict, and because he is vicious one part is distressed at being restrained, and another is pleased [by the intended action]; and so each part pulls in a different direction, as though they were tearing him apart. Even if he cannot be distressed and pleased at the same time, still he is soon distressed because he was pleased, and wishes these things had not become pleasant to him; for base people are full of regret.

Hence the base person appears not to have a friendly attitude even toward himself, because he has nothing lovable about him.

If this state is utterly miserable, everyone should earnestly shun vice and try to be decent; for that is how someone will have a friendly relation to himself and will become a friend to another.

5

Goodwill would seem to be a feature of friendship, but still it is not friendship. For it arises even toward people we do not know, and without their noticing it, whereas friendship does not. We have also said this before.

Nor is it loving, since it lacks intensity and desire, which are implied by loving. Moreover, loving requires familiarity, but goodwill can also arise in a moment, as it arises, for instance, [in a spectator] for contestants. For [the spectator] acquires goodwill for them, and wants what they want, but would not cooperate with them in any action; for, as we said, his goodwill arises in a moment and his fondness is superficial.

Goodwill, then, would seem to be a beginning of friendship, just as pleasure coming through sight is a beginning of erotic passion. For no one has erotic passion for another without previous pleasure in his appearance. But still enjoyment of his appearance does not imply erotic passion for him; passion consists also in longing for him in his absence and in an appetite for his presence. Similarly, though people cannot be friends without previous goodwill, goodwill does not imply friendship; for when they have goodwill, people only wish goods to the other, and will not cooperate with him in any action, or go to any trouble for him. Hence we might transfer [the name

'friendship'], and say that goodwill is inactive friendship, and that when it lasts some time and they grow accustomed to each other, it becomes friendship.

It does not, however, become friendship for utility or pleasure; for these aims do not produce goodwill either. For a recipient of a benefit does what is just when he returns goodwill for what he has received. But those who wish for another's welfare because they hope to enrich themselves through him would seem to have goodwill to themselves, rather than to him. Likewise, they would seem to be friends to themselves rather than to him, if they attend to him because he is of some use to them.

But in general goodwill results from some sort of virtue and decency, whenever one person finds another to be apparently fine or brave or something similar. As we said, this also arises in the case of contestants.

6

Concord also appears to be a feature of friendship. That is why it is not merely sharing a belief, since this might happen among people who do not know each other. Nor are people said to be in concord when they agree on just anything, on astronomical questions, for instance, since concord on these questions is not a feature of friendship. Rather, a city is said to be in concord when [its citizens] agree on what is advantageous, make the same decision, and act on their common resolution.

Hence concord concerns questions for action, and, more exactly, large questions where both or all can get what they want. A city, for instance, is in concord whenever all the citizens resolve to make offices elective, or to make an alliance with the Spartans, or to make Pittacus[15] ruler, when he himself is also willing.

But whenever each person wants the same thing all to himself, as the people in the *Phoenissae*[16] do, they are in conflict. For it is not concord when each merely has the same thing in mind, whatever it is. Rather, each must also have the same thing in mind for the same person; this is true, for instance, whenever both the common people and the decent party want the best people to rule, since when that is so both sides get what they seek.

Concord, then, is apparently political friendship, as indeed it is said to be; for it is concerned with advantage and with what affects life [as a whole].

This sort of concord is found in decent people. For they are in concord with themselves and with each other, since they are practically of the same mind; for their wishes are stable, not flowing back and forth like a tidal strait. They wish for what is just and advantageous, and also seek it in common.

Base people, however, cannot be in concord, except to a slight degree, just as they can be friends only to a slight degree; for they seek to overreach in benefits [to themselves], and shirk labors and public services. And since each wishes this for himself, he interrogates and obstructs his neighbor; for when people do not look out for the common good, it is ruined. The result is that they are in conflict, trying to compel one another to do what is just, but not wishing to do it themselves.

7

Benefactors seem to love their beneficiaries more than the beneficiaries love them [in return], and this is discussed as though it were an unreasonable thing to happen. In most people's view, this is because the beneficiaries are debtors and the benefactors creditors: The debtor in a loan wishes the creditor did not exist, while the creditor even attends to the safety of the debtor. So also, then, a benefactor wants the beneficiary to exist because he expects gratitude in return, whereas the beneficiary is not attentive about making the return.

Now Epicharmus might say that most people say this because they 'take a bad person's point of view.' Still, it would seem to be a human point of view, since the many are indeed forgetful, and seek to receive benefits more than to give them.

However, it seems that the cause is more proper to [human] nature, and the case of creditors is not

15. [After serving as dictator of Mitylene for fourteen years in the early sixth century, he gave up his office, although the citizens unanimously wanted him to continue.—M.L.M.]

16. [Euripides' *Phoenissae* is about the bitter and unscrupulous struggle between Eteocles and Polyneices for absolute power in Thebes.—T.I.]

even similar. For they do not love their debtors, but in wishing for their safety simply seek repayment. Benefactors, however, love and like their beneficiaries even if they are of no present or future use to them. The same is true of craftsmen; for each likes his own product more than it would like him if it acquired a soul. Presumably this is true of poets most of all, since they dearly like their own poems, and are fond of them as though they were their children.

This, then, is what the case of the benefactor resembles; here the beneficiary is his product, and hence he likes him more than the product likes its producer. The reason for this is that being is choiceworthy and lovable for all, and we are insofar as we are actualized, since we are insofar as we live and act. Now the product is, in a way, the producer in his actualization; hence the producer is fond of the product, because he loves his own being. This is natural, since what he is potentially is what the product indicates in actualization.

At the same time, the benefactor's action is fine for him, so that he finds enjoyment in the person he acts on; but the person acted on finds nothing fine in the agent, but only, at most, some advantage, which is less pleasant and lovable.

What is pleasant is actualization in the present, expectation for the future, and memory of the past; but what is most pleasant is the [action we do] insofar as we are actualized, and this is also most lovable. For the benefactor, then, his product endures, since the fine is long-lasting; but for the person acted on, the useful passes away.

Besides, memory of fine things is pleasant, while memory of [receiving] useful things is not altogether pleasant, or is less pleasant—though the reverse would seem to be true for expectation.

Moreover, loving is like production, while being loved is like being acted on; and [the benefactor's] love and friendliness are the result of his greater activity.

Further, everyone is fond of whatever has taken effort to produce; for instance, people who have made money themselves are fonder of it than people who have inherited it. And while receiving a benefit seems to take no effort, giving one is hard work. This is also why mothers love their children more [than fathers do], since giving birth is more effort for them, and they know better that the children are theirs. And this also would seem to be proper to benefactors.

8

There is also a puzzle about whether one ought to love oneself or someone else most of all; for those who like themselves most are criticized and denounced as self-lovers, as though this were something shameful. Indeed, the base person seems to go to every length for his own sake, and all the more the more vicious he is; hence he is accused, for instance, of doing nothing [for any end apart] from himself. The decent person, on the contrary, acts for what is fine, all the more the better he is, and for his friend's sake, disregarding his own [interest].

The facts, however, conflict with these claims, and that is not unreasonable. For it is said that we must love most the friend who is most a friend; and one person is a friend to another most of all if he wishes goods to the other for the other's sake, even if no one will know about it. But these are features most of all of one's relation to oneself; and so too are all the other defining features of a friend, since we have said that all the features of friendship extend from oneself to others.

All the proverbs agree with this too, speaking, for instance, of 'one soul,' 'what friends have is common,' 'equality is friendship,' and 'the knee is closer than the shin.' For all these are true most of all in someone's relations with himself, since one is a friend to himself most of all. Hence he should also love himself most of all.

It is not surprising, then, that there is a puzzle about which view we ought to follow, since both inspire some confidence. Presumably, then, we must divide these sorts of arguments, and distinguish how far and in what ways those on each side are true. Perhaps, then, it will become clear, if we grasp how those on each side understand self-love.

Those who make self-love a matter for reproach ascribe it to those who award the biggest share in money, honors, and bodily pleasures to themselves. For these are the goods desired and eagerly pursued by the many on the assumption that they are best. That is why they are also contested. Those who overreach for these goods gratify their appetites and in

general their feelings and the nonrational part of the soul; and this is the character of the many. That is why the application of the term ['self-love'] is derived from the most frequent [kind of self-love], which is base. This type of self-lover, then, is justifiably reproached.

And plainly it is the person who awards himself these goods whom the many habitually call a self-lover. For if someone is always eager above all to do just or temperate actions or any other actions in accord with the virtues, and in general always gains for himself what is fine, no one will call him a self-lover or blame him for it.

This sort of person, however, more than the other sort, seems to be a self-lover. At any rate he awards himself what is finest and best of all, and gratifies the most controlling part of himself, obeying it in everything. And just as a city and every other composite system seems to be above all its most controlling part, the same is true of a human being; hence someone loves himself most if he likes and gratifies this part.

Similarly, someone is called continent or incontinent because his understanding is or is not the master, on the assumption that this is what each person is. Moreover, his own voluntary actions seem above all to be those involving reason. Clearly, then, this, or this above all, is what each person is, and the decent person likes this most of all.

That is why he most of all is a self-lover, but a different kind from the self-lover who is reproached. He differs from him as much as the life guided by reason differs from the life guided by feelings, and as much as the desire for what is fine differs from the desire for what seems advantageous.

Those who are unusually eager to do fine actions are welcomed and praised by everyone. And when everyone strains to achieve what is fine and concentrates on the finest actions, everything that is right will be done for the common good, and each person individually will receive the greatest of goods, since that is the character of virtue. And so the good person must be a self-lover, since he will both help himself and benefit others by doing fine actions. But the vicious person must not love himself, since he will harm both himself and his neighbors by following his base feelings.

For the vicious person, then, the right actions conflict with those he does. The decent person, however, does the right actions, since every understanding chooses what is best for itself and the decent person obeys his understanding.

It is quite true that, as they say, the excellent person labors for his friends and for his native country, and will die for them if he must; he will sacrifice money, honors, and contested goods in general, in achieving the fine for himself. For he will choose intense pleasure for a short time over slight pleasure for a long time; a year of living finely over many years of undistinguished life; and a single fine and great action over many small actions. This is presumably true of one who dies for others; he does indeed choose something great and fine for himself. He is also ready to sacrifice money as long as his friends profit; for the friends gain money, while he gains the fine, and so he awards himself the greater good.

He treats honors and offices in the same way; for he will sacrifice them all for his friends, since this is fine and praiseworthy for himself. It is not surprising, then, that he seems to be excellent, since he chooses the fine at the cost of everything. It is also possible, however, to sacrifice actions to his friend, since it may be finer to be responsible for his friend's doing the action than to do it himself.

In everything praiseworthy, then, the excellent person awards himself the fine. In this way, then, we must be self-lovers, as we have said. But in the way the many are, we ought not to be.

9

There is also a dispute about whether the happy person will need friends or not. For it is said that blessedly happy and self-sufficient people have no need of friends. For they already have [all] the goods, and hence, being self-sufficient, need nothing added. But your friend, since he is another yourself, supplies what your own efforts cannot supply. Hence it is said, 'When the god gives well, what need is there of friends?'

It would seem absurd, however, to award the happy person all the goods, without giving him friends; for having friends seems to be the greatest external good. And if it is more proper to a friend to confer benefits

than to receive them, and it is proper to the good person and to virtue to do good, and it is finer to benefit friends than to benefit strangers, the excellent person will need people for him to benefit. Indeed, that is why there is a question about whether friends are needed more in good fortune than in ill fortune; for it is assumed that in ill fortune we need people to benefit us, and in good fortune we need others for us to benefit.

Presumably it is also absurd to make the blessed person solitary. For no one would choose to have all [other] goods and yet be alone, since a human being is a political [animal], tending by nature to live together with others. This will also be true, then, of the happy person; for he has the natural goods, and clearly it is better to spend his days with decent friends than with strangers of just any character. Hence the happy person needs friends.

Then what are those on the other side saying, and on what point are they correct? Perhaps they say what they say because the many think that it is the useful people who are friends. Certainly the blessedly happy person will have no need of these, since he has [all] goods. Similarly, he will have no need, or very little, of friends for pleasure; for since his life is pleasant, it has no need of imported pleasures. Since he does not need these sorts of friends, he does not seem to need friends at all.

This conclusion, however, is presumably not true. For we said at the beginning that happiness is a kind of activity; and clearly activity comes into being, and does not belong [to someone all the time], as a possession does. Now if being happy consists in living and being active; the activity of the good person is excellent, and [hence] pleasant in itself, as we said at the beginning; what is our own is pleasant; and we are able to observe our neighbors more than ourselves, and to observe their actions more than our own; it follows that a good person finds pleasure in the actions of excellent people who are his friends, since these actions have both the naturally pleasant [features—they are good, and they are his own]. The blessed person, therefore, will need virtuous friends, given that he decides to observe virtuous actions that are his own, and the actions of a virtuous friend are of this sort.

Further, it is thought that the happy person must live pleasantly. But the solitary person's life is hard, since it is not easy for him to be continuously active all by himself; but in relation to others and in their company it is easier. Hence his activity will be more continuous. It is also pleasant in itself, as it must be in the blessedly happy person's case. For the excellent person, insofar as he is excellent, enjoys actions in accord with virtue, and objects to actions caused by vice, just as the musician enjoys fine melodies and is pained by bad ones.

Further, good people's life together allows the cultivation of virtue, as Theognis says.

If we examine the question more from the point of view of [human] nature, an excellent friend would seem to be choiceworthy by nature for an excellent person. For, as we have said, what is good by nature is good and pleasant in itself for an excellent person.

For animals, life is defined by the capacity for perception, but for human beings, it is defined by the capacity for perception or understanding; moreover, every capacity refers to an activity, and a thing is present fully in its activity; hence living fully would seem to be perceiving or understanding.

Now life is good and pleasant in itself; for it has definite order, which is proper to the nature of what is good. What is good by nature is also good for the decent person; that is why life would seem to be pleasant for everyone. But we must not consider a life that is vicious and corrupted, or filled with pains; for such a life lacks definite order, just as its proper features do. (The truth about pain will be more evident in what follows.)

Life itself, then, is good and pleasant, as it would seem, at any rate, from the fact that everyone desires it, and decent and blessed people desire it more than others do—for their life is most choiceworthy for them, and their living is most blessed.

Now someone who sees perceives that he sees; one who hears perceives that he hears; one who walks perceives that he walks; and similarly in the other cases also there is some [element] that perceives that we are active; so that if we are perceiving, we perceive that we are perceiving, and if we are understanding, we perceive that we are understanding. Now perceiving that we are perceiving or understanding is the same as perceiving that we are, since we agreed that being is perceiving or understanding.

1170b Perceiving that we are alive is pleasant in itself. For life is by nature a good, and it is pleasant to perceive that something good is present in us. Living is also choiceworthy, for a good person most of all, since being is good and pleasant for him; for he is 5 pleased to perceive something good in itself together [with his own being].

The excellent person is related to his friend in the same way as he is related to himself, since a friend is another himself. Therefore, just as his own being is choiceworthy for him, his friend's being is choiceworthy for him in the same or a similar way. We agreed that someone's own being is choiceworthy because he perceives that he is good, and this sort of 10 perception is pleasant in itself. He must, then, perceive his friend's being together [with his own], and he will do this when they live together and share conversation and thought. For in the case of human beings what seems to count as living together is this sharing of conversation and thought, not sharing the same pasture, as in the case of grazing animals.

15 If, then, for the blessedly happy person, being is choiceworthy, since it is naturally good and pleasant, and if the being of his friend is closely similar to his own, his friend will also be choiceworthy. What is choiceworthy for him he must possess, since otherwise he will in this respect lack something. Anyone who is to be happy, then, must have excellent friends.

10

20 Then should we have as many friends as possible? Or is it the same as with the friendship of host and guest, where it seems to be good advice to 'have neither many nor none'? Is this also good advice in friendship, to have neither no friends nor excessively many?

25 With friends for utility the advice seems very apt, since it is hard work to return many people's services, and life is too short for it. Indeed, more [such] friends than are adequate for one's own life are superfluous, and a hindrance to living finely; hence we have no need of them. A few friends for pleasure are enough also, just as a little seasoning on food is enough.

30 Of excellent people, however, should we have as many as possible as friends, or is there some proper measure of their number, as of the number in a city? For a city could not be formed from ten people, but it would be a city no longer if it had a hundred thousand. Presumably, though, the right quantity is not just one number, but anything between certain defined limits. Hence there is also some limit defining 1171a the number of friends. Presumably, this is the largest number with whom you could live together, since we found that living together seems to be most characteristic of friendship.

Clearly you cannot live with many people and distribute yourself among them. Further these many people must also be friends to one another, if they are all to spend their days together; and this is hard 5 work for many people to manage. It also becomes difficult for many to share one another's enjoyments and distresses as their own, since you are quite likely to find yourself sharing one friend's pleasure and another friend's grief at the same time.

Presumably, then, it is good not to seek as many friends as possible, and good to have no more than enough for living together; indeed it even seems im- 10 possible to be an extremely close friend to many people. That is why it also seems impossible to be passionately in love with many people, since passionate erotic love tends to be an excess of friendship, and one has this for one person; hence also one has extremely close friendship for a few people.

This would seem to be borne out in what people actually do. For the friendship of companions is not found in groups of many people, and the friendships 15 celebrated in song are always between two people. By contrast, those who have many friends and treat everyone as close to them seem to be friends to no one, except in the way fellow citizens are friends; these people are regarded as ingratiating. Certainly it is possible to have a fellow citizen's friendship for many people, and still to be a truly decent person, not ingratiating; but it is impossible to be many people's friend for their virtue and for themselves. We have reason to be satisfied if we can find even a few 20 such friends.

11

Have we more need of friends in good fortune or in ill fortune? For in fact we seek them in both; for in ill fortune we need assistance, and in good fortune

we need friends to live with and to benefit, since then we wish to do good. Certainly it is more necessary to have friends in ill fortune; that is why useful friends are needed here. But it is finer to have them in good fortune. That is why we also seek decent friends; for it is more choiceworthy to do good to them and spend our time with them.

The very presence of friends is also pleasant, in ill fortune as well as good fortune; for we have our pain lightened when our friends share our distress. Indeed, that is why one might be puzzled about whether they take a part of it from us, as though helping us to lift a weight, or, alternatively, their presence is pleasant and our awareness that they share our distress makes the pain smaller. Well, we need not discuss whether it is this or something else that lightens our pain; at any rate, what we have mentioned does appear to occur.

However, the presence of friends would seem to be a mixture [of pleasure and pain]. For certainly the sight of our friends in itself is pleasant, especially when we are in ill fortune, and it gives us some assistance in removing our pain. For a friend consoles us by the sight of him and by conversation, if he is dexterous, since he knows our character and what gives us pleasure and pain.

Nonetheless, awareness of his pain at our ill fortune is painful to us; for everyone tries to avoid causing pain to his friends. That is why someone with a manly nature tries to prevent his friend from sharing his pain. Unless he is unusually immune to pain, he cannot endure pain coming to his friends; and he does not allow others to share his mourning at all, since he is not prone to mourn himself either. Females, however, and effeminate men enjoy having people to wail with them; they love them as friends who share their distress. But in everything we clearly must imitate the better person.

In good fortune, by contrast, the presence of friends makes it pleasant to pass our time and to notice that they take pleasure in our own goods. That is why it seems that we must eagerly call our friends to share our good fortune, since it is fine to do good. But we must hesitate to call them to share our ill fortune, since we must share bad things with them as little as possible; hence the saying 'My misfortune is enough.' We should invite them most of all whenever they will benefit us greatly, with little trouble to themselves.

Conversely, it is presumably appropriate to go eagerly, without having to be called, to friends in misfortune. For it is proper to a friend to benefit, especially to benefit a friend in need who has not demanded it, since this is finer and pleasanter for both friends. In good fortune he should come eagerly to help him, since friends are needed for this also; but he should be slow to come to receive benefits, since eagerness to be benefited is not fine. Presumably, though, one should avoid getting a reputation for being a killjoy, as sometimes happens, by refusing benefits.

Hence the presence of friends is apparently choiceworthy in all conditions.

12

What the erotic lover likes most is the sight of his beloved, and this is the sort of perception he chooses over the others, supposing that this above all is what makes him fall in love and remain in love. In the same way, surely, what friends find most choiceworthy is living together. For friendship is community, and we are related to our friend as we are related to ourselves. Hence, since the perception of our own being is choiceworthy, so is the perception of our friend's being. Perception is active when we live with him; hence, not surprisingly, this is what we seek.

Whatever someone [regards as] his being, or the end for which he chooses to be alive, that is the activity he wishes to pursue in his friend's company. Hence some friends drink together, others play dice, while others do gymnastics and go hunting, or do philosophy. They spend their days together on whichever pursuit in life they like most; for since they want to live with their friends, they share the actions in which they find their common life.

Hence the friendship of base people turns out to be vicious. For they are unstable, and share base pursuits; and by becoming similar to each other, they grow vicious. But the friendship of decent people is decent, and increases the more often they meet. And they seem to become still better from their activities and their mutual correction. For each molds the other in what they approve of, so that '[you will learn] what is noble from noble people.'

So much, then, for friendship. The next task will be to discuss pleasure.

BOOK X

1

The next task, presumably, is to discuss pleasure. For it seems to be especially proper to our [animal] kind; that is why, when we educate children, we steer them by pleasure and pain. Besides, enjoying and hating the right things seems to be most important for virtue of character. For pleasure and pain extend through the whole of our lives, and are of great importance for virtue and the happy life, since people decide on pleasant things, and avoid painful things.

Least of all, then, it seems, should these topics be neglected, especially since they arouse much dispute. For some say pleasure is the good, while others, on the contrary, say it is altogether base. Presumably, some [who say it is base] say so because they are persuaded that it is so. Others, however, say it because they think it is better for the conduct of our lives to present pleasure as base even if it is not. For, they say, the many lean toward pleasure and are slaves to pleasures, and that is why we must lead them in the contrary direction, because that is the way to reach the intermediate condition.

Surely, however, this is wrong. For arguments about actions and feelings are less credible than the facts; hence any conflict between arguments and perceptible [facts] arouses contempt for the arguments, and moreover undermines the truth as well [as the arguments]. For if someone blames pleasure, but then has been seen to seek it on *some* occasions, the reason for his lapse seems to be that he regards *every* type of pleasure as something to seek; for the many are not the sort to make distinctions.

True arguments, then, would seem to be the most useful, not only for knowledge but also for the conduct of life. For since they harmonize with the facts, they are credible, and so encourage those who comprehend them to live by them.

Enough of this, then; let us now consider what has been said about pleasure.

2

Eudoxus thought that pleasure is the good, because he saw that all [animals], both rational and nonrational, seek it, and in everything, he says, what is choiceworthy is good, and what is most choiceworthy is supreme. The fact that all are drawn to the same thing [i.e., pleasure], indicates, in his view, that it is best for all, since each [kind of animal] finds its own good, just as it finds its own nourishment; and what is good for all, what all aim at, is the good. These arguments of his were found credible because of his virtuous character, rather than on their own [merits]. For since he seemed to be outstandingly temperate, he did not seem to be saying this because he was a friend of pleasure; rather, it seemed that what he said was how it really was.

He thought it was no less evident from consideration of the contrary. For pain in itself, he said, is something to be avoided for all, so that, similarly, its contrary is choiceworthy for all. Now what is most choiceworthy is what we choose not because of, or for the sake of, anything else; and it is agreed that this is the character of pleasure, since we never ask anyone what his end is in being pleased, because we assume that pleasure is choiceworthy in itself.

Moreover, [he argued], when pleasure is added to any other good, to just or temperate action, for instance, it makes that good more choiceworthy; and good is increased by the addition of itself.

This [last] argument, at least, would seem to present pleasure as one good among others, no more a good than any other. For the addition of any other good makes a good more choiceworthy than it is all by itself. Indeed Plato uses this sort of argument to undermine the claim of pleasure to be the good. For, he argues, the pleasant life is more choiceworthy when combined with prudence than it is without it; and if the mixed [good] is better, pleasure is not the good, since nothing can be added to the good to make it more choiceworthy. Nor, clearly, could anything else be the good if it is made more choiceworthy by the addition of anything that is good in itself. Then what is the good that meets this condition, and that we share in also? That is what we are looking for.

But when some object that what everything aims at is not good, surely there is nothing in what they

say. For if things seem [good] to all, we say they are [good]; and if someone undermines confidence in these, what he says will hardly inspire more confidence in other things. For if [only animals] without understanding desired these things, there would be something in the objection; but if prudent [animals] also desire them, how can there be anything in it? And presumably even in inferior [animals] there is something superior to themselves that seeks their own proper good.

The argument [against Eudoxus] about the contrary would also seem to be incorrect. For they argue that if pain is an evil, it does not follow that pleasure is a good, since evil is also opposed to evil, and both are opposed to the neutral condition [without pleasure or pain]. The objectors' general point here is right, but what they say in the case mentioned is false. For if both pleasure and pain were evils, we would also have to avoid both, and if both were neutral, we would have to avoid neither, or else avoid both equally. Evidently, however, we avoid pain as an evil and choose pleasure as a good; hence this must also be the opposition between them.

3

Again, if [as the objectors argue] pleasure is not a quality, it does not follow [as they suppose] that it is not a good. For virtuous activities and happiness are not qualities either.

They say that the good is definite, whereas pleasure is indefinite because it admits of more and less. If their judgment rests on the actual condition of being pleased, it must also hold for justice and the other virtues, where evidently we are said to have a certain character more and less, and to act more and less in accord with the virtues; for we may be more [and less] just or brave, and may do just or temperate actions more and less. If, on the other hand, their judgment rests on the [variety of] pleasures, then surely they fail to state the reason [why pleasures admit of more and less], namely that some are unmixed [with pain] and others are mixed.

Moreover, just as health admits of more and less, though it is definite, why should pleasure not be the same? For not every [healthy person] has the same proportion [of bodily elements], nor does the same person always have the same, but it may be relaxed and still remain up to a certain limit, and may differ in more and less. The same is quite possible, then, for pleasure also.

They hold that what is good is complete, whereas processes and becomings are incomplete, and they try to show that pleasure is a process and a becoming. It would seem, however, that they are wrong, and pleasure is not even a process. For quickness or slowness seems to be proper to every process—if not in itself (as, for instance, with the universe), then in relation to something else. But neither of these is true of pleasure. For though certainly it is possible to become pleased quickly, as it is possible to become angry quickly, it is not possible to be pleased quickly, even in relation to something else, whereas this is possible for walking and growing and all such things [i.e., for processes]. It is possible, then, to pass quickly or slowly into pleasure, but not possible to be [quickly or slowly] in the corresponding activity, i.e., to be pleased quickly [or slowly].

And how could pleasure be a becoming? For one random thing, it seems, does not come to be from any other; what something comes to be from is what it is dissolved into. Hence whatever pleasure is the becoming of, pain should be the perishing of it.

They do indeed say that pain is the emptying of the natural [condition, and hence the perishing], and that pleasure is its refilling [and hence the becoming]. Emptying and filling happen to the body; if, then, pleasure is the refilling of something natural, what has the refilling will also have the pleasure. Hence it will be the body that has pleasure. This does not seem to be true, however. The refilling, then, is not pleasure, though someone might be pleased while a refilling is going on, and pained when he is becoming empty.

This belief [that pleasure is refilling] seems to have arisen from pains and pleasures in connection with food; for first we are empty and suffer pain, and then take pleasure in the refilling. The same is not true, however, of all pleasures; for pleasures in mathematics, and among pleasures in perception those through the sense of smell, and many sounds, sights, memories, and expectations as well, all arise without [previous] pain. In that case what will they be comings-to-be of? For since no emptiness of anything has come

to be, there is nothing whose refilling might come to be.

To those who cite the disgraceful pleasures [to show that pleasure is not a good], we might reply that these [sources of disgraceful pleasures] are not pleasant. For if things are healthy or sweet or bitter to sick people, we should not suppose that they are also healthy, or sweet, or bitter, except to them, or that things appearing white to people with eye disease are white, except to them. Similarly, if things are pleasant to people in bad condition, we should not suppose that they are also pleasant, except to these people.

Or else we might say that pleasures are choiceworthy, but not if they come from these sources, just as wealth is desirable, but not if you have to betray someone to get it, and health is desirable, but not if it requires you to eat anything and everything.

Or perhaps pleasures differ in species. For those from fine sources are different from those from shameful sources; and we cannot have the just person's pleasure without being just, any more than we can have the musician's without being musicians, and similarly in the other cases.

The difference between a friend and a flatterer seems to indicate that pleasure is not good, or else that pleasures differ in species. For in dealings with us the friend seems to aim at what is good, but the flatterer at pleasure; and the flatterer is reproached, whereas the friend is praised, on the assumption that in their dealings they have different aims.

And no one would choose to live with a child's [level of] thought for his whole life, taking as much pleasure as possible in what pleases children, or to enjoy himself while doing some utterly shameful action, even if he would never suffer pain for it.

Moreover, there are many things that we would be eager for even if they brought no pleasure—for instance, seeing, remembering, knowing, having the virtues. Even if pleasures necessarily follow on them, that does not matter; for we would choose them even if no pleasure resulted from them.

It would seem to be clear, then, that pleasure is not the good, that not every pleasure is choiceworthy, and that some are choiceworthy in themselves, differing in species or in their sources [from those that are not].

Let this suffice, then, for discussion of the things said about pleasure and pain.

4

What, then, or what kind of thing, is pleasure? This will become clearer if we take it up again from the beginning. For seeing seems to be complete at any time, since it has no need for anything else to complete its form by coming to be at a later time. And pleasure is also like this, since it is some sort of whole, and no pleasure is to be found at any time that will have its form completed by coming to be for a longer time.

That is why pleasure is not a process either. For every process, such as constructing a building, takes time, and aims at some end, and is complete when it produces the product it seeks, or, [in other words, is complete] in this whole time [that it takes]. Moreover, each process is incomplete during the processes that are its parts, i.e., during the time it goes on; and it consists of processes that are different in form from the whole process and from one another.

For laying stones together and fluting a column are different processes; and both are different from the [whole] production of the temple. For the production of the temple is a complete production, since it needs nothing further [when it is finished] to achieve the proposed goal; but the production of the foundation or the triglyph is an incomplete production, since [when it is finished] it is [the production] of a part. Hence [processes that are parts of larger processes] differ in form; and we cannot find a process complete in form at any time [while it is going on], but [only], if at all, in the whole time [that it takes].

The same is true of walking and the other [processes]. For if locomotion is a process from one place to another, it includes locomotions differing in form—flying, walking, jumping, and so on. And besides these differences, there are differences in walking itself. For the place from which and the place to which are not the same in the whole racecourse as they are in a part of it, or the same in one part as in another; nor is travelling along one line the same as travelling along another, since what we cover is not just a line, but a line in a [particular] place, and this line and that line are in different places.

Now we have discussed process exactly elsewhere. But, at any rate, a process, it would seem, is not complete at every time; and the many [constituent] processes are incomplete, and differ in form, since the place from which and the place to which make the form of a process [and different processes begin and end in different places].

The form of pleasure, by contrast, is complete at any time. Clearly, then, it is different from a process, and is something whole and complete. This also seems true because a process must take time, but being pleased need not; for what is present in an instant is a whole. This also makes it clear that it is wrong to say that pleasure is a process or a becoming. For this is not said of everything, but only of what is divisible and not a whole; for seeing, or a point, or a unit, has no coming to be, and none of these is either a process or a becoming. But pleasure is a whole; hence it too has no coming to be.

Every perceptual capacity is active in relation to its perceptible object, and completely active when it is in good condition in relation to the finest of its perceptible objects. For this above all seems to be the character of complete activity, whether it is ascribed to the capacity or to the subject that has it. Hence for each capacity the best activity is the activity of the subject in the best condition in relation to the best object of the capacity.

This activity will also be the most complete and the most pleasant. For every perceptual capacity and every sort of thought and study has its pleasure; the most pleasant activity is the most complete; and the most complete is the activity of the subject in good condition in relation to the most excellent object of the capacity. Pleasure completes the activity.

But the way in which pleasure completes the activity is not the way in which the perceptible object and the perceptual capacity complete it when they are both excellent—just as health and the doctor are not the cause of being healthy in the same way.

Clearly a pleasure arises that corresponds to each perceptual capacity, since we say that sights and sounds are pleasant; and clearly it arises most of all whenever the perceptual capacity is best, and is active in relation to the best sort of object. When this is the condition of the perceptible object and of the perceiving subject, there will always be pleasure, when the producer and the subject to be affected are both present.

Pleasure completes the activity—not, however, as the state does, by being present [in the activity], but as a sort of consequent end, like the bloom on youths. Hence as long as the objects of understanding or perception and the subject that judges or attends are in the right condition, there will be pleasure in the activity. For as long as the subject affected and the productive [cause] remain similar and in the same relation to each other, the same thing naturally arises.

Then how is it that no one is continuously pleased? Is it not because we get tired? For nothing human is capable of continuous activity, and hence no continuous pleasure arises either, since pleasure is a consequence of the activity. Some things delight us when they are new to us, but later delight us less, for the same reason. For at first our thought is stimulated and intensely active toward them, as our sense of sight is when we look closely at something; but later the activity becomes lax and careless, so that the pleasure fades also.

Why does everyone desire pleasure? We might think it is because everyone also aims at being alive. Living is a type of activity, and each of us is active toward the objects he likes most and in the ways he likes most. The musician, for instance, activates his hearing in hearing melodies; the lover of learning activates his thought in thinking about objects of study; and so on for each of the others. Pleasure completes their activities, and hence completes life, which they desire. It is reasonable, then, that they also aim at pleasure, since it completes each person's life for him, and life is choiceworthy.

But do we choose life because of pleasure, or pleasure because of life? Let us set aside this question for now, since the two appear to be combined and to allow no separation; for pleasure never arises without activity, and, equally, it completes every activity.

5

Hence pleasures also seem to differ in species. For we suppose that things of different species are completed by different things. That is how it appears, both with natural things and with artifacts—for

instance, with animals, trees, a painting, a statue, a house, or an implement. Similarly, activities that differ in species are also completed by things that differ in species. Now activities of thought differ in species from activities of the capacities for perception, and so do these from each other; so also, then, do the pleasures that complete them.

This is also apparent from the way each pleasure is proper to the activity that it completes. For the proper pleasure increases the activity; for we judge each thing better and more exactly when our activity involves pleasure. If, for instance, we enjoy doing geometry, we become better geometers, and understand each question better; and similarly lovers of music, building, and so on improve at their proper function when they enjoy it. Each pleasure increases the activity; what increases it is proper to it; and since the activities are different in species, what is proper to them is also different in species.

This is even more apparent from the way some activities are impeded by pleasures from others. For lovers of flutes, for instance, cannot pay attention to a conversation if they catch the sound of someone playing the flute, because they enjoy flute playing more than their present activity; and so the pleasure proper to flute playing destroys the activity of conversation.

The same is true in other cases also, whenever we are engaged in two activities at once. For the more pleasant activity pushes out the other one, all the more if it is much more pleasant, so that we no longer even engage in the other activity. Hence if we are enjoying one thing intensely, we do not do another very much. It is when we are only mildly pleased that we do something else; for instance, people who eat nuts in theatres do this most when the actors are bad.

Since, then, the proper pleasure makes an activity more exact, longer, and better, whereas an alien pleasure damages it, clearly the two pleasures differ widely. For an alien pleasure does virtually what a proper pain does. The proper pain destroys activity, so that if, for instance, writing or rational calculation has no pleasure and is in fact painful for us, we do not write or calculate, since the activity is painful. Hence the proper pleasures and pains have contrary effects on an activity; and the proper ones are those that arise from the activity in itself. And as we have said, the effect of alien pleasures is similar to the effect of pain, since they ruin the activity, though not in the same way as pain.

Since activities differ in degrees of decency and badness, and some are choiceworthy, some to be avoided, some neither, the same is true of pleasures; for each activity has its own proper pleasure. Hence the pleasure proper to an excellent activity is decent, and the one proper to a base activity is vicious; for, similarly, appetites for fine things are praiseworthy, and appetites for shameful things are blameworthy. And in fact the pleasure in an activity is more proper to it than the desire for it. For the desire is distinguished from it in time and in nature; but the pleasure is close to the activity, and so little distinguished from it that disputes arise about whether the activity is the same as the pleasure.

Still, pleasure would seem to be neither thought nor perception, since that would be absurd. Rather, it is because [pleasure and activity] are not separated that to some people they appear the same. Hence, just as activities differ, so do the pleasures. Sight differs from touch in purity, as hearing and smell do from taste; hence the pleasures also differ in the same way. So also do the pleasures of thought differ from these [pleasures of sense]; and both sorts have different kinds within them.

Each kind of animal seems to have its own proper pleasure, just as it has its own proper function; for the proper pleasure will be the one that corresponds to its activity. This is apparent if we also study each kind; for a horse, a dog, and a human being have different pleasures, and, as Heracleitus says, an ass would choose chaff over gold, since asses find food more pleasant than gold. Hence animals that differ in species also have pleasures that differ in species; and it would be reasonable for animals of the same species to have the same pleasures also.

In fact, however, the pleasures differ quite a lot, in human beings at any rate. For the same things delight some people, and cause pain to others; and while some find them painful and hateful, others find them pleasant and lovable. The same is true of sweet things. For the same things do not seem sweet to a feverish and to a healthy person, or hot to an enfeebled and to a vigorous person; and the same is true of other things.

But in all such cases it seems that what is really

so is what appears so to the excellent person. If this is right, as it seems to be, and virtue, i.e., the good person insofar as he is good, is the measure of each thing, then what appear pleasures to him will also really be pleasures, and what is pleasant will be what he enjoys.

And if what he finds objectionable appears pleasant to someone, that is not at all surprising; for human beings suffer many sorts of corruption and damage. It is not pleasant, however, except to these people in these conditions. Clearly, then, we should say that the pleasures agreed to be shameful are not pleasures at all, except to corrupted people.

But what about those pleasures that seem to be decent? Of these, which kind, or which particular pleasure, should we take to be the pleasure of a human being? Surely it will be clear from the activities, since the pleasures are consequences of these. Hence the pleasures that complete the activities of the complete and blessedly happy man, whether he has one activity or more than one, will be called the fully human pleasures to the fullest extent. The other pleasures will be human in secondary, or even more remote ways, corresponding to the character of the activities.

6

We have now finished our discussion of the types of virtue; of friendship; and of pleasure. It remains for us to discuss happiness in outline, since we take this to be the end of human [aims]. Our discussion will be shorter if we first take up again what we said before.

We said, then, that happiness is not a state. For if it were, someone might have it and yet be asleep for his whole life, living the life of a plant, or suffer the greatest misfortunes. If we do not approve of this, we count happiness as an activity rather than a state, as we said before.

Some activities are necessary, i.e., choiceworthy for some other end, while others are choiceworthy in their own right. Clearly, then, we should count happiness as one of those activities that are choiceworthy in their own right, not as one of those choiceworthy for some other end. For happiness lacks nothing, but is self-sufficient.

An activity is choiceworthy in its own right if nothing further apart from it is sought from it. This seems to be the character of actions in accord with virtue; for doing fine and excellent actions is choiceworthy for itself. But pleasant amusements also [seem to be choiceworthy in their own right]; for they are not chosen for other ends, since they actually cause more harm than benefit, by causing neglect of our bodies and possessions. Moreover, most of those people congratulated for their happiness resort to these sorts of pastimes. That is why people who are witty participants in them have a good reputation with tyrants, since they offer themselves as pleasant [partners] in the tyrant's aims, and these are the sort of people the tyrant requires. And so these amusements seem to have the character of happiness because people in supreme power spend their leisure in them.

These sorts of people, however, are presumably no evidence. For virtue and understanding, the sources of excellent activities, do not depend on holding supreme power. Further, these powerful people have had no taste of pure and civilized pleasure, and so they resort to bodily pleasures. But that is no reason to think these pleasures are most choiceworthy, since boys also think that the things they honor are best. Hence, just as different things appear honorable to boys and to men, it is reasonable that in the same way different things appear honorable to base and to decent people.

As we have often said, then, what is honorable and pleasant is what is so to the excellent person. To each type of person the activity that accords with his own proper state is most choiceworthy; hence the activity in accord with virtue is most choiceworthy to the excellent person [and hence is most honorable and pleasant].

Happiness, then, is not found in amusement; for it would be absurd if the end were amusement, and our lifelong efforts and sufferings aimed at amusing ourselves. For we choose practically everything for some other end—except for happiness, since it is [the] end; but serious work and toil aimed [only] at amusement appears stupid and excessively childish. Rather, it seems correct to amuse ourselves so that we can do something serious, as Anacharsis says; for amusement would seem to be relaxation, and it is because we cannot toil continuously that we require relaxation. Relaxation, then, is not [the] end; for we pursue it [to prepare] for activity. But the happy life

1177a seems to be a life in accord with virtue, which is a life involving serious actions, and not consisting in amusement.

Besides, we say that things to be taken seriously are better than funny things that provide amusement, and that in each case the activity of the better part and the better person is more serious and excellent; and the activity of what is better is superior, and thereby has more the character of happiness.

Besides, anyone at all, even a slave, no less than the best person, might enjoy bodily pleasures; but no one would allow that a slave shares in happiness, if one does not [also allow that the slave shares in the sort of] life [needed for happiness]. Happiness, then, is found not in these pastimes, but in the activities in accord with virtue, as we also said previously.

7

If happiness is activity in accord with virtue, it is reasonable for it to accord with the supreme virtue, which will be the virtue of the best thing. The best is understanding, or whatever else seems to be the natural ruler and leader, and to understand what is fine and divine, by being itself either divine or the most divine element in us. Hence complete happiness will be its activity in accord with its proper virtue; and we have said that this activity is the activity of study.

This seems to agree with what has been said before, and also with the truth. For this activity is supreme, since understanding is the supreme element in us, and the objects of understanding are the supreme objects of knowledge.

Further, it is the most continuous activity, since we are more capable of continuous study than any continuous action.

Besides, we think pleasure must be mixed into happiness; and it is agreed that the activity in accord with wisdom is the most pleasant of the activities in accord with virtue. Certainly, philosophy seems to have remarkably pure and firm pleasures, and it is reasonable for those who have knowledge to spend their lives more pleasantly than those who seek it.

Moreover, the self-sufficiency we spoke of will be found in study more than in anything else. For admittedly the wise person, the just person, and the other virtuous people all need the good things necessary for life. Still, when these are adequately supplied, the just person needs other people as partners and recipients of his just actions; and the same is true of the temperate person, the brave person, and each of the others. But the wise person is able, and more able the wiser he is, to study even by himself; and though he presumably does it better with colleagues, even so he is more self-sufficient than any other [virtuous person].

Besides, study seems to be liked because of itself alone, since it has no result beyond having studied. But from the virtues concerned with action we try to a greater or lesser extent to gain something beyond the action itself.

Besides, happiness seems to be found in leisure; for we deny ourselves leisure so that we can be at leisure, and fight wars so that we can be at peace. Now the virtues concerned with action have their activities in politics or war, and actions here seem to require trouble. This seems completely true for actions in war, since no one chooses to fight a war, and no one continues it, for the sake of fighting a war; for someone would have to be a complete murderer if he made his friends his enemies so that there could be battles and killings. But the actions of the politician also deny us leisure; apart from political activities themselves, those actions seek positions of power and honors, or at least they seek happiness for the politician himself and for his fellow citizens, which is something different from political science itself, and clearly is sought on the assumption that it is different.

Hence among actions in accord with the virtues those in politics and war are preeminently fine and great; but they require trouble, aim at some [further] end, and are choiceworthy for something other than themselves. But the activity of understanding, it seems, is superior in excellence because it is the activity of study, aims at no end apart from itself, and has its own proper pleasure, which increases the activity. Further, self-sufficiency, leisure, unwearied activity (as far as is possible for a human being), and any other features ascribed to the blessed person, are evidently features of this activity. Hence a human being's complete happiness will be this activity, if it receives a complete span of life, since nothing incomplete is proper to happiness.

Such a life would be superior to the human level.

For someone will live it not insofar as he is a human being, but insofar as he has some divine element in him. And the activity of this divine element is as much superior to the activity in accord with the rest of virtue as this element is superior to the compound. Hence if understanding is something divine in comparison with a human being, so also will the life in accord with understanding be divine in comparison with human life. We ought not to follow the makers of proverbs and 'Think human, since you are human,' or 'Think mortal, since you are mortal.' Rather, as far as we can, we ought to be pro-immortal, and go to all lengths to live a life in accord with our supreme element; for however much this element may lack in bulk, by much more it surpasses everything in power and value.

Moreover, each person seems to be his understanding, if he is his controlling and better element. It would be absurd, then, if he were to choose not his own life, but something else's. And what we have said previously will also apply now. For what is proper to each thing's nature is supremely best and most pleasant for it; and hence for a human being the life in accord with understanding will be supremely best and most pleasant, if understanding, more than anything else, is the human being. This life, then, will also be happiest.

8

The life in accord with the other kind of virtue [i.e., the kind concerned with action] is [happiest] in a secondary way, because the activities in accord with this virtue are human. For we do just and brave actions, and the other actions in accord with the virtues, in relation to other people, by abiding by what fits each person in contracts, services, all types of actions, and also in feelings; and all these appear to be human conditions. Indeed, some feelings actually seem to arise from the body; and in many ways virtue of character seems to be proper to feelings.

Besides, prudence is inseparable from virtue of character, and virtue of character from prudence. For the principles of prudence accord with the virtues of character; and correctness in virtues of character accords with prudence. And since these virtues are also connected to feelings, they are concerned with the compound. Since the virtues of the compound are human virtues, the life and the happiness in accord with these virtues is also human. The virtue of understanding, however, is separated [from the compound]. Let us say no more about it, since an exact account would be too large a task for our present project.

Moreover, it seems to need external supplies very little, or [at any rate] less than virtue of character needs them. For let us grant that they both need necessary goods, and to the same extent; for there will be only a very small difference, even though the politician labors more about the body and suchlike. Still, there will be a large difference in [what is needed] for the [proper] activities [of each type of virtue]. For the generous person will need money for generous actions; and the just person will need it for paying debts, since wishes are not clear, and people who are not just pretend to wish to do justice. Similarly, the brave person will need enough power, and the temperate person will need freedom [to do intemperate actions], if they are to achieve anything that the virtue requires. For how else will they, or any other virtuous people, make their virtue clear?

Moreover, it is disputed whether decision or action is more in control of virtue, on the assumption that virtue depends on both. Well, certainly it is clear that the complete [good] depends on both; but for actions many external goods are needed, and the greater and finer the actions the more numerous are the external goods needed.

But someone who is studying needs none of these goods, for that activity at least; indeed, for study at least, we might say they are even hindrances. Insofar as he is a human being, however, and [hence] lives together with a number of other human beings, he chooses to do the actions that accord with virtue. Hence he will need the sorts of external goods [that are needed for the virtues], for living a human life.

In another way also it appears that complete happiness is some activity of study. For we traditionally suppose that the gods more than anyone are blessed and happy; but what sorts of actions ought we to ascribe to them? Just actions? Surely they will appear ridiculous making contracts, returning deposits, and so on. Brave actions? Do they endure what [they find] frightening and endure dangers because it is fine? Generous actions? Whom will they give to? And

surely it would be absurd for them to have currency or anything like that. What would their temperate actions be? Surely it is vulgar praise to say that they do not have base appetites. When we go through them all, anything that concerns actions appears trivial and unworthy of the gods. Nonetheless, we all traditionally suppose that they are alive and active, since surely they are not asleep like Endymion. Then if someone is alive, and action is excluded, and production even more, what is left but study? Hence the gods' activity that is superior in blessedness will be an activity of study. And so the human activity that is most akin to the gods' activity will, more than any others, have the character of happiness.

A sign of this is the fact that other animals have no share in happiness, being completely deprived of this activity of study. For the whole life of the gods is blessed, and human life is blessed to the extent that it has something resembling this sort of activity; but none of the other animals is happy, because none of them shares in study at all. Hence happiness extends just as far as study extends, and the more someone studies, the happier he is, not coincidentally but insofar as he studies, since study is valuable in itself. And so [on this argument] happiness will be some kind of study.

But happiness will need external prosperity also, since we are human beings; for our nature is not self-sufficient for study, but we need a healthy body, and need to have food and the other services provided. Still, even though no one can be blessedly happy without external goods, we must not think that to be happy we will need many large goods. For self-sufficiency and action do not depend on excess.

Moreover, we can do fine actions even if we do not rule earth and sea; for even from moderate resources we can do the actions that accord with virtue. This is evident to see, since many private citizens seem to do decent actions no less than people in power do—even more, in fact. It is enough if moderate resources are provided; for the life of someone whose activity accords with virtue will be happy.

Solon[17] surely described happy people well, when he said they had been moderately supplied with external goods, had done what he regarded as the finest actions, and had lived their lives temperately. For it is possible to have moderate possessions and still to do the right actions. And Anaxagoras would seem to have supposed that the happy person was neither rich nor powerful, since he said he would not be surprised if the happy person appeared an absurd sort of person to the many. For the many judge by externals, since these are all they perceive. Hence the beliefs of the wise would seem to accord with our arguments.

These considerations, then, produce some confidence. But the truth in questions about action is judged from what we do and how we live, since these are what control [the answers to such questions]. Hence we ought to examine what has been said by applying it to what we do and how we live; and if it harmonizes with what we do, we should accept it, but if it conflicts we should count it [mere] words.

The person whose activity accords with understanding and who takes care of understanding would seem to be in the best condition, and most loved by the gods. For if the gods pay some attention to human beings, as they seem to, it would be reasonable for them to take pleasure in what is best and most akin to them, namely understanding; and reasonable for them to benefit in return those who most of all like and honor understanding, on the assumption that these people attend to what is beloved by the gods, and act correctly and finely. Clearly, all this is true of the wise person more than anyone else; hence he is most loved by the gods. And it is likely that this same person will be happiest; hence, by this argument also, the wise person, more than anyone else, will be happy.

9

We have now said enough in outlines about happiness and the virtues, and about friendship and pleasure also. Should we, then, think that our decision [to study these] has achieved its end? On the contrary, the aim of studies about action, as we say, is surely not to study and know about a given thing, but rather to act on our knowledge. Hence knowing about virtue is not enough, but we must also try to possess and exercise virtue, or become good in any other way.

17. [According to Solon, Tellus of Athens was the happiest man he knew; he was wealthy, lived to see his grandchildren, and died honorably in battle.—M.L.M.]

Now if arguments were sufficient by themselves to make people decent, the rewards they would command would justifiably have been many and large, as Theognis says, and rightly bestowed. In fact, however, arguments seem to have enough influence to stimulate and encourage the civilized ones among the young people, and perhaps to make virtue take possession of a well-born character that truly loves what is fine; but they seem unable to turn the many toward being fine and good.

For the many naturally obey fear, not shame; they avoid what is base because of the penalties, not because it is disgraceful. For since they live by their feelings, they pursue their proper pleasures and the sources of them, and avoid the opposed pains, and have not even a notion of what is fine and [hence] truly pleasant, since they have had no taste of it.

What argument, then, could reform people like these? For it is impossible, or not easy, to alter by argument what has long been absorbed as a result of one's habits. But, presumably, we should be satisfied to achieve some share in virtue if we already have what we seem to need to become decent.

Now some think it is nature that makes people good; some think it is habit; some that it is teaching. The [contribution] of nature clearly is not up to us, but results from some divine cause in those who have it, who are the truly fortunate ones. Arguments and teaching surely do not prevail on everyone, but the soul of the student needs to have been prepared by habits for enjoying and hating finely, like ground that is to nourish seed. For someone who lives in accord with his feelings would not even listen to an argument turning him away, or comprehend it [if he did listen]; and in that state how could he be persuaded to change? And in general feelings seem to yield to force, not to argument. Hence we must already in some way have a character suitable for virtue, fond of what is fine and objecting to what is shameful.

It is difficult, however, for someone to be trained correctly for virtue from his youth if he has not been brought up under correct laws; for the many, especially the young, do not find it pleasant to live in a temperate and resistant way. That is why laws must prescribe their upbringing and practices; for they will not find these things painful when they get used to them.

Presumably, however, it is not enough if they get the correct upbringing and attention when they are young; rather, they must continue the same practices and be habituated to them when they become men. Hence we need laws concerned with these things also, and in general with all of life. For the many yield to compulsion more than to argument, and to sanctions more than to the fine.

That is why legislators must, in some people's view, urge people toward virtue and exhort them to aim at the fine—on the assumption that anyone whose good habits have prepared him decently will listen to them—but must impose corrective treatments and penalties on anyone who disobeys or lacks the right nature, and must completely expel an incurable. For the decent person, it is assumed, will attend to reason because his life aims at the fine, whereas the base person, since he desires pleasure, has to receive corrective treatment by pain, like a beast of burden. That is why it is said that the pains imposed must be those most contrary to the pleasures he likes.

As we have said, then, someone who is to be good must be finely brought up and habituated, and then must live in decent practices, doing base actions neither willingly nor unwillingly. And this will be true if his life follows some sort of understanding and correct order that prevails on him.

Now a father's instructions lack this power to prevail and compel; and so in general do the instructions of an individual man, unless he is a king or someone like that. Law, however, has the power that compels; and law is reason that proceeds from a sort of prudence and understanding. Besides, people become hostile to an individual human being who opposes their impulses, even if he is correct in opposing them, whereas a law's prescription of what is decent is not burdensome.

And yet, it is only in Sparta, or in a few other cities as well, that the legislator seems to have attended to upbringing and practices. In most other cities they are neglected, and an individual lives as he wishes, 'laying down the rules for his children and wife,' like a Cyclops.

It is best, then, if the community attends to upbringing, and attends correctly. But if the community neglects it, it seems fitting for each individual to promote the virtue of his children and his friends—to be able

to do it, or at least to decide to do it. From what we have said, however, it seems he will be better able to do it if he acquires legislative science. For, clearly, attention by the community works through laws, and decent attention works through excellent laws; and whether the laws are written or unwritten, for the education of one or of many, seems unimportant, as it is in music, gymnastics, and other practices. For just as in a city the provisions of law and the types of character [found in that city] have influence, similarly a father's words and habits have influence, and all the more because of kinship and because of the benefits he does; for his children are already fond of him and naturally ready to obey.

Further, education adapted to an individual is actually better than a common education for everyone, just as individualized medical treatment is better. For though generally a feverish patient benefits from rest and starvation, presumably some patient does not; nor does the boxing instructor impose the same way of fighting on everyone. Hence it seems that treatment in particular cases is more exactly right when each person gets special attention, since he then more often gets the suitable treatment.

Nonetheless a doctor, a gymnastics trainer, and everyone else will give the best individual attention if they also know universally what is good for all, or for these sorts. For sciences are said to be, and are, of what is common [to many particular cases]. Admittedly someone without scientific knowledge may well attend properly to a single person, if his experience has allowed him to take exact note of what happens in a given case, just as some people seem to be their own best doctors, though unable to help anyone else at all. Nonetheless, presumably, it seems that someone who wants to be an expert in a craft and a branch of study should progress to the universal, and come to know that, as far as possible; for that, as we have said, is what the sciences are about.

Then perhaps also someone who wishes to make people better by his attention, many people or few, should try to acquire legislative science, if laws are a means to make us good. For not just anyone can improve the condition of just anyone, or the person presented to him; but if someone can, it is the person with knowledge, just as in medical science and the others that require attention and prudence.

Next, then, should we examine whence and how someone might acquire legislative science? Just as in other cases [we go to the practitioner], should we go to the politicians, since, as we saw, legislative science seems to be a part of political science? Or does the case of political science appear different from the other sciences and capacities? For evidently, in the other cases, the same people, such as doctors or painters, who transmit the capacity to others actively practice it themselves. By contrast, it is the sophists who advertise that they teach politics but none of them practices it. Instead, those who practice it are the political activists, and they seem to act on some sort of capacity and experience rather than thought.

For evidently they neither write nor speak on such questions, though presumably it would be finer to do this than to compose speeches for the law courts or the Assembly; nor have they made politicians out of their own sons or any other friends of theirs. But it would be reasonable for them to do this if they were able; for there is nothing better than the political capacity that they could leave to their cities, and nothing better that they could decide to produce in themselves, or, therefore, in their closest friends.

Nonetheless, experience would seem to contribute quite a lot; otherwise people would not have become better politicians by familiarity with politics. That is why those who aim to know about political science would seem to need experience as well.

By contrast, those of the sophists who advertise [that they teach political science] appear to be a long way from teaching; for they are altogether ignorant about the sort of thing political science is, and the sorts of things it is about. For if they had known what it is, they would not have taken it to be the same as rhetoric, or something inferior to it, or thought it an easy task to assemble the laws with good reputations and then legislate. For they think they can select the best laws, as though the selection itself did not require comprehension, and as though correct judgment were not the most important thing, as it is in music.

[They are wrong;] for those with experience in each area judge the products correctly and comprehend the ways and means of completing them, and what fits with what; for if we lack experience, we must be satisfied with noticing that the product is well or badly made, as with painting. Now laws would

1181b seem to be the products of political science; how, then, could someone acquire legislative science, or judge which laws are best, from laws alone? For neither do we appear to become experts in medicine by reading textbooks.

And yet doctors not only try to describe the [recognized] treatments, but also distinguish different [bodily] states, and try to say how each type of patient might be cured and must be treated. And what they say seems to be useful to the experienced, though useless to the ignorant. Similarly, then, collections of laws and political systems might also, presumably, be most useful if we are capable of studying them and of judging what is done finely or in the contrary way, and what sorts of [elements] fit with what. Those who lack the [proper] state [of experience] when they go through these collections will not manage to judge finely, unless they can do it all by themselves [without training], though they might come to comprehend them better by going through them.

Since, then, our predecessors have left the area of legislation uncharted, it is presumably better to examine it ourselves instead, and indeed to examine political systems in general, and so to complete the philosophy of human affairs, as far as we are able.

First, then, let us try to review any sound remarks our predecessors have made on particular topics. Then let us study the collected political systems, to see from them what sorts of things preserve and destroy cities, and political systems of different types; and what causes some cities to conduct politics well, and some badly. For when we have studied these questions, we will perhaps grasp better what sort of political system is best; how each political system should be organized so as to be best; and what habits and laws it should follow.

Let us discuss this, then, starting from the beginning.

Politics

BOOK I

Chapter 1

1252a We see that every city-state is a community of some sort, and that every community is established for the sake of some good (for everyone performs every action for the sake of what he takes to be good). Clearly, then, while every community aims at some good, the community that has the most authority of all and 5 encompasses all the others aims highest, that is to say, at the good that has the most authority of all. This community is the one called a city-state, the community that is political.

Those, then, who think that the positions of statesman, king, household manager, and master of slaves are the same, are not correct. For they hold that each of these differs not in kind, but only in whether the subjects ruled are few or many: that if, for example, someone rules few people, he is a master; if more, a household manager; if still more, he has the position 10 of statesman or king—the assumption being that there is no difference between a large household and a small city-state. As for the positions of statesman and king, they say that someone who is in charge by himself has the position of king, whereas someone 15 who follows the principles of the appropriate science, ruling and being ruled in turn, has the position of statesman. But these claims are not true. What I am saying will be clear, if we examine the matter according to the method of investigation that has guided us elsewhere. For as in other cases, a composite has to be analyzed until we reach things that are incomposite, since these are the smallest parts of the whole, so if 20 we also examine the parts that make up a city-state, we shall see better both how these differ from each other, and whether or not it is possible to gain some expertise in connection with each of the things we have mentioned.

Chapter 2

If one were to see how these things develop naturally from the beginning, one would, in this case as in 25 others, get the best view of them. First, then, those who cannot exist without each other necessarily form a couple, as [1] female and male do for the sake of procreation (they do not do so from deliberate choice, but, like other animals and plants, because the urge to leave behind something of the same kind as themselves is natural), and [2] as a natural ruler and what 30 is naturally ruled do for the sake of survival. For if something is capable of rational foresight, it is a natural ruler and master, whereas whatever can use its body to labor is ruled and is a natural slave. That is why the same thing is beneficial for both master and slave.

There is a natural distinction, of course, between what is female and what is servile. For, unlike the blacksmiths who make the Delphian knife, nature 1252b produces nothing skimpily, but instead makes a single thing for a single task, because every tool will be made best if it serves to perform one task rather than many. Among non-Greeks, however, a woman and a slave occupy the same position. The reason is that 5 they do not have anything that naturally rules; rather their community consists of a male and a female slave. That is why our poets say "it is proper for Greeks to rule non-Greeks,"[1] implying that non-Greek and slave are in nature the same.

1. [For a comprehensive listing of Aristotle's literary references in the *Politics*, see Aristotle, *Politics*, translated by C.D.C. Reeve (Indianapolis: Hackett Publishing Company, 1998).]

The first thing to emerge from these two communities is a household, so that Hesiod is right when he said in his poem, "First and foremost: a house, a wife, and an ox for the plow." For an ox is a poor man's servant. The community naturally constituted to satisfy everyday needs, then, is the household; its members are called "meal-sharers" by Charondas and "manger-sharers" by Epimenides the Cretan. But the first community constituted out of several households for the sake of satisfying needs other than everyday ones is a village.

As a colony or offshoot from a household, a village seems to be particularly natural, consisting of what some have called "sharers of the same milk," sons and the sons of sons. That is why city-states were originally ruled by kings, as nations still are. For they were constituted out of people who were under kingships; for in every household the eldest rules as a king. And so the same holds in the offshoots, because the villagers are blood relatives. This is what Homer is describing when he says: "Each one lays down the law for his own wives and children." For they were scattered about, and that is how people dwelt in the distant past. The reason all people say that the gods too are ruled by a king is that they themselves were ruled by kings in the distant past, and some still are. Human beings model the shapes of the gods on their own, and do the same to their way of life as well.

A complete community constituted out of several villages, once it reaches the limit of total self-sufficiency, practically speaking, is a city-state. It comes to be for the sake of living, but it remains in existence for the sake of living well. That is why every city-state exists by nature, since the first communities do. For the city-state is their end, and nature is an end; for we say that each thing's nature—for example, that of a human being, a horse, or a household—is the character it has when its coming-into-being has been completed. Moreover, that for the sake of which something exists, that is to say, its end, is best, and self-sufficiency is both end and best.

It is evident from these considerations, then, that a city-state is among the things that exist by nature, that a human being is by nature a political animal, and that anyone who is without a city-state, not by luck but by nature, is either a poor specimen or else superhuman. Like the one Homer condemns, he too is "clanless, lawless, and homeless." For someone with such a nature is at the same time eager for war, like an isolated piece in a board game.

It is also clear why a human being is more of a political animal than a bee or any other gregarious animal. Nature makes nothing pointlessly, as we say, and no animal has speech except a human being. A voice is a signifier of what is pleasant or painful, which is why it is also possessed by the other animals (for their nature goes this far: they not only perceive what is pleasant or painful but signify it to each other). But speech is for making clear what is beneficial or harmful, and hence also what is just or unjust. For it is peculiar to human beings, in comparison to the other animals, that they alone have perception of what is good or bad, just or unjust, and the rest. And it is community in these that makes a household and a city-state.

The city-state is also prior in nature to the household and to each of us individually, since a whole is necessarily prior to its parts. For if the whole body is dead, there will no longer be a foot or a hand, except homonymously, as one might speak of a stone "hand" (for a dead hand will be like that); but everything is defined by its task and by its capacity; so that in such condition they should not be said to be the same things but homonymous ones. Hence that the city-state is natural and prior in nature to the individual is clear. For if an individual is not self-sufficient when separated, he will be like all other parts in relation to the whole. Anyone who cannot form a community with others, or who does not need to because he is self-sufficient, is no part of a city-state—he is either a beast or a god. Hence, though an impulse toward this sort of community exists by nature in everyone, whoever first established one was responsible for the greatest of goods. For as a human being is the best of the animals when perfected, so when separated from law and justice he is worst of all. For injustice is harshest when it has weapons, and a human being grows up with weapons for virtue and practical wisdom to use, which are particularly open to being used for opposite purposes. Hence he is the most unrestrained and most savage of animals when he lacks virtue, as well as the worst where food and sex are concerned. But justice is a political matter; for justice is the organization of a political community, and justice decides what is just.

Chapter 3

1253b Since it is evident from what parts a city-state is constituted, we must first discuss household management, for every city-state is constituted from households. The parts of household management correspond in turn to the parts from which the household is constituted, and a complete household consists of slaves and free. But we must first examine each thing in 5 terms of its smallest parts, and the primary and smallest parts of a household are master and slave, husband and wife, father and children. So we shall have to examine these three things to see what each of them is and what features it should have. The three in question are [1] mastership, [2] "marital" science (for we have no word to describe the union of woman 10 and man), and [3] "procreative" science (this also lacks a name of its own). But there is also a part which some believe to be identical to household management, and others believe to be its largest part. We shall have to study its nature too. I am speaking of what is called wealth acquisition.

15 But let us first discuss master and slave, partly to see how they stand in relation to our need for necessities, but at the same time with an eye to knowledge about this topic, to see whether we can acquire some better ideas than those currently entertained. For, as we said at the beginning, some people believe that mastership is a sort of science, and that mastership, household management, statesmanship, and the science of kingship are all the same. But others believe that it is contrary to nature to be a master (for it is 20 by law that one person is a slave and another free, whereas by nature there is no difference between them), which is why it is not just either; for it involves force.

Chapter 4

Since property is part of the household, the science of property acquisition is also a part of household management (for we can neither live nor live well without the necessities). Hence, just as the specialized 25 crafts must have their proper tools if they are going to perform their tasks, so too does the household manager. Some tools are inanimate, however, and some are animate. The ship captain's rudder, for example, is an inanimate tool, but his lookout is an animate one; for where crafts are concerned every assistant is classed as a tool. So a piece of property is 30 a tool for maintaining life; property in general is the sum of such tools; a slave is a piece of animate property of a sort; and all assistants are like tools for using tools. For, if each tool could perform its task on command or by anticipating instructions, and if like the statues of Daedalus or the tripods of Hephaestus—which the 35 poet describes as having "entered the assembly of the gods of their own accord"—shuttles wove cloth by themselves, and picks played the lyre, a master craftsman would not need assistants, and masters would not need slaves.

What are commonly called tools are tools for pro- 1254a duction. A piece of property, on the other hand, is for action. For something comes from a shuttle beyond the use of it, but from a piece of clothing or a bed we get only the use. Besides, since action and 5 production differ in kind, and both need tools, their tools must differ in the same way as they do. Life consists in action, not production. Therefore, slaves too are assistants in the class of things having to do with action. Pieces of property are spoken of in the same way as parts. A part is not just a part of another thing, but is *entirely* that thing's. The same is also 10 true of a piece of property. That is why a master is just his slave's *master*, not his simply, while a slave is not just his master's *slave*, he is entirely his.

It is clear from these considerations what the nature and capacity of a slave are. For anyone who, despite being human, is by nature not his own but someone else's is a natural slave. And he is someone else's 15 when, despite being human, he is a piece of property; and a piece of property is a tool for action that is separate from its owner.

Chapter 5

But whether anyone is really like that by nature or not, and whether it is better or just for anyone to be a slave or not (all slavery being against nature)—these are the things we must investigate next. And it is not difficult either to determine the answer by argument or to learn it from actual events. For ruling and being ruled are not only necessary, they are also beneficial, 20 and some things are distinguished right from birth,

some suited to rule and others to being ruled. There are many kinds of rulers and ruled, and the better the ruled are, the better the rule over them always is; for example, rule over humans is better than rule over beasts. For a task performed by something better is a better task, and where one thing rules and another is ruled, they have a certain task. For whenever a number of constituents, whether continuous with one another or discontinuous, are combined into one common thing, a ruling element and a subject element appear. These are present in living things, because this is how nature as a whole works. (Some rule also exists in lifeless things: for example, that of a harmony. But an examination of that would perhaps take us too far afield.)

Soul and body are the basic constituents of an animal: the soul is the natural ruler; the body the natural subject. But of course one should examine what is natural in things whose condition is natural, not corrupted. One should therefore study the human being too whose soul and body are in the best possible condition; one in whom this is clear. For in depraved people, and those in a depraved condition, the body will often seem to rule the soul, because their condition is bad and unnatural.

At any rate, it is, as I say, in an animal that we can first observe both rule of a master and rule of a statesman. For the soul rules the body with the rule of a master, whereas understanding rules desire with the rule of a statesman or with the rule of a king. In these cases it is evident that it is natural and beneficial for the body to be ruled by the soul, and for the affective part to be ruled by understanding (the part that has reason), and that it would be harmful to everything if the reverse held, or if these elements were equal. The same applies in the case of human beings with respect to the other animals. For domestic animals are by nature better than wild ones, and it is better for all of them to be ruled by human beings, since this will secure their safety. Moreover, the relation of male to female is that of natural superior to natural inferior, and that of ruler to ruled. But, in fact, the same holds true of all human beings.

Therefore those people who are as different from others as body is from soul or beast from human, and people whose task, that is to say, the best thing to come from them, is to use their bodies are in this condition—those people are natural slaves. And it is better for them to be subject to this rule, since it is also better for the other things we mentioned. For he who can belong to someone else (and that is why he actually does belong to someone else), and he who shares in reason to the extent of understanding it, but does not have it himself (for the other animals obey not reason but feelings), is a natural slave. The difference in the use made of them is small, since both slaves and domestic animals help provide the necessities with their bodies.

Nature tends, then, to make the bodies of slaves and free people different too, the former strong enough to be used for necessities, the latter useless for that sort of work, but upright in posture and possessing all the other qualities needed for political life—qualities divided into those needed for war and those for peace. But the opposite often happens as well: some have the bodies of free men; others, the souls. This, at any rate, is evident: if people were born whose bodies alone were as excellent as those found in the statues of the gods, everyone would say that those who were substandard deserved to be their slaves. And if this is true of the body, it is even more justifiable to make such a distinction with regard to the soul; but the soul's beauty is not so easy to see as the body's.

It is evident, then, that there are some people, some of whom are naturally free, others naturally slaves, for whom slavery is both just and beneficial.

Chapter 6

But it is not difficult to see that those who make the opposite claim are also right, up to a point. For slaves and slavery are spoken of in two ways: for there are also slaves—that is to say, people who are in a state of slavery—by *law*. The law is a sort of agreement by which what is conquered in war is said to belong to the victors. But many of those conversant with the law challenge the justice of this. They bring a writ of illegality against it, analogous to that brought against a speaker in the assembly. Their supposition is that it is monstrous if someone is going to be the subject and slave to whatever has superior power and is able to subdue him by force. Some hold the latter view, others the former; and this is true even among the wise.

The reason for this dispute, and for the overlap in the arguments, is this: virtue, when it is equipped with resources, is in a way particularly adept in the use of force; and anything that conquers always does so because it is outstanding in *some* good quality. This makes it seem that force is not without virtue, and that only the justice of the matter is in dispute. For one side believes that justice is benevolence, whereas the other believes that it is precisely the rule of the more powerful that is just. At any event, when these accounts are disentangled, the other arguments have neither force nor anything else to persuade us that the one who is more virtuous should not rule or be master.

Then there are those who cleave exclusively, as they think, to justice of a sort (for law is justice of a sort), and maintain that enslavement in war is just. But at the same time they imply that it is not just. For it is possible for wars to be started unjustly, and no one would say that someone is a slave if he did not deserve to be one; otherwise, those regarded as the best born would be slaves or the children of slaves, if any of them were taken captive and sold. That is why indeed they are not willing to describe *them*, but only non-Greeks, as slaves. Yet, in saying this, they are seeking precisely the natural slave we talked about in the beginning. For they have to say that some people are slaves everywhere, whereas others are slaves nowhere.

The same holds of noble birth. Nobles regard themselves as well born wherever they are, not only when they are among their own people, but they regard non-Greeks as well born only when they are at home. They imply a distinction between a good birth and freedom that is unqualified and one that is not unqualified. As Theodectes' Helen says: "Sprung from divine roots on both sides, who would think that I deserve to be called a slave?" But when people say this, they are in fact distinguishing slavery from freedom, well born from low born, in terms of virtue and vice alone. For they think that good people come from good people in just the way that human comes from human, and beast from beast. But often, though nature does have a tendency to bring this about, it is nevertheless unable to do so.

It is clear, then, that the objection with which we began has something to be said for it, and that the one lot are not always natural slaves, nor the other naturally free. But it is also clear that in some cases there is such a distinction—cases where it is beneficial and just for the one to be master and the other to be slave, and where the one ought to be ruled and the other ought to exercise the rule that is natural for him (so that he is in fact a master), and where misrule harms them both. For the same thing is beneficial for both part and whole, body and soul; and a slave is a sort of part of his master—a sort of living but separate part of his body. Hence, there is a certain mutual benefit and mutual friendship for such masters and slaves as deserve to be by nature so related. When their relationship is not that way, however, but is based on law, and they have been subjected to force, the opposite holds.

Chapter 7

It is also evident from the foregoing that the rule of a master is not the same as rule of a statesman and that the other kinds of rule are not all the same as one another, though some people say they are. For rule of a statesman is rule over people who are naturally free, whereas that of a master is rule over slaves; rule by a household manager is a monarchy, since every household has one ruler; rule of a statesman is rule over people who are free and equal.

A master is so called not because he possesses a science but because he is a certain sort of person. The same is true of slave and free. None the less, there could be such a thing as mastership or slave-craft; for example, the sort that was taught by the man in Syracuse who for a fee used to train slave boys in their routine services. Lessons in such things might well be extended to include cookery and other services of that type. For different slaves have different tasks, some of which are more esteemed, others more concerned with providing the necessities: "slave is superior to slave, master to master," as the proverb says. All such sciences, then, are the business of slaves.

Mastership, on the other hand, is the science of using slaves; for it is not in acquiring slaves but in using them that someone is a master. But there is nothing grand or impressive about this science. The master needs to know how to command the things that the slave needs to know how to do. Hence for

those who have the resources not to bother with such things, a steward takes on this office, while they themselves engage in politics or philosophy. As for the science of acquiring slaves (the just variety of it), it is different from both of these, and is a kind of warfare or hunting.

These, then, are the distinctions to be made regarding slave and master.

Chapter 8

Since a slave has turned out to be part of property, let us now study property and wealth acquisition generally, in accordance with our guiding method. The first problem one might raise is this: Is wealth acquisition the same as household management, or a part of it, or an assistant to it? If it is an assistant, is it in the way that shuttle making is assistant to weaving, or in the way that bronze smelting is assistant to statue making? For these do not assist in the same way: the first provides tools, whereas the second provides the matter. (By the matter I mean the substrate, that out of which the product is made—for example, wool for the weaver and copper for the bronze smelter.)

It is clear that household management is not the same as wealth acquisition, since the former uses resources, while the latter provides them; for what science besides household management uses what is in the household? But whether wealth acquisition is a part of household management or a science of a different kind is a matter of dispute. For if someone engaged in wealth acquisition has to study the various sources of wealth and property, and property and wealth have many different parts, we shall first have to investigate whether farming is a part of household management or some different type of thing, and likewise the supervision and acquisition of food generally.

But there are many kinds of food too. Hence the lives of both animals and human beings are also of many kinds. For it is impossible to live without food, so that differences in diet have produced different ways of life among the animals. For some beasts live in herds and others live scattered about, whichever is of benefit for getting their food, because some of them are carnivorous, some herbivorous, and some omnivorous. So, in order to make it easier for them to get hold of these foods, nature has made their ways of life different. And since the same things are not naturally pleasant to each, but rather different things to different ones, among the carnivores and herbivores themselves the ways of life are different.

Similarly, among human beings too; for their ways of life differ a great deal. The idlest are nomads; for they live a leisurely life, because they get their food effortlessly from their domestic animals. But when their herds have to change pasture, they too have to move around with them, as if they were farming a living farm. Others hunt for a living, differing from one another in the sort of hunting they do. Some live by raiding; some—those who live near lakes, marshes, rivers, or a sea containing fish—live from fishing; and some from birds or wild beasts. But the most numerous type lives off the land and off cultivated crops. Hence the ways of life, at any rate those whose fruits are natural and do not provide food through exchange or commerce, are roughly speaking these: nomadic, raiding, fishing, hunting, farming. But some people contrive a pleasant life by combining several of these, supplementing their way of life where it has proven less than self-sufficient; for example, some live both a nomadic and a raiding life, others, both a farming and a hunting one, and so on, each spending their lives as their needs jointly compel.

It is evident that nature itself gives such property to all living things, both right from the beginning, when they are first conceived, and similarly when they have reached complete maturity. Animals that produce larvae or eggs produce their offspring together with enough food to last them until they can provide for themselves. Animals that give birth to live offspring carry food for their offspring in their own bodies for a certain period, namely, the natural substance we call milk. Clearly, then, we must suppose in the case of fully developed things too that plants are for the sake of animals, and that the other animals are for the sake of human beings, domestic ones both for using and eating, and most but not all wild ones for food and other kinds of support, so that clothes and the other tools may be got from them. If then nature makes nothing incomplete or pointless, it must have made all of them for the sake of human beings. That is why even the science of warfare, since hunting is a part of it, will in a way be a natural part of property acquisition. For this science ought to be used not

only against wild beasts but also against those human beings who are unwilling to be ruled, but naturally suited for it, as this sort of warfare is naturally just.

One kind of property acquisition is a natural part of household management, then, in that a store of the goods that are necessary for life and useful to the community of city-state or household either must be available to start with, or household management must arrange to make it available. At any rate, true wealth seems to consist in such goods. For the amount of this sort of property that one needs for the self-sufficiency that promotes the good life is not unlimited, though Solon in his poetry says it is: "No boundary to wealth has been established for human beings." But such a limit or boundary has been established, just as in the other crafts. For none has any tool unlimited in size or number, and wealth is a collection of tools belonging to statesmen and household managers.

It is clear, then, that there is a natural kind of property acquisition for household managers and statesmen, and it is also clear why this is so.

Chapter 9

But there is another type of property acquisition which is especially called wealth acquisition, and justifiably so. It is the reason wealth and property are thought to have no limit. For many people believe that wealth acquisition is one and the same thing as the kind of property acquisition we have been discussing, because the two are close neighbors. But it is neither the same as the one we discussed nor all that far from it: one of them is natural, whereas the other is not natural, but comes from a sort of experience and craft.

Let us begin our discussion of the latter as follows. Every piece of property has two uses. Both of these are uses of it as such, but they are not the same uses of it as such: one is proper to the thing and the other is not. Take the wearing of a shoe, for example, and its use in exchange. Both are uses to which shoes can be put. For someone who exchanges a shoe, for money or food, with someone else who needs a shoe, is using the shoe as a shoe. But this is not its proper use because it does not come to exist for the sake of exchange. The same is true of other pieces of property as well, since the science of exchange embraces all of them. It first arises out of the natural circumstance of some people having more than enough and others less. This also makes it clear that the part of wealth acquisition which is commerce does not exist by nature: for people needed to engage in exchange only up to the point at which they had enough. It is evident, then, that exchange has no task to perform in the first community (that is to say, the household), but only when the community has become larger. For the members of the household used to share all the same things, whereas those in separate households shared next many different things, which they had to exchange with one another through barter when the need arose, as many non-Greek peoples still do even to this day. For they exchange useful things for other useful things, but nothing beyond that—for example, wine is exchanged for wheat, and so on with everything else of this kind.

This kind of exchange is not contrary to nature, nor is it any kind of wealth acquisition; for its purpose was to fill a lack in a natural self-sufficiency. None the less, wealth acquisition arose out of it, and in an intelligible manner. Through importing what they needed and exporting their surplus, people increasingly got their supplies from more distant foreign sources. Since not all the natural necessities are easily transportable, the use of money had of necessity to be devised. So for the purposes of exchange people agreed to give to and take from each other something that was a useful thing in its own right and that was convenient for acquiring the necessities of life: iron or silver or anything else of that sort. At first, its value was determined simply by size and weight, but finally people also put a stamp on it, so as to save themselves the trouble of having to measure it. For the stamp was put on to indicate the amount.

After money was devised, necessary exchange gave rise to the second of the two kinds of wealth acquisition, commerce. At first, commerce was probably a simple affair, but then it became more of a craft as experience taught people how and from what sources the greatest profit could be made through exchange. That is why it is held that wealth acquisition is concerned primarily with money, and that its task is to be able to find sources from which a pile of wealth will come. For it is productive of wealth and money, and wealth is often assumed to be a pile of money,

on the grounds that this is what wealth acquisition and commerce are concerned to provide.

On the other hand, it is also held that money itself is nonsense and wholly conventional, not natural at all. For if those who use money alter it, it has no value and is useless for acquiring necessities; and often someone who has lots of money is unable to get the food he needs. Yet it is absurd for something to be wealth if someone who has lots of it will die of starvation, like Midas in the fable, when everything set before him turned to gold in answer to his own greedy prayer. That is why people look for a different kind of wealth and wealth acquisition, and rightly so; for natural wealth and wealth acquisition *are* different. Natural wealth acquisition is a part of household management, whereas commerce has to do with the production of goods, not in the full sense, but *through their exchange*. It is held to be concerned with money, on the grounds that money is the unit and limit of exchange.

The wealth that derives from this kind of wealth acquisition *is* without limit. For medicine aims at unlimited health, and each of the crafts aims to achieve its end in an unlimited way, since each tries to achieve it as fully as possible. (But none of the things that promote the end is unlimited, since the end itself constitutes a limit for all crafts.) Similarly, there is no limit to the end of this kind of wealth acquisition, for its end is wealth in that form, that is to say, the possession of money. The kind of wealth acquisition that is a part of household management, on the other hand, does have a limit, since this is not the task of household management.

In one way, then, it seems that every sort of wealth has to have a limit. Yet, if we look at what actually happens, the opposite seems true, for all wealth acquirers go on increasing their money without limit. The explanation of this is that the two are closely connected. Each of the two kinds of wealth acquisition makes use of the same thing, so their uses overlap, since they are uses of the same property. But they do not use it in accordance with the same principle. For one aims to increase it, whereas the other aims at a different end. So some people believe that this is the task of household management, and go on thinking that they should maintain their store of money or increase it without limit.

The reason they are so disposed, however, is that they are preoccupied with living, not with living well. And since their appetite for life is unlimited, they also want an unlimited amount of what sustains it. And those who do aim at living well seek what promotes physical gratification. So, since this too seems to depend on having property, they spend all their time acquiring wealth. And the second kind of wealth acquisition arose because of this. For since their gratification lies in excess, they seek the craft that produces the excess needed for gratification. If they cannot get it through wealth acquisition, they try to do so by means of something else that causes it, using each of their powers in an unnatural way. For the end of courage is not to produce wealth but to produce confidence in the face of danger; nor is it the end of generalship or medicine to do so, but rather victory and health. None the less, these people make all of these into forms of wealth acquisition in the belief that acquiring wealth is the end, and that everything ought to promote the end.

We have now said what unnecessary wealth acquisition is and why we need it. We have also said that the necessary kind is different, that it is a natural part of household management concerned with the means of life, and that it is not limitless like this one, but has a limit.

Chapter 10

Clearly, we have also found the solution to our original problem about whether the craft of wealth acquisition is that of a household manager or a statesman, or not—this having rather to be available. For just as statesmanship does not make human beings, but takes them from nature and uses them, so too nature must provide land or sea or something else as a source of food, and a household manager must manage what comes from these sources in the way required. For the task of weaving is not to make wool but to use it, and to know which sorts are useful and suitable or worthless and unsuitable. For one might be puzzled as to why wealth acquisition is a part of household management but medicine is not, even though the members of a household need health, just as they need life and every other necessity. And in fact there is a way in which it is the task of a household manager

or ruler to see to health, but in another way it is not his task but a doctor's. So too with wealth: there is a way in which a household manager has to see to it, and another in which he does not, and an assistant craft does. But above all, as we said, nature must ensure that wealth is there to start with. For it is the task of nature to provide food for what is born, since the surplus of that from which they come serves as food for every one of them. That is why the craft of acquiring wealth from crops and animals is natural for all people.

But, as we said, there are two kinds of wealth acquisition. One has to do with commerce, the other with household management. The latter is necessary and commendable, but the kind that has to do with exchange is justly disparaged, since it is not natural but is from one another. Hence usury is very justifiably detested, since it gets wealth from money itself, rather than from the very thing money was devised to facilitate. For money was introduced to facilitate exchange, but interest makes money itself grow bigger. (That is how it gets its name; for offspring resemble their parents, and interest is money that comes from money.) Hence of all the kinds of wealth acquisition this one is the most unnatural.

Chapter 11

Now that we have adequately determined matters bearing on knowledge, we should go through those bearing on practice. A free person has theoretical knowledge of all of these, but he will gain practical experience of them to meet necessary needs. The practical parts of [1] wealth acquisition are experience of: [1.1] livestock, for example, what sorts of horses, cattle, sheep, and similarly other animals yield the most profit in different places and conditions; for one needs practical experience of which breeds are by comparison with one another the most profitable, and which breeds yield the most profit in which places, as different ones thrive in different places. [1.2] Farming, which is now divided into land planted with fruit and land planted with cereals. [1.3] Bee keeping and the rearing of the other creatures, whether fish or fowl, that can be of some use. These, then, are the parts of the primary and most appropriate kind of wealth acquisition.

[2] Exchange's most important part, on the other hand, is [2.1] trading, which has three parts: [2.1.1] ship owning, [2.1.2] transport, and [2.1.3] marketing. These differ from one another in that some are safer, others more profitable. The second part of exchange is [2.2] money lending; the third is [2.3] wage earning. As for wage earning, some wage earners are [2.3.1] vulgar craftsmen, whereas [2.3.2] others are unskilled, useful for manual labor only.

[3] A third kind of wealth acquisition comes between this kind and the primary or natural kind, since it contains elements both of the natural kind and of exchange. It deals with inedible but useful things from the earth or extracted from the earth. Logging and mining are examples. Mining too is of many types, since many kinds of things are mined from the earth.

A general account has now been given of each of them. A detailed and precise account might be useful for practical purposes, but it would be vulgar to spend one's time developing it. (The operations that are most craftlike depend least on luck; the more they damage the body, the more vulgar they are; the most slavish are those in which the body is used the most; the most ignoble are those least in need of virtue.) Besides, some people have written books on these matters which may be studied by those interested. For example, Chares of Paros and Apollodorus of Lemnos have written on how to farm both fruit and cereals, and others have written on similar topics.

Moreover, the scattered stories about how people have succeeded in acquiring wealth should be collected, since all of them are useful to those who value wealth acquisition. For instance, there is the scheme of Thales of Miletus. This is a scheme for getting wealthy which, though credited to him on account of his wisdom, is in fact quite generally applicable. People were reproaching Thales for being poor, claiming that it showed his philosophy was useless. The story goes that he realized through his knowledge of the stars that a good olive harvest was coming. So, while it was still winter, he raised a little money and put a deposit on all the olive presses in Miletus and Chios for future lease. He hired them at a low rate, because no one was bidding against him. When the olive season came and many people suddenly sought

olive presses at the same time, he hired them out at whatever rate he chose. He collected a lot of money, showing that philosophers could easily become wealthy if they wished, but that this is not their concern. Thales is said to have demonstrated his own wisdom in this way. But, as I said, his scheme involves a generally applicable principle of wealth acquisition: to secure a monopoly if one can. Hence some city-states also adopt this scheme when they are in need of money: they secure a monopoly in goods for sale.

There was a man in Sicily who used some money that had been lent to him to buy up all the iron from the foundries, and later, when the merchants came from their warehouses to buy iron, he was the only seller. He did not increase his prices exorbitantly and yet he turned his fifty silver talents into one hundred and fifty. When Dionysius heard about this, he told the man to take his wealth out, but to remain in Syracuse no longer, as he had discovered ways of making money that were harmful to Dionysius' own affairs. Yet this man's insight was the same as Thales': each contrived to secure a monopoly for himself.

It is also useful for statesmen to know about these things, since many city-states have an even greater need for wealth acquisition and the associated revenues than a private household does. That is why indeed some statesmen restrict their political activities entirely to finance.

Chapter 12

Household management has proved to have three parts: [1] one is mastership (which we discussed earlier), [2] another that of a father, and [3] a third, marital. For a man rules his wife and children both as free people, but not in the same way: instead, he rules his wife the way a statesman does, and his children the way a king does. For a male, unless he is somehow constituted contrary to nature, is naturally more fitted to lead than a female, and someone older and completely developed is naturally more fitted to lead than someone younger and incompletely developed.

In most cases of rule of a statesman, it is true, people take turns at ruling and being ruled, because they tend by nature to be on an equal footing and to differ in nothing. Nevertheless, whenever one person is ruling and another being ruled, the one ruling tries to distinguish himself in demeanor, title, or rank from the ruled; witness what Amasis said about his footbath. Male is permanently related to female in this way.

The rule of a father over his children, on the other hand, is that of a king, since a parent rules on the basis of both age and affection, and this is a type of kingly rule. Hence Homer did well to address Zeus, who is the king of them all, as "Father of gods and men." For a king should have a natural superiority, but be the same in stock as his subjects; and this is the condition of older in relation to younger and father in relation to child.

Chapter 13

It is evident, then, that household management is more seriously concerned with human beings than with inanimate property, with their virtue more than with its (which we call wealth), and with the virtue of free people more than with that of slaves.

The first problem to raise about slaves, then, is this: Has the slave some other virtue more estimable than those he has as a tool or servant, such as temperance, courage, justice, and other such states of character? Or has he none besides those having to do with the physical assistance he provides? Whichever answer one gives, there are problems. If slaves have temperance and the rest, in what respect will they differ from the free? If they do not, absurdity seems to result, since slaves are human and have a share in reason. Roughly the same problem arises about women and children. Do they too have virtues? Should women be temperate, courageous, and just, or a child be temperate or intemperate? Or not?

The problem of natural rulers and natural subjects, and whether their virtue is the same or different, needs to be investigated in general terms. If both of them should share in what is noble-and-good, why should one of them rule once and for all and the other be ruled once and for all? (It cannot be that the difference between them is one of degree. Ruling and being ruled differ in kind, but things that differ in degree do not differ in that way.) On the other

hand, if the one shares in what is noble-and-good, and not the other, that would be astonishing. For if the ruler is not going to be temperate and just, how will he rule well? And if the subject is not going to be, how will he be ruled well? For if he is intemperate and cowardly, he will not perform any of his duties. It is evident, therefore, that both must share in virtue, but that there are differences in their virtue (as there are among those who are naturally ruled).

Consideration of the soul leads immediately to this view. The soul by nature contains a part that rules and a part that is ruled, and we say that each of them has a different virtue, that is to say, one belongs to the part that has reason and one to the nonrational part. It is clear, then, that the same holds in the other cases as well, so that most instances of ruling and being ruled are natural. For free rules slaves, male rules female, and man rules child in different ways, because, while the parts of the soul are present in all these people, they are present in different ways. The deliberative part of the soul is entirely missing from a slave; a woman has it but it lacks authority; a child has it but it is incompletely developed. We must suppose, therefore, that the same necessarily holds of the virtues of character too: all must share in them, but not in the same way; rather, each must have a share sufficient to enable him to perform his own task. Hence a ruler must have virtue of character complete, since his task is unqualifiedly that of a master craftsman, and reason is a master craftsman, but each of the others must have as much as pertains to him. It is evident, then, that all those mentioned have virtue of character, and that temperance, courage, and justice of a man are not the same as those of a woman, as Socrates supposed: the one courage is that of a ruler, the other that of an assistant, and similarly in the case of the other virtues too.

If we investigate this matter in greater detail, it will become clear. For people who talk in generalities, saying that virtue is a good condition of the soul, or correct action, or something of that sort, are deceiving themselves. It is far better to enumerate the virtues, as Gorgias does, than to define them in this general way. Consequently, we must take what the poet says about a woman as our guide in every case: "To a woman silence is a crowning glory"—whereas this does not apply to a man. Since a child is incompletely developed, it is clear that his virtue too does not belong to him in relation to himself but in relation to his end and his leader. The same holds of a slave in relation to his master. But we said that a slave is useful for providing the necessities, so he clearly needs only a small amount of virtue—just so much as will prevent him from inadequately performing his tasks through intemperance or cowardice.

If what we have now said is true, one might raise the problem of whether vulgar craftsmen too need to have virtue; for they often fail to perform their tasks through intemperance. Or are the two cases actually very different? For a slave shares his master's life, whereas a vulgar craftsman is at a greater remove, and virtue pertains to him to just the extent that slavery does; for a vulgar craftsman has a kind of delimited slavery. Moreover, a slave is among the things that exist by nature, whereas no shoemaker is, nor any other sort of craftsman. It is evident, then, that the cause of such virtue in a slave must be the master, not the one who possesses the science of teaching him his tasks. Hence those who deny reason to slaves, but tell us to give them orders only, are mistaken; for slaves should be admonished more than children.

But we may take these matters to be determined in this way. As for man and woman, father and children, the virtue relevant to each of them, what is good in their relationship with one another and what is not good, and how to achieve the good and avoid the bad—it will be necessary to go through all these in connection with the constitutions. For every household is part of a city-state, these are parts of a household, and the virtue of a part must be determined by looking to the virtue of the whole. Hence both women and children must be educated with an eye to the constitution, if indeed it makes any difference to the virtue of a city-state that its children be virtuous, and its women too. And it must make a difference, since half the free population are women, and from children come those who participate in the constitution.

So, since we have determined some matters, and must discuss the rest elsewhere, let us regard the present discussion as complete, and make a new beginning. And let us first investigate those who have expressed views about the best constitution.

BOOK II

Chapter 1

Since we propose to study which political community is best of all for people who are able to live as ideally as possible, we must investigate other constitutions too, both some of those used in city-states that are said to be well governed, and any others described by anyone that are held to be good, in order to see what is correct or useful in them, but also to avoid giving the impression that our search for something different from them results from a desire to be clever. Let it be held, instead, that we have undertaken this inquiry because the currently available constitutions are not in good condition.

We must begin, however, at the natural starting point of this investigation. For all citizens must share everything, or nothing, or some things but not others. It is evidently impossible for them to share nothing. For a constitution is a sort of community, and so they must, in the first instance, share their location; for one city-state occupies one location, and citizens share that one city-state. But is it better for a city-state that is to be well managed to share everything possible? Or is it better to share some things but not others? For the citizens could share children, women, and property with one another, as in Plato's *Republic*. For Socrates claims there that children, women, and property should be communal. So is what we have now better, or what accords with the law described in the *Republic*?

Chapter 2

That women should be common to all raises many difficulties. In particular, it is not evident from Socrates' arguments why he thinks this legislation is needed. Besides, the end he says his city-state should have is impossible, as in fact described, yet nothing has been settled about how one ought to delimit it. I am talking about the assumption that it is best for a city-state to be as far as possible all one unit; for that is the assumption Socrates adopts. And yet it is evident that the more of a unity a city-state becomes, the less of a city-state it will be. For a city-state naturally consists of a certain multitude; and as it becomes more of a unity, it will turn from a city-state into a household, and from a household into a human being. For we would surely say that a household is more of a unity than a city-state and an individual human being than a household. Hence, even if someone could achieve this, it should not be done, since it will destroy the city-state.

A city-state consists not only of a number of people, but of people of different kinds, since a city-state does not come from people who are alike. For a city-state is different from a military alliance. An alliance is useful because of the weight of numbers, even if they are all of the same kind, since the natural aim of a military alliance is the sort of mutual assistance that a heavier weight provides if placed on a scales. A nation will also differ from a city-state in this sort of way, provided the multitude is not separated into villages, but is like the Arcadians. But things from which a unity must come differ in kind. That is why reciprocal equality preserves city-states, as we said earlier in the *Ethics*, since this must exist even among people who are free and equal. For they cannot all rule at the same time, but each can rule for a year or some other period. As a result they all rule, just as all would be shoemakers and carpenters if they changed places, instead of the same people always being shoemakers and the others always carpenters. But since it is better to have the latter also where a political community is concerned, it is clearly better, where possible, for the same people always to rule. But among those where it is not possible, because all are naturally equal, and where it is at the same time just for all to share the benefits or burdens of ruling, it is at least possible to approximate to this if those who are equal take turns and are similar when out of office. For they rule and are ruled in turn, just as if they had become other people. It is the same way among those who are ruling; some hold one office, some another.

It is evident from these considerations that a city-state is not a natural unity in the way some people say it is, and that what has been alleged to be the greatest good for city-states destroys them, whereas what is good for a thing preserves it. It is also evident on other grounds that to try to make a city-state too much a unity is not a better policy. For a household is more self-sufficient than a single person, and a city-state than a household; and a city-state tends to come

about as soon as a community's population is large enough to be fully self-sufficient. So, since what is more self-sufficient is more choiceworthy, what is less a unity is more choiceworthy than what is more so.

Chapter 3

But even if it is best for a community to be as much a unity as possible, this does not seem to have been established by the argument that everyone says "mine" and "not mine" at the same time (for Socrates takes this as an indication that his city-state is completely one). For "all" is ambiguous. If it means each individually, perhaps more of what Socrates wants will come about, since each will then call the same woman his wife, the same person his son, the same things his property, and so on for each thing that befalls him. But this is not in fact how those who have women and children in common will speak. They will *all* speak, but not *each*. And the same goes for property: all, not each. It is evident, then, that there is an equivocation involved in "all say." (For "all," "both," "odd," and "even," are ambiguous, and give rise to contentious arguments even in discussion.) Hence in one sense it would be good if all said the same, but not possible, whereas in the other sense it is in no way conducive to concord.

But the phrase is also harmful in another way, since what is held in common by the largest number of people receives the least care. For people give most attention to their own property, less to what is communal, or only as much as falls to them to give. For apart from anything else, the thought that someone else is attending to it makes them neglect it the more (just as a large number of household servants sometimes give worse service than a few). Each of the citizens acquires a thousand sons, but they do not belong to him as an individual: any of them is equally the son of any citizen, and so will be equally neglected by them all. Besides, each says "mine" of whoever among the citizens is doing well or badly in this sense, that he is whatever fraction he happens to be of a certain number. What he really means is "mine or so-and-so's," referring in this way to each of the thousand or however many who constitute the city-state. And even then he is uncertain, since it is not clear who has had a child born to him, or one who once born survived. Yet is this way of calling the same thing "mine" as practiced by each of two or ten thousand people really better than the way they in fact use "mine" in city-states? For the same person is called "my son" by one person, "my brother" by another, "my cousin" by a third, or something else in virtue of some other connection of kinship or marriage, one's own marriage, in the first instance, or that of one's relatives. Still others call him "my fellow clansman" or "my fellow tribesman." For it is better to have a cousin of one's own than a son in the way Socrates describes.

Moreover, it is impossible to prevent people from having suspicions about who their own brothers, sons, fathers, and mothers are. For the resemblances that occur between parents and children will inevitably be taken as evidence of this. And this is what actually happens, according to the reports of some of those who write accounts of their world travels. They say that some of the inhabitants of upper Libya have their women in common, and yet distinguish the children on the basis of their resemblance to their fathers. And there are some women, as well as some females of other species such as mares and cows, that have a strong natural tendency to produce offspring resembling their sires, like the mare in Pharsalus called "Just."

Chapter 4

Moreover, there are other difficulties that it is not easy for the establishers of this sort of community to avoid, such as voluntary or involuntary homicides, assaults, or slanders. None of these is pious when committed against fathers, mothers, or not too distant relatives (just as none is even against outsiders). Yet they are bound to occur even more frequently among those who do not know their relatives than among those who do. And when they do occur, the latter can perform the customary expiation, whereas the former cannot.

It is also strange that while making sons communal, he forbids sexual intercourse only between lovers, but does not prohibit sexual love itself or the other practices which, between father and son or a pair of brothers, are most indecent, since even the love alone is. It is strange, too, that Socrates forbids such sexual intercourse solely because the pleasure that comes

from it is so intense, but regards the fact that the lovers are father and son or brother and brother as making no difference.

It would seem more useful to have the farmers rather than the guardians share their women and children. For there will be less friendship where women and children are held in common. But it is the *ruled* who should be like that, in order to promote obedience and prevent rebellion.

In general, the results of such a law are necessarily the opposite of those of a good law, and the opposite of those that Socrates aims to achieve by organizing the affairs of children and women in this way. For we regard friendship as the greatest of goods for city-states, since in this condition people are least likely to factionalize. And Socrates himself particularly praises unity in a city-state, something that is held to be, and that he himself says is, the result of friendship. (Similarly, in the erotic dialogues, we know that Aristophanes says that lovers, because of their excessive friendship, want to grow together and become one instead of two. The result in such circumstances, however, is that one or both has necessarily perished.) But in a city-state this sort of community inevitably makes friendship watery, in that father hardly ever says "mine" of son, or son of father. For just as adding a lot of water to a drop of sweet wine makes the mixture undetectable, so it is with the kinship connections expressed in these names, since in a constitution of this sort a father has least reason to cherish his sons as sons, or a son his father as a father, or brothers each other as brothers. For there are two things in particular that cause human beings to love and cherish something: their own and their favorite. And neither can exist among those governed in this way.

But there is also a lot of confusion about the way in which the children, once born, will be transferred from the farmers and craftsmen to the guardians, and vice versa. Those who do the transferring and receiving are sure to know who has been transferred to whom. Besides, in these cases the results we mentioned earlier must of necessity happen even more often—I mean assaults, love affairs, and murders. For those who have been transferred to the other citizens will no longer call the guardians "brothers," "children," "fathers," or "mothers," nor will those who have been transferred to the guardians use these terms of the other citizens, so as to avoid committing, through kinship, any such offenses.

So much for our conclusions about community of women and children.

Chapter 5

The next topic to investigate is property, and how those in the best constitution should arrange it. Should it be owned in common, or not? One could investigate these questions even in isolation from the legislation dealing with women and children. I mean even if women and children belong to separate individuals, which is in fact the practice everywhere, it still might be best for property either to be owned or used communally. For example, [1] the land might be owned separately, while the crops grown on it are communally stored and consumed (as happens in some nations). [2] Or it might be the other way around: the land might be owned and farmed communally, while the crops grown on it are divided up among individuals for their private use (some non-Greeks are also said to share things in this way). [3] Or both the land and the crops might be communal.

If the land is worked by others, the constitution is different and easier. But if the citizens do the work for themselves, property arrangements will give rise to a lot of discontent. For if the citizens happen to be unequal rather than equal in the work they do and the profits they enjoy, accusations will inevitably be made against those who enjoy or take a lot but do little work by those who take less but do more. It is generally difficult to live together and to share in any human enterprise, particularly in enterprises such as these. Travelers away from home who share a journey together show this clearly. For most of them start quarreling because they annoy one another over humdrum matters and little things. Moreover, we get especially irritated with those servants we employ most regularly for everyday services.

These, then, and others are the difficulties involved in the common ownership of property. The present practice, provided it was enhanced by virtuous character and a system of correct laws, would be much superior. For it would have the good of both—by "of both" I mean of the common ownership of property and of private ownership. For while property should

be in some way communal, in general it should be private. For when care for property is divided up, it leads not to those mutual accusations, but rather to greater care being given, as each will be attending to what is his own. But where use is concerned, virtue will ensure that it is governed by the proverb "friends share everything in common."

Such a practice is already present in outline form in some city-states, which implies that it is not impracticable. In well-managed city-states, in particular, some elements exist, whereas others could come to be. For although each citizen does own private property, he makes part of it available for his friends to use and keeps part for his own use. For example, in Sparta they pretty much have common use of each other's slaves, and dogs and horses also; and when on a journey in the countryside, they may take what provisions they need from the fields. Evidently, then, it is better for property to be private and its use communal. It is the legislator's special task to see that people are so disposed.

Besides, to regard a thing as one's own makes an enormous difference to one's pleasure. For the love each person feels for himself is no accident, but is something natural. Selfishness is rightly criticized. But it is not just loving oneself, it is loving oneself more than one should, just as in the case of the love of money (since practically everyone does love each of these things). Moreover, it is very pleasant to help one's friends, guests, or companions, and do them favors, as one can if one has property of one's own. But those who make the city-state too much a unity by abolishing private property exclude these pleasures. They also openly take away the tasks of two of the virtues: of temperance in regard to women (for it is a fine thing to stay away from another man's woman out of temperance), and generosity with one's property, since one cannot show oneself to be generous, nor perform any generous action (for it is in the use made of property that generosity's task lies).

Such legislation may seem attractive, and humane. For anyone who hears it accepts it gladly, thinking that all will have an amazing friendship for all, particularly when someone blames the evils now existing in constitutions on property's not being communal (I mean lawsuits brought against one another over contracts, perjury trials, and flattery of the rich). Yet none of these evils is caused by property not being communal but by vice. For we see that those who own and share communal property have far more disagreements than those whose property is separate. But we consider those disagreeing over what they own in common to be few, because we compare them with the many whose property is private. Furthermore, it would be fair to mention not only how many evils people will lose through sharing, but also how many good things. The life they would lead seems to be totally impossible.

One has to think that the reason Socrates goes astray is that his assumption is incorrect. For a household and a city-state must indeed be a unity up to a point, but not totally so. For there is a point at which it will, as it goes on, not be a city-state, and another at which, by being nearly not a city-state, it will be a worse one. It is as if one were to reduce a harmony to a unison, or a rhythm to a single beat. But a city-state consists of a multitude, as we said before, and should be unified and made into a community by means of education. It is strange, at any rate, that the one who aimed to bring in education, and who believed that through it the city-state would be excellent, should think to set it straight by measures of this sort, and not by habits, philosophy, and laws—as in Sparta and Crete, where the legislator aimed to make property communal by means of the messes.

And we must not overlook this point, that we should consider the immense period of time and the many years during which it would not have gone unnoticed if these measures were any good. For practically speaking all things have been discovered, although some have not been collected, and others are known about but not used. The matter would become particularly evident, however, if one could see such a constitution actually being instituted. For it is impossible to construct his city-state without separating the parts and dividing it up into common messes or into clans and tribes. Consequently, nothing else will be legislated except that the guardians should not do any farming, which is the very thing the Spartans are trying to enforce even now.

But the fact is that Socrates has not said, nor is it easy to say, what the arrangement of the constitution as a whole is for those who participate in it. The multitude of the other citizens constitute pretty well

the entire multitude of his city-state, yet nothing has been determined about them, whether the farmers too should have communal property or each his own private property, or whether their women and children should be private or communal. If all is to be common to all in the same way, how will they differ from the guardians? And how will they benefit from submitting to their rule? Or what on earth will prompt them to submit to it—unless the guardians adopt some clever stratagem like that of the Cretans? For the Cretans allow their slaves to have the same other things as themselves, and forbid them only the gymnasia and the possession of weapons. On the other hand, if they too are to have such things, as they do in other city-states, what sort of community will it be? For it will inevitably be two city-states in one, and those opposed to one another. For he makes the guardians into a sort of garrison, and the farmers, craftsmen, and the others into the citizens. Hence the indictments, lawsuits, and such other bad things as he says exist in other city-states will all exist among them. And yet Socrates claims that because of their education they will not need many regulations, such as town or market ordinances and others of that sort. Yet he gives this education only to the guardians. Besides, he gives the farmers authority over their property, although he requires them to pay a tax. But this is likely to make them much more difficult and presumptuous than the helots, serfs, and slaves that some people have today.

But be that as it may, whether these matters are similarly essential or not, nothing at any rate has been determined about them; neither are the related questions of what constitution, education, and laws they will have. The character of these people is not easy to discover, and the difference it makes to the preservation of the community of the guardians is not small. But if Socrates is going to make their women communal and their property private, who will manage the household in the way the men manage things in the fields? Who will manage it, indeed, if the farmers' women and property are communal? It is futile to draw a comparison with wild beasts in order to show that women should have the same way of life as men: wild beasts do not go in for household management.

The way Socrates selects his rulers is also risky. He makes the same people rule all the time, which becomes a cause of conflict even among people with no merit, and all the more so among spirited and warlike men. But it is evident that he has to make the same people rulers, since the gold from the god has not been mixed into the souls of one lot of people at one time and another at another, but always into the same ones. He says that the god, immediately at their birth, mixed gold into the souls of some, silver into others, and bronze and iron into those who are going to be craftsmen and farmers.

Moreover, even though Socrates deprives the guardians of their happiness, he says that the legislator should make the whole city-state happy. But it is impossible for the whole to be happy unless all, most, or some of its parts are happy. For happiness is not made up of the same things as evenness, since the latter can be present in the whole without being present in either of the parts, whereas happiness cannot. But if the guardians are not happy, who is? Surely not the skilled craftsmen or the multitude of vulgar craftsmen.

These, then, are the problems raised by the constitution Socrates describes, and there are others that are no less great.

Chapter 9

There are two things to investigate about the constitution of Sparta, of Crete, and, in effect, about the other constitutions also. First, is there anything legislated in it that is good or bad as compared with the best organization? Second, is there anything legislated in it that is contrary to the fundamental principle or character of the intended constitution?

It is generally agreed that to be well-governed a constitution should have leisure from necessary tasks. But the way to achieve this is not easy to discover. For the Thessalian serfs often attacked the Thessalians, just as the helots—always lying in wait, as it were, for their masters' misfortunes—attacked the Spartans. Nothing like this has so far happened in the case of the Cretans. Perhaps the reason is that, though they war with one another, the neighboring city-states never ally themselves with the rebels: it benefits them to do so, since they also possess subject peoples themselves. Sparta's neighbors, on the other hand, the

Argives, Messenians, and Arcadians, were all hostile. The Thessalians, too, first experienced revolts because they were still at war with their neighbors, the Achaeans, Perrhaebeans, and Magnesians. If nothing else, it certainly seems that the management of serfs, the proper way to live together with them, is a troublesome matter. For if they are given license, they become arrogant and claim to merit equality with those in authority, but if they live miserably, they hate and conspire. It is clear, then, that those whose system of helotry leads to these results still have not found the best way.

Furthermore, the license where their women are concerned is also detrimental both to the deliberately chosen aims of the constitution and to the happiness of the city-state as well. For just as a household has a man and a woman as parts, a city-state, too, is clearly to be regarded as being divided almost equally between men and women. So in all constitutions in which the position of women is bad, half the city-state should be regarded as having no laws. And this is exactly what has happened in Sparta. For the legislator, wishing the whole city-state to have endurance, makes his wish evident where the men are concerned, but has been negligent in the case of the women. For being free of all constraint, they live in total intemperance and luxury. The inevitable result, in a constitution of this sort, is that wealth is esteemed. This is particularly so if the citizens are dominated by their women, like most military and warlike races (except for the Celts and some others who openly esteemed male homosexuality). So it is understandable why the original author of the myth of Ares and Aphrodite paired the two; for all warlike men seem obsessed with sexual relations with either men or women. That is why the same happened to the Spartans, and why in the days of their hegemony, many things were managed by women. And yet what difference is there between women rulers and rulers ruled by women? The result is the same. Audacity is not useful in everyday matters, but only, if at all, in war. Yet Spartan women were very harmful even here. They showed this quite clearly during the Theban invasion; for they were of no use at all, like women in other city-states, but caused more confusion than the enemy.

So it seems that license with regard to women initially occurred in Sparta for explicable reasons. For Spartan men spent a great deal of time away from home during their wars with the Argives, and again with the Arcadians and Messenians. So when leisure returned, they placed themselves in the hands of their legislator, already prepared thanks to military life, which includes many parts of virtue. But we are told that when he attempted to bring the women under his laws, they resisted and he retreated. These, then, are the causes of what happened, and so, clearly, of the present error as well. But of course we are not investigating the question of whom we should excuse and whom not, but what is correct and what is not.

The fact that the position of women is not well handled seems not only to create a certain unseemliness in the constitution, as we said before, but also to contribute something to the love of money. For what one might criticize next, after the foregoing, is the uneven distribution of property. For because some of the Spartans came to own too much wealth and others very little, the land passed into the hands of a few. This is poorly organized by the laws as well. For the legislator quite rightly made it improper to buy or sell an existing land holding, but he left owners free to give or bequeath their land if they wished, even though this inevitably leads to the same results as the other. Indeed, nearly two-fifths of all the land belongs to the women, both because many become heiresses and because large dowries are given. It would have been better if it had been organized so that there was no dowry or only a small or moderate one. But, as it is, one may marry an heiress daughter to whomever one wishes, and if a man dies intestate, the person he leaves as his heir gives her to whom he likes. As a result, in a land capable of supporting fifteen hundred cavalry and thirty thousand hoplites, there were fewer than a thousand. The very facts have clearly shown that the organization of these matters served them badly. For their city-state did not withstand one single blow, but was ruined because of its shortage of men.

It is said that at the time of their early kings, they used to give a share in the constitution to others, so that there was no shortage of men, despite lengthy wars. Indeed, they say that there were once ten thousand Spartiates. Whether this is true or not, a better way to keep high the number of men in a city-state

is by leveling property. But the law dealing with the procreation of children militates against this reform. 1270b For the legislator, intending there to be as many Spartiates as possible, encourages people to have as many children as possible, since there is a law exempting a father of three sons from military service, and a father of four from all taxes. But it is evident that if many children are born, and the land is correspondingly divided, many people will inevitably become poor.

Matters relating to the board of overseers are also badly organized. For this office has sole authority over the most important matters; but the overseers are drawn from among the entire people, so that often very poor men enter it who, because of their poverty, are open to bribery. (This has been shown on many occasions in the past too, and recently among the Andrians; for some, corrupted by bribes, did everything in their power to destroy the entire city-state.) Moreover, because the office is too powerful—in fact, equal in power to a tyranny—even the kings were forced to curry favor with the overseers. And this too has harmed the constitution, for from an aristocracy a democracy was emerging.

Admittedly, the board of overseers does hold the constitution together; for the people remain contented because they participate in the most important office. So, whether it came about because of the legislator or by luck, it benefits Spartan affairs. For if a constitution is to survive, every part of the city-state must want it to exist and to remain as it is. And the kings want this because of the honor given to them; the noble-and-good, because of the senate (since this office is a reward of virtue); and the people, because of the board of overseers (since selections for it are made from all). Still, though the overseers should be chosen from all, it should not be by the present method, which is exceedingly childish.

Furthermore, the overseers have authority over the most important judicial decisions, though they are ordinary people. Hence it would be better if they decided cases not according to their own opinion, but in accordance with what is written, that is to say, laws. Again, the overseers' lifestyle is not in keeping with the aim of the constitution. For it involves too much license, whereas in other respects it is too austere, so that they cannot endure it, but secretly escape from the law and enjoy the pleasures of the body.

Matters relating to the senate also do not serve the Spartans well. If the senators were decent people, with an adequate general education in manly virtue, one might well say that this office benefits the city-state. Although, one might dispute about whether they ought to have lifelong authority in important matters, since the mind has its old age as well as the body. But when they are educated in such a way that even the legislator himself doubts that they are good men, it is not safe. And in fact in many matters of 1271a public concern, those who have participated in this office have been conspicuous in taking bribes and showing favoritism. This is precisely why it is better that the senators not be exempt from inspection, as they are at present. It might seem that the overseers should inspect every office, but this would give too much to the board of overseers, and is not the way we say inspections should be carried out.

The method of electing senators is also defective. Not only is the selection made in a childish way, but it is wrong for someone worthy of the office to ask for it: a man worthy of the office should hold it whether he wants to or not. But the fact is that the legislator is evidently doing the same thing here as in the rest of the constitution. He makes the citizens love honor and then takes advantage of this fact in the election of the senators; for no one would ask for office who did not love honor. Yet the love of honor and of money are *the* causes of most voluntary wrongdoings among human beings.

The question of whether or not it is better for city-states to have a kingship must be discussed later; but it is better to choose each new king, not as now, but on the basis of his own life. (It is clear that even the Spartan legislator himself did not think it possible to make the kings noble-and-good. At any rate he distrusts them, on the grounds that they are not sufficiently good men. That is precisely why they used to send out a king's opponents as fellow ambassadors, and why they regard faction between the kings as a safeguard for the city-state.)

Nor were matters relating to the messes (or so-called *phiditia*) well legislated by the person who first established them. For they ought to be publicly supported, as they are in Crete. But among the Spartans each individual has to contribute, even though some are extremely poor and unable to afford the

expense. The result is thus the opposite of the legislator's deliberately chosen aim. He intended the institution of messes to be democratic, but, legislated as they are now, they are scarcely democratic at all, since the very poor cannot easily participate in them. Yet their traditional way of delimiting the Spartan constitution is to exclude from it those who cannot pay this contribution.

The law dealing with the admirals has been criticized by others, and rightly so, since it becomes a cause of faction. For the office of admiral is established against the kings, who are permanent generals, as pretty much another kingship.

One might also criticize the fundamental principle of the legislator as Plato criticized it in the *Laws*. For the entire system of their laws aims at a part of virtue, military virtue, since this is useful for conquest. So, as long as they were at war, they remained safe. But once they ruled supreme, they started to decline, because they did not know how to be at leisure, and had never undertaken any kind of training with more authority than military training. Another error, no less serious, is that although they think (rightly) that the good things that people compete for are won by virtue rather than by vice, they also suppose (not rightly) that these goods are better than virtue itself.

Matters relating to public funds are also badly organized by the Spartiates. For they are compelled to fight major wars, yet the public treasury is empty, and taxes are not properly paid; for, as most of the land belongs to the Spartiates, they do not scrutinize one another's tax payments. Thus the result the legislator has produced is the opposite of beneficial: he has made his city-state poor and the private individuals into lovers of money.

So much for the Spartan constitution. For these are the things one might particularly criticize in it.

BOOK III

Chapter 1

When investigating constitutions, and what each is and is like, pretty well the first subject of investigation concerns a city-state, to see what the city-state is. For as things stand now, there are disputes about this. Some people say, for example, that a city-state performed a certain action, whereas others say that it was not the city-state that performed the action, but rather the oligarchy or the tyrant did. We see, too, that the entire occupation of statesmen and legislators concerns city-states. Moreover, a constitution is itself a certain organization of the inhabitants of a city-state. But since a city-state is a composite, one that is a whole and, like any other whole, constituted out of many parts, it is clear that we must first inquire into citizens. For a city-state is some sort of multitude of citizens. Hence we must investigate who should be called a citizen, and who the citizen is. For there is often dispute about the citizen as well, since not everyone agrees that the same person is a citizen. For the sort of person who is a citizen in a democracy is often not one in an oligarchy.

We should leave aside those who acquire the title of citizen in some exceptional way; for example, those who are made citizens. Nor is a citizen a citizen through residing in a place, for resident aliens and slaves share the dwelling place with him. Again, those who participate in the justice system, to the extent of prosecuting others in the courts or being judged there themselves, are not citizens: parties to treaties can also do that (though in fact in many places the participation of resident aliens in the justice system is not even complete, but they need a sponsor, so that their participation in this sort of communal relationship is in a way incomplete). Like minors who are too young to be enrolled in the citizen lists or old people who have been excused from their civic duties, they must be said to be citizens *of a sort*, but not unqualified citizens. Instead, a qualification must be added, such as "incomplete" or "superannuated" or something else like that (it does not matter what, since what we are saying is clear). For we are looking for the unqualified citizen, the one whose claim to citizenship has no defect of this sort that needs to be rectified (for one can raise and solve similar problems about those who have been disenfranchised or exiled).

The unqualified citizen is defined by nothing else so much as by his participation in judgment and office. But some offices are of limited tenure, so they cannot be held twice by the same person at all, or can be held again only after a definite period. Another person, however, holds office indefinitely, such as the

juror or assemblyman. Now someone might say that the latter sort are not officials at all, and do not, because of this, participate in any office as such. Yet surely it would be absurd to deprive of office those who have the most authority. But let this make no difference, since the argument is only about a word. For what a juror and an assemblyman have in common lacks a name that one should call them both. For the sake of definition, let it be indefinite office. We take it, then, that those who participate in office in this way are citizens. And this is pretty much the definition that would best fit all those called citizens.

We must not forget, however, that in case of things in which what underlies differs in kind (one coming first, another second, and so on), a common element either is not present at all, insofar as these things are such, or only in some attenuated way. But we see that constitutions differ in kind from one another, and that some are posterior and others prior; for mistaken or deviant constitutions are necessarily posterior to those that are not mistaken. (What we mean by "deviant" will be apparent later.) Consequently, the citizen in each constitution must also be different.

That is precisely why the citizen that we defined is above all a citizen in a democracy, and may possibly be one in other constitutions, but not necessarily. For some constitutions have no "the people" or assemblies they legally recognize, but only specially summoned councils and judicial cases decided by different bodies. In Sparta, for example, some cases concerning contracts are tried by one overseer, others by another, whereas cases of homicide are judged by the senate, and other cases by perhaps some other official. It is the same way in Carthage, since there certain officials decide all cases. None the less, our definition of a citizen admits of correction. For in the other constitutions, it is not the holder of indefinite office who is assemblyman and juror, but someone whose office is definite. For it is either to some or to all of the latter that deliberation and judgment either about some or about all matters is assigned.

It is evident from this who the citizen is. For we can now say that someone who is eligible to participate in deliberative and judicial office is a citizen in this city-state, and that a city-state, simply speaking, is a multitude of such people, adequate for life's self-sufficiency.

Chapter 2

But the definition that gets used in practice is that a citizen is someone who comes from citizens on both sides, and not on one only—for example, that of father or of mother. Some people look for more here too, going back, for example, two or three or more generations of ancestors. But quick political definitions of this sort lead some people to raise the problem of how these third- or fourth-generation ancestors will be citizens. So Gorgias of Leontini, half perhaps to raise a real problem and half ironically, said that just as mortars are made by mortar makers, so Lariseans too are made by craftsmen, since some of them are Larisean makers. But this is easy: if the ancestors participated in the constitution in the way that accords with the definition just given, they were citizens. For "what comes from a citizen father and mother" cannot be applied to even the first inhabitants or founders.

But perhaps a bigger problem is raised by the next case: those who come to participate in a constitution after a revolution, such as the citizens created in Athens by Cleisthenes after the expulsion of the tyrants (for he enrolled many foreigners and alien slaves in the tribes). But the dispute in relation to these people is not which of them is a citizen, but whether they are rightly or wrongly so. And yet a further question might be raised as to whether one who is not rightly a citizen is a citizen at all, as "wrong" and "false" seem to have the same force. But since we see that there are also some people holding office wrongly, whom we say *are* holding it though not rightly, and since a citizen is defined as someone who holds a sort of office (for someone who participates in such office is a citizen, as we said), it is clear that these people too must be admitted to be citizens.

Chapter 3

The problem of rightly and not rightly is connected to the dispute we mentioned earlier. For some people raise a problem about how to determine whether a city-state has or has not performed an action, for example, when an oligarchy or a tyranny is replaced by a democracy. At these times, some do not want to honor treaties, since it was not the city-state but its tyrant who entered into them, nor to do many

other things of the same sort, on the grounds that some constitutions exist by force and not for the common benefit. Accordingly, if indeed some democrats also rule in that way, it must be conceded that the acts of their constitution are the city-state's in just the same way as are those of the oligarchy or the tyranny.

There seems to be a close relation between this argument and the problem of when we ought to say that a city-state is the same, or not the same but a different one. The most superficial way to investigate this problem is by looking to location and people. For a city-state's location and people can be split, and some can live in one place and some in another. Hence the problem must be regarded as a rather tame one. For the fact that a thing is said to be a city-state in many different ways makes the investigation of such problems pretty easy.

Things are similar if one asks when people inhabiting the same location should be considered a single city-state. Certainly not because it is enclosed by walls, since a single wall could be built around the Peloponnese. Perhaps Babylon is like that, or anywhere else that has the dimensions of a nation rather than a city-state. At any rate, they say that when Babylon was captured, a part of the city-state was unaware of it for three days. But it will be useful to investigate this problem in another context. For the size of the city-state, both as regards numbers and as regards whether it is beneficial for it to be one or several, should not be overlooked by the statesman.

But when the same people are inhabiting the same place, is the city-state to be called the same as long as the inhabitants remain of the same stock, even though all the time some are dying and others being born (just as we are accustomed to say that rivers and springs remain the same, even though all the time some water is flowing out and some flowing in)? Or are we to say that human beings can remain the same for this sort of reason, but the city-state is different? For if indeed a city-state is a sort of community, a community of citizens sharing a constitution, then, when the constitution changes its form and becomes different, it would seem that the city-state too cannot remain the same. At any rate, a chorus that is at one time in a comedy and at another in a tragedy is said to be two different choruses, even though the human beings in it are often the same. Similarly, with any other community or composite: we say it is different if the form of the composite is different. For example, we call a melody composed of the same notes a different melody when it is played in the Dorian harmony than when it is played in the Phrygian. But if this is so, it is evident that we must look to the constitution above all when saying that the city-state is the same. But the name to call it may be different or the same one whether its inhabitants are the same or completely different people.

But whether it is just to honor or not to honor agreements when a city-state changes to a different constitution requires another argument.

Chapter 4

The next thing to investigate after what we have just discussed is whether the virtue of a good man and of a good citizen should be regarded as the same, or not the same. But surely if we should indeed investigate this, the virtue of a citizen must first be grasped in some sort of outline.

Just as a sailor is one of a number of members of a community, so, we say, is a citizen. And though sailors differ in their capacities (for one is an oarsman, another a captain, another a lookout, and others have other sorts of titles), it is clear both that the most exact account of the virtue of each sort of sailor will be peculiar to him, and similarly that there will also be some common account that fits them all. For the safety of the voyage is a task of all of them, since this is what each of the sailors strives for. In the same way, then, the citizens too, even though they are dissimilar, have the safety of the community as their task. But the community is the constitution. Hence the virtue of a citizen must be suited to his constitution. Consequently, if indeed there are several kinds of constitution, it is clear that there cannot be a single virtue that is the virtue—the complete virtue—of a good citizen. But the good man, we say, does express a single virtue: the complete one. Evidently, then, it is possible for someone to be a good citizen without having acquired the virtue expressed by a good man.

By going through problems in a different way, the same argument can be made about the best constitution. If it is impossible for a city-state to consist entirely of good people, and if each must at least perform his

own task well, and this requires virtue, and if it is impossible for all the citizens to be similar, then the virtue of a citizen and that of a good man cannot be a single virtue. For that of the good citizen must be had by all (since this is necessary if the city-state is to be best), but the virtue of a good man cannot be had by all, unless all the citizens of a good city-state are necessarily good men. Again, since a city-state consists of dissimilar elements (I mean that just as an animal consists in the first instance of soul and body, a soul of reason and desire, a household of man and woman, and property of master and slave, so a city-state, too, consists of all these, and of other dissimilar kinds in addition), then the citizens cannot all have one virtue, any more than can the leader of a chorus and one of its ordinary members.

It is evident from these things, therefore, that the virtue of a man and of a citizen cannot be unqualifiedly the same.

But will there, then, be anyone whose virtue is the same both as a good citizen and as a good man? We say, indeed, that an excellent ruler is good and possesses practical wisdom, but that a citizen need not possess practical wisdom. Some say, too, that the education of a ruler is different right from the beginning, as is evident, indeed, from the sons of kings being educated in horsemanship and warfare, and from Euripides saying "No subtleties for me . . . but what the city-state needs," (since this implies that rulers should get a special sort of education). But if the virtue of a good ruler is the same as that of a good man, and if the man who is ruled is also a citizen, then the virtue of a citizen would not be unqualifiedly the same as the virtue of a man (though that of a certain sort of citizen would be), since the virtue of a ruler and that of a citizen would not be the same. Perhaps this is why Jason said that he went hungry except when he was a tyrant. He meant that he did not know how to be a private individual.

Yet the capacity to rule and be ruled is at any rate praised, and being able to do both well is held to be the virtue of a citizen. So if we take a good man's virtue to be that of a ruler, but a citizen's to consist in both, then the two virtues would not be equally praiseworthy.

Since, then, both these views are sometimes accepted, that ruler and ruled should learn different things and not the same ones, and that a citizen should know and share in both, we may see what follows from that. For there is rule by a master, by which we mean the kind concerned with the necessities. The ruler does not need to know how to produce these, but rather how to make use of those who do. In fact, the former is servile. (By "the former" I mean actually knowing how to perform the actions of a servant.) But there are several kinds of slaves, we say, since their tasks vary. One part consists of those tasks performed by manual laborers. As their very name implies, these are people who work with their hands. Vulgar craftsmen are included among them. That is why among some peoples in the distant past craftsmen did not participate in office until extreme democracy arose. Accordingly, the tasks performed by people ruled in this way should not be learned by a good person, nor by a statesman, nor by a good citizen, except perhaps to satisfy some personal need of his own (for then it is no longer a case of one person becoming master and the other slave).

But there is also a kind of rule exercised over those who are similar in birth and free. This we call "political" rule. A ruler must learn it by being ruled, just as one learns to be a cavalry commander by serving under a cavalry commander, or to be a general by serving under a general, or under a major or a company commander to learn to occupy the office. Hence this too is rightly said, that one cannot rule well without having been ruled. And whereas the virtues of these *are* different, a good citizen must have the knowledge and ability both to be ruled and to rule, and this is the virtue of a citizen, to know the rule of free people from both sides.

In fact, a good man too possesses both, even if a ruler does have a different kind of justice and temperance. For if a good person is ruled, but is a free citizen, his virtue (justice, for example) will clearly not be of one kind, but includes one kind for ruling and another for being ruled, just as a man's and a woman's courage and temperance differ. For a man would seem a coward if he had the courage of a woman, and a woman would seem garrulous if she had the temperance of a good man, since even household management differs for the two of them (for his task is to acquire property and hers to preserve it). Practical wisdom is the only virtue peculiar to a ruler;

for the others, it would seem, must be common to both rulers and ruled. At any rate, practical wisdom is not the virtue of one who is ruled, but true opinion is. For those ruled are like makers of flutes, whereas rulers are like the flute players who use them.

So then, whether the virtue of a good man is the same as that of an excellent citizen or different, and how they are the same and how different, is evident from the preceding.

Chapter 5

But one of the problems about the citizen still remains. For is the citizen really someone who is permitted to participate in office, or should vulgar craftsmen also be regarded as citizens? If, indeed, those who do not share in office should be regarded as citizens, then this sort of virtue cannot belong to every citizen (for these will then be citizens). On the other hand, if none of this sort is a citizen, in what category should they each be put?—for they are neither resident aliens nor foreigners.

Or shall we say that from *this* argument, at least, nothing absurd follows, since neither slaves nor freed slaves are in the aforementioned classes either? For the truth is that not everyone without whom there would not be a city-state is to be regarded as a citizen. For children are not citizens in the way men are. The latter are unqualified citizens, whereas the former are only citizens given certain assumptions: they are citizens, but incomplete ones. Vulgar craftsmen were slaves or foreigners in some places long ago, which is why most of them still are even today. The best city-state will not confer citizenship on vulgar craftsmen, however; but if they too are citizens, then what we have characterized as a citizen's virtue cannot be ascribed to everyone, or even to all free people, but only to those who are freed from necessary tasks. Those who perform necessary tasks for an individual are slaves; those who perform them for the community are vulgar craftsmen and hired laborers.

If we carry our investigation a bit further, it will be evident how things stand in these cases. In fact, it is clear from what we have already said. For since there are several constitutions, there must also be several kinds of citizens, particularly of citizens who are being ruled. Hence in some constitutions vulgar craftsmen and hired laborers must be citizens, whereas in others it is impossible—for example, in any so-called aristocracy in which offices are awarded on the basis of virtue and merit. For it is impossible to engage in virtuous pursuits while living the life of a vulgar craftsman or a hired laborer.

In oligarchies, however, while hired laborers could not be citizens (since participation in office is based on high property assessments), vulgar craftsmen could be, since in fact most craftsmen become rich (though in Thebes there used to be a law that anyone who had not kept away from the market for ten years could not participate in office).

In many constitutions, however, the law even goes so far as to admit some foreigners as citizens; for in some democracies the descendant of a citizen mother is a citizen, and in many places the same holds of bastards too. Nevertheless, since it is because of a shortage of legitimate citizens that they make such people citizens (for it is because of underpopulation that they employ laws in this way), when they are well supplied with a crowd of them, they gradually disqualify, first, those who have a slave as father or mother, then those with citizen mothers, until finally they make citizens only of those who come from citizens on both sides.

It is evident from these considerations, therefore, that there are several kinds of citizens, and that the one who participates in the offices is particularly said to be a citizen, as Homer too implied when he wrote: "like some disenfranchised alien."[2] For people who do not participate in the offices *are* like resident aliens. When this is concealed, it is for the sake of deceiving coinhabitants.

As to whether the virtue expressed by a good man is to be regarded as the same as that of an excellent citizen or as different, it is clear from what has been said that in one sort of city-state both are the same person, while in another they are different. And that person is not just anyone, but the statesman, who has authority or is capable of exercising authority in the supervision of communal matters, either by himself or with others.

2. [*Iliad* IX.648, XVI.59. Achilles is complaining that this is how Agamemnon is treating him.—C.D.C.R.]

Chapter 6

Since these issues have been determined, the next thing to investigate is whether we should suppose that there is just one kind of constitution or several, and, if there are several, what they are, how many they are, and how they differ.

A constitution is an organization of a city-state's various offices but, particularly, of the one that has authority over everything. For the governing class has authority in every city-state, and the governing class is the constitution. I mean, for example, that in democratic city-states the people have authority, whereas in oligarchic ones, by contrast, the few have it, and we also say the constitutions of these are different. And we shall give the same account of the other constitutions as well.

First, then, we must set down what it is that a city-state is constituted for, and how many kinds of rule deal with human beings and communal life. In our first discussions, indeed, where conclusions were reached about household management and rule by a master, it was also said that a human being is by nature a political animal. That is why, even when they do not need one another's help, people no less desire to live together, although it is also true that the common benefit brings them together, to the extent that it contributes some part of living well to each. This above all is the end, then, whether of everyone in common or of each separately. But human beings also join together and maintain political communities for the sake of life by itself. For there is perhaps some share of what is noble in life alone, as long as it is not too overburdened with the hardships of life. In any case, it is clear that most human beings are willing to endure much hardship in order to cling to life, as if it had a sort of joy inherent in it and a natural sweetness.

But surely it is also easy to distinguish at least the kinds of rule people talk about, since we too often discuss them in our own external works. For rule by a master, although in truth the same thing is beneficial for both natural masters and natural slaves, is nevertheless rule exercised for the sake of the master's own benefit, and only coincidentally for that of the slave. For rule by a master cannot be preserved if the slave is destroyed. But rule over children, wife, and the household generally, which we call household management, is either for the sake of the ruled or for the sake of something common to both. Essentially, it is for the sake of the ruled, as we see medicine, physical training, and the other crafts to be, but coincidentally it might be for the sake of the rulers as well. For nothing prevents the trainer from sometimes being one of the athletes he is training, just as the captain of a ship is always one of the sailors. Thus a trainer or a captain looks to the good of those he rules, but when he becomes one of them himself, he shares coincidentally in the benefit. For the captain is a sailor, and the trainer, though still a trainer, becomes one of the trained.

Hence, in the case of political office too, where it has been established on the basis of equality and similarity among the citizens, they think it right to take turns at ruling. In the past, as is natural, they thought it right to perform public service when their turn came, and then to have someone look to *their* good, just as they had earlier looked to his benefit when they were in office. Nowadays, however, because of the profits to be had from public funds and from office, people want to be in office continuously, as if they were sick and would be cured by being always in office. At any rate, perhaps the latter would pursue office in that way.

It is evident, then, that those constitutions that look to the common benefit turn out, according to what is unqualifiedly just, to be correct, whereas those which look only to the benefit of the rulers are mistaken and are deviations from the correct constitutions. For they are like rule by a master, whereas a city-state is a community of free people.

Chapter 7

Now that these matters have been determined, we must next investigate how many kinds of constitutions there are and what they are, starting first with the correct constitutions. For once they have been defined, the deviant ones will also be made evident.

Since "constitution" and "governing class" signify the same thing, and the governing class is the authoritative element in any city-state, and the authoritative element must be either one person, or few, or many, then whenever the one, the few, or the many rule

for the common benefit, these constitutions must be correct. But if they aim at the private benefit, whether of the one or the few or the multitude, they are deviations (for either the participants should not be called citizens, or they should share in the benefits).

A monarchy that looks to the common benefit we customarily call a kingship; and rule by a few but more than one, an aristocracy (either because the best people rule, or because they rule with a view to what is best for the city-state and those who share in it). But when the multitude governs for the common benefit, it is called by the name common to all constitutions, namely, *politeia*. Moreover, this happens reasonably. For while it is possible for one or a few to be outstandingly virtuous, it is difficult for a larger number to be accomplished in every virtue, but it can be so in military virtue in particular. That is precisely why the class of defensive soldiers, the ones who possess the weapons, has the most authority in this constitution.

Deviations from these are tyranny from kingship, oligarchy from aristocracy, and democracy from polity. For tyranny is rule by one person for the benefit of the monarch, oligarchy is for the benefit of the rich, and democracy is for the benefit of the poor. But none is for their common profit.

Chapter 8

We should say a little more about what each of these constitutions is. For certain problems arise, and when one is carrying out any investigation in a philosophical manner, and not merely with a practical purpose in view, it is appropriate not to overlook or omit anything, but to make the truth about each clear.

A tyranny, as we said, exists when a monarchy rules the political community like a master; in an oligarchy those in authority in the constitution are the ones who have property. A democracy is the opposite; those who do not possess much property, and are poor, are in authority. The first problem concerns this definition. Suppose that the majority were rich and had authority in the city-state; yet there is a democracy whenever the majority has authority. Similarly, to take the opposite case, suppose the poor were fewer in number than the rich, but were stronger and had authority in the constitution; yet when a small group has authority it is said to be an oligarchy. It would seem, then, that these constitutions have not been well defined. But even if one combines being few with being rich in one case, and being a majority with being poor in the other, and describes the constitutions accordingly (oligarchy as that in which the rich are few in number and hold the offices, and democracy as that in which the poor are many and hold them), another problem arises. For what are we to call the constitutions we just described, those where the rich are a majority and the poor a minority, but each has authority in its own constitution—if indeed there is no other constitution besides those just mentioned?

What this argument seems to make clear is that it is a coincidence that the few have authority in oligarchies and the many in democracies, a result of the fact that everywhere the rich are few and the poor many. That is why, indeed, the reasons just mentioned are not the reasons for the differences. What does distinguish democracy and oligarchy from one another is poverty and wealth: whenever some, whether a minority or a majority, rule because of their wealth, the constitution is necessarily an oligarchy, and whenever the poor rule, it is necessarily a democracy. But it turns out, as we said, that the former are in fact few and the latter many. For only a few people are rich, but all share in freedom; and these are the reasons they both dispute over the constitution.

Chapter 9

The first thing one must grasp, however, is what people say the defining marks of oligarchy and democracy are, and what oligarchic and democratic justice are. For [1] they all grasp justice of a sort, but they go only to a certain point and do not discuss the whole of what is just in the most authoritative sense. For example, justice seems to be equality, and it is, but not for everyone, only *for equals*. Justice also seems to be inequality, since indeed it is, but not for everyone, only *for unequals*. They disregard the "for whom," however, and judge badly. The reason is that the judgment concerns themselves, and most people are pretty poor judges about what is their own.

So since what is just is just *for certain people*, and consists in dividing things and people in the same

way (as we said earlier in the *Ethics*), they agree about what constitutes equality in the thing but disagree about it in the people. This is largely because of what was just mentioned, that they judge badly about what concerns themselves, but also because, since they are both speaking up to a point about justice of a sort, they think they are speaking about what is unqualifiedly just. For one lot thinks that if they are unequal in one respect (wealth, say) they are wholly unequal, whereas the other lot thinks that if they are equal in one respect (freedom, say) they are wholly equal. But about the most authoritative considerations they do not speak.

For suppose people constituted a community and came together for the sake of property; then their participation in a city-state would be proportional to their property, and the oligarchic argument would as a result seem to be a powerful one. (For it is not just that someone who has contributed only one mina to a sum of one hundred minas should have equal shares in that sum, whether of the principal or of the interest, with the one who has contributed all the rest.) But suppose [2] they do not do so only for the sake of life, but rather for the sake of living well, since otherwise there could be a city-state of slaves or animals, whereas in fact there is not, because these share neither in happiness nor in a life guided by deliberative choice.

And suppose [3] they do not do so for the sake of an alliance to safeguard themselves from being wronged by anyone, nor [4] to facilitate exchange and mutual assistance, since otherwise the Etruscans and the Carthaginians, and all those who have treaties with one another would virtually be citizens of one city-state. To be sure, they have import agreements, treaties about refraining from injustice, and formal documents of alliance, but no offices common to all of them have been established to deal with these matters; instead each city-state has different ones. Nor are those in one city-state concerned with what sort of people the others should be, or that none of those covered by the agreements should be unjust or vicious in any way, but only that neither city-state acts unjustly toward the other. But those who are concerned with good government give careful attention to political virtue and vice. Hence it is quite evident that the city-state (at any rate, the one truly so called and not just for the sake of argument) must be concerned with virtue. For otherwise the community becomes an alliance that differs only in location from other alliances in which the allies live far apart, and law becomes an agreement, "a guarantor of just behavior toward one another," as the sophist Lycophron said, but not such as to make the citizens good and just.

It is evident that this is right. For even if [5] one were to bring their territories together into one, so that the city-state of the Megarians was attached to that of the Corinthians by walls, it still would not be a single city-state. Nor would it be so if their citizens intermarried, even though this is one of the forms of community characteristic of city-states. Similarly, if there were some who lived separately, yet not so separately as to share nothing in common, and had laws against wronging one another in their business transactions (for example, if one were a carpenter, another a farmer, another a cobbler, another something else of that sort, and their number were ten thousand), yet they shared nothing else in common besides such things as exchange and alliance—not even in this case would there be a city-state.

What, then, is the reason for this? Surely, it is not because of the nonproximate nature of their community. For suppose they joined together while continuing to share in that way, but each nevertheless treated his own household like a city-state, and the others like a defensive alliance formed to provide aid against wrongdoers only. Even then this still would not be thought a city-state by those who make a precise study of such things, if indeed they continued to associate with one another in the same manner when together as when separated.

Evidently, then, a city-state is not [5] a sharing of a common location, and does not exist for the purpose of [4] preventing mutual wrongdoing and [3] exchanging goods. Rather, while these must be present if indeed there is to be a city-state, when all of them *are* present there is still not yet a city-state, but [2] only when households and families live well as a community whose end is a complete and self-sufficient life. But this will not be possible unless they do inhabit one and the same location and practice intermarriage. That is why marriage connections arose in city-states, as well as brotherhoods, religious sacrifices, and the leisured pursuits of living together.

For things of this sort are the result of friendship, since the deliberative choice of living together constitutes friendship. The end of the city-state is living well, then, but these other things are for the sake of the end. And a city-state is the community of families and villages in a complete and self-sufficient life, which we say is living happily and nobly.

So political communities must be taken to exist for the sake of noble actions, and not for the sake of living together. Hence those who contribute the most to *this* sort of community have a larger share in the city-state than those who are equal or superior in freedom or family but inferior in political virtue, and those who surpass in wealth but are surpassed in virtue.

It is evident from what has been said, then, that [1] those who dispute about constitutions all speak about a *part* of justice.

Chapter 10

There is a problem as to what part of the state is to have authority, since surely it is either the multitude, or the rich, or decent people, or the one who is best of all, or a tyrant. But all of these apparently involve difficulties. How so? If the poor, because they are the greater number, divide up the property of the rich, isn't that unjust? "No, by Zeus, it isn't, since it seemed just to those in authority." What, then, should we call extreme injustice? Again, if the majority, having seized everything, should divide up the property of the minority, they are evidently destroying the city-state. But virtue certainly does not ruin what has it, nor is justice something capable of destroying a city-state. So it is clear, then, that this law cannot be just. Besides, everything done by a tyrant must be just as well; for he, being stronger, uses force, just as the multitude do against the rich.

But is it just, then, for the rich minority to rule? If they too act in the same way, plundering and confiscating the property of the multitude, and this is just, then the other case is as well. It is evident, therefore, that all these things are bad and unjust.

But should decent people rule and have authority over everything? In that case, everyone else must be deprived of honors by being excluded from political office. For offices are positions of honor, we say, and when the same people always rule, the rest must necessarily be deprived of honors.

But is it better that the one who is best should rule? But this is even more oligarchic, since those deprived of honors are more numerous.

Perhaps, however, someone might say that it is a bad thing in general for a human being to have authority and not the law, since he at any rate has the passions that beset the soul. But if law may be oligarchic or democratic, what difference will that make to our problems? For the things we have just described will happen just the same.

Chapter 11

As for the other cases, we may let them be the topic of a different discussion. But the view that the multitude rather than the few best people should be in authority would seem to be held, and while it involves a problem, it perhaps also involves some truth. For the many, who are not as individuals excellent men, nevertheless can, when they have come together, be better than the few best people, not individually but collectively, just as feasts to which many contribute are better than feasts provided at one person's expense. For being many, each of them can have some part of virtue and practical wisdom, and when they come together, the multitude is just like a single human being, with many feet, hands, and senses, and so too for their character traits and wisdom. That is why the many are better judges of works of music and of the poets. For one of them judges one part, another another, and all of them the whole thing.

It is in this way that excellent men differ from each of the many, just as beautiful people are said to differ from those who are not beautiful, and as things painted by craft are superior to real things: they bring together what is scattered and separate into one—although, at least if taken separately, this person's eye and some other feature of someone else will be more beautiful than the painted ones.

Whether this superiority of the many to the few excellent people can exist in the case of every people and every multitude is not clear. Though presumably, by Zeus, it is clear that in some of them it cannot possibly do so, since the same argument would apply to beasts. For what difference is there, practically

speaking, between some people and beasts? But nothing prevents what has been said from being true of *some* multitude.

By means of these considerations, too, one might solve the problem mentioned earlier and also the related one of what the free should have authority over, that is to say, the multitude of the citizens who are not rich and have no claim whatsoever arising from virtue. For it would not be safe to have them participate in the most important offices, since, because of their lack of justice and practical wisdom, they would inevitably act unjustly in some instances and make mistakes in others. On the other hand, to give them no share and not to allow them to participate at all would be cause for alarm. For a state in which a large number of people are excluded from office and are poor must of necessity be full of enemies. The remaining alternative, then, is to have them participate in deliberation and judgment, which is precisely why Solon and some other legislators arrange to have them elect and inspect officials, but prevent them from holding office alone. For when they all come together their perception is adequate, and, when mixed with their betters, they benefit their states, just as a mixture of roughage and pure food-concentrate is more useful than a little of the latter by itself. Taken individually, however, each of them is an imperfect judge.

But this organization of the constitution raises problems itself. In the first place, it might be held that the same person is able to judge whether or not someone has treated a patient correctly, and to treat patients and cure them of disease when it is present—namely, the doctor. The same would also seem to hold in other areas of experience and other crafts. Therefore, just as a doctor should be inspected by doctors, so others should also be inspected by their peers. But "doctor" applies to the ordinary practitioner of the craft, to a master craftsman, and thirdly, to someone with a general education in the craft. For there are people of this third sort in (practically speaking) all the crafts. And we assign the task of judging to generally educated people no less than to experts.

Moreover, it might be held that election is the same way, since choosing correctly is also a task for experts: choosing a geometer is a task for expert geometers, for example, and choosing a ship's captain is a task for expert captains. For even if some laymen are also involved in the choice of candidates in the case of some tasks and crafts, at least they do not play a larger role than the experts. According to this argument, then, the multitude should not be given authority over the election or inspection of officials.

But perhaps not all of these things are correctly stated, both because according to the earlier argument the multitude may not be too servile, since each may be a worse judge than those who know, but a better or no worse one when they all come together; and because there are some crafts in which the maker might not be either the only or the best judge—the ones where those who do not possess the craft nevertheless have knowledge of its products. For example, the maker of a house is not the only one who has some knowledge about it; the one who uses it is an even better judge (and the one who uses is the household manager). A captain, too, judges a rudder better than a carpenter, and a guest, rather than the cook, a feast.

This problem might be held to be adequately solved in such a way. But there is another connected with it. For it is held to be absurd for inferior people to have authority over more important matters than decent people do. But inspections and elections of officials are very important things. And in some constitutions, as we said, these are assigned to the people, since the assembly has authority over all such matters. And yet those with low property assessments and of whatever age participate in the assembly, and in deliberation and decision, whereas those with high property assessment are the treasurers and generals and hold the most important offices.

But one can, in fact, also solve this problem in the same way. For perhaps these things are also correctly organized. For it is neither the individual juror, nor the individual councilor, nor the individual assemblyman who is ruling, but the court, the council, and the people, whereas each of the individuals mentioned is only a part of these. (By "part" I mean the councilor, the assemblyman, and the juror.) Hence it is just for the multitude to have authority over the more important matters. For the people, the council, and the court consist of many individuals, and their collective property assessment is greater than the assessment of those who, whether individually or in small groups,

hold the important offices. So much for how these matters should be determined.

As to the first problem we mentioned, it makes nothing else so evident as that the laws, when correctly
1282b established, should be in authority, and that the ruler, whether one or many, should have authority over only those matters on which the laws cannot pronounce with precision, because it is not easy to make
5 universal declarations about everything.

It is not yet clear, however, what correctly established laws should be like, and the problem stated earlier remains to be solved. For the laws must necessarily be bad or good, and just or unjust, at the same time and in the same way as the constitutions. Still,
10 at least it is evident that the laws must be established to suit the constitution. But if this is so, it is clear that laws that accord with the correct constitutions must be just, and those that accord with the deviant constitutions not just.

Chapter 12

Since in every science and craft the end is a good, the greatest and best good is the end of the science or craft
15 that has the most authority of all of them, and this is the science of statesmanship. But the political good is justice, and justice is the common benefit. Now everyone holds that what is just is some sort of equality, and up to a point, at least, all agree with what has been determined in those philosophical works of ours deal-
20 ing with ethical issues. For justice is something to someone, and they say it should be something equal to those who are equal. But equality in what and inequality in what, should not be overlooked. For this involves a problem and political philosophy.

Someone might say, perhaps, that offices should be unequally distributed on the basis of superiority in any good whatsoever, provided the people did not differ in their remaining qualities but were exactly
25 similar, since where people differ, so does what is just and what accords with merit. But if this is true, then those who are superior in complexion, or height, or any other good whatsoever will get more of the things with which political justice is concerned. And isn't that plainly false? The matter is evident in the various
30 sciences and capacities. For among flute players equally proficient in the craft, those who are of better birth do not get more or better flutes, since they will not play the flute any better if they do. It is the superior performers who should also get the superior instruments. If what has been said is somehow not 35
clear, it will become so if we take it still further. Suppose someone is superior in flute playing, but is very inferior in birth or beauty; then, even if each of these (I mean birth and beauty) is a greater good than flute playing, and is proportionately more superior to flute playing than he is superior in flute playing, 40
he should still get the outstanding flutes. For the superiority in wealth and birth would have to contribute to the performance, but in fact they contribute 1283a
nothing to it.

Besides, according to this argument every good would have to be commensurable with every other. For if being a certain height counted more, height in general would be in competition with both wealth and 5
freedom. So if one person is more outstanding in height than another is in virtue, and if height in general is of more weight than virtue, then all goods would be commensurable. For if a certain amount of size is better than a certain amount of virtue, it is clear that some amount of the one is equal to some amount of the other. Since this is impossible, it is clear that in political mat- 10
ters, too, it is reasonable not to dispute over political office on the basis of just any sort of inequality. For if some are slow runners and others fast, this is no reason for the latter to have more and the former less: it is in athletic competitions that such a difference wins honor. The dispute must be based on the things from which a city-state is constituted. Hence the well-born, 15
the free, and the rich reasonably lay claim to office. For there must be both free people and those with assessed property, since a city-state cannot consist entirely of poor people, any more than of slaves. But if these things are needed in a city-state, so too, it is clear, are justice and political virtue, since a city-state cannot be managed without these. Rather, without the former a city- 20
state cannot exist, and without the latter it cannot be well managed.

Chapter 13

As regards the existence of a city-state, all, or at any rate some, of these would seem to have a correct claim in the dispute. But as regards the good life,

education and virtue would seem to have the most just claim of all in the dispute, as was also said earlier. But since those equal in one thing only should not have equality in everything, nor inequality if they are unequal in only one thing, all constitutions of this sort must be deviant.

We said before that all dispute somewhat justly, but that not all do so in an unqualifiedly just way. The rich have a claim due to the fact that they own a larger share of the land, and the land is something common, and that, in addition, they are usually more trustworthy where treaties are concerned. The free and the well-born have closely related claims, for those who are better born are more properly citizens than those of ignoble birth, and good birth is honored at home by everyone. Besides, they have a claim because better people are likely to come from better people, since good birth is virtue of family. Similarly, then, we shall say that virtue has a just claim in the dispute, since justice, we say, is a communal virtue, which all the other virtues necessarily accompany. But the majority too have a just claim against the minority, since they are stronger, richer, and better, when taken as the majority in relation to the minority.

If they were all present in a single city-state, therefore (I mean, for example, the good, the rich, the well-born, and a political multitude in addition), will there be a dispute as to who should rule or not? Within each of the constitutions we have mentioned, to be sure, the decision as to who should rule is indisputable, since these differ from one another because of what is in authority; for example, because in one the rich are in authority, in another the excellent men, and each of the others differs the same way. But be that as it may, we are investigating how the matter is to be determined when all these are present simultaneously. Suppose, for example, that those who possess virtue are extremely few in number, how should the matter be settled? Should their fewness be considered in relation to the task? To whether they are able to manage the city-state? Or to whether there are enough of them to constitute a city-state by themselves?

But there is a problem that faces all who dispute over political office. Those who claim that they deserve to rule because of their wealth could be held to have no justice to their claim at all, and similarly those claiming to do so because of their family. For it is clear that if someone is richer again than everyone else, then, on the basis of the same justice, this one person will have to rule them all. Similarly, it is clear that someone who is outstanding when it comes to good birth should rule those who dispute on the basis of freedom. Perhaps the same thing will also occur in the case of virtue where aristocracies are concerned. For if one man were better than the others in the governing class, even though they were excellent men, then, on the basis of the same justice, this man should be in authority. So if the majority too should be in authority because they are superior to the few, then, if one person, or more than one but fewer than the many, were superior to the others, these should be in authority rather than the multitude. All this seems to make it evident, then, that none of the definitions on the basis of which people claim that they themselves deserve to rule, whereas everyone else deserves to be ruled by them, is correct. For the multitude would have an argument of some justice even against those who claim that they deserve to have authority over the governing class because of their virtue, and similarly against those who base their claim on wealth. For nothing prevents the multitude from being sometimes better and richer than the few, not as individuals but collectively.

Hence the problem that some people raise and investigate can also be dealt with in this way. For they raise the problem of whether a legislator who wishes to establish the most correct laws should legislate for the benefit of the better citizens or that of the majority, when the case just mentioned occurs. But what is correct must be taken to mean what is equitable; and what is equitable in relation to the benefit of the entire city-state, and the common benefit of the citizens. And a citizen generally speaking is someone who participates in ruling and in being ruled, although in each constitution he is someone different. It is in the best one, however, that he is the one who has the power and who deliberately chooses to be ruled and to rule with an eye to the virtuous life. But if there is one person or more than one (though not enough to make up a complete city-state) who is so outstanding by reason of his superior virtue that neither the virtue nor the political power of all the others is commensurable with his (if there is only

one) or theirs (if there are a number of them), then such men can no longer be regarded as part of the city-state. For they would be treated unjustly if they were thought to merit equal shares, when they are so unequal in virtue and political power. For anyone of that sort would reasonably be regarded as a god among human beings. Hence it is clear that legislation too must be concerned with those who are equals both in birth and in power, and that for the other sort there is no law, since they themselves are law. For, indeed, anyone who attempted to legislate for them would be ridiculous, since they would presumably respond in the way Antisthenes tells us the lions did when the hares acted like popular leaders and demanded equality for everyone.

That is why, indeed, democratically governed city-states introduce ostracism. For of all city-states these are held to pursue equality most, and so they ostracize those held to be outstandingly powerful (whether because of their wealth, their many friends, or any other source of political power), banishing them from the city-state for fixed periods of time. The story goes, too, that the Argonauts left Heracles behind for this sort of reason: the Argo refused to carry him with the other sailors on the grounds that his weight greatly exceeded theirs. That is also why those who criticize tyranny or the advice that Periander gave Thrasybulus should not be considered to be unqualifiedly correct in their censure. For they say that Periander said nothing to the messenger who had been sent to him for advice, but leveled a cornfield by cutting off the outstandingly tall ears. When the messenger, who did not know why Periander did this, reported what had happened, Thrasybulus understood that he was to get rid of the outstanding men.

This advice is not beneficial only to tyrants, however, nor are tyrants the only ones who follow it. The same situation holds too in oligarchies and democracies. For ostracism has the same sort of effect as cutting down the outstanding people or sending them into exile. But those in control of power treat city-states and nations in the same way. For example, as soon as Athens had a firm grip on its imperial rule, it humbled Samos, Chios, and Lesbos, in violation of the treaties it had with them; and the king of the Persians often cut the Medes and Babylonians down to size, as well as any others who had grown presumptuous because they had once ruled empires of their own.

The problem is a general one that concerns all constitutions, even the correct ones. For though the deviant constitutions use such methods with an eye to the private benefit, the position is the same with those that aim at the common good. But this is also clear in the case of the other crafts and sciences. For no painter would allow an animal to have a disproportionately large foot, not even if it were an outstandingly beautiful one, nor would a shipbuilder allow this in the case of the stern or any of the other parts of the ship, nor will a chorus master tolerate a member of the chorus who has a louder and more beautiful voice than the entire chorus. So, from this point of view, there is nothing to prevent monarchs from being in harmony with the city-state they rule when they resort to this sort of practice, provided their rule benefits their city-states. Where acknowledged sorts of superiority are concerned, then, there is some political justice to the argument in favor of ostracism.

It would be better, certainly, if the legislator established the constitution in the beginning so that it had no need for such a remedy. But the next best thing is to try to fix the constitution, should the need arise, with a corrective of this sort. This is not what actually tended to happen in city-states, however. For they did not look to the benefit of their own constitutions, but used ostracism for purposes of faction. It is evident, then, that in each of the deviant constitutions ostracism is privately advantageous and just, but it is perhaps also evident that it is not unqualifiedly just.

In the case of the best constitution, however, there is a considerable problem, not about superiority in other goods, such as power or wealth or having many friends, but when there happens to be someone who is superior in virtue. For surely people would not say that such a person should be expelled or banished, but neither would they say that they should rule over him. For that would be like claiming that they deserved to rule over Zeus, dividing the offices. The remaining possibility—and it seems to be the natural one—is for everyone to obey such a person gladly, so that those like him will be permanent kings in their city-states.

Chapter 14

After the matters just discussed, it may perhaps be well to change to an investigation of kingship, since we say that it is one of the correct constitutions. What we have to investigate is whether or not it is beneficial for a city-state or territory which is to be well managed to be under a kingship, or under some other constitution instead, or whether it is beneficial for some but not for others. But first it must be determined whether there is one single type of kingship or several different varieties.

In fact this is easy to see—that kingship includes several types, and that the manner of rule is not the same in all of them. For kingship in the Spartan constitution, which is held to be the clearest example of kingships based on law, does not have authority over everything, but when the king leaves the country, he does have leadership in military affairs. Moreover, matters relating to the gods are assigned to the kings. [1] This type of kingship, then, is a sort of permanent autocratic generalship. For the king does not have the power of life and death, except when exercising a certain sort of kingship, similar to that exercised in ancient times on military expeditions, on the basis of the law of force. Homer provides a clear example. Agamemnon put up with being abused in the assemblies, but when they went out to fight he had the power even of life and death. At any rate, he says: "Anyone I find far from the battle. . . shall have no hope of escaping dogs and vultures, for I myself shall put him to death."[3] This, then, is one kind of kingship—a generalship for life. Some of these are based on lineage, others elective.

[2] But there is another kind of monarchy besides this, which is like kingships that exist among some non-Greeks. The powers all these have are very like those tyrants have, but they are based on law and are hereditary. Because non-Greeks are by nature more slavish in their character than Greeks, those in Asia being more so than those in Europe, they tolerate rule by a master without any complaint. So for this sort of reason these kingships are tyrannical, but they are stable because hereditary and based on law. Their bodyguards are kingly and not tyrannical for the same reason. For the citizens guard their kings with their weapons, whereas a foreign contingent guards tyrants. For kings rule willing subjects on the basis of law, whereas the latter rule unwilling ones. Thus the former have bodyguards drawn from the citizens, whereas the latter have their bodyguards to protect them against the citizens.

These, then, are two kinds of monarchy. [3] But there is another, which existed among the ancient Greeks, those they call dictators. Put simply, this is an elected tyranny, which differs from non-Greek kingship not because it is not based on law but only because it is not hereditary. Some hold this office for life, others for a fixed time or purpose. For example, the Mytileneans once elected Pittacus to defend them against the exiles led by Antimenides and the poet Alcaeus. Indeed, it is Alcaeus who makes it clear in one of his drinking songs that they did elect Pittacus tyrant. He complains that "They set up base-born Pittacus as tyrant of that gutless and ill-omened city-state, with great praise from the assembled throng." These are and were tyrannical because like the rule of a master, but kingly because elective and voluntary.

[4] A fourth kind of kingly monarchy, which existed in the heroic period, was voluntary, elective, and established on the basis of law. For because the first of the line were benefactors of the multitude in the crafts or war, or through bringing them together or providing them with land, they became kings over willing subjects, and their descendants took over from them. They had authority in regard to leadership in war, and religious sacrifices not requiring priests. They also decided legal cases, some doing so under oath, and others not (the oath consisted in lifting up the scepter). In ancient times, they ruled continuously over the affairs of the city-state, both domestic and foreign. But later, when the kings themselves relinquished some of these prerogatives, and others were taken away by the crowd in various city-states, only the sacrifices were left to the kings, and even where there was a kingship worthy of the name, it was only leadership in military affairs conducted beyond the frontiers that the king held on to.

There are, then, these four kinds of kingship. One belongs to the heroic age: this was over willing subjects and served certain fixed purposes; the king was

3. [*Iliad* II.391–393. The last line Aristotle quotes is not in our text.]

general and judge and had authority over matters to do with the gods. The second is the non-Greek kind, which is rule by a master based on lineage and law. The third is so-called dictatorship, which is elective tyranny. Fourth among them is Spartan kingship, which, simply put, is permanent generalship based on lineage. These, then, differ from one another in this way.

[5] But there is a fifth kind of kingship, when one person controls everything in just the way that each nation and each city-state controls the affairs of the community. It is organized along the lines of household management. For just as household management is a sort of kingship over a household, so this kingship is household management of one or more city-states or nations.

Chapter 15

Practically speaking, then, there are just two kinds of kingship to be examined, namely, the last one and the Spartan. For most of the others lie in between them, since they control less than absolute kingship but more than Spartan kingship. So our investigation is pretty much about two questions: First, whether or not it is beneficial for a city-state to have a permanent general (whether chosen on the basis of family or by turns). Second, whether or not it is beneficial for one person to control everything. In fact, however, the investigation of this sort of generalship has the look of an investigation of laws rather than of constitutions, since this is something that can come to exist in any constitution. So the first question may be set aside. But the remaining sort of kingship *is* a kind of constitution. Hence we must study it and go through the problems it involves.

The starting point of the investigation is this: whether it is more beneficial to be ruled by the best man or by the best laws. Those who think it beneficial to be ruled by a king hold that laws speak only of the universal, and do not prescribe with a view to actual circumstances. Consequently, it is foolish to rule in accordance with written prescriptions in any craft, and doctors in Egypt are rightly allowed to change the treatment after the fourth day (although, if they do so earlier, it is at their own risk). It is evident, for the same reason, therefore, that the best constitution is not one that follows written laws. All the same, the rulers should possess the universal reason as well. And something to which the passionate element is entirely unattached is better than something in which it is innate. This element is not present in the law, whereas every human soul necessarily possesses it.

But perhaps it ought to be said, to oppose this, that a human being will deliberate better about particulars. In that case, it is clear that the ruler must be a legislator, and that laws must be established, but they must not have authority insofar as they deviate from what is best, though they should certainly have authority everywhere else. As to what the law cannot decide either at all or well, should the one best person rule, or everyone? For as things stand now, people come together to hear cases, deliberate, and decide, and the decisions themselves all concern particulars. Taken individually, any one of these people is perhaps inferior to the best person. But a city-state consists of many people, just like a feast to which many contribute, and is better than one that is a unity and simple. That is why a crowd can also judge many things better than any single individual. Besides, a large quantity is more incorruptible, so the multitude, like a larger quantity of water, are more incorruptible than the few. The judgment of an individual is inevitably corrupted when he is overcome by anger or some other passion of this sort, whereas in the same situation it is a task to get all the citizens to become angry and make mistakes at the same time.

Let the multitude in question be the free, however, who do nothing outside the law, except about matters the law cannot cover—not an easy thing to arrange where numbers are large. But suppose there were a number who were both good men and good citizens, which would be more incorruptible—one ruler, or a larger number all of whom are good? Isn't it clear that it would be the larger number? "But such a group will split into factions, whereas the single person is free of faction." One should no doubt oppose this objection by pointing out that they may be excellent in soul just like the single person.

So then, if the rule of a number of people, all of whom are good men, is to be considered an aristocracy, and the rule of a single person a kingship, aristocracy would be more choiceworthy for city-states than kingship (whether the rule is supported by force or

not), provided that it is possible to find a number of people who are similar. Perhaps this too is the reason people were formerly under kingships—because it was rare to find men who were very outstanding in virtue, particularly as the city-states they lived in at that time were small. Besides, men were made kings because of benefactions, which it is precisely the task of good men to confer. When there began to be many people who were similar in virtue, however, they no longer put up with kingship, but looked for something communal and established a polity. But when they began to acquire wealth from the common funds, they became less good, and it was from some such source, so one might reasonably suppose, that oligarchies arose; for they made wealth a thing of honor. Then from oligarchies they changed first into tyrannies, and from tyrannies to democracy. For by concentrating power into ever fewer hands, because of a shameful desire for profit, they made the multitude stronger, with the result that it revolted and democracies arose. Now that city-states have become even larger, it is perhaps no longer easy for any other constitution to arise besides democracy.

But now if one does posit kingship as the best thing for a city-state, how is one to handle the matter of children? Are the descendants to rule as kings too? If they turn out as some have, it would be harmful. "But perhaps, because he is in control, he will not give it to his children." But this is hardly credible. For it is a difficult thing to do, and demands greater virtue than human nature allows.

There is also a problem concerning force, and whether anyone who is going to rule as king should have some force in attendance with which he can compel anyone who does not wish to obey his rule. If not, how can he possibly manage his office? For even if he were a king exercising authority in accord with the law, and never acted in accordance with his own wishes contrary to the law, it would still be necessary for him to have some power with which to protect the laws. In the case of this sort of king, it is perhaps not difficult to determine the solution. He *should* have a force, but a force of such a kind as to be stronger than an individual, whether by himself or together with many, but weaker than the multitude. This is the way the ancients gave bodyguards when they selected someone from the city-state to be what they called a dictator or tyrant; and when Dionysius asked for bodyguards, someone advised the Syracusans to give him bodyguards of this sort.

Chapter 16

Now that we have reached this point the next topic must be that of the king who does everything according to his own wish, so we must investigate this. For the so-called king according to law does not, as we said, amount to a kind of constitution, since a permanent generalship can exist in any constitution (for example, in a democracy and an aristocracy), and many places put one person in control of managing affairs. There is an office of this sort in Epidamnus, indeed, and to a lesser extent in Opus as well.

But as regards so-called absolute kingship (which is where the king rules everything in accord with his own wish), some hold that it is not even in accordance with nature for one person, from among all the citizens, to be in control, when the city-state consists of similar people. For justice and merit must be by nature the same for those who are by nature similar. Hence, if indeed it is harmful to their bodies for equal people to have unequal food or clothing, the same holds, too, where offices are concerned. The same also holds, therefore, when equal people have what is unequal. Which is precisely why it is just for them to rule no more than they are ruled, and, therefore, to do so in turn. But this is already law; for the organization *is* law. Thus it is more choiceworthy to have law rule than any one of the citizens. And, by this same argument, even if it is better to have certain people rule, they should be selected as guardians of and assistants to the laws. For there do have to be some rulers; although it is not just, they say, for there to be only one; at any rate, not when all are similar. Moreover, the sort of things at least that the law seems unable to decide could not be discovered by a human being either. But the law, having educated the rulers for this special purpose, hands over the rest to be decided and managed in accordance with the most just opinion of the rulers. Moreover, it allows them to make any corrections by introducing anything found by experience to be an improvement on the existing laws. Anyone who instructs law to rule would seem to be asking God and the understanding alone

to rule; whereas someone who asks a human being asks a wild beast as well. For appetite is like a wild beast, and passion perverts rulers even when they are the best men. That is precisely why law is understanding without desire.

The comparison with the crafts, that it is bad to give medical treatment in accordance with written prescriptions and more choiceworthy to rely on those who possess the craft instead, would seem to be false. For doctors never do things contrary to reason because of friendship, but earn their pay by healing the sick. Those who hold political office, on the other hand, do many things out of spite or in order to win favor. And indeed if people suspected their doctors of having been bribed by their enemies to do away with them, they would prefer to seek treatment derived from books. Moreover, doctors themselves call in other doctors to treat them when they are sick, and trainers call in other trainers when they are exercising, their assumption being that they are unable to judge truly because they are judging about their own cases, and while in pain. So it is clear that in seeking what is just they are seeking the mean; for the law is the mean. Again, laws based on custom are more authoritative and deal with matters that have more authority than do written laws, so that even if a human ruler is more reliable than written laws, he is not more so than those based on custom.

Yet, it is certainly not easy for a single ruler to oversee many things; hence there will have to be numerous officials appointed under him. Consequently, what difference is there between having them there from the beginning and having one person appoint them in this way? Besides, as we said earlier, if it really is just for the excellent man to rule because he is better, well, two good ones are better than one. Hence the saying "When two go together . . . ," and Agamemnon's prayer, "May ten such counselors be mine."

Even nowadays, however, officials, such as jurors, have the authority to decide some things the law cannot determine. For, as regards those matters the law can determine, certainly no one disputes that the law itself would rule and decide best. But because some matters can be covered by the laws, while others cannot, the latter lead people to raise and investigate the problem whether it is more choiceworthy for the best law to rule or the best man (since to legislate about matters that call for deliberation is impossible). The counterargument, therefore, is not that it is not necessary for a human being to decide such matters, but that there should be many judges, not one only. For each official judges well if he has been educated by the law. And it would perhaps be accounted strange if someone, when judging with one pair of eyes and one pair of ears, and acting with one pair of feet and hands, could see better than many people with many pairs, since, as things stand, monarchs provide themselves with many eyes, ears, hands, and feet. For they appoint those who are friendly to their rule and to themselves as co-rulers. Now if they are not friendly in this way, they will not do as the monarch chooses. But suppose they are friendly to him and his rule—well, a friend is someone similar and equal, so if he thinks they should rule, he must think that those who are equal and similar to him should rule in a similar fashion.

These, then, are pretty much the arguments of those who dispute against kingship.

Chapter 17

But perhaps these arguments hold in some cases and not in others. For what is by nature both just and beneficial is one thing in the case of rule by a master, another in the case of kingship, and another in the case of rule by a statesman (nothing is by nature both just and beneficial in the case of a tyranny, however, nor in that of the other deviant constitutions, since they come about contrary to nature). But it is surely evident from what has been said that in a case where people are similar and equal, it is neither beneficial nor just for one person to control everything. This holds whether there are no laws except the king himself, or whether there are laws; whether he is a good person ruling good people, or a not good one ruling not good ones; and even whether he is their superior in virtue—except in one set of circumstances. What these circumstances are must now be stated—although we have in a way already stated it.

First, we must determine what kind of people are suited to kingship, what to aristocracy, and what to polity. A multitude should be under kingship when it naturally produces a family that is superior in the

virtue appropriate to political leadership. A multitude is suited to aristocracy when it naturally produces a multitude capable of being ruled with the rule appropriate to free people by those who are qualified to lead by their possession of the virtue required for the rule of a statesman. And a multitude is suited to polity when there naturally arises in it a warrior multitude capable of ruling and being ruled, under a law which distributes offices to the rich on the basis of merit. Whenever it happens, then, that there is a whole family, or even some one individual among the rest, whose virtue is so superior as to exceed that of all the others, it is just for this family to be the kingly family and to control everything, and for this one individual to be king. For, as was said earlier, this not only accords with the kind of justice customarily put forward by those who establish constitutions, whether aristocratic, oligarchic, or even democratic (for they all claim to merit rule on the basis of superiority in something, though not superiority in the same kind of thing), but also with what was said earlier. For it is surely not proper to kill or to exile or to ostracize an individual of this sort, nor to claim that he deserves to be ruled in turn. For it is not natural for the part to be greater than the whole, but this is what happens in the case of someone who has this degree of superiority. So the only remaining option is for such a person to be obeyed and to be in control not by turns but unqualifiedly.

Kingship, then, and what its varieties are, and whether it is beneficial for city-states or not, and if so, for which and how, may be determined in this way.

Chapter 18

We say that there are three correct constitutions, and that the best of them must of necessity be the one managed by the best people. This is the sort of constitution in which there happens to be either one particular person or a whole family or a number of people whose virtue is superior to that of all the rest, and where the latter are capable of being ruled and the former of ruling with a view to the most choiceworthy life. Furthermore, as we showed in our first discussions, the virtue of a man must of necessity be identical to that of a citizen of the best city-state. Hence it is evident that the ways and means by which a man becomes excellent are the same as those by which one might establish a city-state ruled by an aristocracy or a king, and that the education and habits that make a man excellent are pretty much the same as those that make him statesmanlike or kingly.

Now that these matters have been determined, we must attempt to discuss the best constitution, the way it naturally arises and how it is established. Anyone, then, who intends to do this must conduct the investigation in the appropriate way.

BOOK IV

Chapter 1

Among all the crafts and sciences that are concerned not only with a part but that deal completely with some one type of thing, it belongs to a single one to study what is appropriate for each type. For example: what sort of physical training is beneficial for what sort of body, that is to say, what sort is best (for the sort that is appropriate for the sort of body that is naturally best and best equipped is necessarily best), and what single sort of training is appropriate for most bodies (since this too is a task for physical training). Further, if someone wants neither the condition nor the knowledge required of those involved in competition, it belongs no less to coaches and physical trainers to provide this capacity too. We see a similar thing in medicine, ship building, clothing manufacture, and every other craft.

Consequently, it is clear that it belongs to the same science to study: [1] What the best constitution is, that is to say, what it must be like if it is to be most ideal, and if there were no external obstacles. Also [2] which constitution is appropriate for which city-states. For achieving the best constitution is perhaps impossible for many; and so neither the unqualifiedly best constitution nor the one that is best in the circumstances should be neglected by the good legislator and true statesman. Further, [3] which constitution is best given certain assumptions. For a statesman must be able to study how any given constitution might initially come into existence, and how, once in existence, it might be preserved for the longest time. I mean, for example, when some

city-state happens to be governed neither by the best constitution (not even having the necessary resources) nor by the best one possible in the existing circumstances, but by a worse one. Besides all these things, a statesman should know [4] which constitution is most appropriate for all city-states. Consequently, those who have expressed views about constitutions, even if what they say is good in other respects, certainly fail when it comes to what is useful. For one should not study only what is best, but also what is possible, and similarly what is easier and more attainable by all. As it is, however, some seek only the constitution that is highest and requires a lot of resources, while others, though they discuss a more attainable sort, do away with the constitutions actually in place, and praise the Spartan or some other. But what should be done is to introduce the sort of organization that people will be easily persuaded to accept and be able to participate in, given what they already have, as it is no less a task to reform a constitution than to establish one initially, just as it is no less a task to correct what we have learned than to learn it in the first place. That is why, in addition to what has just been mentioned, a statesman should also be able to help existing constitutions, as was also said earlier. But this is impossible if he does not know [5] how many kinds of constitutions there are. As things stand, however, some people think that there is just one kind of democracy and one of oligarchy. But this is not true. So one must not overlook the varieties of each of the constitutions, how many they are and how many ways they can be combined. And [6] it is with this same practical wisdom that one should try to see both which laws are best and which are appropriate for each of the constitutions. For laws should be established, and all do establish them, to suit the constitution and not the constitution to suit the laws. For a constitution is the organization of offices in city-states, the way they are distributed, what element is in authority in the constitution, and what the end is of each of the communities. Laws, apart from those that reveal what the constitution is, are those by which the officials must rule, and must guard against those who transgress them. Clearly, then, a knowledge of the varieties of each constitution and of their number is also necessary for establishing laws. For the same laws cannot be beneficial for all oligarchies or for all democracies—if indeed there are several kinds, and not one kind of democracy nor one kind of oligarchy only.

Chapter 2

Since our initial inquiry concerning constitutions, we distinguished three correct constitutions (kingship, aristocracy, polity) and three deviations from them (tyranny from kingship, oligarchy from aristocracy, and democracy from polity), and since we have already discussed aristocracy and kingship, for studying the best constitution is the same as discussing these names, since each of them tends to be established on the basis of virtue furnished with resources; and since further, we have determined how aristocracy and kingship differ from one another, and when a constitution should be considered a kingship, it remains to deal with the constitution that is called by the name common to all constitutions, and also with the others—oligarchy, democracy, and tyranny.

It is also evident which of these deviations is worst and which second worst. For the deviation from the first and most divine constitution must of necessity be the worst. But kingship either must be in name only and not in fact or must be based on the great superiority of the person ruling as king. Hence tyranny, being the worst, is furthest removed from being a constitution; oligarchy is second worst (since aristocracy is very far removed from this constitution); and democracy the most moderate. An earlier thinker has already expressed this same view, though he did not look to the same thing we do. For he judged that when all these constitutions are good (for example, when an oligarchy is good, and also the others), democracy is the worst of them, but that when they are bad, it is the best. But we say that these constitutions are all of them mistaken, and that it is not right to speak of one kind of oligarchy as better than another, but as less bad.

But let us leave aside the judgment of this matter for the present. Instead, we must determine: [1] First, how many varieties of the constitutions there are (if indeed there are several kinds of democracy and oligarchy). Next, [2] which kind is most attainable, and which most choiceworthy after the best constitution (if indeed there is some other constitution which,

though aristocratic and well constituted, is at the same time appropriate for most city-states), and also which of the other constitutions is more choiceworthy for which people (for democracy is perhaps more necessary than oligarchy for some, whereas for others the reverse holds). After these things, [3] how someone who wishes to do so should establish these constitutions (I mean, each kind of democracy or oligarchy). Finally, when we have gone as far as we can to give a succinct account of each of these topics, [4] we must try to go through the ways in which constitutions are destroyed and those in which they are preserved, both in general and in the case of each one separately, and through what causes these most naturally come about.

Chapter 3

The reason why there are several constitutions is that every city-state has several parts. For in the first place, we see that all city-states are composed of households; and, next, that within this multitude there have to be some who are rich, some who are poor, and some who are in the middle; and that of the rich and of the poor, the one possessing weapons and the other without weapons. We also see that the people comprise a farming part, a trading part, and a vulgar craftsman part. And among the notables there are differences in wealth and in extent of their property—as, for example, in the breeding of horses, since this is not easy for those without wealth to do. (That is why, indeed, there were oligarchies among those city-states in ancient times whose power lay in their cavalry, and who used horses in wars with their neighbors—as, for example, the Eretrians did, and the Chalcidians, the Magnesians on the river Menander, and many of the others in Asia.) There are also differences based on birth, on virtue, and on everything else of the sort that we characterized as part of a city-state in our discussion of aristocracy, since there we distinguished the number of parts that are necessary to any city-state. For sometimes all of these parts participate in the constitution, sometimes fewer of them, sometimes more.

It is evident, therefore, that there must be several constitutions that differ in kind from one another, since these parts themselves also differ in kind. For a constitution is the organization of offices, and all consitutions distribute these either on the basis of the power of the participants, or on the basis of some sort of equality common to them (I mean, for example, of the poor or of the rich, or some equality common to both). Therefore, there must be as many constitutions as there are ways of organizing offices on the basis of the superiority and varieties of the parts.

But there are held to be mainly two constitutions: just as the winds are called north or south, and the others deviations from these, so there are also said to be two constitutions, democracy and oligarchy. For aristocracy is regarded as a sort of oligarchy, on the grounds that it is a sort of rule by the few, whereas a so-called polity is regarded as a sort of democracy, just as the west wind is regarded as northerly, and the east as southerly. According to some people, the same thing also happens in the case of harmonies, which are regarded as being of two kinds, the Dorian and the Phrygian, and the other arrangements are called either Phrygian types or Dorian types. People are generally accustomed, then, to think of constitutions in this way. But it is truer and better to distinguish them, as we have, and say that two constitutions (or one) are well formed, and that the others are deviations from them, some from the well-mixed "harmony," and others from the best constitution, the more tightly controlled ones and those that are more like the rule of a master being more oligarchic, and the unrestrained and soft ones democratic.

Chapter 4

One should not assert (as some are accustomed to do now) that democracy is simply where the multitude are in authority (for both in oligarchies and everywhere else, the larger part is in authority). Nor should an oligarchy be regarded as being where the few are in authority over the constitution. For if there were a total of thirteen hundred people, out of which a thousand were rich people who give no share in office to three hundred poor ones, no one would say that the latter were democratically governed even if they were free and otherwise similar to the rich. Similarly, if the poor were few, but stronger than the rich, who were a majority, no one would call such a constitution an oligarchy if the others, though rich,

did not participate in office. Thus it is better to say that a democracy exists when the free are in authority and an oligarchy exists when the rich are; but it happens that the former are many and the latter few, since many are free but few are rich. Otherwise there would be an oligarchy if offices were distributed on the basis of height (as is said to happen in Ethiopia) or on the basis of beauty, since beautiful people and tall ones are both few in number.

Yet these are not sufficient to distinguish these constitutions. Rather, since both democracy and oligarchy have a number of parts, we must further grasp that it is not a democracy if a few free people rule over a majority who are not free, as, for example, in Apollonia on the Ionian Gulf and in Thera. For in each of these city-states the offices were held by the well born, the descendants of the first colonists, although they were few among many. Nor is it an oligarchy if the rich rule because they are the multitude, as was formerly the case in Colophon, where the majority possessed large properties before the war against the Lydians. Rather, it is a democracy when the free and the poor who are a majority have the authority to rule, and an oligarchy when the rich and well born, who are few, do.

It has been stated, then, that there are a number of constitutions and why this is so. But let us now say why there are more than the ones mentioned, what they are, and how they arise, taking as our starting point what was agreed to earlier. For we are agreed that every city-state has not only one part but several.

If we wanted to grasp the kinds of animals, we would first determine what it is necessary for every animal to have: for example, certain of the sense organs; something with which to work on and absorb food (such as a mouth and a stomach); and also parts by which it moves. If these were the only parts, but they had varieties (I mean, for example, if there were several types of mouths, stomachs, and sense organs, and also of locomotive parts), then the number of ways of combining these would necessarily produce a number of types of animals. For the same animal cannot have mouths or ears of many different varieties. Hence, when these have been grasped, all the possible ways of pairing them together will produce kinds of animals, that is to say, as many kinds of animals as there are combinations of the necessary parts. It is the same way with the constitutions we have mentioned. For city-states are constituted not out of one but many parts, as we have often said.

One of these parts is [1] the multitude concerned with food, the ones called farmers. A second is [2] those called vulgar craftsman. They are concerned with the crafts without which a city-state cannot be managed (of these some are necessary, whereas others contribute to luxury or fine living). A third is [3] the traders (by which I mean those engaged in selling and buying, retail trade, and commerce). A fourth is [4] the hired laborers. A fifth is [5] the defensive warriors, which are no less necessary than the others, if the inhabitants are not to become the slaves of any aggressor. For no city-state that is naturally slavish can possibly deserve to be called a city-state at all; for a city-state is self-sufficient, whereas something that is slavish is not self-sufficient.

That is why what is said in the *Republic*, though sophisticated, is not adequate. For Socrates says that a city-state is constituted out of four absolutely necessary classes, and these, he says, are weavers, farmers, shoemakers, and house builders. Then, on the grounds that these are not self-sufficient, he adds blacksmiths, people to look after the necessary livestock, and those engaged in retail trade and commerce. All these become the full complement of his first city-state—as if every city-state were constituted for the sake of providing the necessities, not for the sake of what is noble, and had equal need of both shoemakers and farmers. Nor does he assign it defensive warriors until, with the expansion of its territory, it encroaches on that of its neighbors, and gets involved in a war. Yet even in these communities of four (or however many) classes, there must be someone to assign and decide what is just. So if indeed one should regard the soul as a more important part of an animal than the body, then, in the case of city-states too, one should regard things of the following sort to be parts, rather than those dealing with our necessary needs: the warriors; those who participate in administering judicial justice; and also those who deliberate, since deliberation is a task for political understanding. It does not matter to the argument whether these tasks belong to separate people or the same ones, since in fact it often happens that the same people both possess weapons and engage in farming. Consequently, if both the former

and the latter are to be regarded as parts of a city-state, it is evident that those who possess weapons, at any rate, must be a part of a city-state.

[7] Seventh are those who perform public service by means of their property. This is the class we call the rich. [8] Eighth are the civil servants, those who serve in connection with the various offices, since a city-state cannot exist without officials. There must, therefore, be some who are able to rule and perform this public service for the city-state either continuously or in turn. There remain those we happened to distinguish just now, those who deliberate and decide the claims of people involved in disputes. Therefore, if these things must indeed take place in city-states, and do so in a way that is noble and just, there must also be some who share in the virtue of statesmen.

As for the other capacities, many hold that they can belong to the same people; for example, that it is possible for the same people to be warriors, farmers, and craftsmen, and both deliberators and judges besides. And everyone claims to possess the virtue too, and thinks he is capable of ruling in most offices. But for the same people to be both rich and poor is impossible. Hence these in particular, the rich and the poor, are held to be parts of a city-state. Besides, the fact that the former are usually few in number and the latter many makes it seem that among the parts of the city-state these two are opposites. Consequently, constitutions are established on the basis of the superiority of these, and there are held to be two constitutions, democracy and oligarchy.

That there are a number of constitutions, then, and why this is so has been stated earlier. But we may now say that there are also several kinds of democracy and oligarchy. This is in fact evident from what has been said. For there are several kinds both of the people and of the so-called notables. For example, of the people, one is the farmers; another, those concerned with the crafts; the kind involved in trading, which is engaged in buying and selling; and the kind concerned with the sea—of which part is the navy, part is engaged in wealth acquisition, part in ferrying passengers, and part in fishing. (In many places, a particular one of these amounts to a large crowd; for example, fishermen in Tarentum and Byzantium, navy men in Athens, traders in Aegina and Chios, and ferrymen in Tenedos.) In addition to these, there are the manual laborers, those who have too little property to enable them to be at leisure; the free people who are not of citizen parentage on both sides; and whatever other kind of multitude there may be. The notables are distinguished by wealth, good birth, virtue, education, and the other characteristics that are ascribed on the basis of the same sort of difference.

[1] The first democracy, then, is the one that is said to be most of all based on equality. For the law in this democracy says that there is equality when the poor enjoy no more superiority than the rich and neither is in authority but the two are similar. For if indeed freedom and equality are most of all present in a democracy, as some people suppose, this would be most true in the constitution in which everyone participates in the most similar way. But since the people are the majority, and majority opinion has authority, this constitution is necessarily a democracy. This, then, is one kind of democracy.

[2] Another is where offices are filled on the basis of property assessments, although these are low, and where anyone who acquires the requisite amount may participate, whereas anyone who loses it may not. [3] Another kind of democracy is where all uncontested citizens participate, and the law rules. [4] Another kind of democracy is where everyone can participate in office merely by being a citizen, and the law rules.

[5] Another kind of democracy is the same in other respects, but the multitude has authority, not the law. This arises when decrees have authority instead of laws; and this happens because of popular leaders. For in city-states that are under a democracy based on law, popular leaders do not arise. Instead, the best citizens preside. Where the laws are not in authority, however, popular leaders arise. For the people become a monarch, one person composed of many, since the many are in authority not as individuals, but all together. When Homer says that "manyheaded rule is not good,"[4] it is not clear whether he means this kind of rule, or the kind where there are a number of individual rulers. In any case, a people of this kind, since it is a monarchy, seeks to exercise monarchic rule through not being ruled by the law, and becomes

4. [*Iliad* II.204.]

a master. The result is that flatterers are held in esteem, and that a democracy of this kind is the analog of tyranny among the monarchies. That is also why their characters are the same: both act like masters toward the better people; the decrees of the one are like the edicts of the other; a popular leader is either the same as a flatterer or analogous. Each of these has special power in his own sphere, flatterers with tyrants, popular leaders with a people of this kind. They are responsible for decrees being in authority rather than laws because they bring everything before the people. This results in their becoming powerful because the people have authority over everything, and popular leaders have it over the people's opinion, since the multitude are persuaded by them. Besides, those who make accusations against officials say that the people should decide them. The suggestion is gladly accepted, with the result that all offices are destroyed.

One might hold, however, that it is reasonable to object that this kind of democracy is not a constitution at all, on the grounds that there is no constitution where the laws do not rule. For the law should rule universally over everything, while offices and the constitution should decide particular cases. So, since democracy is one of the constitutions, it is evident that this sort of arrangement, in which everything is managed by decree, is not even a democracy in the most authoritative sense, since no decree can possibly be universal.

The kinds of democracy, then, should be distinguished in this way.

Chapter 5

Of the kinds of oligarchy, [1] one has offices filled on the basis of such a high property assessment that the poor, even though they are the majority, do not participate, but anyone who does acquire the requisite amount may participate in the constitution. [2] In another the offices are filled on the basis of a high assessment and they themselves elect someone to fill any vacancy. If they elect from among all of these, it is held to be more aristocratic; if from some specified people, oligarchic. [3] In another kind of oligarchy a son succeeds his father. [4] In a fourth what was just mentioned occurs, and not the law but the officials rule. This is to oligarchies what tyranny is to monarchies, and to the democracy we spoke of last among democracies. Such an oligarchy is called a dynasty.

These, then, are the kinds of oligarchy and democracy. But one must not overlook the fact that it has happened in many places that constitutions which are not democratic according to their laws are none the less governed democratically because of custom and training. Similarly, in other places, the reverse has happened: the constitution is more democratic in its laws, but is governed in a more oligarchic way as a result of custom and training. This happens especially after there has been a change of constitution. For the change is not immediate, but people are content at first to take from others in smaller ways. Hence the pre-existing laws remain in effect, although those who have changed the constitution are dominant.

Chapter 6

It is evident from what has been said that there are this many kinds of democracy and oligarchy. For either all of the aforementioned parts of the people must participate in the constitution, or some must and others not. [1] So when the part that farms and that owns a moderate amount of property has authority over the constitution, it is governed in accordance with the laws. For they have enough to live on as long as they keep working, but they cannot afford any leisure time. So they put the law in charge and hold only such assemblies as are necessary. And the others may participate when they have acquired the property assessment defined by the laws. Hence all those who have acquired it may participate. For, generally speaking, it is oligarchic when not all of these may participate, though not if what makes being at leisure impossible is the absence of revenues. This, then, is one kind of democracy and these are the reasons for it.

[2] Another kind arises through the following distinction. For it is possible for everyone of uncontested birth to participate, but for only those who have leisure actually to do so. Hence in this kind of democracy the laws rule because there is no revenue. [3] A third kind is when all who are free may participate in the constitution, but, for the reason just mentioned, they

do not participate, so that law necessarily rules in this kind also. [4] A fourth kind of democracy was the last to arise in city-states. For because city-states have become much larger than the original ones and possess abundant sources of revenue, everyone shares in the constitution, and so the multitude preponderates. And they all do participate and govern, because even the poor are able to be at leisure, since they get paid. A multitude of this sort is particularly leisured, indeed, since care for their own property does not impede them. But it does impede the rich, who often fail to take part in the assembly or serve on juries as a result. Hence the multitude of poor citizens come to have authority over the constitution and not the laws. The kinds of democracy, then, are such and so many because of these necessities.

As for the kinds of oligarchy, [1] when a number of people own property, but a smaller amount—not too much—this is the first kind of oligarchy. For anyone who acquires the amount may participate. And because of the multitude participating in the governing class, law is necessarily in authority, not human beings. For it is necessary for them to consent to having the law rule and not themselves, the more removed they are from exercising monarchy, and the more they have neither so much property that they can be at leisure without worrying nor so little that they need to be supported by the city-state.

[2] But if the property owners are fewer and their properties greater than those mentioned before, the second kind of oligarchy arises. For, being more powerful, the property owners expect to get more. Hence they themselves elect from among the rest of the citizens those who are to enter the governing class. But as they are not yet powerful enough to rule without law, they pass a law of this sort.

[3] But if they tighten this process by becoming fewer and owning larger properties, the third stage of oligarchy is reached, where they keep the offices in their own hands, but do so in accordance with a law requiring deceased members to be succeeded by their sons. [4] But when they now tighten it excessively through their property holdings and the number of their friends, a dynasty of this sort approximates a monarchy, and human beings are in authority, not law. This is the fourth kind of oligarchy, corresponding to the final kind of democracy.

Chapter 7

There are also two constitutions besides democracy and oligarchy, one of which is mentioned by everyone and which we said was one of the four kinds of constitutions. The four they mention are monarchy, oligarchy, democracy, and, fourth, so-called aristocracy. There is a fifth, however, which is referred to by the name shared by all constitutions: the one called a *politeia* (polity). But because it does not occur often, it gets overlooked by those who try to enumerate the kinds of constitutions, and, like Plato, list only the four in their discussion of constitutions.

It is well to call the constitution we treated in our first discussions an aristocracy. For the only constitution that is rightly called an aristocracy is the one that consists of those who are unqualifiedly best as regards virtue, and not of those who are good men only given a certain assumption. For only here is it unqualifiedly the case that the same person is a good man and a good citizen. But those who are good in other constitutions are so relative to their constitutions. Nevertheless, there are some constitutions that differ both from constitutions that are oligarchically governed and from so-called polity, and are called aristocracies. For a constitution where officials are elected not only on the basis of wealth but also on the basis of merit differs from both of these and is called aristocratic. For even in those constitutions where virtue is not a concern of the community, there are still some who are of good repute and held to be decent. Hence wherever a constitution looks to wealth, virtue, and the people (as it does in Carthage), it is aristocratic, as also are those, like the constitution of the Spartans, which look to only two, virtue and the people, and where there is a mixture of these two things, democracy and virtue. There are, then, these two kinds of aristocracy besides the first, which is the best constitution; and there is also a third, namely, [4] those kinds of so-called polity that lean more toward oligarchy.

Chapter 8

It remains for us to speak about so-called polity and about tyranny. We have adopted this arrangement, even though neither polity nor the aristocracies just

mentioned are deviant, because in truth they all fall short of the most correct constitution, and so are counted among the deviations, and these deviations are deviations from them, as we mentioned in the beginning. On the other hand, it is reasonable to treat tyranny last, since it is least of all a constitution, and our inquiry is about constitutions. So much for the reason for organizing things in this way.

But we must now set forth our views on polity. Its nature should be more evident now that we have determined the facts about oligarchy and democracy. For polity, to put it simply, is a mixture of oligarchy and democracy. It is customary, however, to call those mixtures that lean toward democracy polities, and those that lean more toward oligarchy aristocracies, because education and good birth more commonly accompany those who are richer. Besides, the rich are held to possess already what unjust people commit injustice to get, which is why the rich are referred to as noble-and-good men, and as notables. So since aristocracies strive to give superiority to the best citizens, oligarchies too are said to consist primarily of noble-and-good men. And it is held to be impossible for a city-state to be well governed if it is not governed aristocratically, but by bad people, and equally impossible for a city-state that is not well governed to be governed aristocratically. But good government does not exist if the laws, though well established, are not obeyed. Hence we must take good government to exist in one way when the established laws are obeyed, and in another when the laws that are in fact obeyed are well established (for even badly established laws can be obeyed). The second situation can come about in two ways: people may obey either the best laws possible for them, or the unqualifiedly best ones.

Aristocracy is held most of all to exist when offices are distributed on the basis of virtue. For virtue is the defining mark of aristocracy, wealth of oligarchy, and freedom of democracy. But majority opinion is found in all of them. For in oligarchy and aristocracy and in democracies, the opinion of the major part of those who participate in the constitution has authority. Now in most city-states the kind of constitution is wrongly named, since the mixture aims only at the rich and the poor, at wealth and freedom. For among pretty much most people the rich are taken to occupy the place of noble-and-good men. But there are in fact *three* grounds for claiming equal participation in the constitution: freedom, wealth, and virtue. (The fourth, which they call good birth, is a consequence of two of the others, since good birth is a combination of old money and virtue.) Hence it is evident that the mixture of the two, the rich and the poor, ought to be called polity, whereas a mixture of the three most of all the others (except for the true and first kind) deserves to be called an aristocracy.

We have said, then, that there are other kinds of constitutions besides monarchy, democracy, and oligarchy. And it is evident what they are, how aristocracies differ among themselves, and polities from aristocracy; and that they are not far apart from one another.

Chapter 9

After what has been said, let us next discuss how, in addition to democracy and oligarchy, so-called polity arises, and how it should be established. At the same time, however, the defining principles of democracy and oligarchy will also become clear. For what we must do is get hold of the division of these, and then take as it were a token from each to put together.

There are three defining principles of the combination and mixture: [1] One is to take legislation from both constitutions. For example, in the case of deciding court cases, oligarchies impose a fine on the rich if they do not take part in deciding court cases, but provide no payment for the poor, whereas democracies pay the poor but do not fine the rich. But what is common to both constitutions and a mean between them is doing both. And hence this is characteristic of a polity, which is a mixture formed from both. This, then, is one way to conjoin them. [2] Another is to take the mean between the organizations of each. In democracies, for example, membership in the assembly is either not based on a property assessment at all or on a very small one, whereas in oligarchies it is based on a large property assessment. The common position here is to require neither of these assessments but the one that is in a mean between the two of them. [3] A third is to take elements from both organizations, some from oligarchic law and others from democratic law. I mean, for example, it is

held to be democratic for officials to be chosen by lot, and oligarchic by election; democratic not on the basis of a property assessment, oligarchic on such a basis. It is aristocratic, therefore, and characteristic of a polity to take one element from one and another from the other, by making officials elected, as in an oligarchy, but not on the basis of a property assessment, as in a democracy.

This, then, is the way to mix them. But the defining principle of a good mixture of democracy and oligarchy is when it is possible to speak of the same constitution both as an oligarchy and as a democracy. For it is clear that speakers speak of it in this way because the mixture is a good one. The mean too is like this, since each of the extremes is visible in it. This is precisely how it is with the Spartan constitution. For many people attempt to speak of it as if it were a democracy, because it has many democratic elements in its organization. First, for example, there is the way sons are brought up. Those of the rich are brought up like those of the poor, and are educated in a way that the sons of the poor could be. Similarly, at the next age, when they have become men, it is the same way. For nothing distinguishes a rich person from a poor one: the food at the messes is the same for everyone, and the rich wear clothes that any poor person could also provide for himself. A further democratic element is that of the two most important offices, the people elect candidates to one and participate in the other; for they elect the senators and participate in the overseership. But other people call the Spartan constitution an oligarchy on account of its having many oligarchic elements. For example, all the officials are chosen by vote and none by lot; a few have authority to impose death and exile; and there are also many other such elements. In a constitution that is well mixed, however, both elements should be held to be present—and neither; and it should survive because of itself and not because of external factors, and because of itself, not because a majority wishes it (since that could happen in a bad constitution too), but because none of the parts of the city-state as a whole would even want another constitution.

We have now described how a polity should be established and likewise those constitutions that are termed aristocracies.

Chapter 10

It remained for us to speak about tyranny, not because there is much to say about it, but so that it can take its place in our inquiry, since we assign it too a place among the constitutions. Now we dealt with kingship in our first discussions (when we investigated whether the kind of kingship that is most particularly so called is beneficial for city-states or not beneficial, who and from what source should be established in it, and in what manner). And we distinguished two kinds of tyranny while we were investigating kingship, because their power somehow also overlaps with kingship, owing to the fact that both are based on law. For some non-Greeks choose [1] autocratic monarchs, and in former times among the ancient Greeks there were [2] people called dictators who became monarchs in this way. There are, however, certain differences between these; but both were kingly in as much as they were based on law, and involved monarchical rule over willing subjects; but both were tyrannical, in as much as the monarchs ruled like masters in accordance with their own judgment. But [3] there is also a third kind of tyranny, which is held to be tyranny in the highest degree, being a counterpart to absolute kingship. Any monarchy is necessarily a tyranny of this kind if the monarch rules in an unaccountable fashion over people who are similar to him or better than him, with an eye to his own benefit, not that of the ruled. It is therefore rule over unwilling people, since no free person willingly endures such rule.

The kinds of tyranny are these and this many, then, for the aforementioned reasons.

Chapter 11

What is the best constitution, and what is the best life for most city-states and most human beings, judging neither by a virtue that is beyond the reach of ordinary people, nor by a kind of education that requires natural gifts and resources that depend on luck, nor by the ideal constitution, but by a life that most people can share and a constitution in which most city-states can participate? For the constitutions called aristocracies, which we discussed just now, either fall outside the reach of most city-states or border on so-called

polities (that is why the two have to spoken about as one).

Decision about all these matters depends on the same elements. For if what is said in the *Ethics* is right, and a happy life is the one that expresses virtue and is without impediment, and virtue is a mean, then the middle life, the mean that each sort of person can actually achieve, must be best. These same defining principles must also hold of the virtue and vice of a city-state or a constitution, since a constitution is a sort of life of city-state.

1295b In all city-states, there are three parts of the city-state: the very rich, the very poor; and, third, those in between these. So, since it is agreed that what is moderate and in a mean is best, it is evident that possessing a middle amount of the goods of luck is also best. For it most readily obeys reason, whereas whatever is exceedingly beautiful, strong, well born, or wealthy, or conversely whatever is exceedingly poor, weak, or lacking in honor, has a hard time obeying reason. For the former sort tend more toward arrogance and major vice, whereas the latter tend too much toward malice and petty vice; and wrongdoing is caused in the one case by arrogance and in the other by malice. Besides, the middle classes are least inclined either to avoid ruling or to pursue it, both of which are harmful to city-states.

Furthermore, those who are superior in the goods of luck (strength, wealth, friends, and other such things) neither wish to be ruled nor know how to be ruled (and this is a characteristic they acquire right from the start at home while they are still children; for because of their luxurious lifestyle they are not accustomed to being ruled, even in school). Those, on the other hand, who are exceedingly deprived of such goods are too humble. Hence the latter do not know how to rule, but only how to be ruled in the way slaves are ruled, whereas the former do not know how to be ruled in any way, but only how to rule as masters rule. The result is a city-state consisting not of free people but of slaves and masters, the one group full of envy and the other full of arrogance. Nothing is further removed from a friendship and a community that is political. For community involves friendship, since enemies do not wish to share even a journey in common. But a city-state, at least, tends to consist as much as possible of people who are equal and similar, and this condition belongs particularly to those in the middle. Consequently, this city-state, the one constituted out of those from which we say the city-state is naturally constituted, must of necessity be best governed. Moreover, of all citizens, those in the middle survive best in city-states. For neither do they desire other people's property as the poor do, nor do other people desire theirs, as the poor desire that of the rich. And because they are neither plotted against nor engage in plotting, they live out their lives free from danger. That is why Phocylides did well to pray: "Many things are best for those in the middle. I want to be in the middle in a city-state."

It is clear, therefore, that the political community that depends on those in the middle is best too, and that city-states can be well governed where those in the middle are numerous and stronger, preferably than both of the others, or, failing that, than one of them. For it will tip the balance when added to either and prevent the opposing extremes from arising. That is precisely why it is the height of good luck if those who are governing own a middle or adequate amount of property, because when some people own an excessive amount and the rest own nothing, either extreme democracy 1296a arises or unmixed oligarchy or, as a result of both excesses, tyranny. For tyranny arises from the most vigorous kind of democracy and oligarchy, but much less often from middle constitutions or those close to them. We will give the reason for this later when we discuss changes in constitutions.

That the middle constitution is best is evident, since it alone is free from faction. For conflicts and dissensions seldom occur among the citizens where there are many in the middle. Large city-states are also freer from faction for the same reason, namely, that more are many in the middle. In small city-states, on the other hand, it is easy to divide all the citizens into two, so that no middle is left and pretty well everyone is either poor or rich. Democracies are also more stable and longer lasting than oligarchies because of those in the middle (for they are more numerous in democracies than in oligarchies and participate in office more), since when the poor predominate without these, failure sets in and they are quickly ruined. The fact that the best legislators have come from the

middle citizens should be regarded as evidence of this. For Solon was one of these, as is clear from his poems, as were Lycurgus (for he was not a king), Charondas, and pretty well most of the others.

It is also evident from these considerations why most constitutions are either democratic or oligarchic. For because the middle class in them is often small, whichever of the others preponderates (whether the property owners or the people), those who overstep the middle way conduct the constitution to suit themselves, so that it becomes either a democracy or an oligarchy. In addition to this, because of the conflicts and fights that occur between the people and the rich, whenever one side or the other happens to gain more power than its opponents, they establish neither a common constitution nor an equal one, but take their superiority in the constitution as a reward of their victory and make in the one case a democracy and in the other an oligarchy. Then too each of those who achieved leadership in Greece has looked to their own constitutions and established either democracies or oligarchies in city-states, aiming not at the benefit of these city-states but at their own. As a consequence of all this, the middle constitution either never comes into existence or does so rarely and in few places. For among those who have previously held positions of leadership, only one man has ever been persuaded to introduce this kind of organization, and it has now become customary for those in city-states not even to wish for equality, but either to seek rule or to put up with being dominated.

What the best constitution is, then, and why it is so is evident from these considerations. As for the other constitutions (for there are, as we say, several kinds of democracies and of oligarchies), which of them is to be put first, which second, and so on in the same way, according to whether it is better or worse, is not hard to see now that the best has been determined. For the one nearest to this must of necessity always be better and one further from the middle worse—provided one is not judging on the basis of certain assumptions. I say "on the basis of certain assumptions," because it often happens that, while one constitution is more choiceworthy, nothing prevents a different one from being more beneficial for some.

Chapter 12

The next thing to go through after what has been said is which constitution and which kind of it is beneficial for which and which kind of people. First, though, a general point must be grasped about all of them, namely, that the part of a city-state that wishes the constitution to continue must be stronger than any part that does not. Every city-state is made up of both quality and quantity. By "quality," I mean freedom, wealth, education, and good birth; by "quantity," I mean the superiority of size. But it is possible that the quality belongs to one of the parts of which a city-state is constituted, whereas the quantity belongs to another. For example, the low-born may be more numerous than the well-born or the poor more numerous than the rich, but yet the one may not be as superior in quantity as it is inferior in quality. Hence these have to be judged in relation to one another. Where the multitude of poor people is superior in the proportion mentioned, there it is natural for a democracy to exist, with each particular kind of democracy corresponding to the superiority of each particular kind of the people. For example, if the multitude of farmers is predominant, it will be the first kind of democracy; if the vulgar craftsmen and wage earners are, the last kind; and similarly for the others in between these. But where the multitude of those who are rich and notable is more superior in quality than it is inferior in quantity, there an oligarchy is natural, with each particular kind of oligarchy corresponding to the superiority of the multitude of oligarchs, in the same way as before.

But the legislator should always include the middle in his constitution: if he is establishing oligarchic laws, he should aim at those in the middle, and if democratic ones, he must bring them in by these laws. And where the multitude of those in the middle outweighs either both of the extremes together, or even only one of them, it is possible to have a stable constitution. For there is no fear that the rich and the poor will conspire together against these, since neither will ever want to serve as slaves to the other; and if they look for a constitution that is more common than this, they will find none. For they would not put up with ruling in turn, because they distrust

one another; and an arbitrator is most trusted everywhere, and the middle person is an arbitrator. The better mixed a constitution is, the more stable it is. But many of those who wish to establish aristocratic constitutions make the mistake not only of granting more to the rich, but also of deceiving the people. For sooner or later, false goods inevitably give rise to a true evil; for the acquisitive behavior of the rich does more to destroy the constitution than that of the poor.

Chapter 13

The devices used in constitutions to deceive the people are five in number, and concern the assembly, offices, the courts, weapons, and physical training. [1] As regards the assembly: allowing all citizens to attend assemblies, but either imposing a fine only on the rich for not attending, or a much heavier one on them. [2] As regards offices: not allowing those with an assessed amount of property to swear off, but allowing the poor to do so. [3] As regards the courts: fining the rich for not serving on juries, but not the poor, or else imposing a large fine on the former and a small one on the latter, as in the laws of Charondas. In some places, everyone who has enrolled may attend the assembly and serve on juries, but once they have enrolled, if they do not attend or serve, they are heavily fined. The aim is to get people to avoid enrolling because of the fine, and not to serve or to attend because of not being enrolled. They legislate in the same way where possessing hoplite arms and physical training are concerned. [4] For the poor are permitted not to possess weapons, but the rich are fined if they do not; [5] and if they do not train, there is no fine for the former, but the latter are fined. That way the rich will participate because of the fine, whereas the poor, not being in danger of it, will not participate.

These legislative devices are oligarchic; in democracies there are opposite devices. For the poor are paid to attend the assembly and serve on juries, and the rich are not fined for failing to. If one wants to mix justly, then, it is evident that one must combine elements from either side, and pay the poor while fining the rich. For in this way everyone would participate, whereas in the other way the constitution comes to belong to one side alone. The constitution should consist only of those who possess weapons; but it is impossible unqualifiedly to define the size of the relevant property assessment, and say that it must be so much. One should instead look for what amount is the highest that would let those who participate in the constitution outnumber those who do not, and fix on that. For the poor are willing to keep quiet even when they do not participate in office, provided no one treats them arrogantly or takes away any of their property (not an easy thing, however, since those who do participate in the governing class are not always cultivated people). People are also in the habit of shirking in time of war if they are poor and do not receive provisions; but if food is provided, they will fight.

In some places, the constitution consists not only of those who are serving as hoplites but also of those who have served as hoplites in the past. In Malea, the constitution consisted of both, although the officials were elected from among the active soldiers. Also the first constitution that arose among the Greeks after kingships also consisted of the defensive warriors. Initially, it consisted of the cavalrymen, since strength and superiority in war lay in them. For a hoplite force is useless without organized formations, and experience in such things and organizations did not exist among the ancients. Hence their strength lay in their cavalry. But as city-states grew larger and those with hoplite weapons became a stronger force, more people came to participate in the constitution. That is precisely why what we now call polities used to be called democracies. But the ancient constitutions were oligarchic and kingly, and quite understandably so. For because of their small population they did not have much of a middle class, so that, being small in number and poor in organization, the people put up with being ruled.

We have said, then, [1] why there are several constitutions—[1.1] why there are others besides those spoken of (for democracy is not one in number, and similarly with the others), [1.2] what their varieties are, and [1.3] why they arise. In addition, [2] we have said which constitution is best, for the majority of cases, and [3] among the other constitutions which suits which sort of people.

Chapter 14

As regards what comes next, let us once again discuss constitutions generally and each one separately, taking the starting point that is appropriate to the subject. All constitutions have three parts by reference to which an excellent legislator must study what is beneficial for each of them. When these parts are in good condition, the constitution is necessarily in good condition, and constitutions necessarily differ from one another as a result of differing in each of these parts. One of the three parts [1] deliberates about public affairs; the second [2] concerns the offices, that is to say, which offices there should be, with authority over what things, and in what way officials should be chosen; and the third [3] is what decides lawsuits. [1] The deliberative part has authority in relation to war and peace, the making and breaking of alliances, and laws; and in relation to death, exile, and the confiscation of property; and in relation to the selection and inspection of officials. It is necessary that these matters for decision [1.1] be assigned either all to all citizens, or [1.2] all to some (to some single office, for example, or to several, or some to some and others to others), or [1.3] some to all and some to some.

[1.1] For all to deliberate about all issues is characteristic of a democracy, since this is the equality the people seek. But there are several ways of having all deliberate. [1.1.1] One way is in turn rather than all together, as in the constitution of Telecles of Miletus. There are other constitutions too in which deliberation is carried out by boards of officials meeting jointly, and all enter office in turn from the tribes and from the smallest parts of the city-state, until all have been gone through. In these cases all meet together only to consider legislation and matters pertaining to the constitution, and to listen to official announcements. [1.1.2] Another way is where they all meet, but only for choosing officials, for legislation, matters of war and peace, and for inspections; and other matters are deliberated on by the officials chosen to deal with the particular area in question, these being chosen from all the citizens either by election or by lot. [1.1.3] Another way is for the citizens to meet together about offices and inspections, and to deliberate about war and alliance, and for other matters to be dealt with by offices of which as few as possible are filled by election, these being the ones where it is necessary to have knowledgeable people holding office. [1.1.4] A fourth way is for all to meet and deliberate about all matters, while the office decides nothing, but prepares issues for decision only. This is the way in which the final kind of democracy is actually managed, the one we say is analogous to a dynastic oligarchy or a tyrannical monarchy.

All these ways, then, are democratic. But [1.2] for some people to deliberate about all matters is oligarchic. And here too there are several varieties. [1.2.1] For when they are chosen on the basis of more moderate property assessments, and there are more of them because of the moderateness of the assessments, and where they follow the law and do not attempt to make changes that it forbids, and where everyone who has the assessed amount may participate—such a constitution is certainly an oligarchy, but, on account of its moderateness, one with the character of a polity. [1.2.2] When not everyone participates in deliberation but only those elected, and when, as before, they rule in accordance with law, it is oligarchic. [1.2.3] When those who have authority over deliberation elect themselves, and when son succeeds father, and they have authority over the laws, this organization is necessarily most oligarchic. [1.3] But, when some have authority over some matters—for example, when all have it over war and peace and inspections, whereas officials who are elected, not chosen by lot, have it in the other areas, it is an aristocracy or a polity. But if it happens that elected officials have authority in some areas, whereas officials chosen by lot, either simply or from a preselected group, have it in others, or if elected officials and officials chosen by lot share authority, some of these are features of an aristocratic constitution and others of polity itself.

This is the way, then, that the deliberative part is distinguished in relation to the various constitutions, and each constitution administers matters in accord with the determinations mentioned.

In the kind of democracy that is most particularly held to be a democracy nowadays (I mean the kind in which the people have authority over even the laws), it is beneficial from the point of view of improving deliberation to do precisely the same thing as is done in oligarchies in regard to the courts. For they

establish a fine for those people they want to have on juries to ensure that they serve (whereas democrats pay the poor). The same should be done in the case of assemblies too, for they will deliberate better if they all deliberate together, the people with the notables, and the latter with the multitude. It is beneficial too if those who do the deliberating are elected, or chosen by lot, in equal numbers from these parts. And even if the democrats among the citizens are greatly superior in numbers, it is beneficial not to provide pay for all of them, but only for a number to balance the number of notables, or to exclude the excess by lot.

In oligarchies, however, it is beneficial either to select some additional people from the multitude of citizens to serve as officials or to establish a board of officials like the so-called preliminary councilors or law-guardians that exist in some constitutions, and then have the assembly deal only with issues that have been considered by this board. In this way, the people will share in deliberation, but will not be able to abolish anything connected to the constitution. It is also beneficial to have the people vote only on decrees brought before them that have already undergone preliminary deliberation, or on nothing contrary to them, or else to let all advise and have only officials deliberate. One should in fact do the opposite of what happens in polities. For the multitude should have authority when vetoing measures but not when approving them; in the latter case, they should be referred back to the officials instead. For in polities, they do the contrary, since the few have authority when vetoing decrees but not when passing them; decrees of the latter sort are always referred to the majority instead.

This, then, is the way the deliberative part, the part that has authority over the constitution, should be determined.

Chapter 15

[2] Next after these things comes the division of the offices. For this part of a constitution too has many varieties: how many offices there are; with authority over what things; with regard to time: how long each office is to last (some make it six months, some less, some make it a year, some a longer period); and whether they are to be held permanently or for a long time, or neither of these, but instead to be held by the same person several times, or not even twice but only once; and further, as regards the selection of officials: from whom they should come, by whom, and how. For one should be able to determine how many ways all these can be handled, and then fit the kinds of offices to the kinds of constitutions for which they are beneficial.

But even to determine what should be called an office is not easy. For a political community needs many sorts of supervisors, so that not everyone who is selected by vote or by lot can be regarded as an official. In the first place, for example, there are the priests: for a priesthood must be regarded as something other than and apart from the political offices. Besides, patrons of the theater and heralds are elected, ambassadors too. But some sorts of supervision *are* political, either concerned with all the citizens involved in a certain activity (as a general supervises those who are serving as soldiers) or some part of them (for example, the supervisors of women or children). Some are related to household management (for corn rationers are often elected), while others are subordinate, and are of the sort that, when there are the resources, are assigned to slaves.

Simply speaking, however, the offices most properly so called are those to which are assigned deliberation, decision, and issuing orders about certain matters, especially the latter, since issuing orders is most characteristic of office. This problem makes scarcely any difference in practice, but since terminological disputes have not been resolved, there is some theoretical work yet to be done.

One might rather raise a problem with regard to any constitution about what sorts of offices and how many of them are necessary for the existence of a city-state, and which sorts, though not necessary, are yet useful with a view to an excellent constitution, but one might particularly raise it with regard to constitutions in small city-states. For in large city-states one can and should assign a single office to a single task. For because there are many citizens, there are many people to take up office, so that some offices are held again only after a long interval and others are held only once. Also every task is better performed when its supervision is handled as a single

matter rather than as one matter among many. In small city-states, however, many offices have to be co-assigned to a few people, since underpopulation makes it hard to have a lot of people in office; for who will succeed them in their turn? But sometimes small city-states need the same offices and laws as large ones, except that the latter need the same ones often, whereas the former need them only at long intervals. That is why, indeed, nothing prevents their assigning many types of supervision at the same time (for they will not impede one another), and why, because of underpopulation, they must make their boards of officials like spit-lamps.

If, then, we can say how many offices every city-state must have, and how many it need not but should have, it will be easier, in the light of this, to determine which offices it is appropriate to combine into a single office. It is also appropriate not to overlook the question of which matters should be supervised by many boards of officials on a local basis, and which a single office should everywhere have authority over. For example, good order: should a market supervisor have authority over this in the marketplace, and another official in another place, or the same one everywhere? Should the offices be distinguished by their tasks or by the people they deal with? I mean, for example, whether there should be a single office for good order, or one for children and another for women. And with regard to the constitutions too, whether the types of offices also differ in each, or not at all. For example, whether in a democracy, an oligarchy, an aristocracy, and a monarchy, the same offices have authority, even though they are not composed of equal or similar people, but from different sorts in different constitutions (the generally educated in aristocracies, the rich in oligarchies, and the free in democracies), or whether certain offices exist precisely because constitutions differ, with sometimes the same offices and sometimes different ones being beneficial (since it is appropriate for the same office to be large in some places and small in others).

Some offices are indeed peculiar to particular constitutions, for example, that of the preliminary councilors. For it is undemocratic, whereas a council is democratic, since there must be some body of this sort to take care of preliminary deliberation on behalf of the people, so that they can do their work. This is oligarchic if the councilors are few in number; but the preliminary councilors are necessarily few in number, and so this arrangement is oligarchic. Where both these offices exist, however, the preliminary councilors are established as a check on the councilors; for a councilor is democratic, a preliminary councilor, oligarchic. But the power of the council is also destroyed in those kinds of democracies in which the people themselves come together and transact all business. This is the usual result when those who attend the assembly either are rich or receive pay, since they then have the leisure to meet often and decide everything themselves. The supervisor of children, the supervisor of women, and any other office that has authority over this sort of supervision, is an aristocratic feature, not democratic (for how can one prevent the women of the poor from going outdoors?) or oligarchic (since the women of oligarchs live luxuriously).

So much about these matters for now, but as regards the selection of officials, we must try to go through things from the beginning. Differences here lie in three defining principles, the combination of which necessarily yields all the different ways. Of these three, the first is [2.1] who selects the officials, second, [2.2] from whom, and, lastly, [2.3] in what way. Of each of these there are three different varieties. Either [2.1.1] all the citizens select or [2.1.2] some do; and they select either [2.2.1] from all or [2.2.2] from certain specified people (determined by a property assessment, for example, or by birth, virtue, or some other such feature, as in Megara where they selected from those who had returned from exile together and fought in alliance against the people); and they select either [2.3.1] by election or [2.3.2] by lot; and, again, these may be paired—I mean that [2.1.3] all may select for some offices and some for others, [2.2.3] some offices may be selected for from all and others from some, and [2.3.3] some may be selected for by lot and others by election.

In the case of each of these varieties, there are four different ways to proceed. Either all select from all by election or all select from all by lot (and from all either by sections—by tribe, for example, or by deme or clan, until all the citizens have been gone through—or from all on every occasion); or from some by election or from some by lot; or partly in

the first way and partly in the second. Again, if only some do the selecting, they may do so either from all by election or from all by lot; or from some by election or from some by lot; or partly in the first way and partly in the second—that is to say, for some from all by election and for some by lot. This gives rise to twelve ways, setting aside two of the combinations. Three of these ways of selecting are democratic, namely, when all select from all by election, by lot, or by both (that is, for some offices by election and for some by lot). But when not all select at the same time, but do so for all from all or from some, whether by election, lot, or both, or from all for some offices and from some for others, whether by election, lot, or both (by "both," I mean some by lot and others by election)—it is characteristic of a polity. When some appoint from all, whether by election, lot, or both (for some offices by lot for others by vote), it is oligarchic—although it is more oligarchic to do so by both. But when some offices are selected for from all and others from some or when some are selected for by election and some by vote, this is characteristic of an aristocratic polity. When some select from some by election, it is oligarchic; also when some select from some by lot (even though this does not happen), and when some select from some in both ways. But when some select from all, and when all select from some by election, it is aristocratic.

These, then, are the number of ways of selecting for offices, and this is how they are distinguished in relation to the constitutions. It will become evident which ways are beneficial for which constitutions, and how selections are to be made, when we determine the powers of the offices, and which these are. By the "power of an office" I mean, for example, having authority over revenues or authority over defense. For the kind of power of a generalship, for example, is different from that of authority over marketplace contracts.

Chapter 16

Of the three parts, it remains to speak about [3] the judicial. And we must grasp the ways that it can be organized by following the same supposition as before. The differences between courts are found in three defining principles: from whom; about what; and how. From whom: I mean whether they are selected from all or from some. About what: how many kinds of courts are there. How: whether by lot or by election.

First, then, let us distinguish how many kinds of courts there are. They are eight in number. One is [i] concerned with inspection. Another [ii] deals with anyone who wrongs the community. Another [iii] with matters that affect the constitution. A fourth [iv] deals with officials and private individuals in disputes about fines. A fifth [v] deals with private transactions of some magnitude. Besides these there is [vi] a court that deals with homicide and [vii] one that deals with aliens. The kinds of homicide court, whether having the same juries or not, are: [vi.1] that concerned with premeditated homicide, [vi.2] that concerned with involuntary homicide, [vi.3] that concerned with cases where there is agreement on the fact of homicide but the justice of it disputed, and a fourth [vi.4] concerned with charges brought against those who have been exiled for homicide after their return (the court of Phreatto in Athens is said to be an example), but such cases are rare at any time even in large city-states. The aliens' court has [vii.1] a part for aliens disputing with aliens and [vii.2] a part for aliens disputing with citizens. Besides all these, there is [viii] a court that deals with petty transactions: those involving one drachma, five drachmas, or a little more (for judgment must be given in these cases too, but it should not fall to a multitude of jurors to give it).

But let us set aside these courts as well as the homicide and aliens' courts and talk about the political ones, which, when not well managed, give rise to factions and constitutional changes. Of necessity, there are just the following possibilities: [3.1] All decide all the cases just distinguished, and are selected either [3.1.1] by lot or [3.1.2] by election; or [3.1] all decide all of them, and [3.1.3] some are selected by lot and some by election; or, [3.1.4] although dealing with the same case, some jurors may be selected by lot and some by election. Thus these ways are four in number. [3.2] There are as many again when selection is from only some of the citizens. For here again either [3.2.1] the juries are selected from some by election and decide all cases; or [3.2.2] they are selected from some by lot and decide all cases; or [3.2.3] some may be selected by lot and some by

election; or [3.2.4] some courts dealing with the same cases may be composed of both members selected by lot and elected members. These ways, as we said, are the counterparts of the ones we mentioned earlier. [3.3] Furthermore, these same ones may be conjoined—I mean, for example, some may be selected from all, others from some, and others from both (as for example if the same court had juries selected partly from all and partly from some); and the selection may be either by lot or by election or by both.

We have now listed the possible ways the courts can be organized. Of these the first, [3.1] those which are selected from all and decide all cases, are democratic. The second [3.2], those which are selected from some and decide all cases, are oligarchic. The third [3.3], those which are partly selected from all and partly from some, are aristocratic or characteristic of a polity.

BOOK VII

Chapter 1

Anyone who intends to investigate the best constitution in the proper way must first determine which life is most choiceworthy, since if this remains unclear, what the best constitution is must also remain unclear. For it is appropriate for those to fare best who live in the best constitution their circumstances allow—provided nothing contrary to reasonable expectation occurs. That is why we should first come to some agreement about what the most choiceworthy life is for practically speaking everyone, and then determine whether it is the same for an individual as for a community, or different.

Since, then, I consider that I have already expressed much that is adequate about the best life in the "external" works, I propose to make use of them here as well. For since, in the case of one division at least, there are three groups—external goods, goods of the body, and goods of the soul—surely no one would raise a dispute and say that not all of them need be possessed by those who are blessedly happy. For no one would call a person blessedly happy who has no shred of courage, temperance, justice, or practical wisdom, but is afraid of the flies buzzing around him, stops at nothing to gratify his appetite for food or drink, betrays his dearest friends for a pittance, and has a mind as foolish and prone to error as a child's or a madman's. But while almost all accept these claims, they disagree about quantity and relative superiority. For they consider any amount of virtue, however small, to be sufficient, but seek an unlimitedly excessive amount of wealth, possessions, power, reputation, and the like.

We, however, will say to them that it is easy to reach a reliable conclusion on these matters even from the facts themselves. For we see that the virtues are not acquired and preserved by means of external goods, but the other way around, and we see that a happy life for human beings, whether it consists in pleasure or virtue or both, is possessed more often by those who have cultivated their characters and minds to an excessive degree, but have been moderate in their acquisition of external goods, than by those who have acquired more of the latter than they can possibly use, but are deficient in the former. Moreover, if we investigate the matter on the basis of argument, it is plain to see. For external goods have a limit, as does any tool, and all useful things are useful for something; so excessive amounts of them must harm or bring no benefit to their possessors. In the case of each of the goods of the soul, however, the more excessive it is, the more useful it is (if these goods too should be thought of as useful, and not simply as noble).

It is generally clear too, we shall say, that the relation of superiority holding between the best condition of each thing and that of others corresponds to that holding between the things whose conditions we say they are. So since the soul is unqualifiedly more valuable, and also more valuable to us, than possessions or the body, its best states must be proportionally better than theirs. Besides, it is for the sake of the soul that these things are naturally choiceworthy, and every sensible person should choose them for its sake, not the soul for theirs.

We may take it as agreed, then, that each person has just as much happiness as he has virtue, practical wisdom, and the action that expresses them. We may use God as evidence of this. For he is blessedly happy, not because of any external goods but because of himself and a certain quality in his nature. This is

also the reason that good luck and happiness are necessarily different. For chance or luck produces goods external to the soul, but no one is just or temperate as a result of luck or because of luck.

The next point depends on the same arguments. The happy city-state is the one that is best and acts nobly. It is impossible for those who do not do noble deeds to act nobly; and no action, whether a man's or a city-state's, is noble when separate from virtue and practical wisdom. But the courage, justice, and practical wisdom of a city-state have the same capacity and are of the same kind as those possessed by each human being who is said to be just, practically wise, and temperate.

So much, then, for the preface to our discussion. For we cannot avoid talking about these issues altogether, but neither can we go through all the arguments pertaining to them, since that is a task for another type of study. But for now, let us assume this much, that the best life, both for individuals separately and for city-states collectively, is a life of virtue sufficiently equipped with the resources needed to take part in virtuous actions. With regard to those who dispute this, if any happen not to be persuaded by what has been said, we must ignore them in our present study, but investigate them later.

Chapter 2

It remains to say whether the happiness of each individual human being is the same as that of a city-state or not. But here too the answer is evident, since everyone would agree that they are the same. For those who suppose that living well for an individual consists in wealth will also call a whole city-state blessedly happy if it happens to be wealthy. And those who honor the tyrannical life above all would claim that the city-state that rules the greatest number is happiest. And if someone approves of an individual because of his virtue, he will also say that the more excellent city-state is happier.

Two questions need to be investigated, however. First, which life is more choiceworthy, the one that involves taking part in politics with other people and participating in a city-state, or the life of an alien cut off from the political community? Second, and regardless of whether participating in a city-state is more choiceworthy for everyone or for most but not for all, which constitution, which condition of the city-state, is best? This second question, and not the one about what is choiceworthy for the individual, is a task for political thought or theory. And since that is the investigation we are now engaged in, whereas the former is a further task, our task is the second question.

It is evident that the best constitution must be that organization in which anyone might do best and live a blessedly happy life. But the very people who agree that the most choiceworthy life is the life of virtue are the ones who dispute about whether it is the political life of action that is worthy of choice or rather the one released from external concerns—a contemplative life, for example, which some say is the only life for a philosopher. For it is evident that almost all of those, past or present, with the greatest love for the honor accorded to virtue have chosen between these two lives (I mean the political life and the philosophic one). And it makes no small difference on which side the truth lies, since anyone with sound practical wisdom at least must organize his affairs by looking to the better target—and this applies to human beings individually and to the constitution communally.

Some people think that ruling over one's neighbors like a master involves one of the greatest injustices, and that rule of a statesman, though it involves no injustice, does involve an impediment to one's own well-being. Others think almost the opposite, they say that an active, political life is the only one for a man, since the actions expressing each of the virtues are no more available to private individuals than to those engaged in communal affairs and politics. Some give this reply, then, but others claim that only a constitution that involves being a master or tyrant is happy.

For some people, indeed, the fundamental aim of the constitution and the laws just is to rule their neighbors like a master. That is why, even though most customs have been established pretty much at random in most cases, anywhere the laws have to some extent a single aim, it is always domination. So in Sparta and Crete the educational system and most of the laws are set up for war. Besides, all the nations that have the power to be acquisitive honor military power—for example, the Scythians, Persians,

Thracians, and Celts. Indeed, some of them even have laws designed to foster military virtue. It is said that in Carthage, for example, they receive armlets as decorations for each campaign in which they take part. There was once a law in Macedonia too that any man who had not killed an enemy must wear a halter for a belt. Among the Scythians, when the cup passes around at a feast, those who have not killed an enemy are not permitted to drink from it. And among the Iberians, a warlike race, they place small obelisks in the earth around a man's tomb to show the number of enemies he has killed. And there are many other similar practices among other peoples, some prescribed by law, others by custom.

Yet to anyone willing to investigate the matter, it would perhaps seem quite absurd if the task of a statesman involved being able to study ways to rule or master his neighbors, whether they are willing or not. For how could this be a political or legislative task, when it is not even lawful? But to rule not only justly but also unjustly is unlawful, whereas it is quite possible to dominate unjustly. Certainly, this is not what we see in the other sciences; for it is not the doctor's or captain's task to use force on his patients or passengers if he cannot persuade them. Yet many seem to think that statesmanship is the same as mastership, and what they all say is unjust or nonbeneficial when it is done to them, they are not ashamed to do to others. For they seek just rule for themselves, but pay no attention to justice in their dealings with others. It is absurd to deny, however, that one thing is fit to be a master and another not fit to be a master. So, if indeed one is that way, one should not try to rule as a master over everyone, but only over those who are fit to be ruled by a master. Similarly, one should not hunt human beings for a feast or sacrifice, but only animals that are fit to be hunted for these purposes: and that is any wild animal that is edible.

Furthermore, it is possible for even a single city-state to be happy all by itself, provided it is well governed, since it is possible for a city-state to be settled somewhere by itself and to employ excellent laws. And *its* constitution will not be organized for the purposes of war or of dominating its enemies (for we are assuming that it has none).

It is clear, therefore, that all military practices are to be regarded as noble, not when they are pursued as the highest end of all, but only when they are pursued for the sake of the highest end. The task of an excellent legislator, then, is to study how a city-state, a race of men, or any other community can come to have a share in a good life and in the happiness that is possible for them. There will be differences, of course, in some of the laws that are instituted, and if there are neighboring peoples, it belongs to legislative science to consider what sorts of military training are needed in relation to which sorts of people and which measures are to be used in relation to each.

But the question of which end the best constitution should aim at will receive a proper investigation later.

Chapter 3

We must now reply to the two sides who agree that the virtuous life is most choiceworthy, but disagree about how to practice it. For some rule out the holding of political office and consider that the life of a free person is both different from that of a statesman and the most choiceworthy one of all. But others consider that the political life is best, since it is impossible for someone inactive to do or act well, and that doing well and happiness are the same. We must reply that they are both partly right and partly wrong. On the one hand, it is true to say that the life of a free person is better than that of a master. For there is certainly nothing grand about using a slave as a slave, since ordering people to do necessary tasks is in no way noble. None the less, it is wrong to consider that every kind of rule is rule by a master. For the difference between rule over free people and over slaves is no smaller than the difference between being naturally free and being a natural slave. We have adequately distinguished them in our first discussions. On the other hand, to praise inaction more than action is not correct either. For happiness is action, and many noble things reach their end in the actions of those who are just and temperate.

Perhaps someone will take these conclusions to imply, however, that having authority over everyone is what is best. For in that way one would have authority over the greatest number of the very noblest actions. It would follow that someone who has the power to rule should not surrender it to his neighbor but

take it away from him, and that a father should disregard his children, a child his father, a friend his friend, and pay no attention to anything except ruling. For what is best is most choiceworthy, and doing well is best.

What they say is perhaps true, if indeed those who use force and commit robbery will come to possess the most choiceworthy thing there is. But perhaps they cannot come to possess it, and the underlying assumption here is false. For someone cannot do noble actions if he is not as superior to those he rules as a husband is to his wife, a father to his children, or a master to his slaves. Therefore, a transgressor could never make up later for his deviation from virtue. For among those who are similar, ruling and being ruled in turn is just and noble, since this is equal or similar treatment. But unequal shares for equals or dissimilar ones for similars is contrary to nature; and nothing contrary to nature is noble. Hence when someone else has superior virtue and his power to do the best things is also superior, it is noble to follow and just to obey him. But he should possess not virtue alone, but also the power he needs to do these things.

If these claims are correct, and we should assume that happiness is doing well, then the best life, whether for a whole city-state collectively or for an individual, would be a life of action. Yet it is not necessary, as some suppose, for a life of action to involve relations with other people, nor are those thoughts alone active which we engage in for the sake of action's consequences; the study and thought that are their own ends and are engaged in for their own sake are much more so. For to do or act well is the end, so that action of a sort is the end too. And even in the case of actions involving external objects, the one who does them most fully is, strictly speaking, the master craftsman who directs them by means of his thought.

Moreover, city-states situated by themselves, which have deliberately chosen to live that way, do not necessarily have to be inactive, since activity can take place even among their parts. For the parts of a city-state have many sorts of communal relationships with one another. Similarly, this holds for any human being taken singly. For otherwise God and the entire universe could hardly be in a fine condition; for they have no external actions, only the internal ones proper to them.

It is evident, then, that the same life is necessarily best both for each human being and for city-states and human beings collectively.

Chapter 13

But we must now discuss the constitution itself, and from which and what sorts of people a city-state should be constituted if it is to be blessedly happy and well governed. In all cases, well-being consists in two things: setting up the aim and end of action correctly and discovering the actions that bear on it. These factors can be in harmony with one another or in disharmony. For people sometimes set up the end well but fail to achieve it in action; and sometimes they achieve everything that promotes the end, but the end they set up is a bad one. Sometimes they make both mistakes. For example, in medicine it sometimes happens that doctors are neither correct in their judgment about what condition a healthy body should be in, nor successful in producing the condition they have set up as their end. In the crafts and sciences both of these have to be under control, the end and the actions directed toward it. It is evident that everyone aims at living well and at happiness. But while some can achieve these ends, others, whether because of luck or because of something in their nature, cannot. For we also need resources in order to live a good life, although we need fewer of them if we are in a better condition, more if we are in a worse one. Others, though they could achieve happiness, search for it in the wrong place from the outset. But since we are proposing to look at the best constitution, and this is the one under which a city-state will be best governed, and since a city-state is best governed under a constitution that would above all make it possible for the city-state to be happy, it is clear that we should not overlook the question of what happiness actually is.

We say, and we have given this definition in our ethical works (if anything in those discussions is of service), that happiness is a complete activation or use of virtue, and not a qualified use but an unqualified one. By "qualified uses" I mean those that are necessary; by "unqualified" I mean those that are

noble. For example, in the case of just actions, just retributions and punishments spring from virtue, but are necessary uses of it, and are noble only in a necessary way, since it would be more choiceworthy if no individual or city-state needed such things. On the other hand, just actions that aim at honors and prosperity are unqualifiedly noblest. The former involve choosing something that is somehow bad, whereas the latter are the opposite: they construct and generate goods. To be sure, an excellent man will deal with poverty, disease, and other sorts of bad luck in a noble way. But blessed happiness requires their opposites. For according to the definition established in our ethical works, an excellent man is the sort whose virtue makes *unqualifiedly* good things good *for him*. Clearly, then, his use of them must also be unqualifiedly good and noble. That is why people think that external goods are the causes of happiness. Yet we might as well hold that a lyre is the cause of fine and brilliant lyre playing, and not the performer's craft. It follows, then, from what has been said, that some goods must be there to start with, whereas others must be provided by the legislator. That is why we pray that our city-state will be ideally equipped with the goods that luck controls (for we assume that luck does control them). When we come to making the city-state excellent, however, that is no longer a task for luck but one for scientific knowledge and deliberate choice. A city-state is excellent, however, because the citizens who participate in the constitution are excellent; and in our city-state all the citizens participate in the constitution. The matter we have to investigate, therefore, is how a man becomes excellent. For even if it is possible for all the citizens to be collectively excellent without being so individually, the latter is still more choiceworthy, since if each is excellent, all are.

But surely people become excellent because of three things. The three are nature, habit, and reason. For first [1] one must possess a certain nature from birth, namely, that of a human, and not that of some other animal. Similarly, one's body and soul must be of a certain sort. But in the case of some of these qualities, there is no benefit in just being born with them, because they are altered by our habits. [2] For some qualities are naturally capable of being developed by habit either in a better direction or in a worse one. The other animals mostly live under the guidance of nature alone, although some are guided a little by habit. [3] But human beings live under the guidance of reason as well, since they alone have reason. Consequently, all three of these factors need to be harmonized with one another. For people often act contrary to their habits and their nature because of reason, if they happen to be persuaded that some other course of action is better.

We have already determined the sorts of natures people should have if it is to be easy for the legislator to take them in hand. Everything thereafter is a task for education. For some things are learned by habituation, others by instruction.

Chapter 15

Since it is evident that human beings have the same end, both individually and collectively, and since the best man and the best constitution must of necessity have the same aim, it is evident that the virtues suitable for leisure should be present in both. For, as has been said repeatedly, peace is the end of war, and leisure of work. Some of the virtues useful for leisure and LEISURED PURSUITS accomplish their task while one is actually at leisure, but others do so while one is at work. For many necessities must be present in order for leisure to be possible. That is why it is appropriate for our city-state to have temperance, courage, and endurance. For as the proverb says, there is no leisure for slaves, and people who are unable to face danger courageously are the slaves of their attackers. Courage and endurance are required for work, philosophy for leisure, and temperance and justice for both, but particularly for peace and leisure. For war compels people to be just and temperate, but the enjoyment of good luck and the leisure that accompanies peace tend to make them arrogant. Much justice and temperance are needed, therefore, by those who are held to be doing best and who enjoy all the things regarded as blessings; people like those, if there are any, who live in the isles of the blessed, as the poets call them. For they will be most in need of philosophy, temperance, and justice the more they live at leisure amidst an abundance of such goods. It is evident, then, why a city-state that is to be happy and good should share in these virtues. For it is shameful

to be unable to make use of good things, but it is even more shameful to be unable to make use of them in leisure time—to make it plain that we are good men when working or at war, but slaves when at peace and leisure. That is why one should not cultivate virtue as the city-state of the Spartans does. For the difference between the Spartans and others is not that they consider different things to be the greatest goods, but that they believe that these goods are obtained by means of a particular virtue. And because they consider these goods and the enjoyment of them to be better than the enjoyment of the virtues, [they train themselves only in the virtue that is useful for acquiring them, and ignore the virtue that is exercised in leisure]. But it is evident from what we have said, that [the latter virtue should be cultivated] on its own account. We must now study how and through what means this will come about.

We distinguished earlier three requirements: nature, habit, and reason. We have already determined the natural qualities our citizens should have. It remains to study whether they are to be educated through reason first or through habits. For the harmony between those should be the best kind of harmony. For it is possible for someone's reason to have missed the best supposition and for him to be led similarly astray by his habits.

This much at least is evident. First, procreation, like the production of any other kind of thing, has a starting point, and some starting points have ends that are the starting points of further ends. But reason and understanding constitute our natural end. Hence they are the ends that procreation and the training of our habits should be organized to promote. Second, just as soul and body are two, so we see that the soul has two parts as well, one that is nonrational and one that has reason. Their states are also two in number, desire and understanding. And just as the development of the body is prior to that of the soul, so the nonrational part is prior to the rational. This too is evident. For spirit, wish, and also appetite are present in children right from birth, whereas reasoning and understanding naturally develop as they grow older. That is why supervision of the body comes first and precedes that of the soul; then comes supervision of appetite or desire. But supervision of desire should be for the sake of understanding, and that of the body for the sake of the soul.

BOOK VIII

Chapter 1

No one would dispute, therefore, that legislators should be particularly concerned with the education of the young, since in city-states where this does not occur, the constitutions are harmed. For education should suit the particular constitution. In fact, the character peculiar to each constitution usually safeguards it as well as establishes it initially (for example, the democratic character, a democracy; and the oligarchic one, an oligarchy), and a better character is always the cause of a better constitution. Besides, prior education and habituation are required in order to perform certain elements of the task of any capacity or craft. Hence it is clear that this also holds for the activities of virtue.

Since the whole city-state has one single end, however, it is evident that education too must be one and the same for all, and that its supervision must be communal, not private as it is at present, when each individual supervises his own children privately and gives them whatever private instruction he thinks best. Training for communal matters should also be communal.

At the same time, one should not consider any citizen as belonging to himself alone, but as all belonging to the city-state, since each is a part of the city-state. And it is natural for the supervision of each part to look to the supervision of the whole. For this reason one might praise the Spartans, since they pay the most serious attention to their children, and do so as a community.

Chapter 2

It is evident, then, that there should be legislation regarding education, and that education should be communal. But the questions of what kind of education there should be and how it should be carried out should not be neglected. In fact, there is dispute at present about what its tasks are. For not all consider that the young should learn the same things, whether to promote virtue or the best life; nor is it evident whether it is more appropriate for education to develop the mind or the soul's character.

Investigation of the education we see around us results in confusion, since it is not at all clear whether people should be trained in what is useful for life, in what conduces to virtue, or in something out of the ordinary. For all of these proposals have acquired some advocates. Besides, there is no agreement about what promotes virtue. For, in the first place, people do not all esteem the same virtue, so they quite understandably do not agree about the training needed for it.

That children should be taught those useful things that are really necessary, however, is not unclear. But it is evident that they should not be taught all of them, since there is a difference between the tasks of the free and those of the unfree, and that they should share only in such useful things as will not turn them into vulgar craftsmen. (Any task, craft, or branch of learning should be considered vulgar if it renders the body or mind of free people useless for the practices and activities of virtue. That is why the crafts that put the body into a worse condition and work done for wages are called vulgar; for they debase the mind and deprive it of LEISURE.)

Even in the case of some of the sciences that are suitable for a free person, while it is not unfree to participate in them up to a point, to study them too assiduously or exactly is likely to result in the harms just mentioned. What one acts or learns *for* also makes a big difference. For what one does for one's own sake, for the sake of friends, or on account of virtue is not unfree, but someone who does the same thing for others would often be held to be acting like a hired laborer or a slave.

Chapter 3

The subjects that are now established tend in two directions, as was mentioned earlier. But generally speaking there are four that are customarily taught: reading and writing, gymnastics, music, and fourth (but only occasionally), drawing. Reading, writing, and drawing are taught because they are useful for life and have many applications; gymnastics is taught because it contributes to courage; but in the case of music a problem immediately arises. Nowadays, most people take part in music for the sake of pleasure. But those who originally included it as a part of education did so, as has often been said, because nature itself aims not only at the correct use of work but also at the capacity for noble leisured activity. Since this is the starting point for everything else, I propose to discuss it once again.

If both are required, but leisured activity is more choiceworthy than work and is its end, we should try to discover what people should do for leisured activity. For surely they should not be amusing themselves, otherwise amusement would have to be our end in life. But if that is impossible, and if amusements are more to be used while one is at work (for one who exerts himself needs relaxation, relaxation is the end of amusement, and work is accompanied by toil and strain), then we should, for this reason, permit amusement, but we should be careful to use it at the right time, dispensing it as a medicine for the ills of work. For this sort of motion of the soul is relaxing and restful because of the pleasure it involves.

Leisured activity is itself held to involve pleasure, happiness, and living blessedly. This is not available to those who are working, however, but only to those who are engaged in leisured activity. For one who is working is doing so for the sake of some end he does not possess, whereas happiness is an end that everyone thinks is accompanied not by pain but by pleasure. This pleasure is not the same for everyone, however, but each takes it to be what suits himself and his condition, and the best person takes it to be the best pleasure, the one that comes from the noblest things. It is evident, then, that we should learn and be taught certain things that promote leisured activity. And these subjects and studies are undertaken for their own sake, whereas those relating to work are necessary and for the sake of things other than themselves.

It is for this reason that our predecessors assigned music a place in education. They did not do so because they supposed: that it is necessary for life (for it is nothing of the sort); or that, like reading and writing, it is useful for making money, managing a household, acquiring further learning, or for a large number of political activities; or that, like gymnastics, it promotes health and vigor, for we see that neither of these results from music. What remains, then, is that music is for pursuit in leisure, which is evidently the very reason our predecessors included it in edu-

cation. For they give it a place among the LEISURED PURSUITS they considered appropriate for free people. Hence Homer's instruction to "call the bard alone to the rich banquet." And he goes on to mention certain others who "call the bard that he may bring delight to all." Elsewhere, Odysseus says that the best leisured pursuit is when men are enjoying good cheer and "the banqueters seated in due order throughout the hall, give ear to the bard." It is evident, then, that there is a certain kind of education that children must be given not because it is useful or necessary but because it is noble and suitable for a free person. But the number of subjects involved (whether one or many), what they are, and how they should be taught—these are questions that must be discussed later on. But as things stand, a certain amount of progress has been made, because we have some evidence from the ancients about the educational subjects they established, music being an obvious case in point.

Furthermore, it is clear that children should be taught some useful subjects (such as reading and writing) not only because of their utility, but also because many other areas of study become possible through them. Similarly, they should be taught drawing not in order to avoid making mistakes in their private purchases or being cheated when buying or selling products, but rather because it makes them contemplate the beauty of bodies. It is completely inappropriate for magnanimous and free people to be always asking what use something is.

Since it is evident that education through habituation must come before education through reason, and that education of the body must come before education of the mind, it clearly follows that children must be put in the hands of physical trainers who will bring their bodies into a certain condition, and coaches who will teach them to do certain physical tasks.

EPICURUS

Often, in the course of Western culture, morality and politics overlap. In the thought of Epicurus (341–271 B.C.E.), they do not, and this fact alone makes him an especially interesting figure, for in the ancient Greek world ethics and the good life were generally conceived in political terms. Hence, it would be surprising if Epicurus' rejection of political involvement were not in part a reaction to the thought of Plato and Aristotle and a return, in a sense, to Socratic thinking and an intense type of psychological therapy. Moreover, it would also be surprising if Epicurus' denial of the political, the avoidance of turbulence and fear, and the striving for psychological equilibrium were not in part a reaction to the pressures of the times—the achievements of Alexander, his death, the fragmentation of the empire, the increased familiarity among diverse cultures, and political crisis.

Epicurus was born on the island of Samos, off the coast of Asia Minor. His father was an Athenian citizen, and Epicurus at eighteen traveled to Athens to perform his military service. At about that time Alexander died, Aristotle left Athens and died a year later, and the Lyceum, Aristotle's school, came under new leadership. Epicurus seems to have returned to live with his family in Colophon and then to have organized his own philosophical circle first in Lesbos and then in Lampsacus, before moving to Athens in 307/306 B.C.E. He remained in Athens until his death in 271.

Upon his return to Athens, Epicurus purchased a house outside the city gates and founded a school, the "Garden," a kind of religious fellowship or society of friends. Apparently Epicurus had followers throughout the Greek world, and he kept in touch with many of them by means of letters, of which some fragments have survived. Epicurus wrote a great deal; Diogenes Laertius, the third-century doxographer, records forty-one of Epicurus' 'best books' and notes that no previous writer had greater productivity. Of this massive corpus, however, only a small portion remains, principally three letters quoted by Diogenes (*To Herodotus*, *To Pythocles*, and *To Menoeceus*), a collection of forty maxims or "principal doctrines" also quoted in Diogenes, and the quantity of Epicurean teaching cited and employed in Lucretius' *De rerum natura* (*On the Nature of Things*).

As A. A. Long has put it, "Epicurus' philosophy is a strange mixture of hard-headed empiricism, speculative metaphysics, and rules for the attainment of a tranquil life." That is, he develops a theory of knowledge that is grounded in sensation and sensory evidence. On this basis, Epicurus accounts for concepts, statements, truth, and rules of logic. He then proceeds to draw on the pre-Socratic atomists, Leucippus and Democritus, to develop his own theory of atoms and the void. From this theory he gives an account of the gods, fate, free will, and such matters. Finally, Epicurus uses these accounts to show how one should live in order to reduce pain and anxiety and thereby to maximize psychic tranquility (*ataraxia*) and pleasure. For example, he argues, tranquility occurs when the knowledge of nature removes our fear of the gods and of death itself. Human beings, Epicurus claims, can dissolve illusion and prejudice and thereby achieve the freedom from pain and the peace of mind that characterize the best life. There is no voluptuary hedonism in this; Epicurus does not fit the later parody of his thought. Rather there is dignity, moderation, and detachment, born of strife and worry but seeking nobility in a world riddled with turbulence, conflict, and superstition.

Letter to Menoeceus

Epicurus to Menoeceus, greetings:

Let no one delay the study of philosophy while young nor weary of it when old. For no one is either too young or too old for the health of the soul. He who says either that the time for philosophy has not yet come or that it has passed is like someone who says that the time for happiness has not yet come or that it has passed. Therefore, both young and old must philosophize, the latter so that although old he may stay young in good things owing to gratitude for what has occurred, the former so that although young he too may be like an old man owing to his lack of fear of what is to come. Therefore, one must practise the things which produce happiness, since if that is present we have everything and if it is absent we do everything in order to have it.

Do and practise what I constantly told you to do, believing these to be the elements of living well. First, believe that god is an indestructible and blessed animal, in accordance with the general conception of god commonly held, and do not ascribe to god anything foreign to his indestructibility or repugnant to his blessedness. Believe of him everything which is able to preserve his blessedness and indestructibility. For gods do exist, since we have clear knowledge of them. But they are not such as the many believe them to be. For they do not adhere to their own views about the gods. The man who denies the gods of the many is not impious, but rather he who ascribes to the gods the opinions of the many. For the pronouncements of the many about the gods are not basic grasps but false suppositions. Hence come the greatest harm from the gods to bad men and the greatest benefits [to the good]. For the gods always welcome men who are like themselves, being congenial to their own virtues and considering that whatever is not such is uncongenial.

Get used to believing that death is nothing to us. For all good and bad consists in sense-experience, and death is the privation of sense-experience. Hence, a correct knowledge of the fact that death is nothing to us makes the mortality of life a matter for contentment, not by adding a limitless time [to life] but by removing the longing for immortality. For there is nothing fearful in life for one who has grasped that there is nothing fearful in the absence of life. Thus, he is a fool who says that he fears death not because it will be painful when present but because it is painful when it is still to come. For that which while present causes no distress causes unnecessary pain when merely anticipated. So death, the most frightening of bad things, is nothing to us; since when we exist, death is not yet present, and when death is present, then we do not exist. Therefore, it is relevant neither to the living nor to the dead, since it does not affect the former, and the latter do not exist. But the many sometimes flee death as the greatest of bad things and sometimes choose it as a relief from the bad things of life. But the wise man neither rejects life nor fears death. For living does not offend him, nor does he believe not living to be something bad. And just as he does not unconditionally choose the largest amount of food but the most pleasant food, so he savours not the longest time but the most pleasant. He who advises the young man to live well and the old man to die well is simple-minded, not just because of the pleasing aspects of life but because the same kind of practice produces a good life and a good death. Much worse is he who says that it is good not to be born, "but when born to pass through the gates of Hades as quickly as possible."[1] For if he really

1. [Theognis 425, 427.—B.I. and L.P.G.]

believes what he says, why doesn't he leave life? For it is easy for him to do, if he has firmly decided on it. But if he is joking, he is wasting his time among men who don't welcome it. We must remember that what will happen is neither unconditionally within our power nor unconditionally outside our power, so that we will not unconditionally expect that it will occur nor despair of it as unconditionally not going to occur.

One must reckon that of desires some are natural, some groundless; and of the natural desires some are necessary and some merely natural; and of the necessary, some are necessary for happiness and some for freeing the body from troubles and some for life itself. The unwavering contemplation of these enables one to refer every choice and avoidance to the health of the body and the freedom of the soul from disturbance, since this is the goal of a blessed life. For we do everything for the sake of being neither in pain nor in terror. As soon as we achieve this state every storm in the soul is dispelled, since the animal is not in a passion to go after some need nor to seek something else to complete the good of the body and the soul. For we are in need of pleasure only when we are in pain because of the absence of pleasure, and when we are not in pain, then we no longer need pleasure.

And this is why we say that pleasure is the starting-point and goal of living blessedly. For we recognized this as our first innate good, and this is our starting point for every choice and avoidance and we come to this by judging every good by the criterion of feeling. And it is just because this is the first innate good, that we do not choose every pleasure; but sometimes we pass up many pleasures when we get a larger amount of what is uncongenial from them. And we believe many pains to be better than pleasures when a greater pleasure follows for a long while if we endure the pains. So every pleasure is a good thing, since it has a nature congenial [to us], but not every one is to be chosen. Just as every pain too is a bad thing, but not every one is such as to be always avoided. It is, however, appropriate to make all these decisions by comparative measurement and an examination of the advantages and disadvantages. For at some times we treat the good things as bad and conversely, the bad things as good.

And we believe that self-sufficiency is a great good, not in order that we might make do with few things under all circumstances, but so that if we do not have a lot we can make do with few, being genuinely convinced that those who least need extravagance enjoy it most; and that everything natural is easy to obtain and whatever is groundless is hard to obtain; and that simple flavours provide a pleasure equal to that of an extravagant life-style when all pain from want is removed, and barley cakes and water provide the highest pleasure when someone in want takes them. Therefore, becoming accustomed to simple, not extravagant, ways of life makes one completely healthy, makes man unhesitant in the face of life's necessary duties, puts us in a better condition for the times of extravagance which occasionally come along, and makes us fearless in the face of chance. So when we say that pleasure is the goal we do not mean the pleasures of the profligate or the pleasures of consumption, as some believe, either from ignorance and disagreement or from deliberate misinterpretation, but rather the lack of pain in the body and disturbance in the soul. For it is not drinking bouts and continuous partying and enjoying boys and women, or consuming fish and the other dainties of an extravagant table, which produce the pleasant life, but sober calculation which searches out the reasons for every choice and avoidance and drives out the opinions which are the source of the greatest turmoil for men's souls.

Prudence is the principle of all these things and is the greatest good. That is why prudence is a more valuable thing than philosophy. For prudence is the source of all the other virtues, teaching that it is impossible to live pleasantly without living prudently, honourably, and justly, and impossible to live prudently, honourably, and justly without living pleasantly. For the virtues are natural adjuncts of the pleasant life and the pleasant life is inseparable from them.

For who do you believe is better than a man who has pious opinions about the gods, is always fearless about death, has reasoned out the natural goal of life and understands that the limit of good things is easy to achieve completely and easy to provide, and that the limit of bad things either has a short duration or causes little trouble?

As to [Fate], introduced by some as the mistress of

all, ⟨he is scornful, saying rather that some things happen of necessity,⟩ others by chance and others by our own agency, and that he sees that necessity is not answerable [to anyone], that chance is unstable, while what occurs by our own agency is autonomous, and that it is to this that praise and blame are attached. For it would be better to follow the stories told about the gods than to be a slave to the fate of the natural philosophers. For the former suggests a hope of escaping bad things by honouring the gods, but the latter involves an inescapable and merciless necessity. And he [the wise man] believes that chance is not a god, as the many think, for nothing is done in a disorderly way by god; nor that it is an uncertain cause. For he does not think that anything good or bad with respect to living blessedly is given by chance to men, although it does provide the starting points of great good and bad things. And he thinks it better to be unlucky in a rational way than lucky in a senseless way; for it is better for a good decision not to turn out right in action than for a bad decision to turn out right because of chance.

Practise these and the related precepts day and night, by yourself and with a like-minded friend, and you will never be disturbed either when awake or in sleep, and you will live as a god among men. For a man who lives among immortal goods is in no respect like a mere mortal animal.

Principal Doctrines

I. What is blessed and indestructible has no troubles itself, nor does it give trouble to anyone else, so that it is not affected by feelings of anger or gratitude. For all such things are a sign of weakness.[1]

II. Death is nothing to us. For what has been dissolved has no sense-experience, and what has no sense-experience is nothing to us.

III. The removal of all feeling of pain is the limit of the magnitude of pleasures. Wherever a pleasurable feeling is present, for as long as it is present, there is neither a feeling of pain nor a feeling of distress, nor both together.

IV. The feeling of pain does not linger continuously in the flesh; rather, the sharpest is present for the shortest time, while what merely exceeds the feeling of pleasure in the flesh lasts only a few days. And diseases which last a long time involve feelings of pleasure which exceed feelings of pain.

V. It is impossible to live pleasantly without living prudently, honourably, and justly and impossible to live prudently, honourably, and justly without living pleasantly. And whoever lacks this cannot live pleasantly.

VI. The natural good of public office and kingship is for the sake of getting confidence from [other] men, [at least] from those from whom one *is* able to provide this.

VII. Some men want to become famous and respected, believing that this is the way to acquire security against [other] men. Thus if the life of such men is secure, they acquire the natural good; but if it is not secure, they do not have that for the sake of which they strove from the beginning according to what is naturally congenial.

VIII. No pleasure is a bad thing in itself. But the things which produce certain pleasures bring troubles many times greater than the pleasures.

IX. If every pleasure were condensed and were present, both in time and in the whole compound [body and soul] or in the most important parts of our nature, then pleasures would never differ from one another.

X. If the things which produce the pleasures of profligate men dissolved the intellect's fears about the phenomena of the heavens and about death and pains and, moreover, if they taught us the limit of our desires, then we would not have reason to criticize them, since they would be filled with pleasures from every source and would contain no feeling of pain or distress from any source—and that is what is bad.

XI. If our suspicions about heavenly phenomena and about death did not trouble us at all and were never anything to us, and, moreover, if not knowing the limits of pains and desires did not trouble us, then we would have no need of natural science.

XII. It was impossible for someone ignorant about the nature of the universe but still suspicious about the subjects of the myths to dissolve his feelings of fear about the most important matters. So it was impossible to receive unmixed pleasures without knowing natural science.

XIII. It was useless to obtain security from men while the things above and below the earth and, generally, the things in the unbounded remained as objects of suspicion.

XIV. The purest security is that which comes from a quiet life and withdrawal from the many, although a certain degree of security from other men does come by means of the power to repel [attacks] and by means of prosperity.

XV. Natural wealth is both limited and easy to acquire. But wealth [as defined by] groundless opinions extends without limit.

1. [Scholiast: "Elsewhere he says that the gods are contemplated by reason, and that some exist 'numerically' [i.e., are numerically distinct, each being unique in kind] while others are similar in form, because of a continuous flow of similar images to the same place; and that they are anthropomorphic."—B.I. and L.P.G.]

XVI. Chance has a small impact on the wise man, while reasoning has arranged for, is arranging for, and will arrange for the greatest and most important matters throughout the whole of his life.

XVII. The just life is most free from disturbance, but the unjust life is full of the greatest disturbance.

XVIII. As soon as the feeling of pain produced by want is removed, pleasure in the flesh will not increase but is only varied. But the limit of mental pleasures is produced by a reasoning out of these very pleasures [of the flesh] and of the things related to these, which used to cause the greatest fears in the intellect.

XIX. Unlimited time and limited time contain equal [amounts of] pleasure, if one measures its limits by reasoning.

XX. The flesh took the limits of pleasure to be unlimited, and [only] an unlimited time would have provided it. But the intellect, reasoning out the goal and limit of the flesh and dissolving the fears of eternity, provided us with the perfect way of life and had no further need of unlimited time. But it [the intellect] did not flee pleasure, and even when circumstances caused an exit from life it did not die as though it were lacking any aspect of the best life.

XXI. He who has learned the limits of life knows that it is easy to provide that which removes the feeling of pain owing to want and makes one's whole life perfect. So there is no need for things which involve struggle.

XXII. One must reason about the real goal and every clear fact, to which we refer mere opinions. If not, everything will be full of indecision and disturbance.

XXIII. If you quarrel with all your sense-perceptions you will have nothing to refer to in judging even those sense-perceptions which you claim are false.

XXIV. If you reject unqualifiedly any sense-perception and do not distinguish the opinion about what awaits confirmation, and what is already present in the sense-perception, and the feelings, and every application of the intellect to presentations, you will also disturb the rest of your sense-perceptions with your pointless opinions; as a result you will reject every criterion. If, on the other hand, in your conceptions formed by opinion, you affirm everything that awaits confirmation as well as what does not, you will not avoid falsehood, so that you will be in the position of maintaining every disputable point in every decision about what is and is not correct.

XXV. If you do not, on every occasion, refer each of your actions to the goal of nature, but instead turn prematurely to some other [criterion] in avoiding or pursuing [things], your actions will not be consistent with your reasoning.

XXVI. The desires which do not bring a feeling of pain when not fulfilled are not necessary, but the desire for them is easy to dispel when they seem to be hard to achieve or to produce harm.

XXVII. Of the things which wisdom provides for the blessedness of one's whole life, by far the greatest is the possession of friendship.

XXVIII. The same understanding produces confidence about there being nothing terrible which is eternal or [even] long-lasting and has also realized that security amid even these limited [bad things] is most easily achieved through friendship.

XXIX. Of desires, some are natural and necessary, some natural and not necessary, and some neither natural nor necessary but occurring as a result of a groundless opinion.[2]

XXX. Among natural desires, those which do not lead to a feeling of pain if not fulfilled and about which there is an intense effort, these are produced by a groundless opinion and they fail to be dissolved not because of their own nature but because of the groundless opinions of mankind.

XXXI. The justice of nature is a pledge of reciprocal usefulness, [i.e.,] neither to harm one another nor be harmed.

XXXII. There was no justice or injustice with respect to all those animals which were unable to make pacts about neither harming one another nor being harmed. Similarly, [there was no justice or injustice] for all those nations which were unable or unwilling to make pacts about neither harming one another nor being harmed.

2. [Scholiast: "Epicurus thinks that those which liberate us from pains are natural and necessary, for example drinking in the case of thirst; natural and not necessary are those which merely provide variations of pleasure but do not remove the feeling of pain, for example expensive foods; neither natural nor necessary are, for example, crowns and the erection of statues."]

XXXIII. Justice was not a thing in its own right, but [exists] in mutual dealings in whatever places there [is] a pact about neither harming one another nor being harmed.

XXXIV. Injustice is not a bad thing in its own right, but [only] because of the fear produced by the suspicion that one will not escape the notice of those assigned to punish such actions.

XXXV. It is impossible for someone who secretly does something which men agreed [not to do] in order to avoid harming one another or being harmed to be confident that he will escape detection, even if in current circumstances he escapes detection ten thousand times. For until his death it will be uncertain whether he will continue to escape detection.

XXXVI. In general outline justice is the same for everyone; for it was something useful in mutual associations. But with respect to the peculiarities of a region or of other [relevant] causes, it does not follow that the same thing is just for everyone.

XXXVII. Of actions believed to be just, that whose usefulness in circumstances of mutual associations is supported by the testimony [of experience] has the attribute of serving as just whether it is the same for everyone or not. And if someone passes a law and it does not turn out to be in accord with what is useful in mutual associations, this no longer possesses the nature of justice. And if what is useful in the sense of being just changes, but for a while fits our basic grasp [of justice], nevertheless it was just for that length of time, [at least] for those who do not disturb themselves with empty words but simply look to the facts.

XXXVIII. If objective circumstances have not changed and things believed to be just have been shown in actual practice not to be in accord with our basic grasp [of justice], then those things were not just. And if objective circumstances do change and the same things which had been just turn out to be no longer useful, then those things were just as long as they were useful for the mutual associations of fellow citizens; but later, when they were not useful, they were no longer just.

XXXIX. The man who has made the best arrangements for confidence about external threats is he who has made the manageable things akin to himself, and has at least made the unmanageable things not alien to himself. But he avoided all contact with things for which not even this could be managed and he drove out of his life everything which it profited him to drive out.

XL. All those who had the power to acquire the greatest confidence from [the threats posed by] their neighbours also thereby lived together most pleasantly with the surest guarantee; and since they enjoyed the fullest sense of belonging they did not grieve the early death of the departed, as though it called for pity.

EPICTETUS

Around 300 B.C.E., two short decades after the death of Alexander the Great and the breakup of the vast Alexandrian empire, there emerged in Athens a philosophical school that became the most influential in the Graeco-Roman world. Stoicism, named after the "porch" or *Stoa poikile* on the Athenian acropolis, where its earliest members convened, was at once a system of logic, a theory of knowledge, a natural philosophy or physics, and an ethics. But most of all it was a way of life, an attempt to confront and deal with the turbulent times and the deep anxiety that arose with the demise of the *polis* as the fixed parameter of moral and political life, and with the limitless horizons of worldwide diversity, competing cultures, and forms of knowledge.

Moreover, Stoic philosophy and the Stoic way of life are not only ancient phenomena. Chiefly through the works of Cicero, Diogenes Laertius, Seneca, Epictetus, and Marcus Aurelius, Stoicism permeated the writings of the Church Fathers and the literature of the Middle Ages. It influenced as well Renaissance thought and modern thinkers as diverse as John Calvin, Richard Hooker, Michel de Montaigne, Descartes, Spinoza, and Kant. Often stoicism was revived in situations as riddled with strain and anxiety as those which first gave rise to it, such as the remarkable neo-stoicism initiated by Justus Lipsius at the end of the sixteenth century.

Epictetus (ca. 55–135 C.E.) is one of three moral philosophers who comprise the Stoic movement known as late or Roman Stoicism. The other two representatives of this movement are Lucius Annaeus Seneca, a wealthy Roman orator, statesman, and author of the first century, and Marcus Aurelius, Emperor of Rome from 161 to 180 C.E. Although the earlier stages of Stoicism—developed by its founder, Zeno of Citium, and the major figures, Chrysippus, Panaetius, and Posidonius—involved sophisticated thinking about language, concepts, reasoning, physics, and much else, Roman Stoicism is primarily a moral doctrine and even a set of moral directives. It clearly relies on the philosophical developments of the Stoic tradition, but it was not itself engaged in serious argumentation and critical analysis. As we indicated above, this moral attractiveness is not surprising. There are doubtless social and political reasons why, in periods of crisis, many turned to Stoicism for solace and guidance. In troubled times its eulogy to philosophical rationality and devotion to self-control provided compelling vehicles for personal tranquility and salvation.

It is not true, however, that Stoicism began as a philosophical inquiry into logic, science, and such things, only later to become a moral doctrine. Indeed, from the beginning, in the hands of Zeno and his disciples, the aim of Stoicism was to determine how best to live. All along, the Stoic interest in technical subjects like logic was propaedeutic to this moral goal. Its materialism, its empiricism, its understanding of nature and fate, all these were intended to lead the Stoic to principles about what human agents can and should do in order to control their lives, reduce anxiety, practice virtue, free themselves from passion, and ultimately gain peace for themselves. For the Stoic, natural philosophy is so coherent that it provides the foundation for a life of harmony with nature, which the Stoic conceived as divine. In this way, the Stoic ideal was a life lived in harmony with the divine. This was an old goal, newly interpreted. Seeking the same freedom from anxiety that Epicurus sought, the Stoics found it in virtue and political participation and ultimately in kinship with rather than in rejection of the divine.

Epictetus was a Phrygian slave from Asia Minor. His master, Epaphroditus, who was Nero's freedman, let Epictetus study with Musonius Rufus, an important Stoic teacher. In 92 the Emperor Domitian banished the philosophers from Rome, and Epictetus settled in Nicopolis, in northwestern Greece, where he taught until his death. He wrote nothing, but one of his students, the future historian Arrian, took notes on his lectures in 115 C.E. and later published them as eight volumes of *Discourses*. These *Discourses*, rhetorical and sermonic,

give the best sense of Epictetus' style. Of them four are extant, together with the *Encheiridion* (the *Manual*), which includes 53 extracts, often modified, from the larger work. It is this manual that was so influential in the sixteenth and seventeenth centuries and which Frederick the Great, emperor of Prussia in the eighteenth century, carried wherever he went.

Encheiridion

1

Some things are up to us and some are not up to us. Our opinions are up to us, and our impulses, desires, aversions—in short, whatever is our own doing. Our bodies are not up to us, nor are our possessions, our reputations, or our public offices, or, that is, whatever is not our own doing. The things that are up to us are by nature free, unhindered, and unimpeded; the things that are not up to us are weak, enslaved, hindered, not our own. So remember, if you think that things naturally enslaved are free or that things not your own are your own, you will be thwarted, miserable, and upset, and will blame both gods and men. But if you think that only what is yours is yours, and that what is not your own is, just as it is, not your own, then no one will ever coerce you, no one will hinder you, you will blame no one, you will not accuse anyone, you will not do a single thing unwillingly, you will have no enemies, and no one will harm you, because you will not be harmed at all.

As you aim for such great goals, remember that you must not undertake them by acting moderately,[1] but must let some things go completely and postpone others for the time being. But if you want both those great goals and also to hold public office and to be rich then you may perhaps not get even the latter just because you aim at the former too; and you certainly will fail to get the former, which are the only things that yield freedom and happiness.[2]

From the start, then, work on saying to each harsh appearance,[3] "You are an appearance, and not at all the thing that has the appearance." Then examine it and assess it by these yardsticks that you have, and first and foremost by whether it concerns the things that are up to us or the things that are not up to us. And if it is about one of the things that is not up to us, be ready to say, "You are nothing in relation to me."

2

Remember, what a desire proposes is that you gain what you desire, and what an aversion proposes is that you not fall into what you are averse to. Someone who fails to get what he desires is *un*fortunate, while someone who falls into what he is averse to has met *mis*fortune. So if you are averse only to what is against nature among the things that are up to you, then you will never fall into anything that you are averse to; but if you are averse to illness or death or poverty, you will meet misfortune. So detach your aversion from everything not up to us, and transfer it to what

From *The Handbook of Epictetus*, translated, with introduction and annotation, by Nicholas White (Indianapolis: Hackett Publishing Company, 1983). Copyright © 1983. Reprinted by permission of the publisher.

1. [This may mean simply that the proposed undertaking is difficult. (Oldfather's translation suggests this), or it may mean (as I believe) that the aim cannot be achieved by the Aristotelian policy of pursuing a mean or middle course between extremes.—N.W.]

2. [Epictetus recommends aiming to have one's state of mind in accord with nature, in the sense explained in the previous paragraph and in c. 8. His point here is that if you aim for that and also simultaneously for certain "externals" like wealth, you will probably have neither and clearly will not have the former.]

3. [The word "appearance" translates *phantasia*, which some translators render by "impression" or "presentation." An appearance is roughly the immediate experience of sense or feeling, which may or may not represent an external state of affairs. (The Stoics held, against the Sceptics, that some appearances self-evidently do represent external states of affairs correctly.)]

is against nature among the things that are up to us. And for the time being eliminate desire completely, since if you desire something that is not up to us, you are bound to be unfortunate, and at the same time none of the things that are up to us, which it would be good to desire, will be available to you. Make use only of impulse and its contrary, rejection,[4] though with reservation, lightly, and without straining.

3

In the case of everything attractive or useful or that you are fond of, remember to say just what sort of thing it is, beginning with the least little things. If you are fond of a jug, say "I am fond of a jug!" For then when it is broken you will not be upset. If you kiss your child or your wife, say that you are kissing a human being; for when it dies you will not be upset.

4

When you are about to undertake some action, remind yourself what sort of action it is. If you are going out for a bath, put before your mind what happens at baths—there are people who splash, people who jostle, people who are insulting, people who steal. And you will undertake the action more securely if from the start you say of it, "I want to take a bath and to keep my choices in accord with nature;" and likewise for each action. For that way if something happens to interfere with your bathing you will be ready to say, "Oh, well, I wanted not only this but also to keep my choices in accord with nature, and I cannot do that if I am annoyed with things that happen."

5

What upsets people is not things themselves but their judgments about the things. For example, death is nothing dreadful (or else it would have appeared dreadful to Socrates), but instead the judgment about death that it is dreadful—*that* is what is dreadful. So when we are thwarted or upset or distressed, let us never blame someone else but rather ourselves, that is, our own judgments. An uneducated person accuses others when he is doing badly; a partly educated person accuses himself, an educated person accuses neither someone else nor himself.

6

Do not be joyful about any superiority that is not your own. If the horse were to say joyfully, "I am beautiful," one could put up with it. But certainly you, when you say joyfully, "I have a beautiful horse," are joyful about the good of the horse. What, then, is your own? Your way of dealing with appearances. So whenever you are in accord with nature in your way of dealing with appearances, then be joyful, since then you are joyful about a good of your own.

7

On a voyage when your boat has anchored, if you want to get fresh water you may pick up a small shellfish and a vegetable by the way, but you must keep your mind fixed on the boat and look around frequently in case the captain calls. If he calls you must let all those other things go so that you will not be tied up and thrown on the ship like livestock. That is how it is in life too: if you are given a wife and a child instead of a vegetable and a small shellfish, that will not hinder you; but if the captain calls, let all those things go and run to the boat without turning back; and if you are old, do not even go very far from the boat, so that when the call comes you are not left behind.

8

Do not seek to have events happen as you want them to, but instead want them to happen as they do happen, and your life will go well.

---

4. [Impulse and rejection (*hormē* and *aphormē*) are, in Stoic terms, natural and non-rational psychological movements, so to speak, that are respectively toward or away from external objects.]

9

Illness interferes with the body, not with one's faculty of choice,[5] unless that faculty of choice wishes it to. Lameness interferes with the limb, not with one's faculty of choice. Say this at each thing that happens to you, since you will find that it interferes with something else, not with you.

10

At each thing that happens to you, remember to turn to yourself and ask what capacity you have for dealing with it. If you see a beautiful boy or woman, you will find the capacity of self-control for that. If hardship comes to you, you will find endurance. If it is abuse, you will find patience. And if you become used to this, you will not be carried away by appearances.

11

Never say about anything, "I have lost it," but instead, "I have given it back." Did your child die? It was given back. Did your wife die? She was given back. "My land was taken." So this too was given back. "But the person who took it was bad!" How does the way the giver[6] asked for it back concern you? As long as he gives it, take care of it as something that is not your own, just as travelers treat an inn.

12

If you want to make progress,[7] give up all considerations like these: "If I neglect my property I will have nothing to live on," "If I do not punish my slave boy he will be bad." It is better to die of hunger with distress and fear gone than to live upset in the midst of plenty. It is better for the slave boy to be bad than for you to be in a bad state. Begin therefore with little things. A little oil is spilled, a little wine is stolen: say, "This is the price of tranquillity; this is the price of not being upset." Nothing comes for free. When you call the slave boy, keep in mind that he is capable of not paying attention, and even if he does pay attention he is capable of not doing any of the things that you want him to. But he is not in such a good position that your being upset or not depends on him.

13

If you want to make progress, let people think you are a mindless fool about externals, and do not desire a reputation for knowing about them. If people think you amount to something, distrust yourself. Certainly it is not easy to be on guard both for one's choices to be in accord with nature and also for externals, and a person who concerns himself with the one will be bound to neglect the other.

14

You are foolish if you want your children and your wife and your friends to live forever, since you are wanting things to be up to you that are not up to you, and things to be yours that are not yours. You are stupid in the same way if you want your slave boy to be faultless, since you are wanting badness not to be badness but something else. But wanting not to fail to get what you desire—*this* you are capable of. A person's master is someone who has power over what he wants or does not want, either to obtain it or take it away. Whoever wants to be free, therefore, let him not want or avoid anything that is up to others. Otherwise he will necessarily be a slave.

15

Remember, you must behave as you do at a banquet. Something is passed around and comes to you: reach out your hand politely and take some. It goes by: do

5. ["Faculty of choice" translates "*proairesis*," which designates a rational faculty of the soul (cf. n. 4).]

6. [The "giver" can be taken to be nature, or the natural order of the cosmos, or god, which the Stoics identified with each other.]

7. ["Making progress" (*prokoptein*) is the Stoic expression for movement in the direction of the ideal condition for a human being, embodied by the Stoic "sage" (cf. c. 15, n.).]

not hold it back. It has not arrived yet: do not stretch your desire out toward it, but wait until it comes to you. In the same way toward your children, in the same way toward your wife, in the same way toward public office, in the same way toward wealth, and you will be fit to share a banquet with the gods. But if when things are set in front of you, you do not take them but despise them, then you will not only share a banquet with the gods but also be a ruler along with them. For by acting in this way Diogenes and Heraclitus[8] and people like them were deservedly gods and were deservedly called gods.

16

When you see someone weeping in grief at the departure of his child or the loss of his property, take care not to be carried away by the appearance that the externals he is involved in are bad, and be ready to say immediately, "What weighs down on this man is not what has happened (since it does not weigh down on someone else), but his judgment about it." Do not hesitate, however, to sympathise with him verbally, and even to moan with him if the occasion arises; but be careful not to moan inwardly.

17

Remember that you are an actor in a play, which is as the playwright wants it to be: short if he wants it short, long if he wants it long. If he wants you to play a beggar, play even this part skillfully, or a cripple, or a public official, or a private citizen. What is yours is to play the assigned part well. But to choose it belongs to someone else.

8. [Diogenes the Cynic (the one who with his lantern looked for an honest man) and Heraclitus of Ephesus, the presocratic philosopher, were along with Socrates and Zeno people whom the Stoics said might possibly have reached the perfect condition of being sages, which the Stoics took to be conceptually no different from the perfect condition of a god.]

18

When a raven gives an unfavorable sign by croaking,[9] do not be carried away by the appearance, but immediately draw a distinction to yourself and say, "None of these signs is for me, but only for my petty body or my petty property or my petty judgments or children or wife. For all signs are favorable if I wish, since it is up to me to be benefited by whichever of them turns out correct.

19

You can be invincible if you do not enter any contest in which victory is not up to you. See that you are not carried away by the appearance, in thinking that someone is happy when you see him honored ahead of you or very powerful or otherwise having a good reputation. For if the really good things are up to us, neither envy nor jealousy has a place, and you yourself will want neither to be a general or a magistrate or a consul, but to be free. And there is one road to this: despising what is not up to us.

20

Remember that what is insulting is not the person who abuses you or hits you, but the judgment about them that they *are* insulting. So when someone irritates you be aware that what irritates you is your own belief. Most importantly, therefore, try not to be carried away by appearance, since if you once gain time and delay you will control yourself more easily.

9. [Most people in antiquity believed in fortune-telling of various kinds, involving bird-calls, the flight of birds, inspection of entrails, stars, and whatnot. Many Stoics, notably Chrysippus, believed in such things, not least because they saw in them manifestations of the order of the cosmos and the tight and intricate interconnections within it, and thus saw them as scientific rather than superstitious.]

21

Let death and exile and everything that is terrible appear before your eyes every day, especially death; and you will never have anything contemptible in your thoughts or crave anything excessively.

22

If you crave philosophy prepare yourself on the spot to be ridiculed, to be jeered at by many people who will say, "Here he is again, all of a sudden turned philosopher on us!" and "Where did he get that high brow?" But don't *you* put on a high brow, but hold fast to the things that appear best to you, as someone assigned by god to this place. And remember that if you hold to these views, those who previously ridiculed you will later be impressed with you, but if you are defeated by them you will be doubly ridiculed.

23

If it ever happens that you turn outward to want to please another person, certainly you have lost your plan of life. Be content therefore in everything to be a philosopher, and if you want to seem to be one, make yourself appear so to yourself, and you will be capable of it.

24

Do not be weighed down by the consideration, "I shall live without any honor, everywhere a nobody!" For if lack of honors is something bad, I cannot be in a bad state because of another person any more than I can be in a shameful one. It is not your task[10] to gain political office, or be invited to a banquet, is it? Not at all. How then is that a lack of honor? And how will you be a nobody everywhere, if you need to be a somebody only in things that are up to you—in which it is open to you to be of the greatest worth? "But your friends will be without help!" What do you mean, "without help?" Well, they will be without a little cash from you, and you will not make them Roman citizens. Who told you, then, that these things are up to you and not the business of someone else? Who can give to someone else what he does not have himself? "Get money," someone says, "so that we may have some." If I can get it while keeping self-respect and trustworthiness and high-mindedness, show me the way and I will get it. But if you demand that I lose the good things that are mine so that you may acquire things that are not good, see for yourselves how unfair and inconsiderate you are. Which do you want more, money or a self-respecting and trustworthy friend? Then help me more toward this, and do not expect me to do things that will make me lose these qualities. "But my country," he says, "will be without help, in so far as it depends on me!" Again, what sort of "help" is this? So it will not have porticos and baths by your efforts. What does that amount to? For it does not have shoes because of the blacksmith or weapons because of the cobbler, but it is enough if each person fulfills his own task. And if you furnished for it another citizen who was trustworthy and self-respecting, would you in no way be helpful to it? "Yes, I would be." Then neither would you yourself be unhelpful to it. "Then what place," he says "will I have in the city?" The one you can have by preserving your trustworthiness and self-respect. And if while wanting to help it you throw away these things, what use will you be to it if you turn out shameless and untrustworthy?

10. [The word translated "task" here and below is *ergon*, which might also be translated by "function."]

25

Has someone been given greater honor than you at a banquet or in a greeting or by being brought in to give advice? If these things are good, you should be glad that he has got them. If they are bad, do not be angry that you did not get them. And remember, you cannot demand an equal share if you did not do the same things, with a view to getting things that are not up to us. For how can someone who does not hang around a person's door have an equal share with someone who does, or someone who does not escort

him with someone who does, or someone who does not praise him with someone who does? You will be unjust and greedy, then, if you want to obtain these things for free when you have not paid the price for which they are bought. Well, what is the price of heads of lettuce? An obol, say. So if someone who has paid an obol takes the heads of lettuce, and you who do not pay do not take them, do not think that you are worse off than the one who did. For just as he has the lettuce, you have the obol that you did not pay. It is the same way in this case. You were not invited to someone's banquet? You did not give the host the price of the meal. He sells it for praise; he sells it for attention. Then give him the balance for which it is sold, if that is to your advantage. But you are greedy and stupid if you want both not to pay and also to take. Have you got nothing, then, in place of the meal? Indeed you do have something; you did not praise someone you did not wish to praise, and you did not have to put up with the people around his door.

26

It is possible to learn the will of nature from the things in which we do not differ from each other. For example, when someone else's little slave boy breaks his cup we are ready to say, "It's one of those things that just happen." Certainly, then, when your own cup is broken you should be just the way you were when the other person's was broken. Transfer the same idea to larger matters. Someone else's child is dead, or his wife. There is no one would not say, "It's the lot of a human being." But when one's own dies, immediately it is, "Alas! Poor me!" But we should have remembered how we feel when we hear of the same thing about others.

27

Just as a target is not set up to be missed, in the same way nothing bad by nature happens in the world.[11]

28

If someone turned your body over to just any person who happened to meet you, you would be angry. But are you not ashamed that you turn over your own faculty of judgment to whoever happens along, so that if he abuses you it is upset and confused?

29

For each action, consider what leads up to it and what follows it, and approach it in the light of that. Otherwise you will come to it enthusiastically at first, since you have not borne in mind any of what will happen next, but later when difficulties turn up you will give up disgracefully. You want to win an Olympic victory? I do too, by the gods, since that is a fine thing. But consider what leads up to it and what follows it, and undertake the action in the light of that. You must be disciplined, keep a strict diet, stay away from cakes, train according to strict routine at a fixed time in heat and in cold, not drink cold water, not drink wine when you feel like it, and in general you must have turned yourself over to your trainer as to a doctor, and then in the contest "dig in,"[12] sometimes dislocate your hand, twist your ankle, swallow a lot of sand, sometimes be whipped, and, after all that, lose. Think about that and then undertake training, if you want to. Otherwise you will be behaving the way children do, who play wrestlers one time, gladiators another time, blow trumpets another time, then act a play. In this way you too are now an athlete, now a gladiator, then an orator, then a philosopher, yet you are nothing wholeheartedly, but like a monkey you mimic each sight that you see, and one thing after another is to your taste, since you do not undertake a thing after considering it from every side, but only randomly and half-heartedly.

In the same way when some people watch a philos-

11. [According to the Stoic view, the universe as a whole is perfect and everything in it has a place in its overall design, so that nothing can exist or occur that is bad in its relation to that overall design.]

12. [Nobody knows just what this expression means in this context.]

opher and hear one speaking like Euphrates[13] (though after all who can speak like him?), they want to be philosophers themselves. Just you consider, as a human being, what sort of thing it is; then inspect your own nature and whether you can bear it. You want to do the pentathlon, or to wrestle? Look at your arms, your thighs, inspect your loins. Different people are naturally suited for different things. Do you think that if you do those things you can eat as you now do, drink as you now do, have the same likes and dislikes? You must go without sleep, put up with hardship, be away from your own people, be looked down on by a little slave boy, be laughed at by people who meet you, get the worse of it in everything, honor, public office, law course, every little thing. Think about whether you want to exchange these things for tranquillity, freedom, calm. If not, do not embrace philosophy, and do not like children be a philosopher at one time, later a tax-collector, than an orator, then a procurator of the emperor. These things do not go together. You must be one person, either good or bad. You must either work on your ruling principle,[14] or work on externals, practise the art either of what is inside or of what is outside, that is, play the role either of a philosopher or of a non-philosopher.

30

Appropriate actions[15] are in general measured by relationships. He is a father: that entails taking care of him, yielding to him in everything, putting up with him when he abuses you or strikes you. "But he is a bad father." Does nature then determine that you have a good father? No, only that you have a father.[16] My brother has done me wrong." Then keep your place in relation to him; do not consider his action, but instead consider what you can do to bring your own faculty of choice[17] into accord with nature. Another person will not do you harm unless you wish it; you will be harmed at just that time at which you take yourself to be harmed. In this way, then, you will discover the appropriate actions to expect from a neighbor, from a citizen, from a general, if you are in the habit of looking at relationships.

31

The most important aspect of piety toward the gods is certainly both to have correct beliefs about them, as beings that arrange the universe well and justly, and to set yourself to obey them and acquiesce in everything that happens and to follow it willingly, as something brought to completion by the best judgment. For in this way you will never blame the gods or accuse them of neglecting you. And this piety is impossible unless you detach the good and the bad from what is not up to us and attach it exclusively to what is up to us, because if you think that any of what is not up to us is good or bad, then when you fail to get what you want and fall into what you do not want, you will be bound to blame and hate those who cause this. For every animal by nature flees and turns away from things that are harmful and from what causes them, and pursues and admires things that are beneficial and what causes them. There is therefore no way for a person who thinks he is being harmed to enjoy what he thinks is harming him, just as it is impossible to enjoy the harm itself. Hence a son even abuses his father when the father does not give him a share of things that he thinks are good; and thinking that being a tyrant was a good thing is

13. [Euphrates was a Stoic lecturer noted for his eloquence.]

14. [The "ruling principle" (or "governing principle"), the *hēgemonikon*, in the rather complicated psychological theory adopted by the Stoics, is that central part of the soul that can understand what is good and decide to act on that understanding. Cf. c. 38, n.]

15. ["Appropriate actions" are *kathēkonta*, which Cicero called *officia*, and are in English translations often called "duties," though the notion is actually somewhat different from that of duty. They are the actions that are of a type generally in accord with nature, or with a particular sort of person's place in it.]

16. [The idea here is, roughly, that there are certain relationships of affinity established by the natural order, and that having a father represents one of them, but that having a good father is not entailed by it.]

17. [Cf. c. 9, n., and c. 29, n.]

what made enemies of Polyneices and Eteocles.[18] This is why the farmer too abuses the gods, and the sailor, and the merchant, and those who have lost their wives and children. For wherever someone's advantage lies, there he also shows piety. So whoever takes care to have desires and aversions as one should also in the same instance takes care about being pious. And it is always appropriate to make libations and sacrifices and give firstfruits according to the custom of one's forefathers, in a manner that is pure and neither slovenly nor careless, nor indeed cheaply nor beyond one's means.

32

When you make use of fortune-telling, remember that you do not know what will turn out and have gone to the fortune-teller to find out, but that if you really are a philosopher you have gone already knowing what sort of thing it is. For if it is one of the things that is not up to us, it is bound to be neither good nor bad. Therefore do not bring desire or aversion to the fortune-teller and do not approach him trembling but instead realizing that everything that turns out is indifferent[19] and nothing in relation to you, and that whatever sort of thing it may be, you will be able to deal with it well and no one will hinder that. So go confidently to the gods as advisers, and thereafter when some particular advice has been given to you remember who your advisers are and whom you will be disregarding if you disobey. Approach fortune-telling as Socrates thought a person should, in cases where the whole consideration has reference to the outcome, and no resource is available from reason or any other technique to find out about the matter. So, when it is necessary to share a danger with a friend or with your country, do not use fortune-telling about whether you should share the danger. For if the fortune-teller says that the omens are unfavorable, clearly death is signified or the injury of a part of your body or exile. But reason chooses to stand by your friend and to share danger with your country even under these conditions. For this reason pay attention to the greater fortune-teller, Pythian Apollo, who threw out of the temple the man who did not help his brother when he was being murdered.[20]

33

Set up right now a certain character and pattern for yourself which you will preserve when you are by yourself and when you are with people. Be silent for the most part, or say what you have to in a few words. Speak rarely, when the occasion requires speaking, but not about just any topic that comes up, not about gladiators, horse-races, athletes, eating or drinking—the things that always come up; and especially if it is about people, talk without blaming or praising or comparing. Divert by your own talk, if you can, the talk of those with you to something appropriate. If you happen to be stranded among strangers, do not talk. Do not laugh a great deal or at a great many things or unrestrainedly. Refuse to swear oaths, altogether if possible, or otherwise as circumstances allow. Avoid banquets given by those outside philosophy. But if the appropriate occasion arises, take great care not to slide into their ways, since certainly if a person's companion is dirty the person who spends time with him, even if he happens to be clean, is bound to become dirty too. Take what has to do with the body to the point of bare need, such as food, drink, clothing, house, household slaves, and cut out everything that is for reputation or luxury. As for sex stay pure as far as possible before marriage, and if you have it do only what is allowable. But do not be angry or censorious toward those who do engage in it, and do not always be making an exhibition of the fact that you do not.

If someone reports back to you that so-and-so is saying bad things about you, do not reply to them

18. [The story of the conflict between the brothers Polyneices and Eteocles is best known to modern readers from Sophocles' tragedy, *Antigone*.]

19. [Things that are "indifferent" in the Stoic view are all things that are external and not up to oneself (cf. c. 1, e.g.).]

20. [The idea is that one does not need a fortune-teller to tell one whether one should defend one's country or one's friends, and that this fact was recognized by the oracle of Apollo at Delphi.]

but answer, "Obviously he didn't know my other bad characteristics, since otherwise he wouldn't just have mentioned these."

For the most part there is no need to go to public shows, but if ever the right occasion comes do not show your concern to be for anything but yourself; that is to say, wish to have happen only what does happen, and for the person to win who actually does win, since that way you will not be thwarted. But refrain completely from shouting or laughing at anyone or being very much caught up in it. After you leave, do not talk very much about what has happened, except what contributes to your own improvement, since that would show that the spectacle had impressed you.

Do not go indiscriminately or readily to people's public lectures, but when you do be on guard to be dignified and steady and at the same time try not to be disagreeable.

When you are about to meet someone, especially someone who seems to be distinguished, put to yourself the question, "What would Socrates or Zeno have done in these circumstances?" and you will not be at a loss as to how to deal with the occasion. When you go to see someone who is important, put to yourself the thought that you will not find him at home, that you will be shut out, that the door will be slammed, that he will pay no attention to you. If it is appropriate to go even under these conditions, go and put up with what happens, and never say to yourself, "It wasn't worth all that!" For that is the way of a non-philosopher, someone who is misled by externals.

In your conversations stay away from making frequent and longwinded mention of what you have done and the dangers that you have been in, since it is not as pleasant for others to hear about what has happened to you as it is for you to remember your own dangers.

Stay away from raising a laugh, since this manner slips easily into vulgarity and at the same time is liable to lessen your neighbors' respect for you. It is also risky to fall into foul language. So when anything like that occurs, if a good opportunity arises, go so far as to criticize the person who has done it, and otherwise by staying silent and blushing and frowning you will show that you are displeased by what has been said.

34

Whenever you encounter some kind of apparent pleasure, be on guard, as in the case of other appearances, not to be carried away by it, but let the thing wait for you and allow yourself to delay. Then bring before your mind two times, both the time when you enjoy the pleasure and the time when after enjoying it you later regret it and berate yourself; and set against these the way you will be pleased and will praise yourself if you refrain from it. But if the right occasion appears for you to undertake the action, pay attention so that you will not be overcome by its attractiveness and pleasantness and seductiveness, and set against it how much better it is to be conscious of having won this victory against it.

35

When you do something that you determine is to be done, never try not to be seen doing it, even if most people are likely to think something bad about it. If you are not doing it rightly, avoid the act itself; if you are doing it rightly, why do you fear those who will criticize you wrongly?

36

Just as the propositions "It is day" and "It is night" have their full value when disjoined [*sc.*, in "It is day *or* it is night"] but have negative value when conjoined [*sc.*, in "It is day *and* it is night"], in the same way, granted that taking the larger portion has value for one's body, it has negative value for preserving the fellowship of a banquet in the way one should.[21] So when you eat with another, remember not merely to see the value for your body of what lies in front of you, but also to preserve your respect for your host.

21. [Very roughly, the idea is that the value of an action has to be judged from all features of the context. The parallel is that allegedly the meaningfulness of a sentence depends in a way on its context.]

37

If you undertake some role beyond your capacity, you both disgrace yourself by taking it and also thereby neglect the role that you were unable to take.

38

Just as in walking about you pay attention so as not to step on a nail or twist your foot, pay attention in the same way so as not to harm your ruling principle.[22] And if we are on guard about this in every action, we shall set about it more securely.

39

The measure of possessions for each person is the body, as the foot is of the shoe. So if you hold to this principle you will preserve the measure; but if you step beyond it, you will in the end be carried as if over a cliff; just as in the case of the shoe, if you go beyond the foot, you get a gilded shoe, and then a purple embroidered one. For there is no limit to a thing once it is beyond its measure.

40

Women are called ladies by men right after they are fourteen. And so when they see that they have nothing else except to go to bed with men, they begin to make themselves up and place all their hopes in that. It is therefore worthwhile to pay attention so that they are aware that they are honored for nothing other than appearing modest and self-respecting.

41

It shows lack of natural talent to spend time on what concerns the body, as in exercising a great deal, eating a great deal, drinking a great deal, moving one's bowels or copulating a great deal. Instead you must do these things in passing, but turn your whole attention toward your faculty of judgment.[23]

42

When someone acts badly toward you or speaks badly of you, remember that he does or says it in the belief that it is appropriate for him to do so. Accordingly he cannot follow what appears to you but only what appears to him, so that if things appear badly to him, he is harmed in as much as he has been deceived. For if someone thinks that a true conjunctive proposition[24] is false, the conjunction is not harmed but rather the one who is deceived. Starting from these considerations you will be gentle with the person who abuses you. For you must say on each occasion, "That's how it seemed to him."

43

Everything has two handles, one by which it may be carried and the other not. If your brother acts unjustly toward you, do not take hold of it by this side, that he has acted unjustly (since this is the handle by which it may not be carried), but instead by this side, that he is your brother and was brought up with you, and you will be taking hold of it in the way that it can be carried.

44

These statements are not valid inferences: "I am richer than you; therefore I am superior to you," or "I am more eloquent than you; therefore I am superior

22. [Cf. c. 29, n. 14.]

23. [Cf. c. 29, n. 14. The claim is in effect that one should be concerned wholly with the state of the ruling part of one's soul, and not with external states of affairs or with those aspects of the soul, such as one's affective feelings or desires, that are directly dependent on external states of affairs. One can see here the Stoic view, which seems paradoxical to many, that one's feelings and nonrational desires are in a crucial sense external to one's true self (cf. c. 6 and Introd.).]

24. [Cf. c. 36. A proposition of this sort consists of two component propositions conjoined by "and."]

to you." But rather these are valid: "I am richer than you; therefore my property is superior to yours," or "I am more eloquent than you; therefore my speaking is superior to yours." But you are identical neither with your property nor with your speaking.

45

Someone takes a bath quickly; do not say that he does it badly but that he does it quickly. Someone drinks a great deal of wine; do not say that he does it badly but that he does a great deal of it. For until you have discerned what his judgment was, how do you know whether he did it badly? In this way it will not turn out that you receive convincing appearances of some things but give assent to quite different ones.[25]

46

Never call yourself a philosopher and do not talk a great deal among non-philosophers about philosophical propositions, but do what follows from them. For example, at a banquet do not say how a person ought to eat, but eat as a person ought to. Remember that Socrates had so completely put aside ostentation that people actually went to him when they wanted to be introduced to philosophers, and he took them.[26] He was that tolerant of being overlooked. And if talk about philosophical propositions arises among non-philosophers, for the most part be silent, since there is a great danger of your spewing out what you have not digested. And when someone says to you that you know nothing and you are not hurt by it, then you know that you are making a start at your task. Sheep do not show how much they have eaten by bringing the feed to the shepherds, but they digest the food inside themselves, and outside themselves they bear wool and milk. So in your case likewise do not display propositions to non-philosophers but instead the actions that come from the propositions when they are digested.

47

When you have become adapted to living cheaply as far as your body is concerned, do not make a show of it, and if you drink water do not say at every opening that you drink water. If you wish to train yourself to hardship, do it for yourself and not for those outside. Do not throw your arms around statues.[27] Instead, when you are terribly thirsty, take cold water into your mouth, and spit it out, and do not tell anyone about it.

48

The position and character of a non-philosopher: he never looks for benefit or harm to come from himself but from things outside. The position and character of a philosopher: he looks for all benefit and harm to come from himself.

Signs of someone's making progress: he censures no one; he praises no one; he blames no one; he never talks about himself as a person who amounts to something or knows something. When he is thwarted or prevented in something, he accuses himself. And if someone praises him he laughs to himself at the person who has praised him; and if someone censures him he does not respond. He goes around like an invalid, careful not to move any of his parts that are healing before they have become firm. He has kept off all desire from himself, and he has transferred all aversion onto what is against nature among the things that are up to us. His impulses toward

25. [A "convincing appearance" is a *katalēptikē phantasia*, the sort of appearance that according to the Stoics is a self-evidently correct representation of the way things actually are (cf. n. 3). "Assent" is *synkatathesis*. Correct assent would of course be assent to self-evidently correct appearances. The line of thought here is, however, quite compressed, and the student will find it a difficult exercise to explain it.]

26. [The allusion is perhaps to the events in the early part of Plato's *Protagoras*.]

27. [According to a story in Diog. Laert. 6.23, Diogenes, the Cynic did this nude in cold weather, to toughen himself. But the statues were outdoors, and Diogenes was a bit of a show-off (but cf. n. 8!).]

everything are diminished. If he seems foolish or ignorant, he does not care. In a single phrase, he is on guard against himself as an enemy lying in wait.

49

When someone acts grand because he understands and can expound the works of Chrysippus,[28] say to yourself, "If Chrysippus had not written unclearly, this man would have nothing to be proud of."

But what do *I* want? To learn to understand nature and follow it. So I try to find out who explains it. And I hear that Chrysippus does, and I go to him. But I do not understand the things that he has written, so I try to find the person who explains them. Up to this point there is nothing grand. But when I do find someone who explains them, what remains is to carry out what has been conveyed to me. This alone is grand. But if I am impressed by the explaining itself, what have I done but ended up a grammarian instead of a philosopher—except that I am explaining Chrysippus instead of Homer. Instead, when someone says to me, "Read me some Chrysippus," I turn red when I cannot exhibit actions that are similar to his words and in harmony with them.

50

Abide by whatever task is set before you as if it were a law, and as if you would be committing sacrilege if you went against it. But pay no attention to whatever anyone says about you, since that falls outside what is yours.

51

How long do you put off thinking yourself worthy of the best things, and never going against the definitive capacity of reason?[29] You have received the philosophical propositions that you ought to agree to and you have agreed to them. Then what sort of teacher are you still waiting for, that you put off improving yourself until he comes? You are not a boy any more, but already a full-grown man. If you now neglect things and are lazy and are always making delay after delay and set one day after another as the day for paying attention to yourself, then without realizing it you will make no progress but will end up a non-philosopher all through life and death. So decide now that you are worthy of living as a full-grown man who is making progress, and make everything that seems best be a law that you cannot go against. And if you meet with any hardship or anything pleasant or reputable or disreputable, then remember that the contest is *now* and the Olympic games are *now* and you cannot put things off any more and that your progress is made or destroyed by a single day and a single action. Socrates became fully perfect in this way, by not paying attention to anything but his reason in everything that he met with. You, even if you are not yet Socrates, ought to live as someone wanting to be Socrates.

52

The first and most necessary aspect of philosophy is that of dealing with philosophical propositions, such as "not to hold to falsehood." The second is that of demonstrations, for example, "How come one must not hold to falsehood?" The third is that of the confirmation and articulation of these, for example. "How come this is a demonstration? What is demonstration? What is entailment? What is conflict? What is truth? What is falsity?" Therefore the third is necessary because of the second, and the second because of the first; but the most necessary, and the one where one must rest, is the first. We, however, do it backwards, since we spend time in the third and all of our effort goes into it, and we neglect the first completely. Therefore we hold to falsehood, but we are ready to explain how it is demonstrated that one must not hold to falsehood.

53

On every occasion you must have these thoughts ready:

28. [On Chrysippus, see the Introduction.]

29. [In brief, the capacity of reason here is that of distinguishing different things from each other and defining them.]

Lead me, Zeus, and you too, Destiny,
Wherever I am assigned by you;
I'll follow and not hesitate,
But even if I do not wish to,
Because I'm bad, I'll follow anyway.

Whoever has complied well with necessity
Is counted wise by us, and understands
divine affairs.

Well, Crito, if it is pleasing to the gods this way, then let it happen this way.

Anytus and Meletus can kill me, but they can't harm me.[30]

30. [These four bits of poetry have the following origins. The first is by Cleanthes, who was head of the Stoic school at Athens between Zeno and Chrysippus. The second is a fragment of Euripides (fr. 965 Nauck). The third is Plato, *Crito* 43d, and the fourth is Plato, *Apology* 30c–d (slightly modified as compared with our manuscript texts), both purporting to be quotations from Socrates (cf. n. 8).]

AUGUSTINE

Like the Thirty Years' War (1618–1648) and the French Revolution (1789–1795), the sack of Rome by the Visigoths in 410 C.E. and the destruction of the Roman Empire was an event of momentous significance. At the time many Romans saw their world in ruins and sought to understand the event and to explain it, in part to assign blame and thereby to indict those responsible. Among these were pagan thinkers who ascribed Rome's downfall to Christianity. In 312 Rome had become Christian, under Constantine; the results, these pagans claimed, were the weakened loyalty of its citizens, an otherworldly abandonment of civic responsibility, and desertion of the gods of the city. All this led to Rome's weakness and her destruction and provided an historical refutation of the Church. By 413, Augustine (354–430), the Bishop of Hippo in North Africa, had written the first three books of his reply to these charges, his sweeping panorama of history and eschatology, of the goal of history and the role of the state in it, of the nature of society and the two cities—the City of God and the earthly city—that constitute it, and of the two types of love that ground these two cities. *De Civitate Dei* (*The City of God*), begun in 413 and completed in 426, speaks out of the dramatic encounter between Augustine and the critics of Christianity in the early fifth century, but it is a work that transcends this situation and addresses all subsequent attempts to understand the complex relations among politics, religion, history, and the moral ends of human life. In it, moreover, Augustine not only responds to the critics of Christianity; he also incorporates into his own conception of the "city of man" many central political values of his republican, stoic, and Roman law opponents, thereby providing a vehicle for transmitting these values to medieval Europe.

Augustine was born in 354 in Thagaste, in North Africa. His father was pagan, his mother, Monica, a Christian. As a youngster Augustine studied Latin and the Latin classics. By 370 he was in Carthage, mastering the works of classical rhetoric and becoming increasingly estranged from his mother's Christianity. In 374 he moved back to Thagaste to teach rhetoric, and then returned to Carthage, where he established a school of rhetoric.

During this period Augustine read Cicero's dialogue *Hortensius* (a work now lost) and was stimulated by it to pursue wisdom and truth through philosophy, in place of the irrational Christian doctrines he had rejected. He found an alternative in Manichaeism, a doctrine of two principles, the forces of light and darkness, of good and evil, that are eternally engaged in battle over the soul of each person and over the world itself. Augustine was especially drawn to this dualistic theory as a solution to the problem of the existence of evil, which the theory ascribed to the force of evil and not to God, and the problem of base human desires and passions.

In 383 Augustine moved to Rome, once again to teach rhetoric, and in 384 took the position of municipal professor of rhetoric in Milan. There Augustine was introduced to a neo-Platonic interpretation of Christianity in the sermons of Ambrose, the Bishop of Milan, and through acquaintance with other Christian intellectuals in Ambrose's circle. Here, finally, was the true philosophy which he had been seeking. By 386 Augustine was converted, and in 387 Ambrose baptized him into the Church.

Augustine returned to Thagaste in 388, where he established with friends a small monastic community. Within a few years and against his wishes, he was ordained a priest and called upon to aid the pastoral affairs of the aged Bishop of Hippo, a seaport town one hundred fifty miles west of Carthage. When the Bishop died in 396, Augustine replaced him, a position which he held until his death. During the years of his episcopacy, Augustine wrote extensively—Scriptural commentaries, theological treatises, letters, and much else. He engaged in polemics and controversies, with the Donatists and Pelagians, among others, delivered sermons, and conducted the affairs of his diocese. In 410 he completed his most important doctrinal work, *De Trinitate*

(*On the Trinity*), and in 400 he published his greatest work, the *Confessions*, in which he recounts the spiritual journey of his first thirty-three years.

In 430, twenty years after the Visigoths had sacked Rome, the Vandals, under Genseric, flooded into Northern Africa from Spain and besieged Hippo. In the midst of the crisis, on August 28, 430, Augustine died, in time to avoid seeing the invaders burn his city.

City of God

BOOK XIX

Chapter 1

Because I see that I must next discuss the proper ends of the two cities—namely, the earthy and the heavenly—I must first explain, insofar as the limits imposed by the plan of this work allow, the arguments by which mortals have struggled to make themselves happy in the misery of this life. This is necessary in order to clarify the difference between their futilities and our hope, which God has given us, and its object, namely true happiness, which God will give us. This will be done not only through divine authority, but also, for the sake of unbelievers, through reason.

Concerning the ends of goods and evils, philosophers have engaged in many and varied disputes among themselves; but the question they have pursued with the greatest effort, turning it over in their minds, is, What makes man happy? our final good is that for the sake of which other things are desired, but which is itself desired for its own sake; and the final evil is that on account of which other things are avoided, but which is avoided on its own account. Hence, we now call the "final good" not that through which good is destroyed, and so ceases to exist, but that through which it is perfected, and so exists fully; and we call the "final evil" not that through which evil ceases to be, but that through which it produces its greatest harm. Thus, these ends are the supreme good and the supreme evil.

As I said, many who have professed the study of wisdom in the futility of this age have worked hard to discover these ends, as well as to obtain the supreme good and to avoid the supreme evil in this life. Although they wandered off in different directions, nevertheless the limit of nature did not permit them to deviate from the path of truth so far that they failed to place the final good and final evil in the soul, in the body, or in both. To this tripartite division of schools Marcus Varro, in his book *On Philosophy*, directed his attention, diligently and subtly scrutinizing a large number of different teachings. By applying certain distinctions he easily arrived at 288 possible—though not necessarily actual—schools. . . .

Chapter 2

Then there are those three kinds of life: the first is the leisurely—but not slothful—life, devoted to contemplating or seeking the truth; the second is the busy life devoted to conducting human affairs; and the third is the life which mixes both of these kinds. When it is asked which of these three ought to be chosen, the final good is not being disputed. What is considered by that question is which of these three brings difficulty or assistance for seeking or preserving the final good. When anyone attains the final good, he is forthwith made happy. However, the life devoted to learned leisure, to public business, or to performing both alternately does not necessarily make one happy. Certainly, many are able to live in one or another of these three ways, but err with respect to desiring the final good by which man is made happy.

Therefore, it is one thing to ask about the final good and the final evil, and the answer to that question distinguishes every single one of the philosophical schools. It is quite another thing to ask questions about the social life, the hesitation of the Academics, the dress and diet of the Cynics, and the three kinds of life—the leisurely, the active, and the combined. The final good and evil are not disputed in any of these questions.

By using these four distinctions—that is, the dis-

tinctions derived from the social life, the new Academics, the Cynics, and the three kinds of life—Marcus Varro reaches 288 schools. If there are other distinctions, they could be added in the same way. By removing all of those four distinctions, because they do not bear upon the question of pursuing the supreme good and thus do not give rise to what can properly be called "schools," he returns to those twelve in which it is added, What is the good of man, the pursuit of which makes man happy? From these twelve, he shows that one is true and the rest false. . . .

To Varro, it seemed proper that these three schools be treated carefully. He asked, What ought to be chosen? True reason does not permit more than one to be true, whether it is among these three or—as we will see later on—somewhere else. In the meantime, we will examine, as briefly and clearly as we can, how Varro chooses one of these three. Certainly, these three schools arise as follows: either the primary goods of nature are chosen for the sake of virtue, or virtue is chosen for the sake of the primary goods of nature, or both—that is, both virtue and the primary goods of nature—are chosen for their own sakes.

Chapter 4

If, then, we are asked what the city of God would reply to each of these questions, and, most importantly, what it thinks about the final good and final evil, it will reply that eternal life is the supreme good and eternal death the supreme evil, and that in order to attain the one and avoid the other, we must live rightly. That is why it is written, "The just man lives by faith" (Gal 3:11), for we do not at present see our good and thus must seek it through believing, nor does our living rightly derive from ourselves, except insofar as he, who gave the very faith through which we believe ourselves to be in need of help from him, helps us in our believing and praying.

Those, however, who have held that the final good and evil are in this life, whether they place the supreme good in the body, in the soul, or in both—and indeed, to express it more explicitly, whether they place it in pleasure or in virtue or both; whether in rest or virtue or in both; whether in pleasure and rest simultaneously or in virtue or in all these; whether in the primary things of nature or in virtue or in all these—they wanted to be happy here and now and, through an astonishing vanity, they wanted to be made happy by their own actions. The Truth ridiculed them through the prophet, saying, "The Lord knows the thoughts of men" (Ps 94:11), or as the apostle Paul puts this testimony, "The Lord knows the thoughts of the wise, that they are vain" (1 Cor 3:20).

Indeed, who is able, however great the flood of his eloquence, to expound the miseries of this life? Cicero lamented them, as well as he was able, in the *Consolation* on the death of his daughter, but how much was he able to do? In truth, when, where, and in what way can those things called the primary goods of nature be so well possessed in this life that they are not tossed about under the sway of unforeseen accidents? What pain contrary to pleasure, what restlessness contrary to rest, could not befall the body of a wise man? Certainly, the amputation or the debility of a man's limbs destroys his soundness, deformity his beauty, feebleness his health, exhaustion his strength, numbness or slowness his mobility. Which of these is it that cannot overcome the flesh of a wise person? The postures and movements of the body, when they are fitting and harmonious, are likewise numbered among the primary goods of nature. Yet what if some state of ill health causes the limbs to shake and tremble? What if the spine is so curved that the hands are forced to touch the ground, making the man a sort of quadruped? Is not every type of posture and movement of the body distorted?

What about the primary things of the mind itself, which are called goods? Sense and intellect are placed first since on account of them perception and comprehension of the truth are possible. Yet what sort of and how much sensation remains if, to say nothing of other things, a man becomes deaf and blind? Indeed, if reason and intelligence recede from someone rendered insane by some illness, where would those faculties slumber? The mad, when they speak or act, do many absurd things, for the most part unrelated—indeed, even opposed—to their own good intentions and inclinations. When we either reflect on or observe what they say and do, if we consider them properly, we are barely—if at all—able to contain our tears. What shall I say of those who suffer the assault of demons? Where is their own intelligence hidden or buried when an evil spirit uses both their soul and

their body according to its own will? Who is confident that this evil cannot befall a wise man in this life? Next, how well and to what extent do we perceive truth in this flesh, when, as we read in the true book of Wisdom, "The corruptible body weighs down the soul and the earthly dwelling oppresses the intelligence as it considers many things" (Wis 9:15)? An "impulse" or "appetite for action," if in this way Latin rightly names that which the Greeks call *hormé*, is counted as one of the primary goods of nature. Yet is it not precisely this which also produces those miserable motions and deeds of the insane which horrify us when sense is distorted and reason is put to sleep?

Further, virtue itself, which is not among the primary goods of nature because it is added afterward through education, claims to be the highest of human goods; and yet what does it do except conduct perpetual wars with vices, not external but internal ones, not those of others but our very own? It this not the particular struggle of that virtue which in Greek is named *sóphrosyné*, in Latin "temperance," by which the carnal passions are curbed so that they do not drag the mind into consenting to every sort of shameful action? Vice is never absent when, in the words of the apostle, "The flesh desires in opposition to the spirit." To this vice there is a contrary virtue, when, as the same apostle says: "The spirit desires in opposition to the flesh. For these," he says, "are at war with each other, so that what you will is not what you do" (Gal 5:17). What, however, do we will to do when we will to be perfected by the supreme good? It can only be that the flesh not desire in opposition to the spirit and that this vice opposed to what the spirit desires not be in us. We are not strong enough to do this in this life, however much we will, but with the help of God, let us at least not surrender the spirit and so yield to the flesh warring against the spirit, and be dragged into sinning by our own consent. Therefore, let us not believe that, as long as we are in this internal war, we have already attained our happiness, which we will to attain by conquering the flesh. And who is so utterly wise as to have no conflict at all with his lusts?

What about the virtue called prudence? Does not its total vigilance consist in distinguishing goods from evils, so that in seeking the former and avoiding the latter no error sneaks in? Yet in this way does not prudence itself give evidence that we are among evils or that evils are within us? Prudence teaches that evil is consenting to the desire to sin and that good is withholding consent to that desire. Nevertheless, that evil, to which prudence teaches us not to consent, and to which temperance enables us not to consent, is not removed from this life by either prudence or temperance.

What about justice, whose function is to render to each his due, thereby establishing in man a certain just order of nature, so that the soul is subordinated to God, and the flesh to the soul, and consequently the flesh and the soul to God? Does it not demonstrate in performing this function that it is still laboring at its task instead of resting in the completion of its goal? Surely, the less the soul keeps God in its own thoughts, the less it is subordinated to him; and the more the flesh desires in opposition to the spirit, the less is it subordinated to the soul. Therefore, as long as there is in us this weakness, this plague, this weariness, how shall we dare to say that we are already made well? If we are not yet made well, how shall we dare to say that we are already happy in the attainment of final happiness?

As for the virtue called courage, no matter how wise one may be, it bears the clearest witness to human evils, which it is forced to endure patiently. I am astonished to see with what boldness the Stoic philosophers contend that such evils are not evils, yet they allow that if evils become so great that a wise man cannot or ought not endure them, he may be driven to bring about his own death and leave this life. So great is the stupid pride of these men that, while holding that the final good is found in this life and that they are made happy by their own efforts, their wise man (that is, the man whom they describe with an amazing inanity) is one who—even if he is made blind, deaf, dumb, and lame, even if he is tormented by pain and assailed by any other such evils that could be spoken or thought, so that he is driven to bring about his own death—is still not ashamed to call this life so composed of evils "happy"!

O happy life, which seeks the help of death in order to be ended! If it is happy, he should remain in it. In what way are those things not evils? They conquer the good of courage and not only compel the same courage to yield to themselves, but also to

rave, so that it both calls the same life happy and persuades one to flee it! Who is so blind that he does not see that if it is happy, one ought not flee it? In saying that such a life must be fled, they openly admit the weakness of their position. The neck of their pride having been broken, why they do not also admit that such a life is miserable? I ask, did Cato kill himself because of endurance or lack of endurance? He would not have done it, except that he could not bear to endure the victory of Caesar.[1] Where is the courage here? Truly, it yielded; truly, it surrendered; truly, it was so completely overcome that it abandoned, deserted, and fled the happy life. Or was it not then happy? Clearly, it was miserable. In what sense, then, were there no evils which made life miserable and something necessary to flee? . . .

If virtues are true—and true virtues cannot exist except in those who possess true piety—they do not profess to be able to protect the men who have them from suffering miseries. True virtues are not such liars as to profess this. They do, however, profess that human life, which is compelled by the great number and magnitude of evils in this world to be miserable, is happy through hope in a future world, and in the same way made well. Indeed, how can it be happy until it is made well? And thus the apostle Paul, speaking not of imprudent, impatient, intemperate, and unjust men, but of men living according to true piety and thereby having true virtues, says: "By hope we are made well. However, hope that is seen is not hope, for how can one hope for what one sees? However, if we hope for what we do not see, we look forward to it with patience" (Rom 8:24–25).

Therefore, as we are made well by hope, so we are made happy by hope; and as we do not presently possess well-being, but look forward to it in the future "with patience," so it is with happiness. This is because we are now among evils, which we must endure patiently, until we arrive at those goods in which we will find only indescribable delight and none of the things which we must now endure. Such well-being, which we will find in the future world, will itself be final happiness. Because they do not see this happiness, the philosophers refuse to believe in it, but struggle to fabricate for themselves in this life an utterly false happiness through a virtue as dishonest as it is proud.

1. [Rather than endure what he considered to be the tyranny of Caesar, Cato of Utica killed himself in 46 B.C. The Stoics considered Cato to be a hero for this.—E.F./D.K.]

Chapter 6

What about the legal judgments of men concerning other men? No matter how much peace abides in cities, they cannot be eliminated. How wretched, how sad we think they are! Those judging are unable to discern the consciences of those whom they judge. Consequently, they are frequently compelled to investigate the truth by torturing innocent witnesses concerning a case that is not even their own. What about when someone whose own case is at stake is tortured? He is asked whether he is guilty while he is being tortured. Even an innocent person, then, pays a most certain penalty for an uncertain crime, and not because it is discovered that he committed it, but because it is not known that he did not commit it. Thus, the ignorance of the judge is frequently the calamity of the innocent.

What is much more intolerable, what must be lamented and washed, if it were possible, by fountains of tears, is this: a judge, on account of ignorance, tortures an accused in order not to execute an innocent person mistakenly, yet it happens that the judge does execute, through wretched ignorance, one who is both innocent and tortured, one whom the judge had tortured in order that he might not execute an innocent person. If, following the "wise," the accused has chosen to flee this life rather than endure the tortures any longer, he says he has committed what he did not commit. Though he is condemned and executed, the judge still does not know whether the person he tortured in order that he might not mistakenly execute an innocent person was innocent or not. Thus, he both tortures an innocent man in order to know and kills him though he does not know.

In this darkness of the social life, will a judge who is "wise" sit in judgment or not? Certainly he will, for human society, which he considers it a crime to desert, binds him and drags him to this duty. These things he does not consider to be crimes: that innocent witnesses are tortured in the cases of others; that the innocent who are accused are frequently

overcome by the power of pain when they are tortured, and are then punished on account of falsely confessing; that, although not punished by death, they frequently die while being tortured or as a result of being tortured; or that sometimes the accusers, perhaps desiring to be beneficial to human society by seeing to it that no crimes go unpunished, are unable to prove the charges even though they are true, since the witnesses lie and the defendant himself fiercely endures the torture without confession, and are themselves mistakenly condemned by a judge. This great number and magnitude of evils he does not consider to be sins, for a wise judge does not do them because of a will to harm, but because of the necessity imposed by not knowing, and also because of the necessity of judging imposed by human society.

Accordingly, even if they are not the malice of the wise, these evils are certainly what we call the misery of man. If indeed it is through the necessity of not knowing and of judging that he tortures and punishes the guiltless, is it not enough for him that we do not hold him to be guilty? Must we call him "happy" besides? How much more thoughtful and appropriate it is for man to recognize misery in this necessity, and to hate himself because of it, and if he is wise in the manner of the pious, to cry out to God, "Deliver me from my necessities!" (Ps 25:17).

Chapter 7

After the city or municipality comes the world, which they regard as the third level of human society. Beginning with the household, they progress to the city and then to the world. Like converging waters, as the world is larger, so is it more dangerous. In the first place, the diversity of languages in the world alienates one man from another. Imagine that two people meet and are compelled by some necessity not to pass by but to remain together. If neither knows the language of the other, although they are both human beings, speechless animals—even if they are of different species—will associate with each other more easily. When human beings realize that they cannot communicate between themselves solely because of the difference of language, nothing promotes their association despite their similarity of nature. A man would rather be with his own dog than a foreigner.

Yet it might be said that, by taming peoples through the peace of society, the imperial city attempts to impose not only its yoke but also its language, so that there is no lack of interpreters, but indeed a great abundance. This is true. Yet how does it compensate for the numerous and immense wars, the great slaughter of men, the tremendous effusion of human blood? Even though those evils are now settled, the misery of them is not yet finished. Although bordering, hostile nations have never been and are not presently lacking, and although wars always have been and continue to be waged against them, nevertheless the very size of the empire has given rise to wars of a worse kind; namely, social and civil wars. The human race is shaken by these more miserable wars, either when they are waged so that there might eventually be calm, or when a fresh outbreak of them is feared. If I wanted to speak appropriately of these evils, great and immense destructions, and hard and dire necessities, even though I could by no means do so as the subject demands, where would this lengthy discussion end?

They say, however, that the wise man will wage only just wars—as if, mindful that he is human, he would not much rather lament that he is subject to the necessity of waging just wars. If they were not just, he would not be required to wage them, and thus he would be free of the necessity of war. It is the iniquity on the part of the adversary that forces a just war upon the wise man. Even if it did not give rise to the necessity of war, such iniquity must certainly be lamented by a human being since it belongs to human beings. Therefore, let anyone who reflects with sorrow upon these evils so great, so horrid, and so savage, confess that he is miserable. Anyone, however, who either permits or considers these things without sorrow in mind is certainly much more miserable, since he thinks himself happy because he has lost human feeling.

Chapter 11

Because the name "peace" is also frequently used with respect to things which are subject to death, where there certainly is no eternal life, we prefer to call the end of this city, where its highest good will be, "eternal life" rather than "peace." Of this end the

apostle says, "Now, indeed, having been liberated from sin and having become servants of God, you will have your reward in sanctification, your true end in eternal life" (Rom 6:22).

On the other hand, "eternal life" could be taken by those who are not familiar with the Sacred Scriptures to include also the life of the wicked. One might think this either because certain philosophers profess the immortality of the soul, or also because our faith professes the unending punishment of the impious, who certainly could not be eternally tormented unless they also lived eternally.

So that it can be understood more easily by all, it must be said that the end of this city, in which it will have its highest good, is either "peace in eternal life" or "eternal life in peace." Peace is such a great good that even with respect to earthly and mortal things, nothing is heard with greater pleasure, nothing desired more longingly, and in the end, nothing better can be found. If I wish to speak of it somewhat longer I will not, I think, be burdensome to readers, both because my subject is the end of this city and because of the very sweetness of peace, which is dear to all.

Chapter 12

Anyone who pays any attention to human affairs and our common human nature, recognizes as I do that just as there is no one who does not wish to be joyful, so there is no one who does not wish to have peace. Indeed, even those who want war want nothing other than to achieve victory; by warring, therefore, they desire to attain a glorious peace. What else is victory, unless triumphing over the opposition? When this has happened, there will be peace. Therefore, even those who are eager to exercise the military virtues by commanding or fighting wage war with the intention of peace. Consequently, the desired end of war is peace, for everyone seeks peace, even by waging war, but no one seeks war by making peace.

Even those who want the peace they now have to be disturbed do not hate peace, but they desire to change the peace according to their own wishes. Thus, they are not unwilling that there be peace, but they want it on their own terms. Furthermore, even if they have separated themselves from others through sedition, when they conspire or plot amongst themselves they do not achieve what they intend unless they have some sort of peace. Likewise, robbers themselves want to have peace with their partners, so that they might more violently and safely attack to the peace of others. Perhaps one person is so strong and so wary of conspiring with others that he does not ally himself to any partners. Waiting in ambush and prevailing alone, he gains plunder by crushing and annihilating whom he can. Still, with those whom he cannot kill and from whom he wants to hide what he does, he certainly has some sort of a shadow of peace.

In his home, with his wife and children and anyone else who might be there, he surely strives to be at peace. Their complying with his command is no doubt pleasing. If they do not do so, he is enraged; he rebukes and punishes them. He establishes peace in his own home, if it is necessary, even by brutality. He thinks that peace is not possible unless the rest of the household is subject to a ruler, and in his own home he himself is that ruler. That is why, if the service of a great multitude, or of cities, or peoples is offered to him, so that they would serve him in the same manner as he wanted to be served in his own household, then he would no longer conceal himself like a bandit in a hideout, but raise himself up like a visible king, although the same desire and malice would abide in him. Thus, all desire to have peace with their own associates, whom they want to live according to their own decree. Indeed, they want, if they are able, to make even those against whom they wage war into their own associates, and to impose on them, when conquered, the laws of their own peace.

Let us imagine someone of the sort sung about in poetry and myth, someone whom, perhaps because of his unsociability and savageness, they have preferred to call "semihuman" rather than "human." His kingdom was the solitude of his horrible cave. So extraordinary was his malice that a name was invented from it, for in the Greek language evil is called *kakos,* which is what he was named.[2] He had no wife with whom to carry on endearing conversation, no little children to play with, no older children to give orders to, no friends with whom to enjoy speaking. He did

2. [The story of Cacus is related by Virgil in *Aeneid* VIII. 184–305.]

not even enjoy the society of his father Vulcan, compared to whom he was happier simply because he had not generated such a monster as himself. He gave nothing to anyone, but took from whomever he could whatever and whenever he wanted.

Nevertheless, in the very solitude of his own cave, in which, as is said, "the ground was always reeking with fresh carnage,"[3] he wanted nothing other than peace—a peace in which no one would molest him, in which the quiet was not disturbed by the violence of anyone or the fear of it. Further, he desired to be at peace with his body, and to the extent that he was at peace with it, all was well with him. When he commanded, the limbs of his body submitted. Yet, his own mortality rebelled against him out of need and stirred up sedition through hunger, aiming to dissociate and exclude the soul from the body. In order to make peace with that mortality as quickly as possible, he plundered, he killed, and he devoured. Though monstrous and savage, he was nevertheless monstrously and savagely providing for the peace of his own life and well-being. Moreover, if he had been willing to make peace with others while he was striving to make peace in his cave and in himself, he would not have been called evil or a monster or semihuman. Also, if the appearance of his body and his breathing horrible fire frightened human society, possibly he was not so much savage because of a desire for harming but because of the necessity of his staying alive.

He might not, however, have even existed, or, what is more believable, he might not have been the same as the description given by the vanity of poetry, for if Cacus were not blamed too much, Hercules would be praised too little.[4] Therefore, it is better, as I have said, to believe that a human or semihuman of that sort never existed, as is the case with many of the imaginings of the poets.

Even the most savage wild animals, from whom Cacus got part of his wildness (for he was even said to be half-wild), care for their own species by means of a certain peace. They do this by associating, begetting, bearing, cherishing, and nourishing the offspring, even though they are for the most part insociable and solitary. I do not mean those animals such as sheep, deer, doves, starlings, and bees, but those such as lions, wolves, foxes, eagles, and owls. Indeed, what tigress, pacifying her wildness, does not gently purr and caress her young? What kite, however much it circles its prey alone, does not unite with a mate, put together a nest, warm the eggs, nourish the young birds, and, as if with the mother of his family, keep peace in his domestic society as much as he can? How much more is man brought by the laws of his nature, as it were, to enter into society and keep peace with all men to the extent that he is able?

After all, even the evil wage war for the sake of the peace of their own associates, and they would want to make everyone their own, if they could, so that everyone and everything would be enslaved to one individual. How would that happen if they did not consent to his peace, either through love or fear? In this manner, pride imitates God in a distorted way. It hates equality with partners under God, but wants to impose its own domination upon its partners in place of God. Consequently, it hates the just peace of God and loves its own iniquitous peace. Nevertheless, it is not able not to love some sort of peace. Truly, there is no defect so contrary to nature that it wipes away even the last vestiges of nature. Accordingly, he who knows to prefer the upright to the deformed, and the ordered to the distorted, sees that the peace of the iniquitous, in comparison to the peace of the just, should not be called "peace" at all. However, it is necessary that even what is distorted be at peace in some way with a part of the things in which it exists or from which it is established. Otherwise, it would not exist at all.

This is just like if someone were to hang with his head downward. The position of the body and the order of the limbs would certainly be distorted, because what nature demands to be above is below, and what it wants to be below is above. This distortion disturbs the peace of the flesh and for that reason is painful. It is nevertheless true that the soul is at peace with the body and is busy struggling for its well-being, and thus there is someone suffering. If the soul departs, having been driven out by the pain, as long as the structure of the limbs remains, so does a certain amount of peace, and thus there is still something

3. [*Aeneid* VIII. 195.]

4. [Cacus was eventually slain by Hercules.]

hanging there. Because the earthly body tends toward the earth and is resisted by the chain by which it is suspended, it tends to the order of its own peace and requests in a weighty voice, as it were, a place where it might rest. Now lifeless and without any sense, nevertheless it does not depart from the peace of its own natural order, either when it has it or when it reaches toward it.

If embalming potions and treatments are applied, which do not allow the form of the cadaver to break up and dissolve, a sort of peace still unites certain parts to other parts and connects the whole mass in its suitable and therefore peaceful place in the earth. If no one applies the treatment for burying, however, then the cadaver disintegrates in the course of nature. It is in a state of disturbance due to dissenting vapors which are disagreeable to our senses (for this is what is smelled in putrefication), until it is assimilated to the elements of the world and gradually, little by little, separates into their peace. Nevertheless, in no way is anything withdrawn from the laws of the supreme creator and governor by whom the peace of the universe is administered, for even if tiny animals are born from the cadaver of a greater animal, by the same law of the creator each little body serves its own little soul in the well-being of peace. Even if the flesh of the dead is devoured by other animals, wherever it is carried, whatever the things to which it is joined, whatever the things into which it is changed and altered, it finds those same laws diffused throughout all things for the well-being of every mortal species, making peace by harmonizing suitable elements.

Chapter 13

Thus, the peace of the body is the ordered proportion of its parts. The peace of the irrational soul is the ordered repose of the appetites. The peace of the rational soul is the ordered agreement of knowledge and action. The peace of the body and the soul is the ordered life and well-being of a living thing. The peace between a mortal man and God is an ordered obedience, in faith, under the eternal law.

The peace among human beings is ordered concord. The peace of the household is an ordered concord concerning commanding and obeying among those who dwell together. The peace of the city is an ordered concord concerning commanding and obeying among the citizens. The peace of the heavenly city is a fellowship perfectly ordered and harmonious, enjoying God and each other in God. The peace of all things is the tranquility of order.

Order is the arrangement of things equal and unequal, alloting to each its own position. Hence, the miserable indeed lack the tranquility of order in which there is no disturbance, since insofar as they are miserable, they certainly are not at peace. Nevertheless, since they are deservedly and justly miserable, they are not, in their very own misery, able to be outside that order. They are surely not united to the happy, but, by the law of order, are separated from them. When they are free from disturbance, they are adjusted to the circumstances in which they find themselves by a harmony of some degree. Thus, some tranquility of order belongs to them, and so some peace. Therefore, the reason they are miserable is because, even if they have some freedom from concern and are not suffering, they are still not in a position where they ought to be exempt from concern and suffering. They are more miserable, however, if they are not at peace with the very law by which the order of nature is administered.

Moreover, when they suffer, they suffer in that part in which a disturbance of peace occurs, but there is still peace in that part not disturbed by suffering and in the structure itself, which is not dissolved. As, therefore, there is a kind of life without suffering, but suffering cannot exist without some life, so there is a kind of peace without any war, but war cannot exist without some peace. This does not follow because of what war itself is, but because it is waged by those or in those who are natural beings in some way. They would not exist at all, unless they remained in a peace of some sort.

Accordingly, there is a nature in which there is no evil, or even in which there can be no evil, but there cannot be a nature in which there is no good. Thus, not even the nature of the devil himself, insofar as it is a nature, is evil. Rather, it is the distortion of that nature that makes it evil. Hence, he did not stand firm in the truth, but he did not escape the judgment of the truth. He did not remain in the tranquility of order, but he nevertheless did not avoid the power of the one who orders. The goodness of God, which

is in the devil's nature, does not remove him from the justice of God, which orders by punishing him. God did not then reproach the good that he created, but the evil that the devil has committed. Neither does God take away all that he gave to the devil's nature, but some he takes and some he leaves, so that there might be something to suffer the loss of what was taken away. That very suffering is a witness to the good taken away and the good left behind, for unless good were left behind, the devil could not suffer because of the good lost. . . .

Therefore, God, who founded all natures most wisely and ordered them most justly, who established the mortal human race as the greatest embellishment of the earth, gave to mankind certain goods suitable for this life. These goods include a temporal peace proportional to the short span of a mortal life, a peace involving health, preservation, and the society of one's own kind. They also include the things necessary for guarding or recovering this peace (such as what is appropriately and fittingly present to the senses: light, sound, breathable air, drinkable water, and whatever is suitable for feeding, covering, healing, and adorning the body). All this was given through the most equitable stipulation, that he who uses such mortal goods rightly, adapting them to the peace of mortals, would receive more and better goods; namely, the peace of immortality and the glory and honor suitable to it, in an eternal life which is for enjoying God and one's neighbor in God. He, however, who uses mortal goods wrongly, would lose them and would not receive eternal ones.

Chapter 15

God said, "Let him have dominion over the fish of the sea and the winged things of the heavens and all the crawling things which crawl upon the earth" (Gn 1:26). He did not will that the rational being, having been made according to his own image, dominate any except the irrational beings; he did not will that man dominate man, but that man dominate the beasts. Therefore, the first just men were established as shepherds of beasts rather than as kings of men, so that even in this way God might suggest what the order of creatures requires and what the reward of sinners drives away. Surely it is understood that the condition of slavery is rightly imposed on the sinner. Accordingly, nowhere in the scripture do we read the word "slave" before the just Noah punished the sin of his son with this word. Thus, he earned the name through fault, not through nature. . . .

The first cause of slavery, then, is sin, with the result that man is placed under man by the bondage of this condition. This does not happen except through the judgment of God, in whom there is no iniquity, and who knows how to distribute the various punishments according to the merits of the delinquent. Yet, as the Lord above says, "Anyone who sins is a slave of sin" (Jn 8:34), and thus indeed many religious people enslaved to iniquitous masters are nevertheless not enslaved to the free: "For by whatever one has been conquered, to that one has also been made a slave" (2 Pt 2:19). And it is certainly a happier condition to be enslaved to a man than to a lust, since the very lust for dominating—not to mention others—ravishes the hearts of mortals by a most savage mastery. In that order of peace by which some are subordinated to others, humility is as beneficial to the enslaved as pride is harmful to the dominating.

Nevertheless, by the nature in which God first established man, no one is a slave of man or of sin. It is also true that penal slavery is ordained by that law which commands the preservation and prohibits the disturbance of the natural order, because if nothing had been done contrary to that law, there would have been nothing requiring the restraint of penal slavery. That is why the apostle also warns slaves to be subject to their masters and to serve with good will and from the heart (Eph 6:5), so that if they are not able to be freed by their masters, they might make their slavery in a certain sense free, by serving not with the cunning of fear, but with the faithfulness of affection, until iniquity is transformed and all human rule and power are made void, and God is all in all (1 Cor 15:24, 28).

Chapter 16

. . . Those who are true "fathers of their families" are concerned that all in their family—the slaves as well as the children—should worship and be reconciled to God. Such fathers desire and long to come to the heavenly household, where the duty of ruling mortals

is not necessary because the duty of being concerned for the welfare of those already happy in that immortality will no longer be necessary. Until that home is reached, fathers ought to endure more because they rule than slaves do because they serve.

If, however, anyone in the household opposes the domestic peace through disobedience, he is disciplined by word or by whip or by any other kind of just and legitimate punishment, to the extent that human society allows. Such discipline is for the profit of the one being disciplined, so that he is readjusted to the peace from which he had departed. After all, just as it is not kindness to help someone when it would cause him to lose a greater good, so it is not innocent to spare punishment and permit someone to fall more grievously into wickedness. Therefore, in order to be innocent, duty demands not only that one not bring evil to anyone, but also that one restrain another from sin or punish his sin, so that either the person who is punished might be set straight by the experience or others frightened by his example.

Hence, because the human household ought to be the beginning or the building block of the city, and because every beginning is directed to some end of its own kind and every part to the integrity of the whole whose part it is, the consequence is clearly that domestic peace is directed to civic peace. That is to say, the ordered concord concerning commanding and obeying of those dwelling together is directed to the ordered concord concerning commanding and obeying of the citizens. Accordingly, the father of the family should obtain the precepts by which he rules his household from the laws of the city, so that his household might be adapted to the peace of the city.

Chapter 17

The household of those who do not live by faith chases an earthly peace consisting of the affairs and advantages of this temporal life. The household of human beings living by faith, on the other hand, looks forward to the future, to those things which are promised as eternal, and makes use of temporal and earthly things like a traveller. Those things do not seize such a person and turn him away from the path to God. They do not increase the burdens of "the corruptible body which weighs down the soul" (Wis 9:15), but sustain him for more easily enduring them. Consequently, both sorts of men and both sorts of households use the things necessary for this mortal life, but the end of such use is unique to each and varies greatly. So also the earthly city, which does not live by faith, desires earthly peace and it secures the concord concerning commanding and obeying of the citizens, so that there might be a certain orderly arrangement of human wills concerning the things pertaining to mortal life. The heavenly city, however, or rather the part of it which journeys in this mortal life and lives by faith, necessarily uses this peace, too, until the very mortality which makes such a peace necessary might pass away.

Because of this, so long as it leads the life of a captive, as it were, journeying within the earthly city, already having received a promise of redemption and a spiritual gift as a pledge of it, the heavenly city has no doubts about conforming to the laws of the earthly city which administer the things required for the sustainance of the mortal life. Because mortality itself is common to both of the cities, concord between them is preserved with respect to those things pertaining to the mortal life. . . .

So long as this heavenly city journeys on the earth, it calls forth citizens from all peoples and gathers a society of foreigners speaking all languages. It is not troubled at all about differences in customs, laws, and institutions by which the earthly peace is either sought or maintained. So long as they do not impede the religion which teaches the worship of the one, supreme, and true God, the heavenly city abrogates or destroys none of them, but indeed observes and follows them, for whatever the diversities of different nations, they nevertheless strive toward the one and the same end of earthly peace.

Hence, even the heavenly city uses the earthly peace on its journey, and it is concerned about and desires the orderly arrangement of human wills concerning the things pertaining to mortal human nature, insofar as it is agreeable to sound piety and religion. It directs the earthly peace to the heavenly peace, which is so truly peace that it must be held and said that the only peace, at least of rational creatures, is the most ordered and most harmonious society enjoying God and each other in God. When that peace comes, there will not be mortal life, but a whole

and certain life; not the ensouled body weighing down the soul in its corruption (Wis 9:15), but a spiritual body with no wants and with every part subordinated to the will. While it journeys, the heavenly city possesses this peace in faith, and out of this faith it lives justly when it directs to the attainment of that peace whatever good actions it performs toward God, and also those performed toward the neighbor, since the life of this city is certainly social.

Chapter 19

The style of dress or manner of living in which anyone follows the faith that leads to God does not matter to the heavenly city, so long as these are not in contradiction with the divine precepts. Thus, even philosophers, when they become Christians, are not required to change their style of dress or eating customs, which do not impede religion, though they are required to change their false teachings. Accordingly, that city does not care at all about the distinction that Varro made concerning the Cynics, so long as nothing is done basely or intemperately.

With respect to those three kinds of life, the leisurely, the active, and the combination of the two, although every one, through sound faith, can lead his life according to any one of them and attain the everlasting reward, what one holds through the love of truth and what one expends through the duty of charity are nevertheless important. Thus, no one ought to be so leisurely that he does not, in his leisure, consider the advantage of his neighbor; neither should anyone be so active that he does not consider the contemplation of God to be necessary.

In leisure, one ought not delight in slothful idleness, but in either the investigation or discovery of truth, so that everyone advances in it and does not withhold his discoveries from others. In action, no one ought to love honor or power in this life, because all is vanity under the sun (Eccl 1:2–3). Rather, the work itself that is done through the same honor or power should be loved, if it is done rightly and profitably. That is to say, it should be loved if it advances the well-being of the subjects, which is according to God, as we have argued earlier.

Because of this the apostle said, "He who desires the episcopacy desires a good work" (1 Tm 3:1). He wanted to explain that the name "episcopacy" is the name of a work not of an honor. Indeed, the word is Greek, and it comes from the fact that he who is set over others "superintends" them; that is, he exercises care for them. Indeed, the Greek word *skopos* means intention; therefore, for *episkopein* we can say, if we want, "superintend." Consequently, he who desires to be over others rather than to benefit others should understand that he is not a bishop.

Thus, no one is prohibited from zealousness for knowledge of the truth, because the life of learned leisure pertains to what is praiseworthy. On the other hand, to desire high position, without which a people cannot be ruled, is indecent, even if the position is held and administered in a decent manner. Because of this, charity for truth seeks holy leisure, while the requirements of charity accept just activity. If this latter burden is not imposed, one is free to grasp for and to contemplate truth. If, however, the burden is imposed, accepting it is on account of the requirements of charity. Even in this instance, however, delight in the truth is not abandoned completely, otherwise that sweetness might be lost and these requirements crush us.

Chapter 21

It is at this place that I will explain, as briefly and clearly as I can, what in the second book of this work I promised that I would demonstrate; namely, that, according to the definition that Scipio uses in the *Republic* of Cicero, there never was a Roman republic. He succinctly defines a "republic" as "the affair of a people." If this definition is true, there never was a Roman republic, because Rome never was the affair of a people, which is Scipio's definition of a republic.

The reason for this is that he defined "a people" as "a fellowship of a multitude united through a consensus concerning right and a sharing of advantage." What he calls "a consensus concerning right" he explains in the dialogue by making it clear that it is not possible for a republic to be managed without justice. Therefore, where there is no true justice, there can be no right. What is done by right is indeed done justly; what is done unjustly, however, cannot be done by right. The iniquitous institutions of human beings must not be said or thought to exist by right, because

even those institutions say that right flows from the fountain of justice, and that what is customarily said by those who do not understand right correctly—i.e. that right is the advantage of the strongest—is false.

Accordingly, where there is no true justice, there can be no fellowship of men united through a consensus concerning right, and therefore there can be no people according to the definition of Scipio or Cicero. Moreover, if there is no people, neither can there be an affair of a people, but only of some sort of a multitude which is not worthy of the name of "a people." Consequently, if a republic is "the affair of a people," and there is no people which is not "united by means of a consensus concerning right," and there is no right where there is no justice, without doubt it must be concluded that where there is no justice, there is no republic.

Furthermore, justice is that virtue which distributes to everyone his due. What sort of justice is it, then, that takes a man away from the true God and subjects him to unclean demons? Is *this* to distribute to each his due? Or, is he who takes the ground purchased by someone and gives it to another who has no right to it unjust, but he who takes himself away from the dominion of the God who made him and enslaves himself to malicious spirits just?

Certainly, the cause of justice against injustice is argued very energetically and forcefully in that very same book, *The Republic*. Earlier, the case of injustice against justice was considered and it was said that the republic could not stand firm or be managed except through injustice. It was set down as the most powerful part of the argument that it was unjust for men to serve other men as their masters, but that unless the imperial city to whom the great republic belongs follows such injustice it is not able to rule its provinces. The response from the side of justice was that this rule over the inhabitants of the provinces is just because servitude is advantageous for such men and is done for their benefit when it is done correctly—that is, when the license for wrongdoing is taken away from the wicked. Also, it was argued that they will be in a better condition as a result of having been subdued, because they were in a worse condition before being subdued.

In order to strengthen this reasoning, a famous example was stated as though it was borrowed from nature: "Why, then, does God rule man, the soul rule the body, the reason rule lust and the rest of the corrupt parts of the soul?"[5] Plainly, this example teaches well that servitude is advantageous to some and that serving God is indeed advantageous to all. In serving God, the soul correctly rules the body, and the reason in the soul subordinated to the Lord God correctly rules lust and the rest of the corrupt parts of the soul. Thus, when a man does not serve God, what in him can be reckoned to belong to justice? Indeed, when not serving God, the soul can in no way justly rule the body, or human reason the vices. Furthermore, if there is not any justice in such a man, without doubt neither is there any in a fellowship of human beings which consists of such men. Therefore, this is not that "consensus concerning right" which makes a multitude of human beings a "people," whose affair is called a "republic."

What shall I say concerning that "advantage," the sharing of which also unites a fellowship of men so that it is named "a people," as stipulated by the definition? If you carefully direct your attention, you will see that there is no advantage to any who live impiously, as do all who do not serve God but serve the demons who, the more impious they are, the more they want to receive sacrifice as gods, even though they are the most unclean spirits of all. Yet, what we have said about the consensus concerning right I think is sufficient to make it apparent that, according to this definition, there is no people which might be said to be a republic in which there is no justice.

If our enemies say that the Romans have not served unclean spirits but good and holy gods in their republic, must what we have already said sufficiently, indeed more than sufficiently, be repeated yet again? Who, except the excessively stupid or the shamelessly contentious, having arrived at this point after reading the earlier books of this work, finds it possible to doubt but that the Romans have up to this point served evil and impure demons? Nevertheless, in order to say no more about the sort of gods they are worshipping with sacrifices, I instead cite what is written in the law of the true God: "Anyone sacrificing to the

5. [*Republic* III. 25.]

gods, except only to the Lord, will be eradicated" (Ex 22:20). Thus, he who admonishes with such a threat did not want either good gods or evil ones to receive sacrifice.

Chapter 23

. . . We ourselves—his city—are the best and most radiant sacrifice. We celebrate this mystery through our offerings, which are known to the faithful, as we have argued in the preceding books. Indeed, through the Hebrew prophets the divine oracles thundered that the offering of sacrificial victims by the Jews, a foreshadowing of the future, would cease, and that peoples from the rising of the sun to its setting would offer one sacrifice, as we see happening now. From these oracles we have taken as much as seemed sufficient and have already sprinkled them throughout this work.

Thus, justice exists when the one and supreme God rules his obedient city according to his grace, so that it does not sacrifice to any whatsoever except Him alone. As a result, in everyone belonging to that same city and obeying God, the soul faithfully commands the body, and reason the corrupt parts of the soul, in accord with the lawful order. Consequently, just like a single just man, a fellowship and a people of just men lives by faith, which works through love, by which man loves God as God ought to be loved, and his neighbor as himself. Where that justice does not exist, truly there is no "fellowship of men united through a consensus concerning right and a sharing of advantage." If this justice does not exist, then a people does not exist, if this is the true definition of a people. Therefore, neither does a republic exist, for there is no affair of a people where there is no people.

Chapter 24

If, however, a people is not defined in that way, but in another—if, for example, it is said that a people is "a fellowship of a multitude of rational beings united through sharing in an agreement about what it loves"—then truly, in order to see the character of a people, what it loves must be considered. If it is not a fellowship of a multitude of beasts, but of rational creatures, and is united through sharing in an agreement about what it loves, then, no matter what it loves, it is not unreasonable to call it "a people." It is a better people if it agrees in loving better things; a worse one if it agrees in loving worse things. According to this definition, the Roman people is a people, and its affair is without doubt a republic. However, history gives witness to what that people loved originally and subsequently, and by what morals it arrived at the bloodiest revolutions and then at social and civil wars, utterly shattering and annihilating concord itself, which is, in a certain sense, the well-being of a people. Of this we have said much in the preceding books. . . .

THOMAS AQUINAS

In 1277, three years after the death of Thomas Aquinas (1224–1274), Pope John XXI asked Stephen Tempier, the bishop of Paris, to investigate the dispute between philosophy and theology that had flourished during the thirteenth century, after the rediscovery of Aristotle's works. The result was a set of 219 propositions that were held by the philosophers and that opposed the Christian faith, including, for example, that the world is eternal and that there is no freedom of choice. On March 7, 1277, the bishop condemned these propositions, which included some of Aquinas' attempts to harmonize Aristotelianism and Christian faith. With this act of condemnation the great task of uniting faith and reason, theology and philosophy, reached a turning point. What Aquinas had tried to achieve, both philosophers and theologians began to reject in their different ways, and his grand synthesis, later to be canonized as official Catholic doctrine, came to generate diverse criticisms.

Aquinas was born at the castle of Roccasecca, near Naples, Italy, the youngest son of Landalfo, the count of Aquino. At the age of five, he began his education under the Benedictine monks at nearby Monte Cassino, where he remained until 1239. He then went to the University of Naples and soon became acquainted with a vigorous young group of Dominicans, students of philosophy and theology. By 1244 Aquinas had joined this local convent of Dominican friars, against his family's wishes. When the Dominicans arranged for him to accompany them on a trip to Cologne, with the plan to send him on to study for a Dominican novitiate at the University of Paris, Aquinas' brothers kidnapped him and held him prisoner at Aquino for a year.

In 1245 Aquinas escaped and made his way to Paris, where he remained until 1248. From 1248 to 1252 he was a member of a Dominican house of studies in Cologne and became the student of the famous German Dominican Aristotelian, Albert the Great. In 1252 Aquinas returned to Paris, where he taught until 1259. He then moved to Italy, where, until 1268, he taught in and around Rome. Once again, he returned to Paris and engaged in controversy with the Latin Averroists and followers of Siger of Brabant, who argued for a pure Aristotelianism, and, on the other side, with the followers of Saint Bonaventure, who sought to establish an ultra-Augustinian (or voluntaristic) Christianity and ban Aristotelianism altogether. In 1272 he was sent to Naples to establish a Dominican house of study. By this time, his health was not good; indeed, some conjecture that he had suffered a stroke. When he was called to Lyons by Pope Gregory X to participate in a council, he struck his head and died of complications on the way, on March 7, 1274, at a monastery between Naples and Rome.

Aquinas' life was intellectually rich, filled with study, teaching, and writing. He left an enormous corpus of work. While teaching in Paris from 1252 to 1259, he wrote his commentary on the *Sentences* of Peter Lombard and his treatises *On the Principles of Nature*, *On Being and Essence*, and *On Truth*. The *Summa Contra Gentiles*, a work intended to help Dominican missionaries in Spain and North Africa, was completed while he was in Italy between 1259 and 1268, and the great *Summa Theologica* was written between 1265 and 1273. During his relatively brief lifetime, he also published a variety of other treatises and commentaries on no less than twelve Aristotelian treatises.

Aquinas was both a theologian and a philosopher. As a theologian, he wrote about God and the world based on rational inquiry and the evidence of faith. As a philosopher, he was an Aristotelian who employed the data of the senses, examined and understood in the light of first principles. He sought to understand God in terms of an inquiry into nature and then to return to understand nature with new thoughts based on his grasp of the divine. The twofold character of his thought, moreover, influenced his ethics; in his understanding of man, the soul, human will, appetite, and moral purpose, he used the teleological notions of capacities,

potentialities, and purposes. For Aquinas, man's ultimate goal is happiness, which he takes to be the joyful knowledge of God and a life which attempts to realize the nature which God has given to man. It is a goal that can be achieved in a variety of ways; his moral theory focuses on these ways. On the one hand, Aquinas is concerned with virtue and the cultivation of character, as these facilitate human happiness; on the other, he is concerned with law as it directs our conduct from the outside but toward the same goal.

In a way, this dichotomy between internal and external control is also reflected in Aquinas' political theory. His family had imperial connections in southern Italy, and hence he grew up with monarchist sensibilities. But he cast his lot with the democratic-style practices of the Dominican order. The result, in Aquinas' thought, is a commitment to a kind of mixed form of government, a constitutional monarchy. Such a society, he argued, is the most conducive to the best human life, and that means to the life of virtue. The best government is government by law for the common good, the community's well-being. It governs a society that best enables people to achieve happiness, which is a society both political in character and religious in purpose. Moreover, the mixed constitution does this through law, which helps people to prevent evil and to seek the good. For Aquinas, then, the state arises out of religious and moral purposes, and morality emerges from human nature and its tendencies, the object of God's beneficent purposes.

Aquinas' life coincides with a period when Christian faith and Aristotelian philosophy confronted each other and achieved as comfortable a synthesis as they would ever attain. His remarkable collection of works exemplifies that synthesis in a uniquely powerful way. Within two decades Aquinas crystallized the deep mood of an epoch, but his success was short-lived. By 1277, with the Condemnation of Paris, the unity was shattered and the main lines of response already plotted; the nominalist and conciliarist responses of Duns Scotus and William of Ockham were developed in the following generation in opposition to Aquinas' synthesis. Aquinas was, in short, a monumental figure, whose life, works, and intellect blend together as a decisive turning point in medieval thought.

On Kingship, to the King of Cyprus

BOOK I

Chapter 1

What the Name *King* Signifies

We need, at the outset of our work, to explain what one should understand by the word *king*. And regarding all things ordained for an end, in which there may be this or that way of proceeding, something needs to give the direction whereby they arrive straightaway to the requisite end. For example, ships, which the force of various winds may toss in different directions, would not arrive at their destination unless the efforts of pilots were to guide the ships to port. And human beings have an end for the attainment of which their whole lives and actions are ordained, since those who act intelligently evidently act for the sake of an end. But human beings may advance in different ways toward their intended end, which the very diversity of human endeavors and activities makes clear. Therefore, human beings need something that directs them to their end.

And nature implants in each human being the light of reason, which directs them in their activities toward their end. And if it were appropriate for human beings to live solitarily, like many animals, they would indeed need no other direction to their end. Rather, each would be king unto self under God, the supreme king, since the light of reason divinely bestowed on each would direct individual human beings themselves in their actions. But human beings are, by their nature, social and political, living in community more than every other animal. And natural necessity indeed makes this evident. For nature has, in the case of other animals, provided food, fur covering, or means of defense (for example, teeth, horns, claws, or at least fleetness for flight). But human beings have been constituted with none of these things provided by nature. Rather, human beings have instead been provided with reason, which enables them to provide all these things for themselves by the work of their hands. And a single human being does not suffice to provide all these things, since single human beings by themselves could not adequately make their way through life. Therefore, it is natural for human beings to live in community with many.

Moreover, nature has implanted in other animals indigenous structures regarding everything useful or harmful for them. For example, sheep, by nature, esteem wolves as enemies. Some animals by their naturally indigenous structure even recognize the medicinal plants and other things necessary to sustain their life. But human beings by nature know only in a general way the things necessary to sustain their life, so that they can arrive at knowledge of particular necessary things for human life by their power to reason from the first principles of nature. And individual human beings cannot attain all such things by their own reason. Therefore, human beings need to live in community, so that they can assist one another, with different human beings engaged in discovering different things by reason (for example, one in medicine, others in this or that).

This is made most clearly evident by the fact that human beings have the characteristic ability to use speech, whereby human beings can completely express their ideas to one another. Other animals indeed communicate their emotions in a general way (for example, dogs express their anger by barking, and other animals their emotions in different ways). Therefore, human beings can communicate with one another more than any other animals can that we see living communally, such as cranes and ants and bees.

Therefore, Solomon, contemplating this, says in Eccl. 4:9: "Two human beings are better than one, since they have the enrichment of mutual association."

Therefore, if human beings by nature live in association with many others, all of them need to have some power to govern them. For if there are many human beings, and they provide for their own individual interests, the people would split into different factions unless there were also to exist a power to provide for what belongs to the common good. Just so, even the body of a human being or any animal would disintegrate unless there were to exist a general regulative power in the body to strive for the common good of all the body's members. And Solomon, contemplating this, said in Prov. 11:14: "The people will be destroyed if there is no ruler."

And this happens in accord with reason. For what belongs to individuals, and what is common to all, are not the same. Human beings indeed differ by what is proper to each one, and are united by what is common to all. But there are different causes of different things. Therefore, besides what causes individual human beings to act for their own good, there needs to be a power that causes them to act for the common good of the community. And so also regarding all things ordained for one thing, we find a power that governs other things. For example, in the universe of material substances, a primary material substance, namely, the heavenly body, governs other material substances by an ordination of God's providence, and rational creatures by his ordination govern the use of all material substances. Also, in each human being, the soul governs the body, and reason governs the irascible and concupiscible parts of the soul. And likewise, one chief bodily member, whether the heart or the head, moves all the others. Therefore, every people needs to have a power that rules.

And regarding some things ordained for an end, there may be a right or wrong way of proceeding. And so also a people may be governed rightly or wrongly. And a people is governed rightly when it is guided to a suitable end, and wrongly when it is guided to an unsuitable end. And the end suitable to a community of free persons is different from the end suitable for a community of slaves, since free persons are their own agents, and slaves belong to others. Therefore, if a ruler should direct a community of free persons for the common good of the people, there will be a right and just regime, as befits free persons. And if the governance of a ruler be ordained for the private good of the ruler and not for the common good of the people, there will be an unjust and wicked regime. And so also the Lord, speaking through Ezechiel, threatens such rulers in Ez. 34:2: "Woe to the shepherds of Israel who have fed themselves" so as to gain their own advantage. "Are not shepherds to feed their flock?" Shepherds of the flock should indeed seek the good of their flock, and every ruler, the good of the people subject to him.

Therefore, if there be an unjust regime in the hands of only one person who seeks from the regime his own advantage, not the good of the people subject to him, we call such a ruler a tyrant, a name derived from strength, namely, in that he crushes by his power and does not rule justly. And so also the ancients called all powerful persons tyrants. And if there be an unjust regime in the hands of several persons, not one, we call it oligarchy (that is, rule by the few) if it is indeed in the hands of a few persons. This is a case where a few persons crush the people for the sake of riches, and differs from tyranny only by the plurality of rulers. And if a wicked regime is in the hands of many, we call it democracy (that is, rule of the people). This is a case where the mass of common citizens crush the rich by the power of their number. For then even the whole people will be as if a single tyrant.

And likewise, we also need to distinguish just regimes. For if a just regime is in the hands of many people, we call it by the general name *polity* (for example, when a large number of warriors rule in a city or province). And if a just regime is in the hands of a few persons, who are also virtuous, we call it aristocracy (that is, the best rule or rule by the best, whom we call aristocrats for that reason). And if a just regime is in the hands of only one person, we properly call that person king. And so the Lord says through Ezechiel in Ez. 37:24: "My servant David will be king over them, and there will be one shepherd of all of them." And this evidently shows that it belongs to the nature of kingship that there is one person who rules, and that he is a shepherd who seeks the common good of the people and not his own individual good.

And because it belongs to human beings to live in a community, since they are insufficient to secure

the necessities of life for themselves if they should remain solitary, the unity of the people is necessarily more complete the more intrinsically self-sufficient it will be to provide the necessities of life. There is indeed a sufficiency of life in one family comprising one household, namely, regarding natural acts of nutrition and procreation and such like. And there is a sufficiency of life in a district, namely, regarding things proper to one occupation. And there is a sufficiency of life in a city, that is, a perfect community, namely, regarding all the necessities of life, but still more in a province because of the need to wage war and afford mutual assistance against enemies. And so we refer to those who rule perfect communities, that is, cities or provinces, as *the* kings. And we call those who rule households fathers of families, not kings, although fathers are analogous to kings, and for that reason we sometimes call kings fathers of their peoples.

Therefore, it is clear from what I have said that a king is a single person who governs the people of a city or province for the common good. And so Solomon says in Eccl. 5:8: "The king rules all the territory subject to him."

Summa Theologica

LAW

ST I–II

Question 90

On the Essence of Law

First Article
Does Law Belong to Reason?

We thus proceed to the first inquiry. It seems that law does not belong to reason, for the following reasons:

Objection 1. The Apostle in Rom. 7:23 says: "I perceive another law in my bodily members," etc. But nothing belonging to reason belongs to bodily members, since reason does not use bodily organs. Therefore, law does not belong to reason.

Obj. 2. Only power, habits, and acts belong to reason. But law is not the very power of reason. Likewise, law is not a habit of reason, since habits of reason are intellectual virtues, about which I have spoken before. Nor is law an act of reason, since law would cease when the lawmaker ceased to reason (e.g., when he is sleeping). Therefore, law does not belong to reason.

Obj. 3. Law induces those subject to the law to act rightly. But inducing to act rightly belongs in the strict sense to the will, as is evident from what I have said before. Therefore, law belongs to the will rather than to reason, as the Jurist also says: "The pleasure of the ruler has the force of law."

On the contrary, it belongs to law to command and forbid. But to command belongs to reason, as I have maintained before. Therefore, law belongs to reason.

I answer that law is a rule and measure of acts that induces persons to act or refrain from acting. For *law* [Lat.: *lex*] is derived from *binding* [Lat.: *ligare*] because law obliges persons to act. And the rule and measure of human acts is reason, which is the primary source of human acts, as is evident from what I have said before. For it belongs to reason to order us to our end, which is the primary source regarding our prospective action, as the Philosopher says. And the source in any kind of thing is the measure and rule of that kind of thing (e.g., units in numbers and first movements in movements). And so we conclude that law belongs to reason.

Reply Obj. 1. We say that law, since it is a rule or measure, belongs to something in two ways. It belongs in one way as to what measures and rules. And law in this way belongs only to reason, since measuring and ruling belong to reason. Law belongs to something in a second way as to what is ruled and measured. And then law applies to everything that a law induces to something, so that we can call every inclination resulting from a law, law by participation, as it were, not essentially. And we in this way call the very inclination of bodily members to concupiscence the law of the bodily members.

Reply Obj. 2. Regarding external acts, we can consider the activity and the product of the activity (e.g., building and the building constructed). Just so, regarding acts of reason, we can consider the very acts of reason (i.e., acts of understanding and reasoning) and the things produced by such acts. And regarding theoretical reason, definitions are indeed the first product. Propositions are the second product. And syllogisms and arguments the third product. And practical reason also uses a kind of syllogism regarding prospective actions, as I have maintained before, and as the Philosopher teaches in the *Ethics*. Therefore, there are things in practical reason that are related to actions as propositions in theoretical reason are related to conclusions. And such universal propositions of practical reason related to actions have the nature of law. And reason indeed sometimes actually contemplates and sometimes only habitually retains these propositions.

Reply Obj. 3. Reason has from the will the power to induce activity, as I have said before, since reason

commands means because one wills ends. But an act of reason needs to rule the will regarding the means commanded in order that the willing have the nature of law. And we in this way understand that the will of a ruler has the force of law. Otherwise, the willing of the ruler would be injustice rather than law.

Second Article
Is Law Always Ordained for the Common Good?

We thus proceed to the second inquiry. It seems that law is not ordained for the common good as its end, for the following reasons:

Objection 1. It belongs to law to command and forbid. But precepts are ordained for particular goods. Therefore, the end of law is not always the common good.

Obj. 2. Law directs the actions of human beings. But human acts regard particulars. Therefore, law is likewise ordained for particular goods.

Obj. 3. Isidore says in his *Etymologies:* "If law is based on reason, everything founded on reason will be law." But both things ordained for the common good and things ordained for private good are based on reason. Therefore, law is ordained both for the common good and for the private good of individuals.

On the contrary, Isidore says in his *Etymologies* that laws are "enacted for no private convenience but for the common benefit of citizens."

I answer that as I have said, law belongs to the source of human acts, since law is their rule and measure. And as reason is the source of human acts, so also is there in reason itself something that is the source of all other kinds of acts. And so law needs chiefly and especially to belong to this source.

And the first source in practical matters, with which practical reason is concerned, is the ultimate end. But the ultimate end of human life is happiness or blessedness, as I have maintained before. And so law especially needs to regard the ordination to blessedness.

Moreover, law in the strict sense needs to concern ordination to happiness in general, since every part is related to a whole as something imperfect to something perfect. And so also the Philosopher, regarding the cited definition of laws, speaks of both happiness and political community. For he says in the *Ethics* that "we call those laws just that constitute and preserve happiness and its particulars by citizens' sharing in a political community." For the political community is the perfect community, as he says in the *Politics*.

And regarding any kind of thing, the one most such is the source of the others, and we call the others such by their relation to that one. For example, fire, which is hottest, causes heat in composite material substances, which we call hot insofar as they share in fire. And so, since we speak of law in the first place because of its ordination to the common good, every other precept regarding particular acts has the nature of law only because of its ordination to the common good. And so every law is ordained for the common good.

Reply Obj. 1. Precepts signify the application of laws to things regulated by the laws. And the ordination to the common good, which belongs to law, can be applied to particular ends. And so there can be precepts even regarding particular matters.

Reply Obj. 2. Actions indeed concern particular matters, but such particulars can be related to the common good by sharing in the final cause, insofar as we call the common good the final cause, not by sharing in a genus or species.

Reply Obj. 3. As theoretical reason firmly establishes nothing except by tracing things back to first indemonstrable principles, so practical reason firmly establishes nothing except by ordering things to our ultimate end, that is, our common good. And what reason so establishes has the nature of law.

Third Article
Is Any Person's Reason Competent to Make Law?

We thus proceed to the third inquiry. It seems that any person's reason is competent to make law, for the following reasons:

Objection 1. The Apostle says in Rom. 2:14 that "when the Gentiles, who do not have the law, by nature do the things the law prescribes, they make law for themselves." But we say the same about everybody. Therefore, anyone can make law for oneself.

Obj. 2. As the Philosopher says in the *Ethics*, "lawmakers aim to induce human beings to virtue." But any human being can lead others to virtue. Therefore, the reason of any human being is competent to make law.

Obj. 3. As the ruler of a political community governs that community, so the head of a household governs his household. But the ruler of a political community can make laws regarding the political community. Therefore, any head of a household can make laws regarding his household.

On the contrary, Isidore says in his *Etymologies*, and the *Decretum* maintains: "Laws are ordinances of the people whereby elders and commoners together prescribe things." Therefore, not every person's reason is competent to make law.

I answer that law in the strict sense primarily and chiefly regards ordaining things for the common good. But ordaining things for the common good belongs either to the whole people or to persons acting in the name of the whole people. And so lawmaking belongs either to the whole people or to a public personage who has the care of the whole people. For also in all other matters, ordaining things for ends belongs to those to whom the ends belong.

Reply Obj. 1. As I have said before law belongs both to those who rule, and by participation to those who are ruled. And it is in the latter way that everyone makes law for oneself, as one participates in the ordinations of the ruler. And so also the Apostle adds in v. 15: "And they manifest the law's operation written in their hearts."

Reply Obj. 2. Private persons cannot effectively induce others to virtue. For private persons can only offer advice and have no coercive power if their advice should not be accepted. And law should have coercive power in order to induce others effectively to virtue, as the Philosopher says in the *Ethics*. But the people or a public personage has such coercive power and the right to inflict punishment, as I shall explain later. And so it belongs only to the people or a public personage to make law.

Reply Obj. 3. As human beings are parts of a household, so households are parts of a political community, as the *Politics* says. And so, as the good of a human being is not the ultimate end of that individual but is ordained for the common good, so also the good of a household is ordained for the good of a political community, which is a perfect community. And so those who govern households can indeed make precepts and rules, but such precepts and rules do not have the nature of law in the strict sense.

Fourth Article
Is Promulgation an Essential Component of Law?

We thus proceed to the fourth inquiry. It seems that promulgation is not an essential component of law, for the following reasons:

Objection 1. The natural law most has the nature of law. But the natural law does not need to be promulgated. Therefore, promulgation is not an essential component of law.

Obj. 2. Obligation to do or not to do things belongs in the strict sense to law. But both those to whom laws have been promulgated and those to whom laws have not, are obliged to obey laws. Therefore, promulgation is not an essential component of law.

Obj. 3. The obligation to obey laws also extends to the future, since "laws impose obligation regarding future affairs," as the *Code* says. But laws are promulgated to those present at their promulgation. Therefore, promulgation is not an essential component of law.

On the contrary, the *Decretum* says that "laws are established when they are promulgated."

I answer that laws are imposed on others as rules and measures, as I have said. But rules and measures are imposed by being applied to those ruled and measured. And so laws, in order to oblige persons, as is proper to law, need to be applied to those who are to be ruled by the laws. But the promulgation leading them to knowledge achieves such application. And so promulgation is necessary for laws to be in force.

And so we can compose the definition of law from the four characteristics I have mentioned: law is an ordination of reason for the common good by one who has the care of the community, and promulgated.

Reply Obj. 1. The natural law is promulgated by God when he implants it in the minds of human beings so that they know it by nature.

Reply Obj. 2. Those to whom a law is not promulgated are obliged to observe it insofar as others make

it known to them, or it can become known to them after it has been promulgated.

Reply Obj. 3. The present promulgation of a law reaches into the future through the durability of written words, which in a way are always promulgating it. And so Isidore says in his *Etymologies* that "we derive *law* [Lat.: *lex*] from *reading* [Lat.: *legere*], since law is written."

Question 91

On Different Kinds of Law

First Article
Is There an Eternal Law?

We thus proceed to the first inquiry. It seems that there is no eternal law, for the following reasons:

Objection 1. Every law is imposed on particular persons. But there was no one from eternity on whom law could be imposed, since only God was from eternity. Therefore, no law is eternal.

Obj. 2. Promulgation is an essential component of law. But there could be no promulgation from eternity, since there was no one from eternity to whom a law would be be promulgated. Therefore, no law can be eternal.

Obj. 3. Law signifies the direction to an end. But nothing ordained to an end is eternal, since only the ultimate end is eternal. Therefore, no law is eternal.

On the contrary, Augustine says in his work *On Free Choice:* "No one with intelligence can perceive the law called supreme reason not to be immutable and eternal."

I answer that as I have said before, law is simply a dictate of practical reason by a ruler who governs a perfect community. But supposing that God's providence rules the world, as I maintained in the First Part, his reason evidently governs the entire community of the universe. And so the plan of governance of the world existing in God as the ruler of the universe has the nature of law. And since God's reason conceives eternally, as Prov. 8:23 says, not temporally, we need to say that such law is eternal.

Reply Obj. 1. Things that do not exist in themselves exist with God insofar as he foreknows and foreordains them, as Rom. 4:17 says: "And he calls nonexisting things into existence." Therefore, the eternal conception of God's law has the nature of an eternal law insofar as he ordains that law for governance of the world he foreknows.

Reply Obj. 2. Word and inscription promulgate law. And God promulgates his eternal law in both ways, since the Word of God and the inscription of the predestined in the Book of Life are eternal. But as regards the creatures who hear or read God's law, the promulgation cannot be eternal.

Reply Obj. 3. Law signifies actively ordaining things for an end, namely, that law ordain things for an end. And law does not signify being ordained for an end, that is, that law itself be ordained for another end, except incidentally in the case of human rulers, whose end is extrinsic to themselves. And then the rulers' laws also need to be ordained for that extrinsic end. But the end of God's governance is God himself, and his law is indistinguishable from himself. And so the eternal law is not ordained for another end.

Second Article
Is There a Natural Law in Us?

We thus proceed to the second inquiry. It seems that there is no natural law in us, for the following reasons:

Objection 1. The eternal law sufficiently governs human beings. For Augustine says in his work *On Free Choice* that "the eternal law is that whereby it is right that all things be most orderly." But nature does not abound in superfluities, nor is it wanting in necessities. Therefore, there is no natural law for human beings.

Obj. 2. Law ordains human beings to their end regarding their actions, as I have maintained before. But nature does not ordain human actions to their end, as happens in the case of irrational creatures, which act for their ends only by natural appetites. Rather, human beings act for their end by the use of their reason and will. Therefore, there is no natural law for human beings.

Obj. 3. The freer one is, the less one is subject to law. But human beings are freer than all other animals because human beings, unlike other animals, have free choice. Therefore, since other animals are not subject to a natural law, neither are human beings.

On the contrary, a gloss on Rom. 2:14, "When the Gentiles, who do not have the law, do by nature

things prescribed by the law," etc., says: "Although they do not have the written law, they have a natural law, whereby each of them understands and is conscious of good and evil."

I answer that as I have said before, law, since it is a rule or measure, can belong to things in two ways: in one way to those who rule and measure; in a second way to those ruled and measured, since things are ruled or measured insofar as they partake of the rule or measure. But the eternal law rules and measures everything subject to God's providence, as is evident from what I have said before. And so everything evidently shares in some way in the eternal law, namely, insofar as all things have inclinations to their own acts and ends from its imprint on them. But the rational creature is subject to God's providence in a more excellent way than other things, since such a creature also shares in God's providence in providing for itself and others. And so it shares in the eternal plan whereby it has its natural inclination to its requisite activity and end. And we call such participation in the eternal law by rational creatures the natural law. And so Ps. 4:6, after saying, "Offer just sacrifices," asks: "Who shows us just things?" and replies: "The light of your countenance, O Lord, has been inscribed on us." The Psalmist thus signifies that the light of natural reason whereby we discern good and evil is simply the imprint of God's light in us. And so it is clear that the natural law is simply rational creatures' participation in the eternal law.

Reply Obj. 1. The argument of this objection would be valid if the natural law were to be something different from the eternal law. But the natural law shares in the eternal law, as I have said.

Reply Obj. 2. Every activity of reason and the will in us is derived from what exists by nature, as I have maintained before, since every process of reasoning is derived from first principles known by nature, and every desire of means is derived from the natural desire of our ultimate end. And so also the natural law needs first to direct our acts to their end.

Reply Obj. 3. Even irrational animals, like rational creatures, share in the eternal law in their own way. But because rational creatures share in the eternal law by using their intellect and reason, we call their participation in the eternal law law in the strict sense, since law belongs to reason, as I have said before. And irrational creatures do not share in the eternal law by the use of reason. And so we can call the latter participation law only by analogy.

Third Article
Are There Human Laws?

We thus proceed to the third inquiry. It seems that there are no human laws, for the following reasons:

Objection. 1. The natural law shares in the eternal law, as I have said. But the eternal law "renders all things most orderly," as Augustine says in his work *On Free Choice*. Therefore, the natural law suffices for ordering all human affairs. Therefore, there is no need for human laws.

Obj. 2. Law has the nature of a measure, as I have said. But human reason is not the measure of things. Rather, the converse is true, as the *Metaphysics* says. Therefore, human reason can produce no law.

Obj. 3. A measure should be most certain, as the *Metaphysics* says. But dictates of human reason about things to be done are uncertain, as Wis. 9:14 says: "The thoughts of mortal human beings are fraught with fear, and our foresight uncertain." Therefore, human reason cannot produce laws.

On the contrary, Augustine in his work *On Free Choice* posits two kinds of law, one kind eternal, and the other temporal, which he calls human.

I answer that law is a dictate of practical reason, as I have said before. But there are similar processes of practical and theoretical reason, since both proceed from principles to conclusions, as I have maintained before. Therefore, we should say that we advance in theoretical reason from indemonstrable first principles, naturally known, to the conclusions of different sciences, conclusions not implanted in us by nature but discovered by exercising reason. Just so, human reason needs to advance from the precepts of the natural law, as general and indemonstrable first principles, to matters that are to be more particularly regulated. And we call such regulations devised by human reason human laws, provided that the other conditions belonging to the nature of law are observed, as I have said before. And so also Cicero says in his *Rhetoric:* "Human law originally sprang from nature. Then things became customs because of their

rational benefit. Then fear and reverence for law validated things that both sprang from nature and were approved by custom."

Reply Obj. 1. Human reason cannot partake of the complete dictates of God's reason but partakes of them in its own way and incompletely. And so regarding theoretical reason, we by our natural participation in God's wisdom know general principles but do not specifically know every truth, as God's wisdom does. Just so regarding practical reason, human beings by nature partake of the eternal law as to general principles but not as to particular specifications of particular matters, although such specifications belong to the eternal law. And so human reason needs to proceed further to determine the particular prescriptions of human law.

Reply Obj. 2. Human reason as such is not the rule of things, but the first principles implanted by nature in human reason are the general rules or measures of everything related to human conduct. And natural reason is the rule and measure of such things, although not of things from nature.

Reply Obj. 3. Practical reason regards practical matters, which are particular and contingent, and does not regard necessary things, as theoretical reason does. And so human laws cannot have the absolute certainty of demonstrated scientific conclusions. Nor need every measure be unerring and certain in every respect. Rather, every measure needs to be such only to the extent possible in its kind of thing.

Fourth Article
Did Human Beings Need a Divine Law?

We thus proceed to the fourth inquiry. It seems that human beings did not need any divine law, for the following reasons:

Objection 1. The natural law is our participation in the eternal law, as I have said. But eternal law is divine law, as I have said. Therefore, we do not need another divine law besides the natural law and the human laws derived from natural law.

Obj. 2. Sir. 15:14 says that "God left human beings in the hands of their own deliberation." But deliberation is an act of reason, as I have maintained before. Therefore, God left human beings to the governance of their own reason. But the dictates of human reason are human laws, as I have said. Therefore, human beings do not need to be governed by another divine law.

Obj. 3. Human nature is more self-sufficient than irrational creatures. But irrational creatures have no divine law besides the inclinations that nature implants in them. Therefore, much less should rational creatures have a divine law besides the natural law.

On the contrary, David petitioned God to lay out the law before him, saying in Ps. 119:33: "Teach me the law, O Lord, in the way of your statutes."

I answer that in addition to the natural law and human laws, divine law was necessary to give direction to human life. And there are four reasons for this.

First, indeed, law directs our acts in relation to our ultimate end. And human beings, if they were indeed ordained only for an end that did not surpass the proportion of their natural ability, would not, regarding reason, need to have any direction superior to the natural law and human laws derived from the natural law. But because human beings are ordained for the end of eternal blessedness, which surpasses their proportional natural human capacity, as I have maintained before, God needed to lay down a law superior to the natural law and human laws to direct human beings to their end.

Second, because of the uncertainty of human judgment, especially regarding contingent and particular matters, different persons may judge differently about various human actions, and so even different and contrary laws result. Therefore, in order that human beings can know beyond any doubt what they should do or should not do, a divinely revealed law, regarding which error is impossible, was needed to direct human beings in their actions.

Third, human beings can make laws regarding things they are able to judge. But human beings can judge only sensibly perceptible external acts, not hidden internal movements. And yet human beings need to live righteously regarding both kinds of acts in order to attain complete virtue. And so human laws could not prohibit or adequately ordain internal acts, and divine law needed to supplement human laws.

Fourth, human laws cannot punish or prohibit all evil deeds, as Augustine says in his work *On Free Choice*. This is because in seeking to eliminate all evils, one would thereby also take away many goods

and not benefit the common good necessary for human companionship. Therefore, in order that no evil remain unforbidden or unpunished, there needed to be a divine law forbidding all sins.

And Ps. 19:7 touches on these four reasons when it says: "The law of the Lord is pure," that is, permitting no sinful wickedness; "converting souls," since it directs both external and internal acts; "the Lord's faithful witness" because of its certain truth and rectitude; "offering wisdom to the little ones," since it ordains human beings for a supernatural and divine end.

Reply Obj. 1. The natural law partakes of the eternal law in proportion to the capacity of human nature. But human beings need to be directed in a higher way to their ultimate supernatural end. And so God gives an additional law that partakes of the eternal law in a higher way.

Reply Obj. 2. Deliberation is an inquiry, and so deliberation needs to advance from some principles. And it does not suffice that it advance from first principles implanted by nature, that is, precepts of the natural law, for the aforementioned reasons. Rather, other principles, namely, precepts of divine law, need to be supplied.

Reply Obj. 3. Irrational creatures are not ordained for higher ends than those proportioned to their natural powers. And so the argument of the objection is inapplicable.

Question 94

On the Natural Law

First Article
Is the Natural Law a Habit?

We thus proceed to the first inquiry. It seems that the natural law is a habit, for the following reasons:

Objection 1. "Three things belong to the soul: powers, habits, and emotions," as the Philosopher says in the *Ethics*. But the natural law is neither a power of the soul nor an emotion. Therefore, the natural law is a habit.

Obj. 2. Basil says that conscience, that is, *synderesis*, is "the law of our intellect," and we can only understand such regarding the natural law. But *synderesis* is a habit, as I maintained in the First Part. Therefore, the natural law is a habit.

Obj. 3. The natural law always abides in human beings, as I shall make clear later. But human beings' reason, to which that law belongs, is not always thinking about the natural law. Therefore, the natural law is a habit, not an act.

On the contrary, Augustine says in his work *On the Marital Good* that "habits are the means whereby we do things when we need to." But the natural law is not such, since that law belongs to infants and the damned, who cannot act by reason of its presence. Therefore, the natural law is not a habit.

I answer that we can speak about habits in two ways. We speak of them in one way in the strict sense and essentially, and then the natural law is not a habit. For I have said before that the natural law is constituted by reason, just as propositions are works of reason. And what one does, and the means whereby one does it, are not the same. For example, one makes a fitting speech by means of the habit of grammar. Therefore, since habits are the means whereby one does things, the natural law cannot be a habit in the strict sense and essentially.

We can speak of habits in a second way as what we possess by reason of habits. For example, we call faith what we have by reason of the habit of faith. And so, as reason sometimes actually considers precepts of the natural law and sometimes only habitually possesses them, we can in the latter way say that the natural law is a habit. Just so, the indemonstrable first principles in theoretical matters are principles belonging to the habit of first principles, not the very habit.

Reply Obj. 1. The Philosopher in the cited text is attempting to discover the genus of virtues. And since virtues are evidently sources of activity, he posits only things that are sources of human activity, namely, powers, habits, and emotions. But other things belong to the soul besides the latter three. For example, certain acts belong to the soul: willing to those willing, and things known to those knowing. And the natural properties of the soul, such as immortality and the like, belong to the soul.

Reply Obj. 2. Basil calls *synderesis* the law of our intellect insofar as it is the habit that contains the precepts of the natural law, that is, the first principles of human actions.

Reply Obj. 3. The argument of this objection reaches the conclusion that we possess the natural law in a habitual way, and we concede this.

Qualification to the argument in the section On the contrary. Sometimes, due to an impediment, one cannot make use of what one possesses habitually. For example, human beings cannot make use of habitual knowledge when they are asleep. And likewise, children cannot make use of habitual understanding of first principles, or even of the natural law, which they possess habitually, due to their immature age.

Second Article
Does the Natural Law Include Several Precepts or Only One?

We thus proceed to the second inquiry. It seems that that the natural law includes only one precept, not several, for the following reasons:

Objection 1. Law belongs to the genus of precept, as I have maintained before. Therefore, if there were to be many precepts of the natural law, it would follow logically that there would also be many natural laws.

Obj. 2. The natural law results from the nature of human beings. But human nature as a whole is one, although multiple regarding its parts. Therefore, either there is only one precept of the natural law because of the unity of the whole, or there are many precepts because of the many parts of human nature. And so even things that regard inclinations of concupiscible power will need to belong to the natural law.

Obj. 3. Law belongs to reason, as I have said before. But there is only one power of reason in human beings. Therefore, there is only one precept of the natural law.

On the contrary, the precepts of the natural law in human beings are related to action as the first principles in scientific matters are related to theoretical knowledge. But there are several indemonstrable first principles of theoretical knowledge. Therefore, there are also several precepts of the natural law.

I answer that as I have said before, the precepts of the natural law are related to practical reason as the first principles of scientific demonstrations are related to theoretical reason. For both the precepts of the natural law and the first principles of scientific demonstrations are self-evident principles. And we speak of things being self-evident in two ways: in one way as such; in a second way in relation to ourselves. We indeed speak of self-evident propositions as such when their predicates belong to the nature of their subjects, although such propositions may not be self-evident to those who do not know the definition of the subjects. For example, the proposition "Human beings are rational" is by its nature self-evident, since to speak of something human is to speak of something rational, although the proposition is not self-evident to one who does not know what a human being is. And so, as Boethius says in his work *On Groups of Seven*, there are axioms or universally self-evident propositions, and propositions whose terms all persons know (e.g., "Every whole is greater than one of its parts" and "Things equal to the same thing are themselves equal") are such. But some propositions are self-evident only to the wise, who understand what the proposition's terms signify. For example, for those who understand that angels are not material substances, it is self-evident that angels are not circumscriptively in a place, something not evident to the uneducated, who do not understand the nature of angels.

And there is a priority regarding the things that fall within the understanding of all persons. For what first falls within our understanding is being, the understanding of which is included in everything that one understands. And so the first indemonstrable principle is that one cannot at the same time affirm and deny the same thing. And this principle is based on the nature of being and nonbeing, and all other principles are based on it, as the *Metaphysics* says. And as being is the first thing that without qualification falls within our understanding, so good is the first thing that falls within the understanding of practical reason. And practical reason is ordered to action, since every efficient cause acts for the sake of an end, which has the nature of good. And so the first principle in practical reason is one based on the nature of good, namely, that good is what all things seek. Therefore, the first precept of the natural law is that we should do and seek good, and shun evil. And all the other precepts of the natural law are based on that precept,

namely, that all the things that practical reason by nature understands to be human goods or evils belong to precepts of the natural law as things to be done or shunned.

And since good has the nature of end, and evil the nature of the contrary, reason by nature understands to be good all the things for which human beings have a natural inclination, and so to be things to be actively sought, and understands contrary things as evil and to be shunned. Therefore, the ordination of our natural inclinations ordains the precepts of the natural law.

First, for example, human beings have an inclination for good by the nature they share with all substances, namely, as every substance by nature seeks to preserve itself. And regarding this inclination, means that preserve our human life and prevent the contrary belong to the natural law.

Second, human beings have more particular inclinations by the nature they share with other animals. And so the *Digest* says that things "that nature has taught all animals," such as the sexual union of male and female, and the upbringing of children, and the like, belong to the natural law.

Third, human beings have inclinations for good by their rational nature, which is proper to them. For example, human beings by nature have inclinations to know truths about God and to live in society with other human beings. And so things that relate to such inclinations belong to the natural law (e.g., that human beings shun ignorance, that they not offend those with whom they ought to live sociably, and other such things regarding those inclinations).

Reply Obj. 1. All the precepts of the natural law, insofar as they relate to one first precept, have the nature of one natural law.

Reply Obj. 2. All the inclinations of any part of human nature (e.g., the concupiscible and irascible powers), insofar as reason rules them, belong to the natural law and are traced to one first precept, as I have said. And so there are many precepts of the natural law as such, but they share a common foundation.

Reply Obj. 3. Reason, although as such one power, ordains everything that concerns human beings. And so the law of reason includes everything that reason can rule.

Third Article
Do All Virtuous Acts Belong to the Natural Law?

We proceed thus to the third inquiry. It seems that not all virtuous acts belong to the natural law, for the following reasons:

Objection 1. It belongs to the nature of law that law be ordained for the common good, as I have said before. But some virtuous acts are ordained for the private good of an individual, as is particularly evident in the case of acts of the virtue of moderation. Therefore, not all virtuous acts are subject to the natural law.

Obj. 2. All sins are contrary to certain virtuous acts. Therefore, if all virtuous acts belong to the natural law, it seems that all sins are consequently contrary to nature. And yet we say this in a special way about some sins.

Obj. 3. Everybody agrees about things that are in accord with nature. But not everybody agrees about virtuous acts, for things that are virtuous for some are vicious for others. Therefore, not all virtuous acts belong to the natural law.

On the contrary, Damascene says in his work *On Orthodox Faith* that "virtues are natural." Therefore, virtuous acts are subject to the natural law.

I answer that we can speak about virtuous acts in two ways: in one way as virtuous; in a second way as we consider such acts in their own species. Therefore, if we are speaking about virtuous acts as virtuous, then all virtuous acts belong to the natural law. For I have said that everything to which human beings are inclined by their nature belongs to the natural law. But everything is by its nature inclined to the activity that its form renders fitting. For example, fire is inclined to heat things. And so, since the rational soul is the specific form of human beings, everyone has an inclination from one's nature to act in accord with reason. And this is to act virtuously. And so in this regard, all virtuous acts belong to the natural law, since one's own reason by nature dictates that one act virtuously.

But if we should be speaking about virtuous acts as such and such, namely, as we consider them in their own species, then not all virtuous acts belong to the natural law. For we do many things virtuously to which nature does not at first incline us, but which

human beings by the inquiry of reason have discovered to be useful for living righteously.

Reply Obj. 1. Moderation concerns the natural desires for food and drink and sex, which desires are indeed ordained for the natural common good, just as other prescriptions of the natural law are ordained for the common moral good.

Reply Obj. 2. We can call the nature proper to human beings the nature of human beings. And so all sins, insofar as they are contrary to reason, are also contrary to nature, as Damascene makes clear in his work *On Orthodox Faith*. Or else we can call the nature common to human beings and other animals the nature of human beings. And so we speak of certain particular sins being contrary to nature. For example, the sexual intercourse of males, which we specifically call the sin contrary to nature, is contrary to the sexual union of male and female, and such sexual union is natural for all animals.

Reply Obj. 3. The argument of this objection is valid regarding virtuous acts as such and such. For then, because of the different conditions of human beings, some acts may be virtuous for some persons, as proportionate and suitable for them, which are nonetheless wicked for other persons, as disproportionate for them.

Fourth Article
Is the Natural Law the Same for All Human Beings?

We thus proceed to the fourth inquiry. It seems that the natural law is not the same for all human beings, for the following reasons:

Objection 1. The *Decretum* says that "the natural law is contained in the [Old] Law and the Gospel." But what is contained in the Law and the Gospel is not in the common possession of all, since Rom. 10:16 says: "Some do not heed the Gospel." Therefore, the natural law is not the same for all human beings.

Obj. 2. "We call things in accord with law just," as the *Ethics* says. But the same work says that nothing is so universally just that it is not otherwise for some. Therefore, even the natural law is not the same for all human beings.

Obj. 3. Things to which human beings' nature inclines them belong to the natural law, as I have said before. But nature inclines different human beings to different things. For example, nature inclines some to desire pleasures, others to desire honors, others to desire other things. Therefore, the natural law is not the same for all human beings.

On the contrary, Isidore says in his *Etymologies:* "The natural law is common to all nations."

I answer that things to which nature inclines human beings belong to the natural law, as I have said before, and one of the things proper to human beings is that their nature inclines them to act in accord with reason. And it belongs to reason to advance from the general to the particular, as the *Physics* makes clear. And regarding that process, theoretical reason proceeds in one way, and practical reason in another way. For inasmuch as theoretical reason is especially concerned about necessary things, which cannot be otherwise disposed, its particular conclusions, just like its general principles, are true without exception. But practical reason is concerned about contingent things, which include human actions. And so the more reason goes from the general to the particular, the more exceptions we find, although there is some necessity in the general principles. Therefore, truth in theoretical matters, both first principles and conclusions, is the same for all human beings, although some know only the truth of the principles, which we call universal propositions, and not the truth of the conclusions. But truth in practical matters, or practical rectitude, is the same for all human beings only regarding the general principles, not regarding the particular conclusions. And not all of those with practical rectitude regarding particulars know the truth in equal measure.

Therefore, the truth or rectitude regarding the general principles of both theoretical and practical reason is the same for all persons and known in equal measure by all of them. And the truth regarding the particular conclusions of theoretical reason is the same for all persons, but some know such truth less than others. For example, it is true for all persons that triangles have three angles equal to two right angles, although not everybody knows this.

But the truth or rectitude regarding particular conclusions of practical reason is neither the same for all persons nor known in equal measure even by those for whom it is the same. For example, it is correct and true for all persons that they should

act in accord with reason. And it follows as a particular conclusion from this principle that those holding goods in trust should return the goods to the goods' owners. And this is indeed true for the most part, but it might in particular cases be injurious, and so contrary to reason, to return the goods (e.g., if the owner should be seeking to attack one's country). And the more the particular conclusion goes into particulars, the more exceptions there are (e.g., if one should declare that entrusted goods should be returned to their owners with such and such safeguards or in such and such ways). For the more particular conditions are added to the particular conclusion, the more ways there may be exceptions, so that the conclusion about returning or not returning entrusted goods is erroneous.

Therefore, we should say that the natural law regarding general first principles is the same for all persons both as to their rectitude and as to knowledge of them. And the natural law regarding particulars, which are, as it were, conclusions from the general principles, is for the most part the same for all persons both as to its rectitude and as to knowledge of it. Nonetheless, it can be wanting in rather few cases both as to its rectitude and as to knowledge of it. As to rectitude, the natural law can be wanting because of particular obstacles, just as natures that come to be and pass away are wanting in rather few cases because of obstacles. And also as to knowledge of the natural law, the law can be wanting because emotions or evil habituation or evil natural disposition has perverted the reason of some. For example, the Germans of old did not consider robbery wicked, as Caesar's *Gallic Wars* relates, although robbery is expressly contrary to the natural law.

Reply Obj. 1. We should not understand the cited statement to mean that all the matters included in the Law and the Gospel belong to the natural law, since the Law and the Gospel transmit to us many things above nature. Rather, we should understand the statement to mean that the Law and the Gospel completely transmit to us the things that belong to the natural law. And so Gratian, after saying that "the natural law is contained in the Law and the Gospel," immediately adds by way of example: "And everyone is thereby commanded to do unto others what one wishes to be done to oneself."

Reply Obj. 2. We should understand the cited statement of the Philosopher regarding things just by nature as conclusions derived from general principles, not as the general principles. And such conclusions are correct for the most part and are wanting in rather few cases.

Reply Obj. 3. As the power of reason in human beings rules and commands other powers, so reason needs to direct all the natural inclinations belonging to other powers. And so it is universally correct for all persons to direct all their inclinations by reason.

Fifth Article
Can the Natural Law Vary?

We thus proceed to the fifth inquiry. It seems that the natural law can vary, for the following reasons:

Objection 1. A gloss on Sir. 17:9, "He [God] supplied them with instruction and the law of life," says: "He wanted the [Old] Law to be written in order to correct the natural law." But what is corrected is changed. Therefore, the natural law can vary.

Obj. 2. The killing of innocent human beings as well as adultery and theft are contrary to the natural law. But God altered these precepts. For example, God on one occasion commanded Abraham to slay his innocent son, as Gen. 22:2 relates. And God on another occasion commanded the Jews to steal vessels the Egyptians had lent them, as Ex. 12:35–36 relates. And God on another occasion commanded Hosea to take a fornicating wife, as Hos. 1:2 relates. Therefore, the natural law can vary.

Obj. 3. Isidore says in his *Etymologies* that "the common possession of all property and the same freedom for all persons belong to the natural law." But we perceive that human laws have altered these prescriptions. Therefore, it seems that the natural law can vary.

On the contrary, the *Decretum* says: "The natural law originates with rational creatures. It does not vary over time and abides without change."

I answer that we can understand the mutability of the natural law in two ways. We can understand it in one way by things being added to it. And then nothing prevents the natural law changing, since both divine law and human laws add to natural law many things beneficial to human life.

We can understand the mutability of the natural law in a second way by way of substraction, namely, that things previously subject to the law cease to be so. And then the natural law is altogether immutable as to its first principles. And as to its secondary precepts, which we said are proper proximate conclusions, as it were, from the first principles, the natural law is not so changed that what it prescribes is not for the most part completely correct. But it can be changed regarding particulars and in rather few cases, due to special causes that prevent observance of such precepts, as I have said before.

Reply Obj. 1. We say that written law has been given to correct the natural law either because the written law supplements what the natural law lacked, or because the natural law in the hearts of some regarding particulars had been corrupted insofar as they thought that things by nature evil were good. And such corruption needed correction.

Reply Obj. 2. All human beings, without exception, both the innocent and the guilty, die when natural death comes. And God's power indeed inflicts such natural death on human beings because of original sin, as 1 Sam. 2:6 says: "The Lord causes death and life." And so, at the command of God, death can without any injustice be inflicted on any human being, whether guilty or innocent.

Likewise, adultery is sexual intercourse with another man's wife, whom the law handed down by God has allotted to him. And so there is no adultery or fornication in having intercourse with any woman at the command of God.

And the argument is the same regarding theft, which consists of taking another's property. One does not take without the consent of the owner (i.e., steal) anything that one takes at the command of God, who is the owner of all property.

Nor is it only regarding human affairs that everything God commands is owed to him. Rather, regarding things of nature, everything God does is also in one respect natural, as I said in the First Part.

Reply Obj. 3. We speak of things belonging to the natural law in two ways. We speak of them belonging in one way because nature inclines us to them. For example, one should not cause injury to another. We speak of them belonging in a second way because nature did not introduce the contrary. For example, we could say that it belongs to the natural law that human beings are naked, since nature did not endow them with clothes, which human skill created. And it is in the latter way that we say that "the common possession of all property and the same freedom for all persons" belong to the natural law, namely, that the reason of human beings, not nature, introduced private property and compulsory servitude. And so the natural law in this respect varies only by way of addition.

Sixth Article
Can the Natural Law Be Excised from the Hearts of Human Beings?

We thus proceed to the sixth inquiry. It seems that the natural law can be excised from the hearts of human beings, for the following reasons:

Objection 1. A gloss on Rom. 2:14, "When the Gentiles, who do not have the law," etc., says: "The law of righteousness, which sin had wiped out, is inscribed on the inner human being renewed by grace." But the law of righteousness is the natural law. Therefore, the natural law can be wiped out.

Obj. 2. The law of grace is more efficacious than the law of nature. But sin destroys the law of grace. Therefore, much more can the natural law be wiped out.

Obj. 3. What law establishes is rendered just, as it were. But human beings have established many things contrary to the natural law. Therefore, the natural law can be excised from the hearts of human beings.

On the contrary, Augustine says in his *Confessions:* "Your law is inscribed on the hearts of human beings, and indeed no wickedness wipes it out." But the law inscribed on the hearts of human beings is the natural law. Therefore, the natural law cannot be wiped out.

I answer that as I have said before, there belong to the natural law, indeed primarily, very general precepts, precepts that everyone knows, and more particular, secondary precepts, which are like proximate conclusions from first principles. Therefore, regarding the general principles, the natural law in general can in no way be excised from the hearts of human beings. But the natural law is wiped out regarding particular actions insofar as desires or other

emotions prevent reason from applying the general principles to particular actions, as I have said before.

And the natural law can be excised from the hearts of human beings regarding the other, secondary precepts, either because of wicked opinions, just as errors in theoretical matters happen regarding necessary conclusions, or because of evil customs or corrupt habits. For example, some did not think robbery a sin, or even sins against nature to be sinful, as the Apostle also says in Rom. 1:24–28.

Reply Obj. 1. Sin wipes out the natural law regarding particulars but not in general, except perhaps regarding secondary precepts of the natural law, in the way I mentioned.

Reply Obj. 2. Although grace is more efficacious than nature, nature is nonetheless more essential to human beings and so more abiding.

Reply Obj. 3. The argument of this objection is valid regarding the secondary precepts of the natural law, contrary to which some lawmakers have passed wicked statutes.

Question 95

On Human Law

First Article
Was It Beneficial That Human Beings Establish Laws?

We thus proceed to the first inquiry. It seems that it was not beneficial that human beings establish laws, for the following reasons:

Objection 1. The purpose of every law is to make human beings good, as I have said before. But admonitions induce human beings willingly to live rightly more than laws do coercively. Therefore, there was no need to establish laws.

Obj. 2. The Philosopher says in the *Ethics:* "Human beings have recourse to judges as justice-in-the-flesh." But justice-in-the-flesh is better than the inanimate justice contained in laws. Therefore, it would have been better to commit the execution of justice to the decisions of judges than to establish laws to supplement their decisions.

Obj. 3. Every law directs human actions, as is evident from what I have said before. But since human acts regard particular things, which are potentially infinite, no one except wise persons, who regard particulars, can sufficiently contemplate the things that belong to the direction of human acts. Therefore, it would have been better that the decisions of wise persons direct human actions than that any established law should. Therefore, there was no need to establish human laws.

On the contrary, Isidore says in his *Etymologies:* "Laws were established so that fear of them curb human audacity, and that innocence be safe in the midst of the wicked, and that the fear of punishment restrain the ability of the wicked to inflict harm." But the human race most needs such things. Therefore, it was necessary to establish human laws.

I answer that, as is evident from what I have said before, human beings by nature have a capacity for virtue, but they need to arrive at the very perfection of virtue by some training. Just so, we perceive that industriousness helps them regarding their necessities (e.g., food and clothing). And nature gives them the sources to provide these necessities, namely, reason and hands, not the full complement of the necessities that nature gives other animals, for whom nature has sufficiently provided covering and food.

But human beings are not readily self-sufficient in regard to this training, since the perfection of virtue consists chiefly of human beings' restraint from excessive pleasures, toward which they are most prone. And this is especially true of youths, for whom training is more efficacious. And so human beings receive such training, whereby they arrive at virtue, from others. And indeed regarding youths prone to virtuous acts by good natural disposition or habituation (or, rather, a gift from God), paternal training, which consists of admonitions, suffices.

But some persons are wicked and prone to vices, and cannot be easily persuaded by words. Therefore, force and fear were needed to restrain them from evil. Consequently, at least desisting from evil deeds, they would both leave others in peace and be themselves at length brought by such habituation to do voluntarily what they hitherto did out of fear, and so become virtuous. But such training, which compels by fear of punishment, is the training administered by laws. And so it was necessary to establish laws in order that human beings live in peace and have virtue. For,

as the Philosopher says in the *Politics:* "As human beings, if perfect in virtue, are the best of animals, so are they, if cut off from law and justice, the worst of all animals." This is because human beings, unlike other animals, have the tools of reason to satisfy their disordered desires and beastly rages.

Reply Obj. 1. Voluntary admonitions induce well disposed human beings to virtue better than compulsion does, but there are some who are not induced to virtue unless they be compelled.

Reply Obj. 2. The Philosopher says in the *Rhetoric:* "It is better that law direct all things than that they be left to the decisions of judges." And this is so for three reasons. First, indeed, it is easier to find the few wise persons sufficient to establish right laws than the many wise persons necessary to judge rightly about particular matters. Second, lawmakers consider over a long time what to impose by law, but judges reach decisions about particular deeds as cases spontaneously arise. And human beings can more easily perceive what is right by considering many instances than they can by considering only one deed. Third, lawmakers decide in general and about future events, but presiding judges decide current cases, and love or hatred or covetousness affects such decisions. And so their decisions are perverted.

Therefore, since few embody the justice required of a judge, and since that justice can be perverted, it was necessary that law determine, whenever possible, what judges should decide, and commit very few matters to the decisions of human beings.

Reply Obj. 3. "We need to commit to judges" certain particular details, which laws cannot encompass, as the Philosopher also says in the *Rhetoric*, such as, "whether alleged deeds have or have not been done," and the like.

Second Article
Is Every Human Law Derived from the Natural Law?

We thus proceed to the second inquiry. It seems that not every human law is derived from the natural law, for the following reasons:

Objection 1. The Philosopher says in the *Ethics* that "it does not at all matter originally whether one effects legal justice in this or that way." But regarding obligations to which the natural law gives rise, it does matter whether one effects justice in this or that way. Therefore, not all the things established by human laws are derived from the natural law.

Obj. 2. Positive law differs from natural law, as Isidore makes clear in his *Etymologies* and the Philosopher makes clear in the *Ethics*. But things derived as conclusions from the general principles of the natural law belong to the natural law, as I have said before. Therefore, things proper to human law are not derived from the natural law.

Obj. 3. The natural law is the same for all persons. For the Philosopher says in the *Ethics* that "natural justice has the same force everywhere." Therefore, if human laws were to be derived from the natural law, human laws would likewise be the same for all persons. But such a conclusion is evidently false.

Obj. 4. We can assign reasons for things derived from the natural law. But "one cannot assign reasons for all the statutes rulers have decreed," as the Jurist says. Therefore, some human laws are not derived from the natural law.

On the contrary, Cicero says in his *Rhetoric:* "Fear and reverence for the laws have prescribed things derived from nature and approved by custom."

I answer that Augustine says in his work *On Free Choice:* "Unjust laws do not seem to be laws." And so laws have binding force insofar as they have justice. And we say regarding human affairs that things are just because they are right according to the rule of reason. But the primary rule of reason is the natural law, as is evident from what I have said before. And so every human law has as much of the nature of law as it is derived from the natural law. And a human law diverging in any way from the natural law will be a perversion of law and no longer a law.

But we should note that we can derive things from the natural law in two ways: in one way as conclusions from its first principles; in a second way as specifications of certain general principles. Indeed, the first way is like the way in which we draw conclusions from first principles in theoretical sciences. And the second way is like the way that craftsmen in the course of exercising their skill adapt general forms to specific things. For example, a builder needs to adapt the general form of a house to this or that

shape of a house. Therefore, some things are derived from general principles of the natural law as conclusions. For example, one can derive the prohibition against homicide from the general principle that one should do no evil to anyone. And some things are derived from general principles of the natural law as specifications. For example, the natural law ordains that criminals should be punished, but that criminals be punished in this or that way is a specification of the natural law.

Therefore, human laws are derived from the natural law in both ways. Things derived from the natural law in the first way are not only contained in human laws as established by those laws, but they also have part of their binding force from the natural law. But things derived from the natural law in the second way have all of their binding force from human law.

Reply Obj. 1. The Philosopher is speaking about the things laws decreed by determining or specifying one of the precepts of the natural law.

Reply Obj. 2. The argument of this objection is valid regarding things derived from the natural law as conclusions.

Reply Obj. 3. The general principles of the natural law cannot be applied to all peoples in the same way because of the great variety of human affairs. And so there are different positive laws for different peoples.

Reply Obj. 4. We should understand the Jurist's statement to regard things decreed by rulers about particular specifications of the natural law. And the judgments of experienced and prudent persons are indeed related to such specifications as certain principles underlying their judgments, namely, inasmuch as they immediately perceive what is the most fitting particular specification. And so the Philosopher says in the *Ethics* that "we should" in such matters "attend to the intuitive statements and opinions of the experienced and the mature or prudent no less than to their arguments."

Third Article
Does Isidore Appropriately Describe the Characteristics of Positive Law?

We thus proceed to the third inquiry. Isidore says: "Laws should be virtuous, just, possible by nature, in accord with a country's customs, suitable to time and place, necessary, useful, so clear that they contain nothing obscure to cause deception, and decreed for the common benefit of all citizens, not the private benefit of some." It seems that he in this way inappropriately describes the characteristics of positive law, for the following reasons:

Objection 1. Isidore previously had explained the characteristics of law in terms of three conditions: "Laws should be everything constituted by reason if befitting religion, suitable for training, and useful for the commonweal." Therefore, he later unnecessarily added further conditions of law.

Obj. 2. Justice is a virtue, as Cicero says in his work *On Duties*. Therefore, Isidore needlessly adds "just" after he mentioned "virtuous."

Obj. 3. Isidore contradistinguished written laws from customs. Therefore, he ought not to have posited in the definition of law that laws be "in accord with a country's customs."

Obj. 4. We call things necessary in two ways. Things that cannot be otherwise, are absolutely necessary, and such necessary things are not subject to human judgment. And so such necessity does not belong to human law. Other things are necessary for ends, and such necessity is the same as usefulness. Therefore, Isidore needlessly posits both "necessary" and "useful" as characteristics of law.

On the contrary, there stands the authority of Isidore himself.

I answer that we need to determine the form of any means in relation to the end desired. For example, the form of a saw is such as to be suitable for cutting wood, as the *Physics* makes clear. Likewise, everything ruled and measured needs to have a form apportioned to its rule or measure. And human law has both, since it is both something ordained for an end and a rule or measure ruled or measured by a higher measure. And the higher measure is indeed of two kinds, namely, the divine law and the natural law, as is evident from what I have said before. But the end of human law is the benefit of human beings, as the Jurist also says. And so indeed Isidore first posited three things as conditions of human law, namely, that human law benefit religion (i.e., as human law is properly related to the divine law), that human law be suitable for training (i.e., as human law is properly

related to the natural law), that human human law be useful for the commonweal (i.e., as human law is properly related to human usefulness).

And all the other conditions that he later mentions are traceable to these three things. For what he calls virtuous is a reference to what befits religion. And by adding that human laws be "just, possible by nature, in accord with a country's customs, suitable to the place and time," he indicates that the laws should be suitable for training. For we indeed first consider human training in relation to the ordination of reason, which ordination is implied in what he calls just. Second, we consider human training in relation to the capacity of human agents. For training ought to be suitable to each according to the capacity of each, including natural capacity. (For example, one should not impose the same training on children that one imposes on adults.) And training ought to be suitable according to human customs, since human beings do not live in society by themselves, not manifesting their behavior to others. Third, in relation to requisite circumstances, he says: "suitable to the place and time." And the additional words, "necessary," "useful," and so forth, refer to what facilitates the commonweal. For example, necessity refers to removing evils, usefulness to acquiring benefits, and clarification to preventing harm that could arise from the laws themselves.

And he indicates that human laws are ordained for the common good, as I have previously affirmed, in the last part of the definition.

Reply Objs. 1–4. The answer makes clear the replies to the objections.

Fourth Article
Does Isidore Appropriately Designate Kinds of Human Law?

We thus proceed to the fourth inquiry. It seems that Isidore does not appropriately designate kinds of human law, for the following reasons:

Objection 1. Isidore includes in human law "the common law of peoples," which he so names, as he says, because "almost every people possesses it." But "natural law is common to all peoples," as he himself says. Therefore, the common law of peoples is contained in the natural law rather than positive human law.

Obj. 2. Things that have the same binding force seem to differ only materially, not formally. But "statutes, plebiscites, decrees of the senate," and the other like things Isidore describes all have the same binding force. Therefore, they seem to differ only materially. But artisans should pay no attention to such differences, since there can be an endless number of them. Therefore, Isidore inappropriately introduces such divisions.

Obj. 3. As there are rulers and priests and soldiers in political communities, so human beings also have other public duties. Therefore, as Isidore posits "military law" and "public law" (which govern priests and magistrates), so he should also posit other laws pertaining to other public duties.

Obj. 4. We should ignore accidental things. But it is accidental to laws whether they are framed by this or that human being. Therefore, Isidore inappropriately posits a division of laws by the names of their framers, namely, that one is called the Cornelian law, another the Falcidian law, and so forth.

On the contrary, the authority of Isidore suffices.

I answer that we can intrinsically distinguish each thing by what belongs to its nature. For example, the nature of animals includes a soul that is rational or nonrational. And so we properly and intrinsically distinguish animals by whether they are rational or irrational, and not by whether they are black or white, which are characteristics altogether outside the nature of animals.

And many characteristics belong to the nature of human laws, and we can properly and intrinsically distinguish human laws by any of those things. For example, it first of all belongs to the nature of human laws that they be derived from the natural law, as is evident from what I have said before. And we in this respect divide positive laws into the common law of peoples and the laws of particular commonwealths by the two ways in which things may be derived from the natural law, as I have said before. For precepts derived from the natural law as conclusions from its general principles belong to the common law of peoples (e.g., just buying and selling, and the like, without which human beings cannot live sociably with

one another). And living sociably with others belongs to the natural law, since human beings are by nature social animals, as the *Politics* proves. But precepts derived from the natural law by way of particular specifications belong to the laws of particular commonwealths, whereby each commonwealth specifies things suitable for itself.

Second, it belongs to the nature of human laws that they be ordained for the common good of a political community. And we can in this respect distinguish human laws by the different kinds of persons who perform particular tasks for the common good (e.g., priests, who pray to God for the people; rulers, who govern the people; soldiers, who fight for the safety of the people). And so special laws are adapted for such persons.

Third, it belongs to the nature of human laws that they be established by those who govern the political community, as I have said before. And we in this respect distinguish human laws by the different forms of governing political communities. And as the Philosopher says in the *Politics*, one of these forms is monarchy (i.e., rule by one person). And we understand the laws of monarchical regimes as royal decrees. And aristocracy (i.e., rule by the best persons or aristocrats) is another form of government. And we understand the laws of aristocratic regimes as the authoritative legal opinions of the wise, and also as the decrees of the senate. And oligarchy (i.e., rule by a few rich and powerful persons) is another form of government. And we understand the laws of oligarchical regimes as magisterial law, also called law by dignitaries. And another form of government is by the people, which form we call democracy. And we understand the laws of democratic regimes as laws by the people. (Tyranny is another form of government, an altogether corrupt form, and so we do not understand the laws of tyrannical regimes as any law.) There is also a form of government that is a mixture of the good forms, and this mixed form of government is the best. And we understand the laws of such regimes as law "prescribed by elders and the people," as Isidore says.

Fourth, it belongs to the nature of human laws that they direct human actions. And we in this respect distinguish laws, which we sometimes designate by their authors, by the laws' different subject matter. For example, we distinguish the Julian Law on adultery, the Cornelian Law on assassination, and the like, because of their subject matter, not because of their authors.

Reply Obj. 1. The common law of peoples is indeed natural for human beings in one respect, insofar as it is rational, since it is derived from the natural law as conclusions not very remote from general principles of the natural law. And so human beings easily agree about such matters. But we distinguish the common law of peoples from the natural law, especially from what is common to all animals.

Reply Objs. 2–4. The replies to these objections is evident from what I have said.

Question 96

On the Power of Human Laws

First Article
Should Human Laws Be Framed in Particular Rather Than General Terms?

We thus proceed to the first inquiry. It seems that human laws should be framed in particular rather than general terms, for the following reasons:

Objection 1. The Philosopher says in the *Ethics* that "things of the legal order consist of everything laws decree about individual matters, and likewise of judicial decisions," which also concern particular matters, since judges hand down decisions on particular cases. Therefore, laws are framed both in general and in particular terms.

Obj. 2. Laws direct human actions, as I have said before. But human actions consist of particular things. Therefore, laws should be framed in particular rather than general terms.

Obj. 3. Laws are the rules and measures of human actions, as I have said before. But measures should be most certain, as the *Metaphysics* says. Therefore, since nothing about human actions can be so universally certain as not to be wanting in particular cases, it seems that laws need to be framed in particular rather than general terms.

On the contrary, the Jurist says: "Laws need to be framed to suit things that more frequently happen, and laws are not framed to suit things that can happen once in a while."

I answer that everything for an end needs to be proportioned to the end. But the end of law is the common good, since "laws should be framed for the common benefit of citizens, not for any private benefit," as Isidore says in his *Etymologies*. And so human laws need to be proportioned to the common good. But the common good consists of many things. And so laws need to regard many things, both persons, matters, and times. For the political community consists of many persons, and its good is procured by many actions. Nor is it instituted to endure only for a short time but to last for all time through successive generations of citizens, as Augustine says in *The City of God*.

Reply Obj. 1. The Philosopher in the *Ethics* posits three parts of legal justice (i.e., positive law). For there are certain prescriptions framed only in general terms, and these are general laws. And regarding such laws, he says that "legal justice indeed does not originally differentiate in particulars but does once established." For example, captives are ransomed at a fixed price. And there are some laws that are general in one respect and particular in another. And we call such laws privileges, that is, private laws, since they regard particular persons, and yet the power of these laws extends to many matters. And it is regarding these that the Philosopher adds: "And, further, everything laws decree in particular cases."

And we call some things legal because general laws are applied to particular cases, not because the applications are laws. For example, judges hand down decisions that we consider legally binding. And it is regarding such that the Philosopher adds: "And judicial decisions."

Reply Obj. 2. Something directive needs to direct several things, and so the Philosopher says in the *Metaphysics* that all the things belonging to a genus are measured by the one of them that primarily belongs to the genus. For if there were to be as many rules or measures as things measured or ruled, a rule or measure, which is that one thing enable many things to be known, would cease to be of any use. And so a law would have no usefulness if it were to cover only a single action. For wise persons give individual commands to direct individual actions, but law is a general command, as I have said.

Reply Obj. 3. "One should not look for the same certainty in all kinds of things," as the *Ethics* says. And so in the case of contingent things like natural events and human affairs, there is sufficient certainty if things are true for the most part, even though they sometimes fail to happen in relatively few cases.

Second Article
Does It Belong to Human Laws to Prohibit All Vices?

We thus proceed to the second inquiry. It seems that it belongs to human laws to prohibit all vices, for the following reasons:

Objection 1. Isidore says in his *Etymologies* that "laws have been established in order to curb human audacity out of fear of them." But human audacity would not be sufficiently curbed unless laws were to prohibit everything evil. Therefore, human laws ought to prohibit everything evil.

Obj. 2. The aim of lawmakers is to make citizens virtuous. But citizens can be virtuous only if they are curbed of all vices. Therefore, it belongs to human law to curb all vices.

Obj. 3. Human law is derived from natural law, as I have said before. But all sins are contrary to the natural law. Therefore, human law ought to prohibit all vices.

On the contrary, Augustine says in his work *On Free Choice:* "It seems to me that laws written for the people's governance rightly permit such things, and that God's providence punishes them." But God's providence only punishes sins. Therefore, human laws, by not prohibiting some sins, rightly permit them.

I answer that laws are established as the rules or measures of human actions, as I have already said. But measures should be homogeneous with what they measure, as the *Metaphysics* says, since different kinds of things are measured by different kinds of measures. And so laws need also to be imposed on human beings according to their condition, since laws ought to be "possible regarding both nature and a country's customs," as Isidore says. And the power or ability to act results from internal habituation or disposition, since the virtuous and those without

virtuous habits do not have the same power to act. Just so, children and adults do not have the same power to act, and so the law is not the same for children and adults. For example, many things are permitted children that the law punishes in adults, or even that public opinion censures. And likewise, many things are tolerated in persons of imperfect virtue that would not be tolerated in virtuous persons. And human law is established for the collectivity of human beings, most of whom have imperfect virtue. And so human law does not prohibit every kind of vice, from which the virtuous abstain. Rather, human law prohibits only the more serious kinds of vice, from which most persons can abstain, and especially those vices that inflict harm on others, without the prohibition of which human society could not be preserved. For example, human laws prohibit murders, thefts, and the like.

Reply Obj. 1. Audacity seems to belong to attacks on others. And so audacity belongs chiefly to the sins that inflict injury on neighbors, and human law prohibits such sins, as I have said.

Reply Obj. 2. Human laws aim to induce human beings to virtue little by little, not all at once. And so the laws do not immediately impose on the many imperfect citizens what already belongs to virtuous citizens, namely, that citizens abstain from everything evil. Otherwise, the imperfect citizens, unable to endure those commands, would erupt into worse evil things. Just so, Prov. 30:33 says: "Those who blow their nose too strongly, emit blood." And Mt. 9:17 says: "If one should put new wine, " that is, the precepts of a perfect life, "into old wineskins, " that is, imperfect human beings, "the wineskins burst, and the wine is spilled," that is, the precepts are despised, and human beings burst into worse evil things out of contempt.

Reply Obj. 3. The natural law is our participation in the eternal law, but human law falls short of the eternal law. For Augustine says in his work *On Free Choice:* "The laws framed for the governance of political communities permit and leave unpunished many things that God's providence punishes. Nor, indeed, should we criticize what the laws do do because of the fact that they do not do everything." And so also human laws cannot prohibit everything that the natural law prohibits.

Third Article
Do Human Laws Command Every Virtuous Action?

We thus proceed to the third inquiry. It seems that human laws do not command every virtuous action, for the following reasons:
